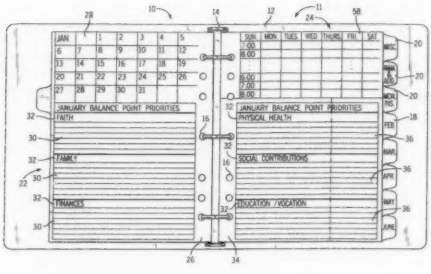
DAILY PLANNING CALENDAR

David V. Durand, S60 W24200 Red Wing Dr., Waukesha, Wis. 53186

Filed May 17, 1999, Appl. No. 312,881
Int. Cl.[7] B42D *5/04*
U.S. Cl. 283—2 **16 Claims**



1. A daily planning calendar including a plurality of individual pages retained within a binder, the calendar comprising:

a plurality of monthly planning pages each representing a month of the year, each monthly planning page including a plurality of monthly information zones and a calendar portion including a visual representation of the current month;

a plurality of daily planning pages each representing a day of the year, each daily planning page having a reduced height relative to the monthly planning pages, such that when the daily planning pages are positioned on top of the monthly planning pages, the calendar portion of the monthly planning page is visible; and

a plurality of weekly planning pages each representing the last day of a week, each weekly planning page including a daily planning portion and a weekly summary portion, the weekly summary portion being detachable from the daily planning portion and including a visual representation of the current week, wherein when the weekly summary portion is detached, the daily planning portion has a height equal to the reduced height of the daily planning pages.

6,039,356

PRINTED SHEET PRODUCTS

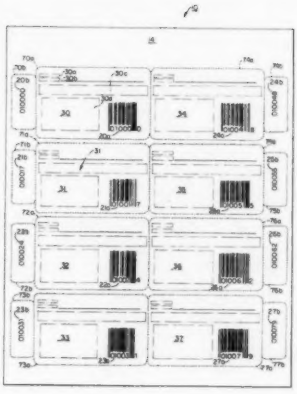
Richard O. Warther, West Chester, and C. Raymond Steen, Jr., Chester Springs, both of Pa., assignors to Vanguard Identification Systems, Inc., Exton, Pa.

Continuation of application No. 08/482,634, Jun. 7, 1995, Pat. No. 5,769,457, which is a continuation-in-part of application No. 08/191,975, Feb. 4, 1994, Pat. No. 5,495,981, which is a continuation-in-part of application No. 07/628,236, Dec. 17, 1990, abandoned, which is a continuation-in-part of application No. 07/502,005, Mar. 30, 1990, Pat. No. 4,978,146. This application Jun. 22, 1998, Appl. No. 102,423.
Int. Cl.[7] B42D *15/00*
U.S. Cl. 283—61 **28 Claims**

1. A printed sheet product comprising:

a thin flexible core formed by a printable material having first and second opposing major planar sides;

a set of at least two separate code fields printed on a first major planar side of the core, each code field of the set being printed with a unique numeric code common to all code fields of the set, the unique numeric code being printed in at least a bar code format in at least a first printed code field of the set and



being printed in at least a second printed code field of the set spaced apart from the first printed code field;

at least one printed field on the second major planar side of the core;

a first cover sheet permanently fixed to the first major planar side of the core overlying at least the first printed code field of the set, the first cover sheet being sufficiently transparent to permit the unique numeric code printed in bar code format in the underlying first code field to be machine read through the first cover sheet;

a pressure sensitive adhesive applied over the second side of the core directly opposite only the second of the first and second code fields; and

scoring extending sufficiently through the core and at least the first cover sheet where present to define at least two separate elements removable from a remainder of the printed sheet product, a first removable element bearing the first printed code field of the set and at least part of the first cover sheet to form a transaction element and a second removable element bearing the second printed code field of the set and at least part of the adhesive, the adhesive on the second removable element being exposable at least after the second removable element is removed from a remainder of the printed sheet product to form a self-adhering label bearing at least the second printed code field.

6,039,357

SECURITY BANDS TO PREVENT COUNTERFEITING WITH COLOR COPIES

Jimmy Ray Kendrick, Nacogdoches, Tex., assignor to Moore North America, Inc., Grand Island, N.Y.

Filed Jan. 8, 1992, Appl. No. 817,894
This patent is subject to a terminal disclaimer.
Int. Cl.[7] B42D *15/00*
U.S. Cl. 283—93 **12 Claims**

1. A protected document comprising:

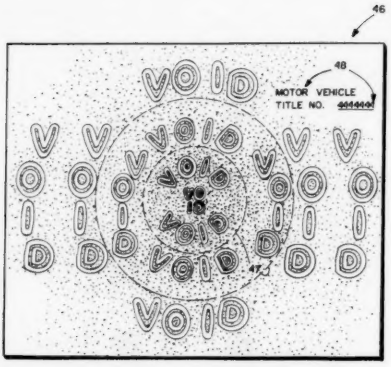
a substrate having a surface;

at least three discrete halftone printed bands disposed on said surface and provided by geometric elements, and in sequence;

each of said printed bands having a significantly different screen density than proximate bands;

within each band said geometric elements comprising a warning word or symbol, and a background;

within each band, one of said warning word or symbol and background having geometric elements of a size such that they are readily reproduced by a photocopy machine, while the other of said warning word or symbol and background has geometric elements of a size such that they are not readily reproduced by a photocopy machine; and



interband areas having densities gradually transitioning between the densities of adjacent bands.

6,039,358

CONNECTING MEANS FOR TWO MEMBERS IN FLUID CONDUCTING ASSEMBLY

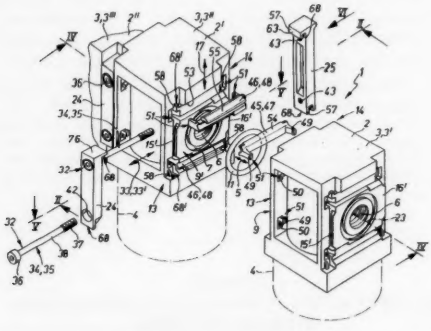
Kurt Stoll, Esslingen; Rolf Berger, Wolfschlugen, and Günter Gebauer, Esslingen, all of Germany, assignors to Festo AG & Co., Esslingen, Germany

Filed Feb. 11, 1998, Appl. No. 22,107

Claims priority, application German Dem. Rep., Feb. 26, 1997, 197 07 630

Int. Cl.[7] **F16L** *19/02*

U.S. Cl. 285—23 **30 Claims**



1. A connection device for connecting two parts in a fluid conducting assembly, comprising holding portions located on sides opposite to one another athwart the direction of connection of the two parts, said holding portions being associated with each other in pairs when said parts are connected together, and a first and a second connecting member adapted to be mounted on the pairs of associated holding portions in a connecting position, said connecting members being able to be clamped by a clamping means in a clamping direction, which is athwart the said direction of connection, against the respectively associated pairs of holding portions in order to cause the parts to be clamped together at facing joint faces thereof, wherein coupling means are provided on the two parts on their facing joint faces, which, prior to the application of the connecting members, provide a coupling of the parts in such a manner that the parts may be slid in the direction of clamping in relation to one another and simultaneously interlockingly fitted together in the direction of connection such that the parts are prevented from separating in the direction of connection, and wherein a first holding and securing means is provided on at least the first connecting member and a second holding and securing means is provided on at least the side of the part facing the first holding and securing means, the first and second holding and securing means cooperating with one another in such a manner that the first connecting member is held, even prior to actuation of the clamping means, on the parts and simultaneously prevents a relative displacement between the two parts.

6,039,359

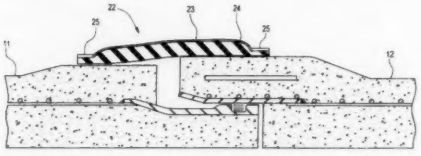
PROTECTIVE SLEEVE AND RELATED METHOD FOR PROTECTING A BURIED PIPE JOINT

Frank P. Valenziano, Warren, N.J., assignor to Coreflex LLC, Asbury Park, N.J.

Filed Feb. 23, 1998, Appl. No. 28,166

Int. Cl.[7] **F16J** *15/10;* **F16L** *55/175*

U.S. Cl. 285—45 **2 Claims**



1. A pipe joint construction comprising in combination:

a tubular concrete first pipe section having an annular front end and provided with a tubular steel spigot projecting forwardly from the front end, the spigot terminating in a leading end and forming an annular ring groove spaced rearwardly from the leading end,

a resilient gasket positioned in the ring groove,

a tubular concrete second pipe section having an annular rear end and provided with a steel bell projecting rearwardly from the rear end and having an inside annular face,

the spigot inserted into the bell in end-to-end relationship with the gasket compressed in the ring groove by the inside annular face,

a sleeve made of a polyurethane foam material having an inorganic alkaline releasing material dispersed therein, the alkaline releasing material being reactive with water to hydrate thereby forming an alkaline substance to protect exposed steel,

the sleeve having a moisture impervious outward surface and a moisture pervious inward surface,

the sleeve spanning from the first pipe section to the second pipe section sealing outwardly a joint formed therebetween, the sleeve extending annularly about the joint and over end margins of both of said pipe sections to protect embedded steel in the margins from corrosion due to surface cracks, and

each of said outer margins connected to the sleeve by means of a tightening band.

6,039,360

COUPLINGS FOR FLUID CONTROLLERS

Tadahiro Ohmi, 2-1-17-301, Komegafukuro, Aoba-ku, Sendai, Miyagi; Michio Yamaji, Osaka; Tsutomu Shinohara, Osaka; Shigeru Itoi, Osaka; Keiji Hirao, Osaka; Yuji Kawano, Osaka; Shigeaki Tanaka, Osaka; Kosuke Yokoyama, Osaka; Hiroshi Morokoshi, Osaka, and Nobukazu Ikeda, Osaka, all of Japan, assignors to Tadahiro Ohmi, Sendai, and Fujikin Incorporated, Osaka, both of Japan

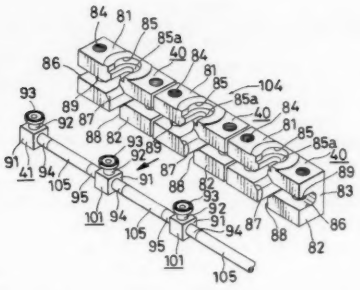
Filed May 6, 1998, Appl. No. 73,387

Claims priority, application Japan, May 8, 1997, 9-117702

Int. Cl.[7] **F16L** *3/26*

U.S. Cl. 285—61 **6 Claims**

1. A coupling for a fluid controller, the coupling being attachable to an opening portion of a downward channel of the fluid controller, the coupling comprising a holding member having an upper wall, a lower wall and a connecting wall and a tubular channel



member held by the holding member, the channel member having an upper end inserted in a through bore formed in the upper wall of the holding member to communicate with the downward channel of the fluid controller, the upper wall of the holding member being formed with screw bores for use in attaching the holding member to the fluid controller.

6,039,361

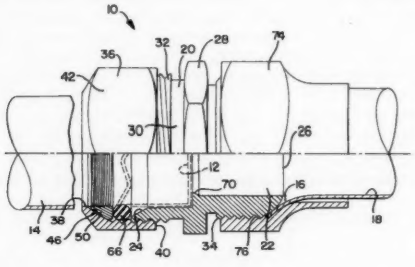
PLUMBING COMPRESSION FITTING FOR CONNECTING ENDS OF PIPE

Oswald P. J. Meli, Solihull, United Kingdom, assignor to MWM Distributors, West Midlands, United Kingdom

Filed Jan. 21, 1998, Appl. No. 10,052

Int. Cl.[7] F16L *55/00*

U.S. Cl. 285—148.19 **8 Claims**



1. A plumbing compression fitting for use in coupling a first pipe end of a first pipe to an opposing end of a second pipe, comprising:

a coupling housing defining a flow passage therethrough, and having a first pipe securing end for engaging the first end of the first pipe, and a second pipe securing end for engaging the end of the second pipe, said flow passage dimensioned to accommodate the ends of the pipes and having a first cross-sectional area;

a capture nut having an axial opening in communication with said passageway and dimensioned to accommodate the first pipe, said capture nut defining an angled annular seat and being configured to threadably engage said first pipe securing end of said coupling housing;

a grab ring dimensioned to be received in said capture nut, said grab ring having a circumference, an inner grab surface dimensioned to circumscribe the first pipe, an inclined radiused outer surface disposed to engage said angled seat, and a front surface, said grab ring defining a gap in said circumference which narrows as said capture nut is tightened upon said first pipe securing end to compressively retain the first pipe in said housing;

an O-ring dimensioned to fit between said first pipe securing end of said coupling housing and said front surface of said grab ring to provide a water tight seal between the pipe and said coupling housing;

said inclined radiused outer surface of said grab ring defining a camming surface which, when engaged by said angled seat, is subject to a force generally perpendicular to said seat, so that as said capture nut is tightened upon said first pipe securing end, said grab ring will be totally retained within said capture nut and will simultaneously move toward to engage compress said O-ring against said first pipe securing end and also tighten about the first pipe such that said grab ring remains free of engagement with said first pipe securing end.

6,039,362

CAM-OPERATED SINGLE ACTING HATCH COVER LOCK

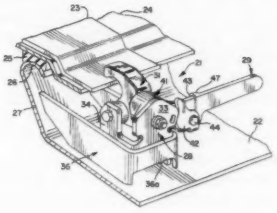
Rudolph E. Nadherny, Golden, Mo., assignor to Ireco, Inc., Chicago, Ill.

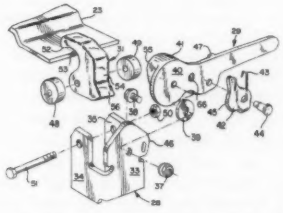
Continuation-in-part of application No. 08/794,847, Feb. 4, 1997, Pat. No. 5,785,362. This application Jul. 27, 1998, Appl. No. 122,929.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] B61D *39/00;* **E05C** *3/30*

U.S. Cl. 292—197 **17 Claims**





1. A cam-operated hatch cover lock for securing an openable roof member of a railway hopper car, the hatch cover lock comprising:

a housing member, said housing member being adapted to secure the hatch cover lock to a railway hopper car at a location therealong;

a handle member pivotally mounted to the housing member to pivot about a handle member axis, said handle member having a camming surface; and

a keeper member pivotally mounted to the housing member to pivot about an axis perpendicular to the handle member axis, a cam follower surface of the keeper member, said keeper member being adapted to retain a strapping associated with the openable roof member upon camming engagement of its said cam follower surface by said camming surface of the handle member.

6,039,363

DOOR LOCKING HANDLE ASSEMBLY OF PULL-OUT AND SIDE-SWINGING LEVER-ACTION TYPE

Atsurou Sugimura, and Yoshihide Tuno, both of Tokyo, Japan, assignors to Takigen Manufacturing Co. Ltd., Tokyo, Japan

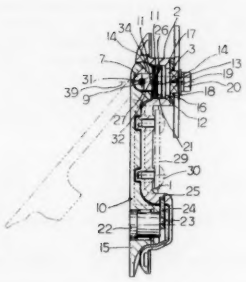
Filed Oct. 30, 1999, Appl. No. 431,038

Claims priority, application Japan, Dec. 22, 1998, 10-364724

Int. Cl.[7] E05C *3/04*

U.S. Cl. 292—202 **5 Claims**

1. A door locking handle assembly of a pull-out and side-swinging lever-action type, comprising:



a stationary casing (**1**) adapted to be fixedly mounted on a door (**8**), said stationary casing (**1**) being provided with a recess in its front surface and a cylindrical portion (**2**) in its base-end portion, wherein said cylindrical portion (**2**) projects rearward from a rear surface of said base-end portion;

a main pin (**3**) rotatably mounted in said cylindrical portion (**2**) of said base-end portion of said stationary casing (**1**) in an insertion manner, said main pin (**3**) being non-axially slidable in said cylindrical portion (**2**) and having its rear-end portion fixed to a catch plate (**6**), wherein said catch plate (**6**) is adapted to be engaged with and disengaged from a receiving portion (**5**) of a stationary frame element(**4**), and said main pin (**3**) is provided with a connecting boss portion (**7**) in its front-end portion;

a control handle (**10**) which has its base-end portion pivoted to said connecting boss portion (**7**) of said main pin (**3**) through a cross pivot (**9**) so that said control handle (**10**) is foldable into and projectable from said recess in said stationary casing (**1**), whereby said control handle (**10**) is side-swingable in its projected position;

a laminated leaf spring (**11**) constructed of a pair of an upper and a lower spring element stacked together, wherein said laminated leaf spring (**11**) is provided with a central through-hole (**12**) through which said laminated leaf spring (**11**) is fixedly mounted on said connecting boss portion (**7**) of said main pin (**3**), said upper spring element of said laminated leaf spring (**11**) being provided with a pair of upwardly protruding portions (**33**, **34**) which are diametrically opposite to each other so as to have said central through-hole (**12**) disposed therebetween, wherein a front surface of said main pin (**3**) faces a rear surface of said laminated leaf spring (**11**) and is curved rearwardly to form a concave portion (**13**);

an engaging projection (**14**) which is provided in a rear surface of said base-end portion of said control handle (**10**) and brought into abutting contact with a front surface of said laminated leaf spring (**11**), wherein after said control handle (**10**) including its grip portion (**15**) is entirely received in said recess in said stationary casing (**1**) and said engaging projection (**14**) has its top portion (**14***a*) positioned in a position oppositely disposed from said grip portion (**15**) of said control handle (**10**) with respect to a reference line (**39**) extending in a direction perpendicular to a front surface of said door (**8**), when said control handle (**10**) is pulled out of said recess in stationary casing (**1**), said top portion (**14***a*) of said engaging projection (**14**) of said control handle (**10**) moves across said reference line (**39**);

a first engaging groove portion (**31**) which is provided in a first oblique surface (**14***b*) of said engaging projection (**14**) of said control handle (**10**) and engaged with said engaging upwardly protruding portions (**33**, **34**) of said laminated leaf spring (**11**) when said control handle (**10**) projects from said stationary casing (**1**); and

a second engaging groove portion (**32**) which is provided in a second oblique surface (**14***c*) of said engaging projection (**14**) of said control handle (**10**) and engaged with said upwardly protruding portions (**33**, **34**) of said laminated leaf spring (**11**) when said control handle (**10**) folds into said recess in said stationary casing (**1**).

6,039,364

SWITCH CABINET FOR ELECTRONICS AND ELECTRICAL ENGINEERING

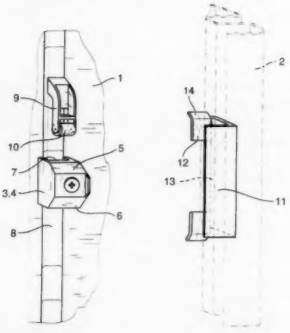
Uwe Rieger, Karlsbad; Klaus Kern, Straubenhardt, both of France, and Daniel Thomas, Seebach, Germany, assignors to Schroff GmbH, Straubenhardt, Germany

Filed Jul. 8, 1998, Appl. No. 111,807

Claims priority, application Germany, Jul. 9, 1997, 197 29 200

Int. Cl.[7] **E05C** *19/00*

U.S. Cl. 292—300 **10 Claims**



1. A switch cabinet for electronics and electrical engineering, having a door hinged at least on one side (**1**), a locking mechanism, and a centering mechanism for the level centering of the door (**1**) when closing, wherein the centering mechanism comprises a centering piece (**3**) and a catching part (**11**) which are arranged in an area of the locking mechanism on the door (**1**) or on a framework element (**2**) of the switch cabinet and interlock when closing the door (**1**), wherein the locking mechanism of the door (**1**) includes a latch member (**9**) and a retaining plate (**12**) for the latch member (**9**), and the catching part (**11**) of the centering mechanism forms the retaining plate (**12**), and wherein the latch member (**9**) is fastened on a movable locking track (**8**) and the centering piece (**3**) comprises a groove (**7**) for guidance along the locking track (**8**).

6,039,365

SEAL-LOCKING MECHANISM

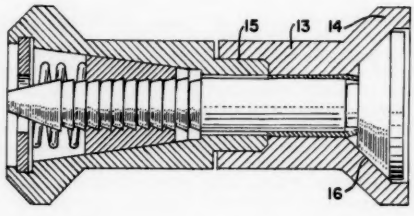
Nikolai Timofeevich Rogatnev, Russian Federation, Moscow, ulitsa Palekhskaya, 11, kv.50, Russian Federation

PCT No. PCT/RU96/00015, § 371 Date Sep. 17, 1997, § 102(e) Date Sep. 17, 1997, PCT Pub. No. WO97/27574, PCT Pub. Date Jul. 31, 1997

PCT Filed Jan. 26, 1996, Appl. No. 913,540

Int. Cl.[7] **E05B** *39/02*

U.S. Cl. 292—327 **2 Claims**



1. A seal-lock comprising:

a body having a head portion and a substantially cylindrical portion, said head portion and said cylindrical portion being

situated substantially along a longitudinal axis of the seal-lock, said cylindrical portion defining an outer cylindrical surface of said body;

a longitudinal opening in said body, said opening having a substantially cylindrical portion and a substantially conical portion, said conical portion being an inner conical portion and thereby defining an inner conical surface of said body;

a fixing element in the form of at least two separate elements, each capable of being moved along said longitudinal axis of the seal-lock and moved apart from each other in a radial direction of the seal-lock, said separate elements all together forming a substantially frustro-conical body, having an outer surface thereof defining an outer surface of said fixing element, said fixing element being situated inside said inner conical portion of said body, said separate elements of said fixing element being spring-loaded against said inner conical portion of said body such that said outer surface of said fixing element is of a shape that will mate to said inner conical surface of said body;

a shaped longitudinal through opening in said fixing element, said shaped longitudinal through opening being situated substantially along said longitudinal axis of the seal-lock and defining an inner surface of said fixing element, said inner surface having unilaterally beveled serrations;

a locking element having a head portion with a face, a substantially cylindrical middle portion, and a sharpened end, said head portion, middle portion, and sharpened end being situated substantially along said longitudinal axis of the seal-lock, a part of said cylindrical middle portion of said locking element having unilaterally beveled serrations which, when said locking element is inserted into said longitudinal opening in said body, matingly engage with said corresponding unilaterally beveled serrations of said fixing element to lock said locking element and hold said cylindrical middle portion of said locking element inside said shaped longitudinal through opening in said fixing element;

a reduced diameter annular undercut located adjacent to said head portion of said locking element;

a cylindrical bushing rotatably mounted on said locking element covering said undercut;

an information located on said face of said head portion of said locking element;

a cap having a head portion and a substantially cylindrical portion embracing said locking element, said cylindrical portion of said cap defining an outer cylindrical surface thereof and being substantially aligned with said outer cylindrical surface of said body, said head portion of said cap having an inner cavity for receiving said head portion of said locking element; and

wherein the seal-lock can be removed by breaking the locking element at its annular undercut such that the body and cap can be reused.

6,039,366

DOOR HANDLE ASSEMBLY AND METHOD OF MOUNTING

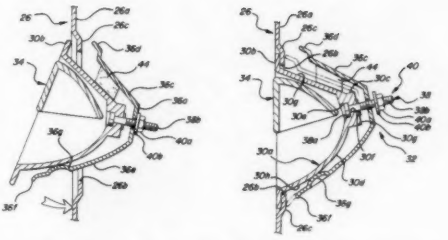
Jimmie Lewis, Rockledge, Fla., assignor to Adac Plastics, Inc., Grand Rapids, Mich.

Filed Mar. 13, 1998, Appl. No. 41,772

Int. Cl.[7] E05C *21/00*

U.S. Cl. 292—352 **7 Claims**

1. An automotive door handle assembly adapted to be mounted in an aperture defined in an outer skin of a motor vehicle door by a door flange having upper and lower edge portions and inner and outer faces, the handle assembly including:



an escutcheon plate sized to fit in the door aperture and having a main body central bowl portion and a peripheral flange extending around the bowl portion and adapted to seat against the outer face of the door flange;

a handle pivotally mounted on the escutcheon plate within the central bowl portion;

a threaded fastener device secured to the central bowl portion of the escutcheon plate and extending rearwardly therefrom;

a clip of U-configuration having a bight portion and upper and lower leg portions extending forwardly from opposite edges of the bight portion in outwardly splayed, outwardly diverging disposition relative to each other and having an aperture in the bight portion fitted over the threaded fastener device to position the clip rearwardly of the bowl portion of the escutcheon plate with the clip leg portions extending forwardly in embracing relation to the bowl portion of the escutcheon plate, the upper leg portion overlying an upper region of the bowl portion of the escutcheon plate and defining a forward clamping free edge flange for clamping engagement against the inner face of the upper edge portion of the door flange to clamp the door flange between the upper leg portion free edge flange and the peripheral flange of the escutcheon plate, the lower leg portion underlying a lower region of the bowl portion of the escutcheon plate and defining a forward clamping free edge flange for clamping engagement against the inner face of the lower edge portion of the door flange to clamp the door flange between the lower leg portion free edge flange and the escutcheon plate peripheral flange;

the handle assembly further including a resilient cushion member fitted between the upper clip leg portion and an adjacent surface of the upper region of the bowl portion of the escutcheon plate; and

the handle assembly further including slide means positioned between the lower leg portion of the clip and an adjacent escutcheon plate surface to facilitate sliding movement of the clip lower leg portion on the adjacent escutcheon plate surface in response to tightening of the fastener device.

6,039,367

OVERPAINTABLE BUMPER WITH ULTRASOUND TRANSDUCER

Harry Muller, Steinheim, and Joachim Mathes, Heilbronn, both of Germany, assignors to ITT Manufacturing Enterprises, Inc., Wilmington, Del.

PCT No. PCT/EP97/00110, § 371 Date Nov. 25, 1998, § 102(e) Date Nov. 25, 1998, PCT Pub. No. WO97/26155, PCT Pub. Date Jul. 24, 1997

PCT Filed Jan. 11, 1997, Appl. No. 117,049

Claims priority, application Germany, Jan. 20, 1996, 196 01 987

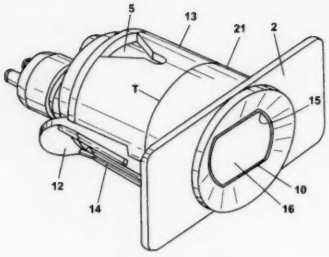
Int. Cl.[7] B60R *19/48;* **G01S** *15/93*

U.S. Cl. 293—117 **10 Claims**

1. A bumper assembly, comprising:

a bumper body,

a holder for acceptance of an ultrasound transducer wherein the holder is attached to the bumper body and has two segments and that the two holder segments are arranged in series in the longitudinal direction of the transducer where the first holder



segment which faces the bumper is connected to the bumper in one piece, and that the second holder segment which faces away from the bumper is permanently connected to the bumper.

6,039,368

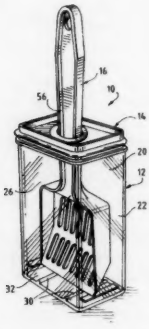
READILY CLEANABLE LITTER CLEANING SYSTEM

Karen Kowalczyk, 1405 Severn Ct., Naperville, Ill. 60565

Filed Feb. 5, 1998, Appl. No. 18,972

Int. Cl.[7] **A01K** *29/00;* **E01H** *1/12*

U.S. Cl. 294—1.3 **9 Claims**



1. A readily cleanable litter cleaning system for removing fecal matter from a litter box, the cleaning system, comprising:

a container having substantially identical front and rear panels joined by substantially identical side panels and a bottom panel, the container having a rectangular cross-section defining an open top and a liquid storage region, the container having a predetermined width along the front and rear panels and a predetermined depth along the side panels, the front, rear and side panels terminating in an upper rim;

at least one projection extending from at least one of the panels into the liquid storage region, the projection terminating in an end in spaced relation from the bottom panel;

a top cover configured for tightly fitting to the container and sealing the container front, rear and side panels at the open top, the cover defining sides and further defining an opening therein in spaced relation to the sides; and

a scoop for removing the fecal matter from the litter, the scoop having a blade portion and an elongated handle, the blade portion having a width configured for placement in the container generally parallel to the front and rear panels and fitting between the side panels, the blade portion further configured for fitting in the container with the blade resting on the at least one container projection, in spaced relation to the bottom,

wherein the container is filled with a quantity of liquid and the scoop is placed in the container and is cleanable by vigorously moving the scoop through the liquid in the container.

6,039,369

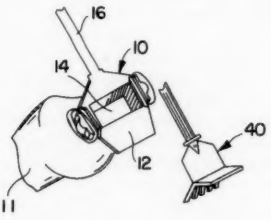
ANIMAL EXCREMENT COLLECTING DEVICE AND COLLECTING TOOL

Robert Stahovic, 708 Venango Ave., Apt. 9, Cambridge Springs, Pa. 16403

Filed Apr. 30, 1998, Appl. No. 70,074

Int. Cl.[7] **A01K** *1/01*

U.S. Cl. 294—1.4 **16 Claims**



11. A collecting structure for the receipt of animal fecal matter comprising a collecting device and a collecting tool;

said collecting device comprises a handle, a generally flat member for the receipt of said fecal matter, and bag securing means;

said handle being attached to an end of said flat member and extending outwardly therefrom;

said flat member having a chute generally centrally disposed and extending therethrough;

said bag securing means being disposed at first and second sides of said flat members adjacent said chute;

said collecting tool comprises a generally flat body member having a first end and a second end, a handle attached to the first end, the second end having a scraping tool extending outwardly therefrom in a first direction, the second end having a raking tool extending outwardly therefrom in a second direction;

a first and second bag securing means each comprises an inner member and an outer member spaced from each other and supported generally parallel to each other;

the first and second bag securing means each further comprise a restricting portion at each end of the outer member whereby a bag portion can be positioned therein and, secured thereby;

the restricting portions comprise a portion of the outer member that extends at an acute angle relative to the inner member forming a wider gap at its outer extreme and a narrower gap at its inner extreme whereby a bag portion may be secured therein.

6,039,370

APPARATUS FOR CAPTURING AND DISPOSING OF ANIMAL LITTER

John C. Dooley, Jr.; Karen R. Meyerson, and John C. Dooley, III, all of 19 Baldwin St., Pennington, N.J. 08534

Filed Jan. 28, 1999, Appl. No. 239,489

Int. Cl.[7] **A01K** *29/00*

U.S. Cl. 294—1.5 **19 Claims**

1. A portable pet toilet device comprising:

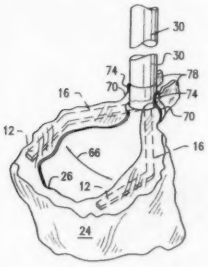
an elongated pole having a first end serving as a handle, and a second end;

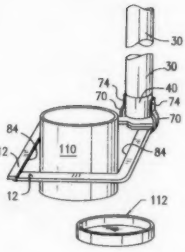
a rod;

means for securing said rod to said second end of said pole, with said rod protruding axially away from said second end;

first and second V-shaped arms, each having flat top and bottom surfaces which are substantially wider than the thickness thereof, each having one end with a through hole for mounting onto said rod and being positioned with an inside corner portion of each arm in opposition to one another, and each having a free end configured for holding a receptacle; and

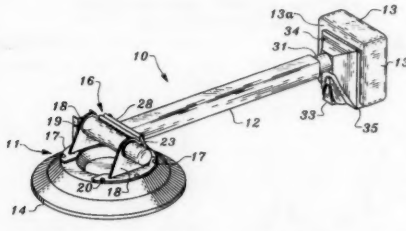
means for retaining said first and second arms on said rod in a fixed position, including means for selectively adjusting the





distance between said first and second arms to accommodate the size of said receptacle to be retained by said arms with said receptacle in an open configuration.

6,039,371
VACUUM STRETCHING AND GRIPPING TOOL AND METHOD FOR LAYING FLOORING
Mark Smith, P.O. Box 1091, San Andreas, Calif. 95249
Filed Aug. 4, 1997, Appl. No. 905,653
Int. Cl.[7] A47G *27/04;* **B25B** *25/00*
U.S. Cl. 294—8.6 **26 Claims**



1. A tool for applying flooring configured as non-textile sheet goods, comprising in combination:

a resilient vacuum suction means placed on the flooring for evacuating air from said vacuum suction means, thereby fastening by flattening said vacuum suction means onto the flooring;

an arm having first and second ends, said first end coupled to said vacuum suction means, extending above the flooring and spaced therefrom;

a pad affixed to said second end whereby the flooring is conformably deployed by moving the flooring in a plane parallel and in tangential registry to an underlying substrate by applying force parallel to the substrate through said pad.

6,039,372
GRILL LIFTING TOOL
Reginald J. Noe, and Toni S. Stroud, both of 611 S. Carbon, Girard, Kans. 66743
Filed Dec. 2, 1998, Appl. No. 204,665
Int. Cl.[7] A47J *45/10*
U.S. Cl. 294—10 **20 Claims**

1. A lifting tool for a grate having a plurality of spaced apart bars therein, said tool comprising:

a handle having a proximal end and a distal end relative to a user;

a head at said distal end of said handle, said head presenting an upper surface and a lower surface;

a first slot in said head adapted to receive at least two bars of the grate therein, said first slot presenting upper and lower surfaces positioned on opposed sides of the at least two grate bars in said first slot; and

a second slot in said head and in communication with said first slot, said second slot generally extending from said upper surface of said first slot for capturing one of the grate bars therein upon a user lifting at said handle proximal end, whereby to raise said head and grate captured therein.

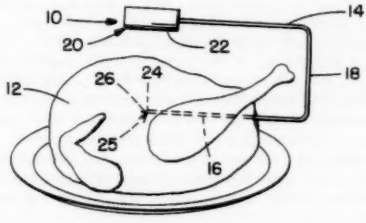
DEVICE FOR LIFTING AND HANDLING FOWL OR MEAT
Lois Horn, 33 Old Field Hill Rd., Southbury, Conn. 06488
Filed Dec. 12, 1997, Appl. No. 989,718
Int. Cl.[7] B65G *7/12*
U.S. Cl. 294—15 **12 Claims**



1. A device for facilitating the lifting and handling of a fowl or body of meat, which comprises:

an elongated upper shaft having a proximal end and a remote end, the proximal end including grasping means,

an elongated lower shaft for insertion into and for supporting the fowl or body of meat, the lower shaft having a distal end portion and a remote end, the distal end portion being located below and parallel to the grasping means, the distal end portion including contact means located directly below a center of gravity of the grasping means of the upper shaft when contacting an internal portion of the fowl or body of meat,

connecting means for connecting the remote ends of the shafts, the lower shaft being spaced from and below the upper shaft such that upon insertion of the lower shaft into the fowl or body of meat, a lifting force imparted to the grasping means brings the contact means into contact with an internal portion of the fowl or body of meat which is directly below the center of gravity of the grasping means; and

wherein (i) centerlines of said elongated upper shaft, elongated lower shaft, distal end portion and connecting means are all positioned in a common plane and (ii) the contact means of the lower shaft includes fixation means for fixing the contact means to the fowl or body of meat to prevent movement of the same off the fixation means during lifting and handling.

SUSPENDED COUPLING FOR LIFTING DEVICES, PARTICULARLY FOR PICKING UP AND DEPOSITING THERMAL INSULATION HOODS

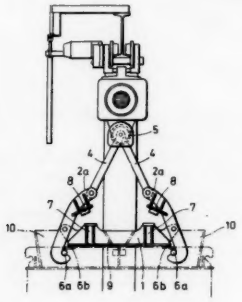
Dieter Klein, Siegen, Germany, assignor to SMS Schloemann-Siemag Aktiengesellschaft, Düsseldorf, Germany

Filed Jul. 15, 1998, Appl. No. 115,801

Claims priority, application Germany, Jul. 16, 1997, 297 12 552 U

Int. Cl.[7] **B66C** *1/28*

U.S. Cl. 294—67.31 **3 Claims**



1. A suspended coupling for lifting devices for picking up thermal insulation hoods from wire coils and for placing thermal insulation hoods over wire coils, the coupling comprising a crossbeam having ends, and double arm lever pairs pivotally hinged in a mirror-inverted manner to the ends of the crossbeam, wherein each lever pair comprises an upper first lever arm pair located above the crossbeam and adapted to be connected through connecting rods to the lifting device, and a second lever arm pair located below the crossbeam and having hook-shaped ends, wherein the hook-shaped ends are adapted to be coupled to support projections arranged at an upper side of the thermal insulation hood by moving the hook-shaped ends toward each other by a pulling movement transmitted to the double lever pair by lifting the connecting rods, further comprising pull-type electromagnets and corresponding armatures, wherein the pull-type electromagnets are mounted on the crossbeam and the armatures are respectively mounted on both lever arms of the upper first lever arm pair opposite the pull-type electromagnets, wherein, in a switched-on pulling position, the electromagnets and the armatures hold the upper lever arm pair and the crossbeam in a locked position relative to each other and hold the hook-shaped ends of the lower lever arm pair out of the coupling position from the support projections.

6,039,375

GRIPPER ASSEMBLY WITH INTEGRATED HEAT SHIELD

Thomas C. Bauman, North Prairie, Wis., assignor to ABB Flexible Automation, Inc., New Berlin, Wis.

Filed Jan. 28, 1998, Appl. No. 14,199

Int. Cl.[7] **B25J** *15/00*

U.S. Cl. 294—119.1 **25 Claims**

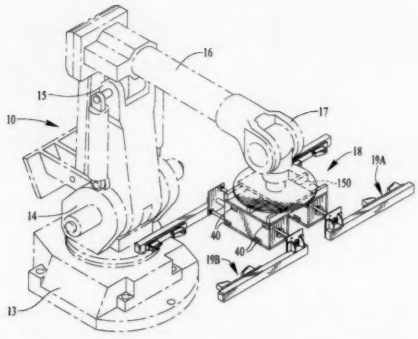
1. An end effector for use with an industrial robot and for grasping a heated object the end effector comprising:

a shell having an interior portion and at least one opening through which a gas may flow into and out of the interior portion of the shell;

two actuators individually mounted to the shell, the shell substantially surrounding and in spaced relation to the actuators;

a jaw coupled to each actuator; and

at least one guide coupled to each jaw, each guide coupled to the shell and for bearing the weight of the jaw coupled to each actuator;



wherein the shell is effective to maintain the actuators at a temperature that is at least about 500° F. less than the temperature of the heated object grasped by the end effector, but not less than the ambient temperature.

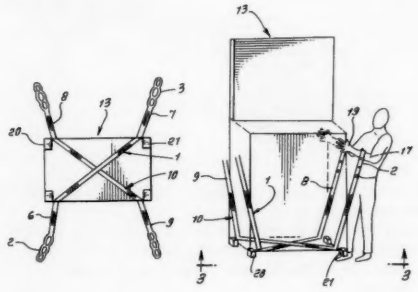
FOREARM FURNITURE LEVERAGE STRAPS

Mark Anthony Lopreiato, 400 N. El Molino Ave., Apt. E, Pasadena, Calif. 91101

Filed Nov. 25, 1997, Appl. No. 977,976

Int. Cl.[7] **B65D** *63/18*

U.S. Cl. 294—152 **10 Claims**



1. Load carrying apparatus, comprising, in combination:

a) first and second elongated straps having end portions,

b) multiple loops at each end portion, and located in planes defined by said end portions and spaced along the length of the strap, to define multiple openings, located in said planes,

c) each strap having a mid-portion located between said strap end portions, and mid-portions of the two straps located to extend under a load to be carried,

d) whereby the user can select which of the loops is to be extended over his forearm, for lifting the load by lifting force exertion to lift said strap mid-portions.

6,039,377

PORTABLE EMERGENCY CARE FACILITY

Charles H. Eberspacher, 2 NW. 61st Ter., Gladstone, Mo. 64188

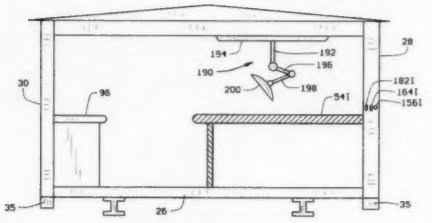
Continuation-in-part of application No. 08/650,467, May 20, 1996, Pat. No. 5,775,758. This application Jul. 6, 1998, Appl. No. 110,211.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **B60P** *3/14;* **A61G** *3/00*

U.S. Cl. 296—24.1 **4 Claims**

1. A portable emergency care facility comprising:



an elongate enclosure having first and second ends and two opposing long walls extending between the first and second ends;

a plurality of wheels on the enclosure to facilitate transporting the facility;

a plurality of treatment tables extending from at least one of the long walls toward the center of the enclosure, each of the treatment tables being sufficiently spaced form the others to allow patient access on both sides of the treatment tables; and

a surgical light mounted over at least one of said treatment tables.

6,039,378

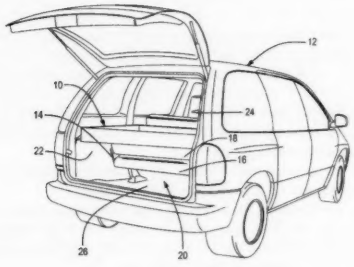
CARGO TRAY FOR A MOTOR VEHICLE

Gary M. Bailey, Stockbridge, Mich., assignor to Chrysler Corporation, Auburn Hills, Mich.

Filed Jul. 15, 1998, Appl. No. 115,936

Int. Cl.[7] B60R *7/00*

U.S. Cl. 296—37.16 **14 Claims**



1. In combination with a motor vehicle including an occupant seat and a cargo area defined by a floor and first and second spaced apart vehicle sidewalls, the occupant seat having a fold-down seatback supported for movement between an upright position and a folded position in which the seatback provides a substantially horizontal surface, the improvement comprising a storage device including a bottom surface and a plurality of storage sidewalls interconnected to said bottom surface, the bottom surface operatively attached to the occupant seat, said storage device movable to a stowed position in which said bottom surface is positioned substantially flush against the seatback and an operative position in which said bottom surface cooperates with the substantially horizontal surface of the seatback to provide an elevated support surface extending rearward from the occupant seat, each storage sidewall of said plurality of storage sidewalls foldable so as to be oriented parallel to said bottom surface when said storage device is in said stowed position and perpendicular to said bottom surface when said storage device is in said operative position.

6,039,379

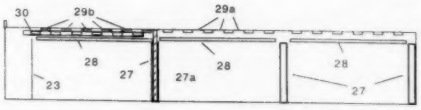
SECURITY COVER FOR PICK-UP TRUCK BEDS

Hakikta Najin Jordan, HC04 Box 9130, Palmer, Ak. 99645

Division of application No. 08/934,822, Sep. 22, 1997. This application Jun. 16, 1999, Appl. No. 334,198.

Int. Cl.[7] B62D *33/02*

U.S. Cl. 296—37.6 **3 Claims**



1. A covering system for a pick-up truck bed, having two oppositely side walls, comprising:

a) A bed liner, removably installed within said pick-up truck bed, said bed liner having a floor, a front wall, and two oppositely disposed sides, said bed liner being shaped to fit a pick-up truck bed;

b) a lower pair of horizontal rails, fixedly attached to the sides of said bed liner, said lower pair of horizontal rails being coplanar and being oppositely disposed on said sides;

c) an upper pair of horizontal rails, fixedly attached to the sides of said bed liner, said upper pair of horizontal rails being coplanar and being oppositely disposed on said sides, said upper pair of horizontal rails further including a plurality of slots formed therein;

d) at least one pair of vertical channels, fixedly attached to said sides, wherein said pair of vertical channels are aligned in a single plane;

e) at least one cover plate, having a plurality of tabs formed thereon, such that said tabs align with said slots in said pair of upper rails, and further such that when said tabs align with said slots in said upper rail, said cover plate passed through said pair of upper rails and rests on said pair of lower rails, and further such that when said cover plate rests on said pair of lower horizontal rails, said cover plate is slidably engaged on said pair of lower horizontal rails;

f) a rear plate, slidably engaged in said pair of vertical channels and further such that said rear plate abuts said cover plate; and

g) a means for lockably securing said cover plate to said rear plate.

6,039,380

KNEE RESTRAINT DEVICE FOR VEHICLES

Alexander Heilig, Wissgoldingen, and Dirk Schultz, Schwäbisch Gmünd, both of Germany, assignors to TRW Occupant Restraitn Systems GmbH & Co. KG, Alfdorf, Germany

Filed Jun. 15, 1998, Appl. No. 94,954

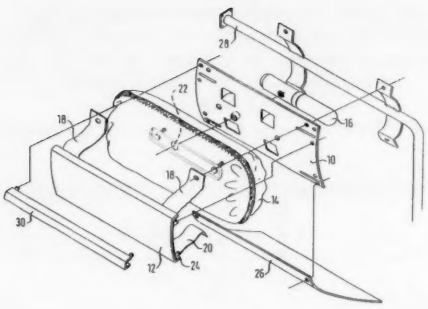
Claims priority, application Germany, Jun. 19, 1997, 297 10 745 U

Int. Cl.[7] B62D *25/14*

U.S. Cl. 296—70 **10 Claims**

1. A knee restraint device for vehicles, comprising:

a base, a knee protector component which is movable towards the knees of a vehicle occupant, a drive means which is arranged between said base and said knee protector component, and catching and positioning means which control a movement path of said knee protector component at least in an up/down direction relative to the vehicle and which, in limits of travel of said drive means, define a predetermined end position of said knee protector component in space, wherein said catching and positioning means are arranged



outside said drive means and said drive means loosely engages said knee protector component.

6,039,381

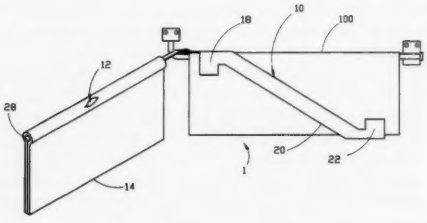
CLIP-ON SIDE SUN VISOR

Andrew W. Klauer, 1104 Mistletoe La., Winneconne, Wis. 54986

Filed Sep. 14, 1999, Appl. No. 395,857

Int. Cl.[7] B60J *3/00*

U.S. Cl. 296—97.6 **14 Claims**



1. A clip-on side sun visor for attachment to a front sun visor of a vehicle comprising:

an attachment device having a downward facing clip on a first end and an upward facing clip on a second end thereof, said downward and upward facing clips being attached to the front sun visor of a vehicle; and

a side sun visor being pivotally attached to said first end of said attachment device such that said side sun visor may be pivoted relative to the front sun visor.

6,039,382

FOLDING TOP FOR A MOTOR VEHICLE

Carl Mather, Lake Orion; Douglas J. Quigley, Rochester Hills, and Glen M. Kondratek, Sterling Heights, all of Mich., assignors to Chrysler Corporation, Auburn Hills, Mich.

Filed Jan. 5, 1998, Appl. No. 2,599

Int. Cl.[7] B60J *7/12*

U.S. Cl. 296—107.01 **7 Claims**

1. In combination,

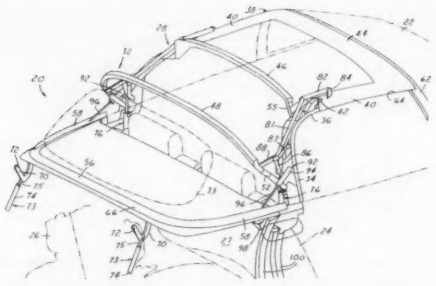
a convertible motor vehicle having a seat, an open-top storage compartment at the rear of said seat, and a tonneau movable from open to closed position relative to the open top of the storage compartment,

a folding top for the vehicle,

said top comprising a flexible, foldable cover,

a frame for supporting said cover,

said frame comprising a pair of laterally spaced apart generally upright side rails,



a roof bow of generally U-shape comprising laterally spaced apart side bars pivotally connected to said respective side rails,

a deck bow of generally U-shape comprising laterally spaced apart side bars pivotally connected to said respective side rails,

a header of generally U-shape comprising a pair of laterally spaced apart side bars pivotally connected to said respective side rails,

said frame being movable to a deployed position in which said roof bow extends upwardly and rearwardly from the pivotal connection of its side bars to said side rails, said deck bow extends rearwardly from the pivot connection of its side bars to said side rails, and said header extends forwardly from the pivotal connection of its side bars to said side rails to support said cover in a position of use,

said frame being movable to a retracted position for storage of said folding top in which said roof bow is pivoted forwardly about the pivotal connection of its side bars to said side rails to a position in which the side bars of said roof bow are generally upright alongside the generally upright side rails in which said deck bow is pivoted upwardly about the pivotal connection of its side bars to said side rails to a position in which the side bars of said deck bow are generally upright alongside the generally upright side rails, and said header is pivoted rearwardly about the pivotal connection of its side bars to said side rails to a generally horizontal position over and above said generally upright side rails, said generally upright roof bow and said generally upright deck bow,

means for moving said frame from the deployed position to the retracted position thereof,

means for moving said tonneau to its open position relative to the open top of said storage compartment,

means for lowering said folding top, when said frame is in its retracted position, into said compartment while maintaining said side rails, roof bow, and deck bow generally upright and said header generally horizontal, and

means for moving said tonneau to its closed position relative to the open top of said storage compartment after lowering thereinto of the folding top.

6,039,383

ROOF CONSTRUCTION FOR A MOTOR VEHICLE

Arno Jambor, Vaihingen, and Oliver Wagner, Filderstadt, both of Germany, assignors to DaimlerChrysler AG, Stuttgart, Germany

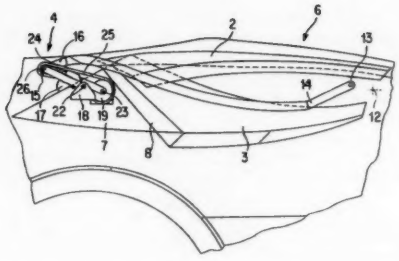
Filed Aug. 27, 1997, Appl. No. 917,730

Claims priority, application Germany, Aug. 27, 1996, 196 34 510

Int. Cl.[7] B60J *7/08*

U.S. Cl. 296—108 **8 Claims**

1. Roof construction for a motor vehicle comprising a dimensionally stable forward roof part which, in a closed operating position thereof, adjoins a windshield frame of a body of the vehicle, a dimensionally stable rearward roof part configured to form C-column sections and be provided with a rear window, the



forward and rear roof parts being swivellably connected with one another, a control mechanism for moving the forward and rear roof parts between a lowered inoperative position and a closed operative position, the rearward roof part, in the lowered inoperative position thereof, being swivelled about a horizontal transverse axis such that rearward ends of the C-column sections, as viewed in a longitudinal direction of the motor vehicle, have free ends which project toward the front of the motor vehicle, wherein, at least in the lowered inoperative position of the C-column sections, at least along a portion of the length of the C-column sections, starting from the rearward ends thereof, wherein the free ends of the C-column sections are free of transverse connection therebetween, and control devices for forward displacement of the rearward roof part in the longitudinal direction are operatively arranged such that, in the inoperative position, the C-column sections at least partially laterally flank a rear area of an interior portion of the motor vehicle.

6,039,384

DOOR SHELL OF A VEHICLE

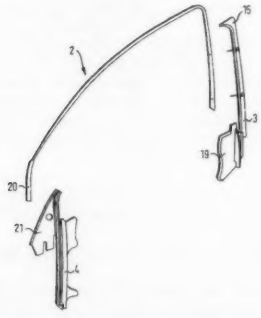
Martin Schulte, Balve, and Ulrich Levermann, Neuenrade-Blintrop, both of Germany, assignors to Schade GmbH & Co. KG, Plettenberg, Germany

Filed Nov. 12, 1998, Appl. No. 191,103

Claims priority, application Germany, Nov. 13, 1997, 197 50 343; Jul. 1, 1998, 198 29 457

Int. Cl.[7] **B60J** *5/04*

U.S. Cl. 296—146.2 **13 Claims**



1. A door shell of a motor vehicle, comprising:

a door housing having an A pillar and a B pillar;

a window frame formed by a shaped profile, the shaped profile having a uniform width along its length, a cross-section, an upper region positioned so as to be spaced above the door housing, a first side corresponding to the A pillar, and a second side corresponding to the B pillar;

a first sheet blank attached to the upper region of the profile at the first side and extending toward the door housing from the upper region of the profile, the first sheet blank being connected to the A pillar of the door housing; and

a second sheet blank attached to the upper region of the profile at the second side and extending toward the door housing from the upper region of the profile, the second sheet blank being connected to the B pillar of the door housing, and wherein the first and second sheet blanks increase in width from the upper region of the profile toward the door housing so as to provide a contact surface area with the door housing having a width greater than the width of the profile.

6,039,385

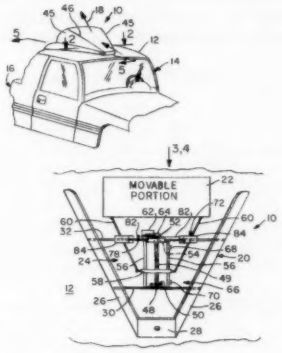
RETRACTABLE AIR DEFLECTOR FOR A VEHICLE

Myron J. Husted, P.O. Box 7, Sasabe, Ariz. 85633

Filed Mar. 16, 1998, Appl. No. 39,935

Int. Cl.[7] **B62D** *35/00*

U.S. Cl. 296—180.3 **30 Claims**



1. A retractable air deflector for mounting to a roof of a cab of a vehicle and for selectively deflecting approaching air upwardly thereover, comprising:

a) a stationary frame for mounting to a roof of a cab of a vehicle; said stationary frame comprising a pair of side walls being straight and upwardly-inwardly inclined and joined transversely at their forward ends by a forward plate;

b) a movable portion movably mounted to said stationary portion and having an up position and a down position; and

c) first means for selectively moving said movable portion relative to said stationary frame through said up and down positions.

6,039,386

FLOOR STRUCTURE OF A VEHICLE

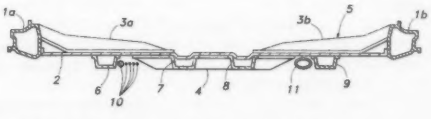
Suehiro Hasshi, and Toshiki Takahashi, both of Wako, Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Mar. 20, 1998, Appl. No. 45,122

Claims priority, application Japan, Mar. 24, 1997, 9-088960; Mar. 24, 1997, 9-088961

Int. Cl.[7] **B60J** *7/00*

U.S. Cl. 296—185 **6 Claims**



1. A floor structure of a vehicle, comprising:

left and right side sills;

a substantially flat floor panel extending between the left and right side sills; and

a cross member for connecting the left and right side sills,

wherein the cross member comprises left and right upper members which extend inwardly from the left and right side sills, respectively, and are attached to a top surface of the floor panel having opposing inward end portions spaced from each other, and a lower member, having end portions, extending laterally across a part of a lateral length of the vehicle and attached to an under surface of the floor panel, wherein the end portions of said lower member overlap the end portions of said left and right upper members.

6,039,387

REINFORCEMENT DEVICE FOR SIDE DOORS OF AUTOMOBILES

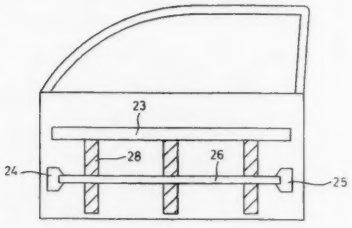
Kuk-Sun Choi, Kyunggi-Do, Rep. of Korea, assignor to Hyundai Motor Company, Seoul, Rep. of Korea

Filed Dec. 16, 1997, Appl. No. 991,252

Claims priority, application Rep. of Korea, Dec. 16, 1996, 96-66440

Int. Cl.[7] B60J *5/04*

U.S. Cl. 296—188 **3 Claims**



1. A reinforcement device for side doors of automobiles, each door having spaced inner and outer panels defining a cavity therebetween, the reinforcement device comprising an impact bar mounted to the outer panel, and an upper reinforcement member mounted to said outer panel at a position above the impact bar, the improvement comprising:

a plurality of U-shaped first reinforcement members in said cavity between the inner and outer panels;

said first members fitted between the inner and outer panels at regularly spaced positions and the recess part of said first members engages the impact bar;

a plurality of second reinforcement members secured along a longitudinal center line of inner surfaces of each of the first members; and

upper sub-reinforcement members formed by bends in top portions of said first members contiguous to the outer panel and secured to said upper reinforcement member.

6,039,388

HOOD OVERSLAM BUMPER FOR AUTOMOBILES

Guk-Sun Choi, Kyunggi-do, Rep. of Korea, assignor to Hyundai Motor Company, Seoul, Rep. of Korea

Filed Oct. 16, 1997, Appl. No. 951,408

Claims priority, application Rep. of Korea, Oct. 18, 1996, 96-46922

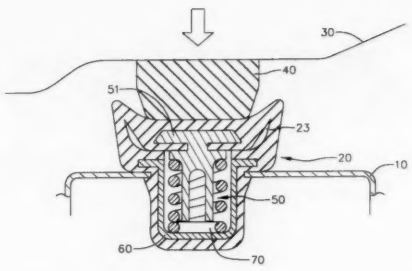
Int. Cl.[7] B60J *5/02*

U.S. Cl. 296—207 **6 Claims**

1. The combination of a hood overslam bumper, a chassis and a hood of an automobile, comprising:

a first bumper member mounted to a lower surface of the hood and having elasticity; and

a second bumper member which comprises a compressible cushion member mounted to a top surface of an upper member of the chassis at a position corresponding to said first bumper member, thus being brought into elastic contact with the first



bumper member when the hood is slammed down, said cushion member being hollow, thus having a cavity; a rod interiorly set in a top center of said hollow cushion member and vertically extending downward within said cavity of the cushion member; a cup-shaped housing set in said hollow cushion member, thus defining a lower portion of the cavity and structurally supporting the cushion member; and a biasing member positioned in said cavity of the cushion member and being stopped by the rod and the housing, thus normally biasing a top wall of said cushion member upwardly.

6,039,389

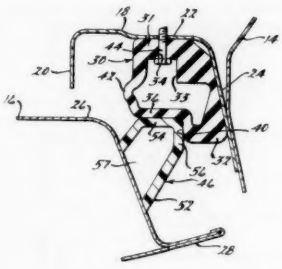
STABILIZATION SYSTEM FOR LIFTGATE

Dave R. Monette, Eastpointe, and Randall D. Kirk, Waterford, both of Mich., assignors to Chrysler Corporation, Auburn Hills, Mich.

Provisional application No. 60/068,388, Dec. 22, 1997, abandoned. This application Feb. 9, 1998, Appl. No. 21,007.

Int. Cl.[7] B60J *5/00*

U.S. Cl. 296—207 **20 Claims**



1. A stabilization system for stabilizing an openable member relative to vehicle structure of a motor vehicle when in a closed position comprising:

a first member for mounting on either the openable member of the vehicle structure;

a second member for mounting on the other of the openable member or the vehicle structure;

said first member having a generally solid base portion for mounting on the one of the openable member and the vehicle structure and a generally hollow outer portion;

said second member having a base portion for mounting on the other one of the openable member or the vehicle structure and a tapered outer portion, said tapered outer portion being pressed against said hollow outer portion of said first member when the openable member is in the closed position such that said hollow outer portion winks over said tapered outer portion of said second member and secures said second member thereagainst to prevent movement of said second member in at least two directions with respect to said first member.

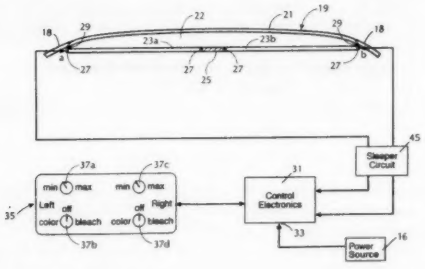
CHROMOGENIC WINDOW ASSEMBLY CONSTRUCTION AND OTHER CHROMOGENIC DEVICES

Anoop Agrawal; Juan Carlos Lopez Tonazzi; Robert Steven LeCompte, all of Tucson, Ariz.; Carl Baertelin, Santa Barbara, Calif., and Douglas Alan Fischer, Grand Rapids, Mich., assignors to Donnelly Corporation, Mich.

Continuation-in-part of application No. 08/699,940, Aug. 20, 1996, abandoned. This application Aug. 20, 1997, Appl. No. 914,876.

Int. Cl.[7] **B60J** *1/20*

U.S. Cl. 296—211 **63 Claims**



1. A chromogenic window panel assembly to be installed in a surface having a surface contour and subject to exposure to a solar radiation source, comprising:

a chromogenic member having an optical property which varies according to an applied signal; and

a light-transmissive outer panel substantially spaced from said chromogenic member, said outer panel being dimensioned and disposed so as to overlap at least a substantial part of the chromogenic member, and having a non-flat surface substantially following the surface contour, wherein said outer panel is disposed between said solar radiation source and said chromogenic member when said window panel assembly is installed in said surface, wherein said chromogenic member comprises a flat, electrochromic member.

6,039,391
HATCH ROOF ATTACHING CONSTRUCTION FOR A T-BAR ROOF CAR

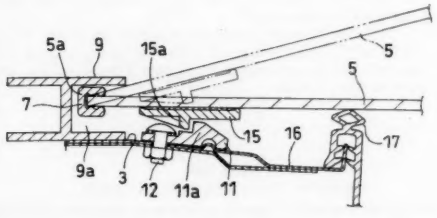
Tomoki Takahashi, Hamamatsu, Japan, assignor to Suzuki Motor Corporation, Hamamatsu, Japan

Filed Jul. 10, 1996, Appl. No. 676,637

Claims priority, application Japan, Aug. 15, 1995, 7-207950

Int. Cl.[7] **B60J** *7/11*

U.S. Cl. 296—218 **6 Claims**



1. A hatch roof attaching construction for a T-bar roof car in which an automotive roof is formed with a pair of openings at the right and left of a roof center provided at the center of the roof and detachable hatch roofs are formed at the openings so as to be opened/closed, comprising:

a center hook provided at the roof center having concaves formed at both sides thereof to accommodate the inside edges of the corresponding detachable hatch roofs;

a weather strip mounted at the edge of each of the openings, said weather strip abutting the underside surface of the corresponding hatch roof when the hatch roof is in the closed position; and

at least one pair of engaging members corresponding to each of the detachable hatch roofs, each pair of engaging members comprising first and second engaging members each of said engaging members comprising a claw, said first engaging member being mounted to the upper surface of the roof center in a predetermined position, said second engaging member being mounted on the underside surface of the hatch roof in a predetermined position such that said claws of said first and second engaging members engage with each other in the car width direction when the detachable roofs are in the closed position so that said roofs are reliably positioned in the car width direction with said inside edges thereof being secured in said concaves of said center hook.

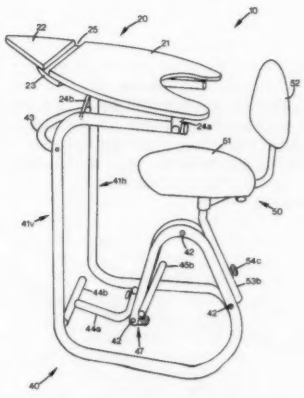
Int. Cl.[7] **A47B** *39/00*

U.S. Cl. 297—172 **16 Claims**



1. A desk including a desk top attached to a frame comprising:

a forward book support surface having an equilateral triangle shape, the support surface being movable between a raised position and a lowered position about a pivot point at a base of the Support surface, the support surface having sides and a rear edge, each side forming a front side edge of the desk top when the support surface is in the lowered position;

a writing surface attached to the base of the support surface, the writing surface having opposite side edges, each side edge having a convex shape that coincides with a periphery of an imaginary circle, the support surface being disposed inside the imaginary circle when the support surface is in the raised position, the support surface having a front portion extending outside the periphery of the imaginary circle when the support surface is in the lowered position; and the writing surface having a straight front edge that is parallel with the base and the writing surface has outwardly curved side edges that form rear side edges of the desk top.

6,039,393

PROTECTIVE COVER FOR BABY SEATS

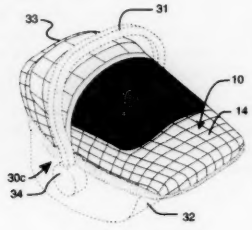
Warren E. Roh, 7753 S. Ames Way, Littleton, Colo. 80123

Continuation of application No. PCT/US96/15553, Sep. 27, 1996, which is a continuation-in-part of application No. 08/593,074, Jan. 29, 1996, abandoned. This application Apr. 15, 1998, Appl. No. 73,002.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **A47D** *15/00*

U.S. Cl. 297—184.13 **24 Claims**



1. A method of protecting an occupant of a baby seat with a self-supporting protective cover comprising:

a. covering a space over a baby seat with a canopy supported by a laterally collapsible support element disposed across said canopy and removable with said canopy;

b. attaching said canopy at least partially around said baby seat with a seal attached to said canopy;

c. resisting an entry of insects flying into said space through said canopy and around said baby seat adjacent said canopy; and

d. allowing air flow through a material on at least a portion of one side of said canopy while resisting said entry of said insects.

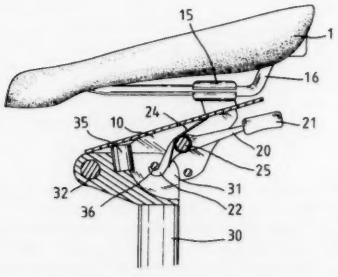
PIVOTABLE SEAT STRUCTURE FOR A BICYCLE

Tian-Chu Chen, Shen Kang Hsiang, Taiwan, assignor to Kalloy Industrial Co., Ltd., Taichung Hsien, Taiwan

Filed Jul. 20, 1999, Appl. No. 356,901

Int. Cl.[7] **B62J** *1/00*

U.S. Cl. 297—195.1 **6 Claims**



1. A pivotable seat structure for a bicycle comprising: a seat post including a block formed on the top thereof, the block having a front end, a rear end and two sides, a positioning post passing through the rear end of the block, an abutting flange formed on each of the two sides of the block, and an elastic pad mounted on the middle of the block; a substantially inverted U-shaped supporting bracket abutting the abutting flange and defining a receiving space for receiving the block, the supporting bracket having a front end pivotally mounted on the front end of the block and a rear end having a side wall defining a sector slot; a substantially inverted V-shaped driver pivotally mounted in the receiving space and having a front end formed with a hook detachably urged on the positioning post and a rear end passing through the sector slot and formed with a press block; a torsion spring mounted in the receiving space and having a front end abutting the front end of the driver for forcing the hook to urge on the positioning post, and a rear end urged on the bottom of the supporting bracket; and a seat fixedly mounted on the supporting bracket.

6,039,395

BICYCLE SADDLE

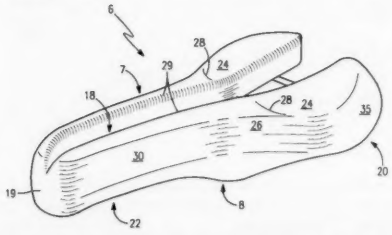
Russell D. Culbertson, Austin, Tex., assignor to Wabuco, Austin, Tex.

Continuation-in-part of application No. 09/028,617, Feb. 24, 1998, Pat. No. 5,918,931, Provisional application No. 60/038,474, Feb. 24, 1997. This application Jul. 6, 1999, Appl. No. 347,939.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **B62J** *1/00*

U.S. Cl. 297—202 **12 Claims**



10. In a bicycle saddle having a central opening adapted to align generally with a central portion of the perineal opening of the cyclist's pelvic bone, the improvement comprising:

(a) a right ridge support surface extending laterally on a right side of the saddle at a swept back angle with respect to a plane perpendicular to a longitudinal axis of the saddle;

(b) a left ridge support surface extending laterally on a left side of the saddle at the swept back angle with respect to a plane perpendicular to the longitudinal axis of the saddle;

(c) a right aft support surface positioned toward a rear of the saddle with respect to the right ridge support surface, the right aft support surface including a surface adapted to align generally with the right tuberosity of the cyclist's ischium when the cyclist is seated on the saddle;

(d) a left aft support surface positioned toward the rear of the saddle with respect to the left ridge support surface, the left aft support surface including a surface adapted to align generally with the left tuberosity of the cyclist's ischium when the cyclist is seated on the saddle;

(e) a right nose portion extending forwardly from an inside edge of the right ridge support surface;

(f) a left nose portion extending forwardly from an inside edge of the left ridge support surface;

(g) a right forward surface positioned toward the front of the saddle with respect to the right ridge support surface, the right forward surface extending along at least a portion of the right ridge support surface; and

(h) a left forward surface positioned toward the front of the saddle with respect to the left ridge support surface, the left forward surface extending along at least a portion of the left ridge support surface.

BICYCLE SEAT AND SEAT COVER

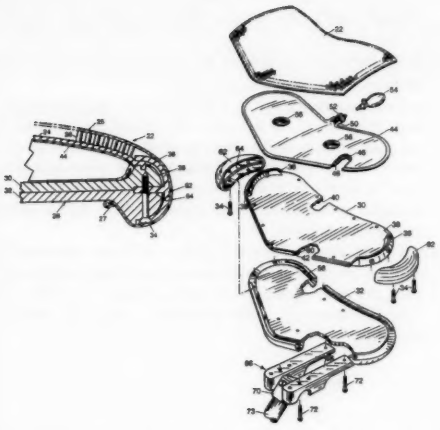
Paul Muser, Oakville, Canada, assignor to Supima Holdings Inc., Oakville, Canada

Filed Mar. 5, 1997, Appl. No. 811,659

Int. Cl.[7] **B62J** *1/18*

U.S. Cl. 297—214 **3 Claims**

1. A seat having a supporting base and a covering, the covering having a planar base sheet made of resilient material disposed over



the supporting base and a plurality of resilient spaced columns integrally formed with said base sheet, each of the columns having a wide end adjacent to the base sheet and a free narrow end remote from the base sheet, each of the columns extending outwardly on one side of the base sheet away from said supporting base, said columns being adapted to create a flow path for ambient air to flow around and within free spaces defined between the columns, and to flex independently from one another and to converge together or diverge from one another in response to the movement or anatomy of a person, so that friction resulting from relative movement between the covering and a person is minimized.

6,039,397

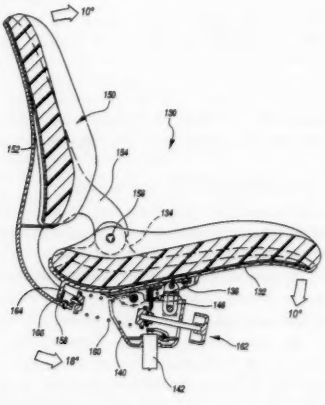
TILT BACK CHAIR CONTROL

Jonathan Ginat, 26 W. 9th St., New York, N.Y. 10011

Division of application No. 08/481,718, Jun. 7, 1995, Pat. No. 5,725,276. This application Mar. 6, 1998, Appl. No. 36,703.

Int. Cl.[7] A47C *3/00*

U.S. Cl. 297—289 **7 Claims**



1. A chair comprising:

a seat member;

a bracket assembly mounted to said seat member and having means for connection of said seat member to a base pedestal, said bracket assembly further including pivot means for pivotable movement of said seat member relative to said base pedestal;

a pair of back support brackets each connected to said seat member along opposite edges thereof and extending upwardly from said seat member;

a back member; and

means for pivotably connecting said back member to said back support brackets, said means including a pair of arms each extending forwardly of said chair from a side of said back member wherein said back member is pivotable about an axis lying above the seat member.

6,039,398

DEVICE FOR ADJUSTING THE INCLINATION OF THE BACK-REST RELATIVE TO THE SEATING PORTION IN CHAIRS IN GENERAL

Claudio Gorgi, and Claudio Taverna, both of Rossano Veneto, Italy, assignors to Imarc S.p.A., Rossano Veneto, Italy

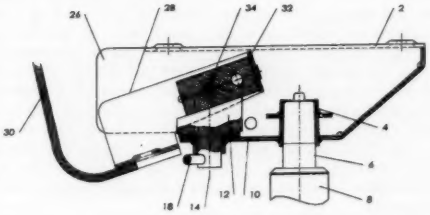
PCT No. PCT/EP96/05795, § 371 Date Sep. 14, 1998, § 102(e) Date Sep. 14, 1998, PCT Pub. No. WO97/23152, PCT Pub. Date Jul. 3, 1997

PCT Filed Dec. 20, 1996, Appl. No. 91,482

Claims priority, application Italy, Dec. 22, 1995, VE95A0051

Int. Cl.[7] B60N *2/22*

U.S. Cl. 297—354.1 **12 Claims**



1. A device which adjusts an inclination of a backrest to a seating portion in chairs in general, comprising a first structural element (**2**) rigid with the seating portion and a second structural element (**28**) rigid with the back-rest and hinged to the first structural element on a traverse hinging axis (**34**), characterised in that with one of the first and second structural elements (**2**, **28**) there is attached a first member (**12**) provided with an inclined surface (**16**) and rotating about a rotational axis (**14**) which intersects said transverse hinging axis (**34**), with the other of the first and second structural elements (**28**, **2**) there being attached a second member comprising at least one cylinder portion centered on a longitudinal axis and (**32**) maintained constantly with its circumferential surface resting on said inclined surface (**16**) along a line, for any angular position of said first member (**12**), the longitudinal axis of said cylinder portion (**32**) intersecting the point of intersection of the rotational axis of said first member (**12**) with the transverse hinging axis on which said first structural element (**2**) and said second structural element (**28**) are hinged together.

6,039,399

LINEAR SEAT RECLINER

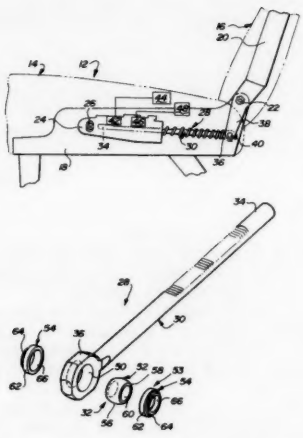
John F. Whalen, Macomb, and David L. Robinson, Sterling Heights, both of Mich., assignors to Fisher Dynamics Corporation, St. Clair Shores, Mich.

Filed Sep. 3, 1998, Appl. No. 146,548

Int. Cl.[7] B60N *2/20;2/22*

U.S. Cl. 297—362.12 **25 Claims**

1. In a linear seat recliner for use in a seat assembly to selectively position a seatback with respect to a seat bottom, the linear seat recliner having a housing adapted to be secured to one of the seatback and the seat bottom and a recliner rod having a first end supported by the housing and a second end adapted to be secured to the other of the seatback and the seat bottom, the improvement comprising a ball joint disposed within an aperture formed in the



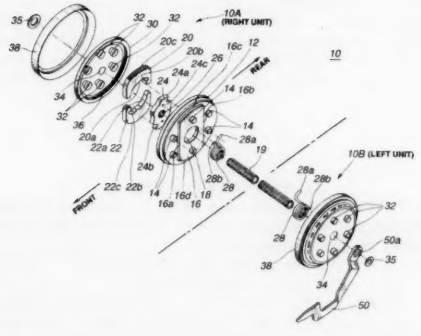
second end of the recliner rod, said ball joint including a retainer defining a socket and a ball swivel rotatably supported in said socket and defining a throughbore adapted to receive a hinge pin for securing the second end of the recliner rod to the seatback or the seat bottom, said retainer having a smooth planar outer circumferential face slidably positionable within said aperture to permit axial movement of said retainer within said aperture and an annular abutment face between said outer circumferential face and said socket, wherein said recliner rod includes a flange on said second end and extending into said aperture for engaging said planar annular abutment face of the retainer to fixedly position the retainer within the aperture preventing said axial movement within said aperture.

6,039,400

SEAT RECLINING DEVICE

Tomonori Yoshida, Yokohama, and Moriyuki Eguchi, Kanagawa, both of Japan, assignors to Ikeda Bussan Co., Ltd., Ayase, Japan

Filed Jun. 22, 1998, Appl. No. 102,651
Claims priority, application Japan, Aug. 27, 1997, 9-244858
Int. Cl.[7] B60N *2/20*
U.S. Cl. 297—367 **7 Claims**



1. A seat reclining device for a seat having a seat cushion and a seatback which is pivotal relative to said seat cushion, comprising:

a first plate adapted to be secured to a rear part of the seat cushion, said first plate having a first circular opening formed therein;

a second plate adapted to be secured to a lower end of said seatback, said second plate having a second circular opening formed therein;

a drive shaft passing through said first and second circular openings of said first and second plates;

a lock mechanism actuated by said drive shaft, said lock mechanism being interposed between said first and second plates to lock said second plate at a desired angular position relative to said first plate and assume a lock condition when said drive shaft is turned in a first direction and cancel the locked condition of said second plate when said drive shaft is turned in a second direction; and

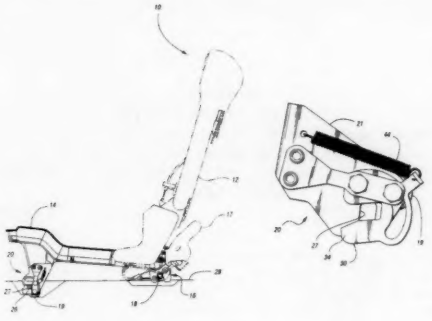
a coil spring disposed about said drive shaft and positioned in said first circular opening, said coil spring being incorporated with said lock mechanism in such a manner as to bias said lock mechanism to assume the locked condition of said second plate.

6,039,401

SELF-LATCHING AND SELF-RELEASING LATCH MECHANISM FOR REMOVABLE SEAT

Liviu Rus, Troy, Mich., assignor to Lear Corporation, Southfield, Mich.

Filed Jul. 28, 1997, Appl. No. 901,729
Int. Cl.[7] B60N *2/10*
U.S. Cl. 297—378.13 **3 Claims**



1. An apparatus for a vehicle comprising:

a collapsible and removable utility seat assembly having a front portion;

a vehicle floor pan with a latch rod thereon;

a bracket attached to the front portion of the utility seat assembly and having a wheel attached thereto, said bracket having a slot therein for receiving the latch rod; and

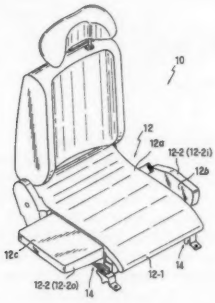
a locking mechanism connected to the bracket, said locking mechanism including a lock member rotatably mounted to the bracket and said locking mechanism having a forwardly protruding leg extending sufficiently forward for automatic engagement with the floor pan in front of the latch rod as the seat assembly is pivotally collapsed forwardly in the vehicle, such that said engagement of the leg with the floor pan causes relative rotation of the lock member with respect to the bracket to move the lock member to a position securing the latch rod within the slot and preventing vertical movement of the seat assembly away from the floor pan, thereby facilitating automatic self-locking of the locking mechanism onto the latch rod as the utility seat assembly is pivotally collapsed.

6,039,402

SEAT PROVIDED WITH A SEAT CLIMBING/DESCENDING AID STRUCTURE FOR EASY CLIMBING ONTO AND DESCENDING FROM THE SEAT, AND A SEAT CLIMBING/DESCENDING AID DESIGNED FOR THAT PURPOSE

Akira Nemoto, Akishima, Japan, assignor to Tachi-S Co., Ltd., Tokyo, Japan

Filed Feb. 12, 1999, Appl. No. 248,984
Int. Cl.[7] B60N *2/02*
U.S. Cl. 297—411.34 **7 Claims**



1. A seat provided with a seat climbing/descending aid structure, the seat including a seat cushion of a type having a seating surface inclined backwardly thereof wherein an area of the seating surface on which a driver, passenger or an occupant on the seat will place his or her buttocks portion is located at a point below a forward area of the seating surface, characterized in that said seat cushion is formed by: a seat cushion body having a seating surface defined on the upper side thereof; and a pair of bucket-like side support members, each being provided at right and left sides of said seat cushion body in such a manner as to erect therefrom, respectively, wherein said pair of bucket-like side support members have their respective cushion surfaces facing towards said seat cushion body, and said seat cushion body and pair of bucket-like side support members are provided separately from each other, wherein one of said pair of bucket-like side support members, which is located at a side through which the driver, passenger or occupant on the seat will move his or her buttocks portion when climbing onto and descending from the seat, is formed as a movable side support member, wherein said movable side support member is rotatable toward a horizontal use position where the cushion surface thereof is turned upward on a generally horizontal plane and may be retained there, so as to function as a seat climbing/descending aid for allowing the driver, passenger or occupant on the seat to easily climb onto and descend from the seat, and also characterized in that a backward portion of said seat cushion body has a support point in the seat, while a forward end portion of the seat cushion body is rotatable about said support point so as to be lowered, with such an arrangement that a predetermined operation causes said forward end portion of the seat cushion body to be lowered, whereby the seating surface of said seat cushion may be set on a generally same horizontal plane with and generally in registry with the cushion surface of said movable side support member which is set in said horizontal use position.

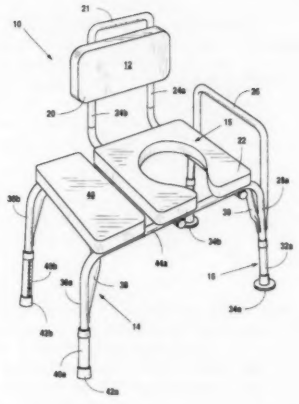
6,039,403

SHOWER/TUB TRANSFER CHAIR

Todd Hargroder, 7626 Grissom Rd., San Antonio, Tex. 78251

Filed Apr. 16, 1998, Appl. No. 61,767
Int. Cl.[7] A47C *7/00*
U.S. Cl. 297—440.24 **1 Claim**

1. An improvement to a shower or bathtub transfer chair where the transfer chair includes a four-legged, longitudinal, support frame structure and a removable, right angled chair structure, the improved transfer chair comprising:



an inside leg frame component comprising first and second inside legs and a connecting inside leg cross-member, each of said inside legs comprising a post portion and an orthogonal extension, said extension comprising and defining a portion of an overall length of said transfer chair;

an outside leg frame component comprising first and second outside legs and a connecting outside leg cross-member, each of said outside legs comprising a post portion and an orthogonal extension, said extension comprising and defining a portion of an overall length of said transfer chair;

a first cross frame component, said first cross frame component detachably connecting said inside leg frame component with said outside leg frame component by removable insertion into and between said orthogonal extensions of said first inside and outside legs;

a second cross frame component, said second cross frame component detachably connecting said inside leg frame component with said outside leg frame component by removable insertion into and between said orthogonal extensions of said second inside and outside legs, wherein a combination of said cross frame components and said inside leg frame component and said outside leg frame component, serves as said four-legged, longitudinal, support frame structure;

a chair back member comprising a planar back support and a plurality of parallel support posts; and

a chair seat member comprising a planar seat support and a plurality of parallel tubular support members, said parallel tubular support members each having a longitudinal Portion and an orthogonal extension, said chair seat member removably attachable to said chair back member at an angle generally perpendicular thereto, by removable insertion of said support posts into said orthogonal extensions of said parallel tubular support members, a combination of said chair back member and said chair seat member removably attachable to said four-legged, longitudinal, support frame structure.

SEGMENT MOUNTED ON VEHICLE WHEEL OR ENDLESS RUBBER TRACK

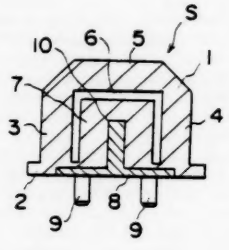
Tomoyuki Kurata; Youichi Kumano, and Kazuya Takahashi, all of Yokohama, Japan, assignors to Bridgestone Corporation, Tokyo, Japan

Division of application No. 08/758,449, Nov. 29, 1996. This application Nov. 9, 1998, Appl. No. 188,287.

Claims priority, application Japan, Dec. 3, 1995, 7-337848; Feb. 9, 1996, 8-048045

Int. Cl.[7] B60B *15/00*

U.S. Cl. 301—43 **3 Claims**



1. A segment of rubber elastic material mounted on the outer periphery of a wheel or an endless rubber track, comprising:

a bottom section mounted in contact with said wheel or said endless rubber track;

side sections;

an outer surface section formed on the ground-contacting side of said segment;

a hollow section defined by said bottom section, said side sections and said outer surface section and formed through said elastic segment along the width of said wheel or endless rubber track; and

a stopper protruded into said hollow section from said bottom section, to extend along the width of said wheel or said endless rubber track, said stopper being kept out of contact with the inner surface of said hollow section under a static load,

wherein the distance between the top surface of said stopper and a part of the inner surface of said outer surface section of said segment nearest to said stopper is larger at front and rear ends of said part and small at a central portion of said part along the direction in which the vehicle is driven.

6,039,406

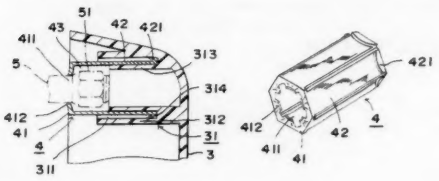
HUBCAP FASTENER STRUCTURE

Lih-Ching Sheu, Tainan Hsien, Taiwan, assignor to Kuan Hsieng Industrial Co., Ltd., Taipei Hsien, Taiwan

Filed May 13, 1998, Appl. No. 76,797

Int. Cl.[7] B60B *7/06*

U.S. Cl. 301—108.4 **5 Claims**



1. A hubcap fastener structure comprising

a cap having a plurality of fastening mounts, each said fastening mount having extending therefrom an outer tubular mount and an inner tubular mount with a gap formed between the outer tubular mount and the inner tubular mount;

a plurality of fittings, each said fitting having an attachment surface and a mounting hole in the attachment surface, wherein a plurality of retainer claws extend from an edge of the mounting hole in the attachment surface radially inwardly towards a center of the mounting hole, and a first end of each of a plurality of retainer strips extends from an outer edge of the attachment surface transversely relative to said retainer claws; and

a plurality of engagement hooks positioned at a second end of each said retainer strip opposite said first end extending from the attachment surface,

wherein said retainer claws and engagement hooks are resilient and said retainer claws are short relative to said retainer strips,

wherein each of the fittings is arranged to be installed by inserting the retainer strips of the fittings into the gap between the outer tubular mount and the inner tubular mount such that said engagement hooks resiliently engage both said inner tubular mount and said outer tubular mount to secure the fittings to said fastening mounts, and

wherein said retainer claws are arranged such that upon inserting the mounting holes of the fittings over bolts projecting from a vehicle hub, the retainer claws engage said bolts to secure the fittings to the bolts.

6,039,407

HUB EXTENDER WITH TOOL CLEARANCE PASSAGEWAYS AND DRIVE NUTS FOR HUB AND BRAKE ASSEMBLY

Michael F. Wiacek, Dearborn, and Gary L. Koch, Plymouth, both of Mich., assignors to Kelsey-Hayes Company, Livonia, Mich.

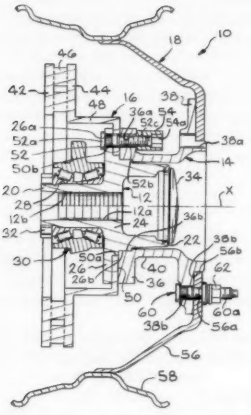
Provisional application No. 60/012,026, Feb. 21, 1996. This application Feb. 21, 1997, Appl. No. 802,955.

Int. Cl.[7] B60B *27/00*

U.S. Cl. 301—111 **19 Claims**

1. A hub extender for use in a hub, wheel and brake assembly comprising:

an inboard flange, an outboard flange, and a main body extending between and interconnecting said inboard flange to said outboard flange, said inboard flange including at least one stud receiving hole formed therein to receive a mounting stud and a nut for securing said hub extender to the hub, wheel and brake assembly, said outboard flange including at least one tool clearance passageway formed therein, said tool clearance passageway being generally coaxially aligned with said stud receiving hole to enable a tool to extend through said tool clearance passageway for manipulating the nut, said inboard flange of said hub extender defining a hub pilot surface for an associated inner surface of the hub, and said outboard flange



of said hub extender defining a wheel pilot surface for an associated surface of the wheel.

6,039,408

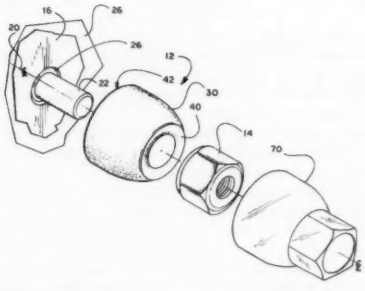
BREAK-AWAY LUG NUT POSITIONER

William Alvarez, 917 Sam Hunt Rd., Fairmont, Ga. 30139

Provisional application No. 60/064,084, Nov. 3, 1997. This application Nov. 2, 1998, Appl. No. 184,916.

Int. Cl.[7] B60B *23/00*

U.S. Cl. 301—111 **27 Claims**



1. A break-away lug nut positioner for rapid race car tire changes configured for attachment to a wheel having a mounting plate with at least one mounting hole, the wheel configured for receipt on a hub defining a hub face, the hub including at least one threaded stud that extends through the mounting hole when the wheel is received on the hub with the mounting plate flush against the hub face, the stud defining threads for engaging the threads of a lug nut, comprising:

a spacer defining a first edge configured for attachment to the lug nut and a second edge configured for attachment to the wheel mounting plate;

the spacer further defining a cavity configured such that, when the wheel is received on the hub with the mounting plate flush against the hub face with the stud extending through the mounting hole and the lug nut is adjacent to the first edge of the spacer and the second edge of the spacer is adjacent to the wheel mounting face with the lug nut aligned with the mounting hole, the stud extends into the spacer cavity and the threads of the stud are positioned adjacent to the threads of the lug nut for easy installation of the lug nut on the stud; and

the spacer further configured to break apart and separate from the lug nut as the lug nut is installed on the stud.

6,039,409

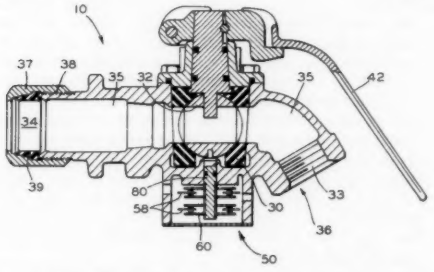
SHUTOFF VALVE ASSEMBLY

Thomas E. Engle, Clayton, N.Y., assignor to Westinghouse Air Brake Company, Wilmerding, Pa.

Filed Oct. 8, 1997, Appl. No. 947,799

Int. Cl.[7] B61G *5/00*

U.S. Cl. 303—7 **20 Claims**



1. A railroad brake line shutoff valve assembly for connection to a car-mounted railway brake line disposed on a first railway vehicle and to a brake line air hose, such brake line air hose for terminating in a gladhand assembly, such gladhand assembly for connection to a similar gladhand assembly on a second railway vehicle coupled to such first railway vehicle, said shutoff valve assembly comprising:

a stationary valve portion and a moveable valve portion, said stationary valve portion having a first fluid line attachment site for attachment of such car mounted railway brake line and a second fluid line attachment site for attachment of such brake line air hose, a motion of said moveable valve portion relative to said stationary valve portion to a first position opening a flowpath through a valve portion between said first fluid line attachment site and said second fluid line attachment site so that such brake line air hose is connected to such car-mounted railway brake line and a motion of said moveable valve portion relative to said stationary valve portion to a second position closing said flowpath through said valve portion between said first fluid line attachment site and said second fluid line attachment site so that such brake line air hose is not connected to such car mounted railway brake line;

an electrical switch for connection to a predetermined number of car-mounted electrical trainline conductors mounted on such first railway vehicle and to a predetermined number of electrical line end segments, such electrical line end segments terminating in a multiple contact electrical trainline connection means, such electrical trainline connection means for connection to a similar electrical trainline connection means on such second railway vehicle coupled to such first railway vehicle, said electrical switch having a stationary portion and a moveable portion, said stationary portion of said switch having a junction portion, said junction portion having a predetermined number of first electric line attachment sites for attachment of such predetermined number of car mounted electrical trainline conductors, said junction portion further having a predetermined number of second electric line attachment sites for attachment of such electrical line end segments, and said junction portion further having a predetermined number of third electric line attachment sites, said third electric line attachment sites having electrical connections to respective members of said first electric line attachment sites, said third electric line attachment sites for connection of respective conductors of a branch electric line to at least one of an electronic system and an electrical system located on such first railway vehicle;

a motion of said moveable portion of said switch relative to said stationary portion of said switch to a first position making a predetermined number of switch electrical connections between individual members of said first electric line attachment sites and said second electric line attachment sites so that such electrical line end segments are electrically connected to respective members of such car mounted electrical

trainline conductors and a motion of said moveable portion of said switch relative to said stationary portion of said switch to a second position breaking said switch electrical connections between said first electric line attachment sites and said second electric line attachment sites so that such electrical line end segments are not electrically connected to such electrical trainline conductors;

said stationary portion of said electrical switch being mechanically connected to said stationary valve portion and said moveable portion of said electrical switch being mechanically connected to said moveable valve portion, so that when said valve portion is in said first valve position, then said switch is in said first switch position and when said valve portion is in said second valve position, then said switch is in said second switch position, so that when said moveable valve portion is placed in said first valve position relative to said stationary valve portion so that said shutoff valve is opened said electrical switch is closed and so that when said moveable valve portion is placed in said second valve position relative to said stationary valve portion so that said shutoff valve is closed said electrical switch is opened; and

means attached to at least one of said moveable valve portion and said moveable portion of said switch for moving said moveable valve portion from said first valve position to said second valve position and said moveable portion of said switch from said first switch position to said second switch position, and for moving said moveable valve portion from said second valve position to said first valve position and said moveable portion of said switch from said second switch position to said first switch position.

6,039,410

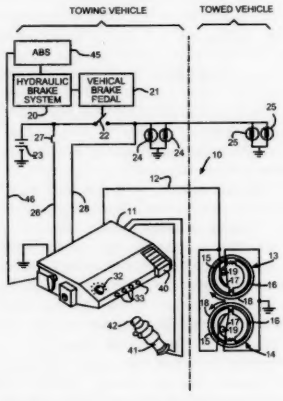
ELECTRONIC TRAILER BRAKE CONTROLLER

Charles L. Robertson, Horton, Ala.; Michael A. Hedding, Canton, and Michael C. McGrath, Farmington Hills, both of Mich., assignors to Hayes Lemmerz International, Inc., Northville, Mich.

Provisional application No. 60/038,294, Jan. 10, 1997. This application Jan. 9, 1998, Appl. No. 4,984.

Int. Cl.[7] B60T *13/00;13/66;7/20*

U.S. Cl. 303—7 **25 Claims**



1. A trailer brake controller comprising:

a brake control signal generator for generating a brake control signal;

a microprocessor connected to said brake control signal generator and responsive to said brake control signal to generate an output brake actuation signal which is related to said brake control signal by a brake controller gain;

a memory connected to said microprocessor; said memory storing a plurality of predetermined brake controller gains; and

a gain control for producing a gain control signal, said gain control connected to said microprocessor, said gain control operable by a vehicle operator to select a gain control signal, said gain control maintaining said selected gain control signal once said gain control is set by said operator, said microprocessor being responsive to said gain control signal to select one of said predetermined gains from said memory for said brake controller gain.

6,039,411

BRAKE CONTROL SYSTEM FOR A VEHICLE

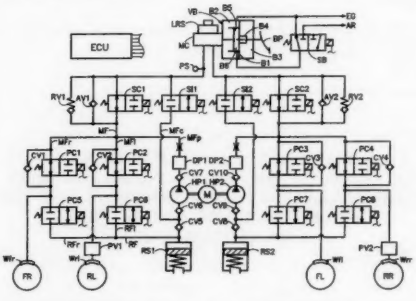
Kenji Tozu, Yokkaichi; Takayuki Itoh, Nagoya; Masanobu Fukami, Hazu gun, and Satoshi Yokoyama, Anjo, all of Japan, assignors to Aisin Seiki Kabushiki Kaisha, Kariya, Japan

Filed Apr. 29, 1999, Appl. No. 301,338

Claims priority, application Japan, Apr. 30, 1998, 10-137787

Int. Cl.[7] B60T *8/40*

U.S. Cl. 303—116.1 **12 Claims**



1. A brake control system for a vehicle comprising:

wheel brake cylinders operatively mounted on front and rear wheels of said vehicle, said wheel brake cylinders being divided into two sets of wheel brake cylinders, each having two wheel brake cylinders;

a master cylinder for pressurizing brake fluid in a reservoir to supply pressurized brake fluid to said wheel brake cylinders in response to depression of a brake pedal;

a first hydraulic braking pressure circuit and a second hydraulic braking pressure circuit for communicating said master cylinder with each of said two sets of wheel brake cylinders, respectively;

two sets of modulator means disposed in said first and second hydraulic braking pressure circuits, respectively, each of said modulating means modulating the braking pressure in each of said wheel brake cylinders;

a pair of hydraulic pressure pumps disposed in said first and second hydraulic braking pressure circuits, respectively, each of said pumps introducing from an inlet thereof the brake fluid and pressurizing the brake fluid to supply the pressurized brake fluid to each of said wheel brake cylinders through each of said modulator means;

two sets of first valve means disposed in said first and second hydraulic braking pressure circuits, respectively, each of said first valve means opening or closing a first passage for communicating said master cylinder with said modulator means, and said first valve means normally opening said first passage;

two sets of second valve means disposed in said first and second hydraulic braking pressure circuits, respectively, each of said second valve means opening or closing a second passage for communicating said reservoir directly with the inlet of each of said pumps, or communicating said reservoir with the inlet of each of said pumps through said master cylinder, and each of said second valve means normally closing said second passage;

auxiliary pressurization means for supplying pressurized brake fluid to each of said first and second hydraulic braking pres-

sure circuits including said second valve means at the inlets of said pumps, respectively, to perform an auxiliary pressurization, at least when said second valve means opened said second passage; and

control means for actuating said modulator means, in the case where at least said second valve means in said first hydraulic braking pressure circuit opens said second passage, and said auxiliary pressurization means performs the auxiliary pressurization, to block the communication between said wheel brake cylinders in said second hydraulic braking pressure circuit, when said brake pedal is not depressed, and to communicate said wheel brake cylinders in said second hydraulic braking pressure circuit with said master cylinder, when said brake pedal is depressed.

COMPACT DISK BOX CAPABLE OF AUTOMATICALLY EXTENDING AND RETRACTING COMPACT DISKS

Ted Ju, No. 15, Wu Shiunn St., An Leh District, Keelung City, Taiwan

Filed Mar. 30, 1999, Appl. No. 281,444
Int. Cl.[7] A47B *63/06*
U.S. Cl. 312—9.15 **7 Claims**

1. A compact disk box structure capable of automatically extending compact disks mainly comprising a compact disk box body, a push plate, a front lid, a plurality of push rods, and a back lid and completed with a switch mechanism; in which said box body has an open rear end and is provided with slide guide grooves on two sides of the top face thereof, a row of parallel elongated openings on the rear portion of the top face, a longitudinal groove on the central portion of the top face and extending from the front end to the rear end, a row of spaced partition ribs formed on the inner wall surface of the top and the bottom of the box body, a row of long slots disposed on a front wall of the box body, two axle holes individually arranged on two side walls near the elongated slots to allow an axle rod to pass through; said push plate has a guide bar arranged on two sides thereof, a push button hole at the center of the front edge, one or more one-way stoppers transversely disposed on the central portion of the bottom face, a plurality of protrusions and a detent block; said front lid is provided with a plurality of rails, two hook-shaped tabs respectively disposed on a position near two ends of the front edge of the inner wall, and two short pins individually arranged on the outer walls near two ends of the lower edge; said push rod has a curved rod body with an axle hole on the upper end thereof; said back lid is provided with a plurality of embossed dots on two side walls; and characterized in that a plurality of said push rods are arranged in sequence in the elongated openings on the top face of the box body with an axle rod extending through the axle holes on the two side walls of the box body and the axle holes of the push rods so that each push rod is rotatably seated between two adjacent partition ribs of the box body and said front lid is pivoted to the front end wall of the box body and can freely turn to open or be secured in position by means of the switch mechanism and said back lid is attached to the rear end of the box body to close the rear end opening.

MODULAR ELECTRONIC ENCLOSURE HAVING ROTATIONAL MOLDED PLASTIC INTERLOCKING COMPONENTS

Marcus L. Melane, Irving; Michael J. Pisterzi, Plano; Edward G. Mills, Prosper, and Curtis L. Hargroves, Double Oak, all of Tex., assignors to Alcatel USA Sourcing, L.P., Plano, Tex.

Filed Dec. 11, 1998, Appl. No. 209,693
This patent is subject to a terminal disclaimer.
Int. Cl.[7] A47B *45/00*
U.S. Cl. 312—205 **8 Claims**

1. A modular enclosure comprising:

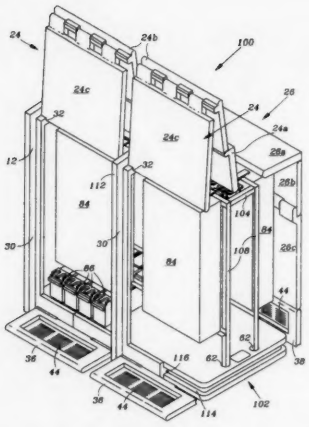
a base having a front wall, a rear wall, and spaced apart first and second end walls, spaced apart a distance;

a first side wall interconnected to said base rear wall and said base front wall;

a second side wall interconnected to said base rear wall and said base front wall, and spaced apart a distance from said first side wall;

a top connected to said side walls;

means for selectively expanding said distance between said first and second side walls for increasing the size of the enclosure while utilizing said first and second side walls said expanding means including a support disposed between said first and second side walls and interconnected to said base rear wall and said base front wall and said top;



a door disposed between said first side wall and said support adjacent said base front wall;

a door disposed between said second side wall and said support adjacent said base front wall;

a wall disposed between said first side wall and said support adjacent said base rear wall;

a wall disposed between said second side wall and said support adjacent said base rear wall; and

said base disposed between said first and second side walls and interconnected to said support.

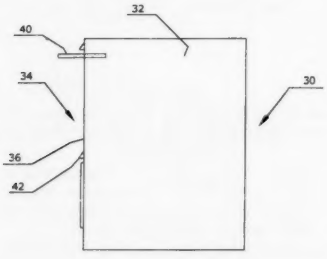
WATER RESISTANT FILE CABINETS

Anders Bruun, 239 Aubert Street, Winnipeg Manitoba, Canada, R2H 3G8

Filed Mar. 4, 1998, Appl. No. 34,240

Int. Cl.[7] A47B *81/00*

U.S. Cl. 312—229 **6 Claims**



1. A filing cabinet comprising:

a housing with at least one compartment having a substantially open front side;

at least one door mounted on the housing for sliding and pivoting movement between an open position extending into the cabinet at the top of the compartment and a closed position extending across the open front side of the compartment;

a water deflector extending across the cabinet immediately above the open front side of the compartment and immediately above the door, said water deflector having a top face sloping downwardly and forwardly from the front side of the compartment and beyond the door when the door is in the closed position, whereby water falling on the cabinet is deflected away from the front panel of the drawer; and

flanges projecting from edges of the compartment overlapping adjacent faces of the door in the closed position of the door whereby water is prevented from entering the open front side of the compartment.

6,039,416

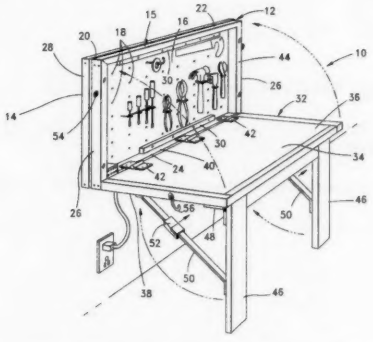
WALL MOUNTED PIVOTING WORK BENCH

Jeffrey W. Lambert, 1571 Greyson Ridge, Marietta, Ga. 30062

Filed Mar. 8, 1999, Appl. No. 262,888

Int. Cl.[7] A47F *5/08*

U.S. Cl. 312—245 **7 Claims**



1. A pivotal work bench for mounting to an essentially vertical wall, said work bench comprising:

a.) a generally rectangular member to be secured to said wall and comprising a peg-board having an array of apertures for receiving plural tool mounting fixtures, a rectangular framed structure extending from a first side of said peg-board, and a spacer member attached to a second side of said peg-board for contacting said wall, whereby to allow for the easy attachment of said fixtures; and,

b.) a second, generally rectangular work bench member hingedly secured to said rectangular structure, said work bench member movable from an operable work supporting position to an inoperable position in spaced relationship to said peg-board in latching engagement with said peripheral structures said work bench member further including a pair of hingedly mounted legs, each said leg having a lockable hinge support, where said hinge support comprises an overriding sleeve member to temporarily secure said legs in supporting relationship to said operable work bench member.

6,039,417

EASY TO ASSEMBLE STORAGE UNIT

Steven R. Snoke, Batavia; Gary Silvis, and Thomas E. Howland, both of Georgetown, all of Ohio, assignors to The Stanley Works, New Britain, Conn.

Continuation of application No. 08/391,211, Feb. 21, 1995, Pat. No. 5,645,332. This application Mar. 10, 1997, Appl. No. 815,317.

This patent is subject to a terminal disclaimer.

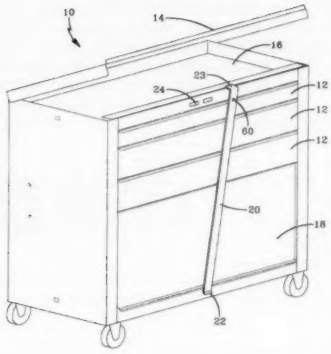
Int. Cl.[7] A47B *43/00*

U.S. Cl. 312—257.1 **18 Claims**

1. A storage container, comprising:

a first wall member having a right wall portion, a right back wall portion and a top edge;

a second wall member having a left wall portion oppositely disposed from said right wall portion of said first wall member, a left back wall portion adapted to be adjoined to said right back wall portion of said first wall member to form a back wall and a top edge;



a top wall adapted to be connected to said right wall portion, said right back wall portion, said left wall portion, and said left back wall portion, wherein a portion of said top wall is located adjacent with said top edges of said first and second wall members;

a lid adapted to be hinged to said first and second wall members, said lid adapted to cover said top wall; and

a floor panel oppositely disposed from said top wall, wherein said floor panel is adapted to be connected to said right wall portion, said right back wall portion, said left wall portion, and said left back wall portion.

6,039,418

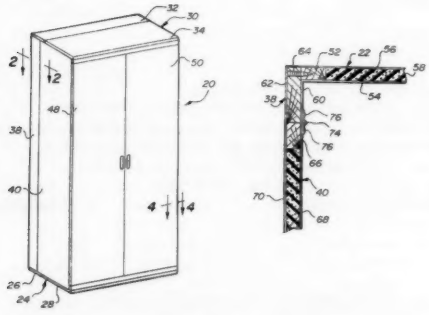
FOLDING WARDROBE

Jackie K. Thomas, Vernon, Ala., assignor to Omni International, Inc., Vernon, Ala.

Filed Nov. 3, 1998, Appl. No. 185,187

Int. Cl.[7] A47B *43/00*

U.S. Cl. 312—258 **1 Claim**



1. A folding wardrobe comprising:

a back panel having front and back faces, a bottom edge, top edge and left and right side edges;

a rear bottom panel, a rear top panel, a rear left side panel and a rear right side panel each fixed to the back panel along the bottom, top, left and right side edges thereof and extending forward from said front face;

a front bottom panel, front top panel, front left side panel and front right side panel each rotatably coupled to a front edge of the rear bottom panel, rear top panel, rear left side panel and rear right side panel respectively for rotation between stowed positions overlying the back panel and use positions extending forwardly from said rear bottom panel, rear top panel, rear left side panel and rear right side panel, respectively, and extending generally planar thereto forming bottom, top and left and right side walls, wherein the rear bottom and the rear top panels each extend forward from the front face of the back panel a greater distance than the rear right and rear left side panels whereby when the front bottom panel, front top panel, front left side panel and front right side panel are in their stowed positions, the front bottom panel and the front top panel overlie the front left side panel and the front right side panel, identical left and right doors coupled to front edges of the front left and right side panels for rotation between stowed positions along an exterior face of said front left and right side panels and closed use positions extending toward one another from the front left and right side panels to close an interior space; and

removable fasteners coupling the front bottom panel and the front top panel to the front left and front right side panels when the panels are in their respective use positions to prevent rotation of the front bottom, front top and front left and right side panels from the use positions, the panels thereby defining an interior space when the front bottom, front top and front left and right side panels are in the use positions,

a shelf and shelf brackets attached to the rear and front left and right side panels for supporting the shelf,

said front left and right side panels are constructed of wood frames about the peripheries thereof with a lightweight filler therein and a decorative cover thereon and the wood frame includes a cross member to which said shelf brackets are attached.

6,039,419

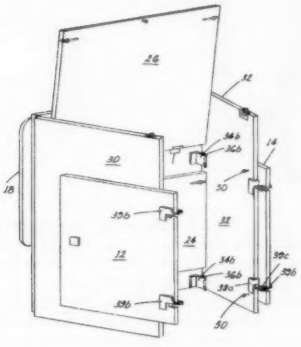
FOLDABLE READY-TO-USE ENTERTAINMENT STAND

Charles R. Brown; Marion O. Fogle, and Thomas F. Salley, all of Orangeburg, S.C., assignors to Decolam, Inc., Orangeburg, S.C.

Continuation-in-part of application No. 08/754,887, Nov. 22, 1996, Pat. No. 5,769,514, and a continuation-in-part of application No. 08/885,296, Jun. 27, 1997, Pat. No. 5,882,098. This application Mar. 26, 1998, Appl. No. 48,512.

Int. Cl.[7] A47B *43/00*

U.S. Cl. 312—262 **25 Claims**



23. A foldable, ready-to-use entertainment stand having a folded and unfolded configuration comprising:

a back panel;

a top pivotally attached to said back panel;

first and second side panels pivotally attached to said back panel for supporting said top;

a horizontal shelf spaced below said top, and hinges secured with said horizontal shelf and said back panel pivotally attaching said horizontal shelf to said back panel;

first and second front doors carried by said first and second side panels, respectively, for enclosing an interior space of said entertainment stand;

first and second displacement hinges secured to said back panel and said first and second side panels pivotally attaching said

first and second side panels to said back panel in spaced apart manner defining a storage space when said first and second side panels are folded about said first and second displacement hinges when said stand is in said folded configuration;

said horizontal shelf being disposed in said storage space when folded to a generally flush configuration with said back panel when said stand is in said folded configuration;

rearwardly pivoting top hinge means attaching said top to said back panel so that said top panel may be pivoted rearwardly to a generally flush position with said back panel when said stand is in said folded configuration; and

flush door hinge means pivotally attaching said first and second front doors to said first and second side panels so that said first and second front doors may be folded generally flush with said first and second side panels, respectively, when said stand is in said folded configuration.

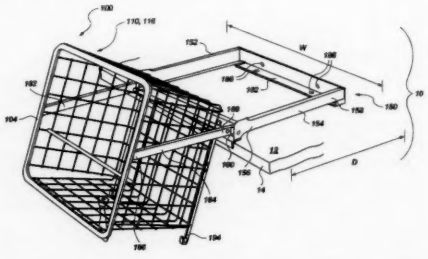
SLIDING AND TILTING SHELF DRAWER

Rex A. Butters, 1260 Cook St., Ogden, Utah 84404, and Scott W. Butters, 1054 Deborah Dr., Bountiful, Utah 84010

Filed Aug. 1, 1997, Appl. No. 905,289

Int. Cl.[7] A47B *88/06*

U.S. Cl. 312—334.1 **12 Claims**



1. A device for organizing and storing various articles, said device being adapted for disposition in a space having a horizontal surface having a front edge having a substantially vertical surface, said device comprising:

a base member disposed on said horizontal surface, said base member having first and second tracks, each track having a

forward end, and a forward member extending between said tracks and holding said tracks together in a parallel configuration;

first and second slide members each slidingly disposed in one of said tracks, said slide members sliding between an accessible position and a storage position;

a compartment pivotally attached to said slide members, said compartment pivoting between an upright position and a tilted position; and

a lip formed on said forward member, said lip adapted for abutting said substantially vertical surface of said front edge of said horizontal surface for correctly positioning said base member and compartment with respect to said vertical surface such that said slide member slides said compartment between said accessible position and said storage position along a substantially perpendicular path with respect to said front edge of said horizontal surface.

6,039,423

PULL-OUT DEVICE FOR A TALL CUPBOARD

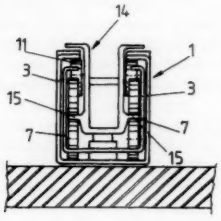
Manfred Fulterer, Lustenau, Austria, assignor to Fulterer Gesellschaft m.b.H., Lustenau, Austria

Filed Sep. 1, 1998, Appl. No. 145,394

Claims priority, application Austria, Sep. 3, 1997, 1474/97; Dec. 30, 1997, 2199/97

Int. Cl.[7] **A47B** *88/00*

U.S. Cl. 312—334.29 **6 Claims**



1. A pull-out device for a tall cupboard, comprising:

a U-shaped carcass rail having opposite cheeks provided at upper edges thereof with inwardly bent flanges which serve as running tracks;

an intermediate rail received in the carcass rail and having opposite cheeks and a plurality of support and running rollers having axles thereof lying in different horizontal planes, with one support roller of the plurality of support rollers being provided in an upper rear portion of each cheek of the intermediate rail and displaceable along the running track defined by a respective flange of the carcass rail, and with at least one running roller of a plurality of running rollers being provided in a middle region of a longitudinal extent of each cheek of the intermediate rail and supported with a radial clearance; and

a pull-out rail having opposite horizontal flanges supported by the running rollers, wherein the flanges of the carcass rail which serve as running tracks, are inclined, from a rear end of the carcass rail, at least along a portion of their longitudinal extent toward a front end of the carcass rail.

6,039,424

MULTIPLE HEIGHT PACKAGE RETAINER

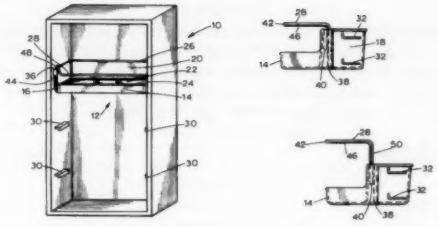
John J. Pink, Cedar Rapids, Iowa, assignor to Amana Company, L.P., Amana, Iowa

Filed May 21, 1997, Appl. No. 859,977

Int. Cl.[7] **A47B** *96/04;* **A47F** *5/00*

U.S. Cl. 312—405.1 **19 Claims**

1. A multiple height package retainer for a refrigerator door, comprising:



a shelf having a shelf front, shelf floor, and first and second ends, the shelf being arranged to support at least one package to be retained;

a single barrier having first and second ends, the barrier being associated with the shelf and having first and second heights with respect to the shelf floor;

first and second holes disposed substantially perpendicular to the shelf floor at the first end of the shelf, the first and second holes each having a depth, the depth of the first and second holes being different, one of the holes receiving the first end of the barrier and, with the first end of the barrier being received within the first hole, the barrier has the first height, and with the first end of the barrier being received within the second hole, the barrier has the second height, the first height being less than the second height;

at least the first hole having a longitudinal axis the longitudinal axis being disposed substantially perpendicular to the shelf floor; and

at least one hole at the second end of the shelf to receive the second end of the barrier.

INK JET RECORDING METHOD AND HEAD

Takuro Sekiya, Yokohama, and Kyuhachiro Iwasaki, Fujisawa, both of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan

Continuation of application No. 08/480,148, Jun. 7, 1995, Pat. No. 5,657,060, which is a continuation of application No. 08/127,951, Sep. 27, 1993, Pat. No. 5,610,637. This application Mar. 19, 1997, Appl. No. 820,763.

Claims priority, application Japan, Sep. 29, 1992, 4-259521; Feb. 17, 1993, 5-28019; May 7, 1993, 5-106706

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **B41J** *2/04;2/015*

U.S. Cl. 347—15 **5 Claims**

1. An ink jet recording apparatus for jetting ink droplet to a recording medium and forming a dot image on said recording medium, said jet recording apparatus comprising:

ink jet orifices from which ink droplets are jetted;

ink spaces which are filled with ink and connected to said ink jetting orifices;

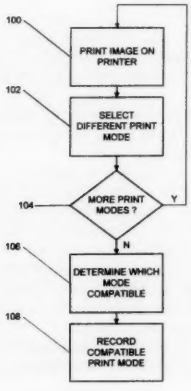
energy applying portions for applying energy to the ink in said ink spaces on demand so that ink droplets are jetted from said ink jetting orifices by the applied energy; and

control means for controlling said energy applying portions in accordance with image information representing an image to be formed on said recording medium so that the image includes pixels each of which is formed of one or a plurality of ink droplets, a maximum number of ink droplets for each pixel being controlled so as to be less than ten, wherein an amount of ink for each pixel formed of one or a plurality of ink droplets is equal to or less than 1.405×10^{-7} grams.

6,039,426
SIMPLIFIED PRINT MODE SELECTION METHOD AND APPARATUS

Michael D Dobbs, Vancouver, Wash., assignor to Hewlett-Packard Company, Palo Alto, Calif.

Filed Aug. 9, 1996, Appl. No. 694,944
Int. Cl.[7] B41J *29/393*
U.S. Cl. 347—19 **6 Claims**



1. A computer-assisted method for selecting a print mode on an ink-jet printer that is compatible with a user-selected print medium, wherein the printer has a set of two or more available print modes, the method comprising the steps of:

ink-jet printing a predefined image on the user-selected print medium in a first predefined location using a first available print mode;

automatically selecting a second available print mode of the ink-jet printer, wherein the second available print mode is a different one of the available print modes in the set than the first available print mode, and is not identical to the first available print mode;

automatically printing the predefined image on the user-selected print medium in a second predefined location different from the first predefined location and using the second available print mode, thereby to produce at least a second predefined image that is differentiated from such first predefined image by print mode;

reviewing the first and second predefined images on the recording medium to determine which print mode is more compatible with the medium, wherein said step is performed by the user visually inspecting the first and second predefined images on the medium and comparing the images to determine a relative quality contrast therebetween; and

recording the more compatible print mode for use in further ink-jet printing on the user-selected medium.

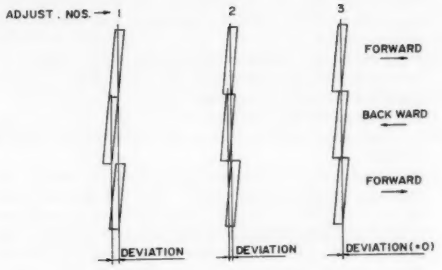
RECORDING APPARATUS HAVING DEVIATION ADJUSTING MECHANISM

Yuji Kanome, Kawasaki, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of application No. 08/262,841, Jun. 21, 1994, abandoned. This application Jun. 2, 1997, Appl. No. 867,390. Claims priority, application Japan, Jun. 22, 1993, 5-150637
Int. Cl.[7] B45J *29/393*
U.S. Cl. 347—19 **17 Claims**

1. A recording apparatus for printing on a recording medium by reciprocating a recording head having a linear array of recording



elements along a main scanning direction to allow printing during both forward and backward scans of the recording head and effecting relative movement between the recording head and the recording medium in a subscanning direction between scans of the recording head in the main scanning direction, comprising:

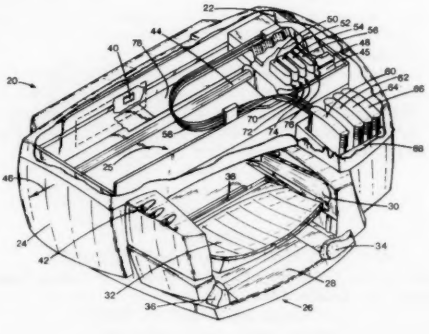
means for causing the recording head to print a plurality of adjustment patterns extending in a direction substantially perpendicular to the main scanning direction by causing the recording head to print consecutive parts of each adjustment pattern in consecutive forward and backward scans of the recording head in the main scanning direction so that each adjustment pattern comprises three parts with the middle of the three parts being printed during scanning of the recording head in a direction opposite of that for the other two parts and with driving timings of the recording elements being selected so that different adjustment patterns have different degrees of misalignment in the main scanning direction between the middle part and the other two parts of the adjustment pattern; and

means for controlling the drive timings of the recording elements during recording of an image based on the adjustment pattern which most closely resembles a straight line in the subscanning direction.

6,039,428
METHOD FOR IMPROVING INK JET PRINTER RELIABILITY IN THE PRESENCE OF INK SHORTS

Ronald A Juve, Brush Prairie, Wash., assignor to Hewlett-Packard Company, Palo Alto, Calif.

Filed May 13, 1998, Appl. No. 78,394
Int. Cl.[7] B41J *29/393*
U.S. Cl. 347—19 **24 Claims**



1. An apparatus for improving the reliability of an ink jet printer comprising:

a plurality of pens;

a power supply line coupled to each of said plurality of pens through at least one power supply contact;

a ground line coupled to each of said plurality of pens through at least one ground contact;

a printer controller;

a plurality of data lines coupled between said plurality of pens and said printer controller for carrying data from said printer controller to each of said pens;

a plurality of line drivers interposed between said printer controller and each of said data lines;

a set of isolation resistors interposed between each of said line drivers and each of said pens to resistively isolate each of said data lines from ink shorts developed at said pens; and

an ink short detector coupled to each of said pens and to said printer controller wherein said ink short detector generates an alarm signal responsive to said ink shorts and said printer controller adaptively re-maps said data responsive to said alarm signal.

INK JET RECORDING APPARATUS WITH RECOVERING DEVICE OF INK JET HEAD

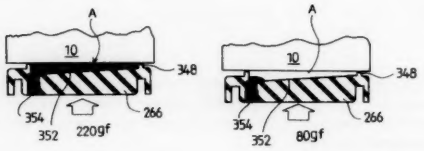
Mutsuo Fukuoka, Ama-gun, Japan, assignor to Brother Kogyo Kabushiki Kaisha, Nagoya, Japan

Filed Aug. 12, 1996, Appl. No. 695,633

Claims priority, application Japan, Aug. 24, 1995, 7-240708

Int. Cl.[7] B41J *2/165*

U.S. Cl. 347—32 **23 Claims**



1. An ink jet recording apparatus including an inkjet head for ejecting ink droplets from nozzles onto a recording medium, a cap made of deformable material for covering the ink jet head and suction means for sucking the ink to recover ink jetting condition of the ink jet head by adding a negative pressure to the cap, the ink jet recording apparatus comprising:

pressing means for contacting the cap with the ink jet head; and

control means for controlling a contact force by the pressing means, through which the cap is contacted with the ink jet head, the control means controlling the contact during at least two continuous positions, the at least two continuous positions including a first position and a second position occurring after the first position;

wherein the contact force corresponding to the first position has a first strength that the cap is isolated from atmosphere when the negative pressure is added to the cap by the suction means; and

wherein the contact force corresponding to the second position has a second strength different from the first strength such that the cap is partially deformed and communicated with atmosphere when the negative pressure is added to the cap by the suction means.

INK JET RECORDING APPARATUS AND CONTROL METHOD THEREOF

Hideyuki Kobayashi; Mitsuru Kishimoto; Noboru Ooishi, and Kiyoshi Ikeda, all of Tokyo, Japan, assignors to Oki Data Corporation, Tokyo, Japan

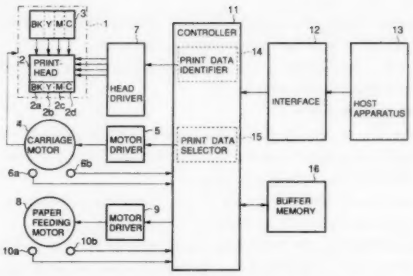
Filed Aug. 26, 1997, Appl. No. 917,375

Claims priority, application Japan, Aug. 28, 1996, 8-245548

Int. Cl.[7] B41J *2/145;2/15;29/38*

U.S. Cl. 347—40 **19 Claims**

1. An ink jet recording apparatus wherein a printhead includes a plurality of ink-ejecting elements by which black ink drops and ink drops of different colors are ejected to a recording medium in accordance with print data when the printhead is moved relative to a recording medium in first and second directions perpendicular to a direction in which the recording medium feeds, the first and second directions being opposite to each other, the plurality of



ink-ejecting elements being aligned in a predetermined order in the first direction, wherein each of the plurality of ink-ejecting elements ejects ink drops of a corresponding one of black ink and colored inks, the colored inks including inks of at least three different colors, the ink jet recording apparatus comprising:

a print data identifier, separating the print data for a line into black print data indicative of printing black dots by ejecting black ink on the recording medium and color print data indicative of printing colored dots by ejecting colored inks on the recording medium; and

a print data selector, providing only the black print data to the printhead to cause the printhead to eject black ink drops when the printhead is moved relative to the recording medium in the first direction, and providing either only the color print data to the printhead to cause the printhead to eject colored ink drops or only the black print data to the printhead to cause the printhead to eject black ink drops, when the printhead is moved relative to the recording medium in the second direction.

6,039,434

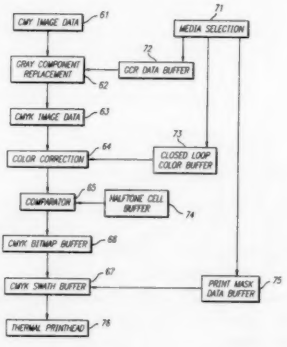
THRESHOLDED UNDERCOLOR REMOVAL AND BLACK REPLACEMENT IN A THERMAL-INKJET PRINTER OR PLOTTER

Nathan Moroney, Barcelona, Spain, assignor to Hewlett-Packard Company, Palo Alto, Calif.

Filed Mar. 4, 1997, Appl. No. 810,752

Int. Cl.[7] B41J *2/21;2/145;2/15*

U.S. Cl. 347—43 **19 Claims**



1. Apparatus for printing images on a printing medium by scanning inkjet printheads; said apparatus comprising:

automatic means for receiving image data expressed as signals for at least chromatic colors;

automatic means for determining a quantity of undercolor, if any, in the image;

automatic means for reducing the chromatic-color signals and adding a signal for black, in amounts nonlinearly related to the quantity of undercolor;

means for holding such printheads and translating such printheads across such printing medium; and

automatic means for applying the reduced and added signals to control printing by such printheads;

wherein said reducing and adding means cooperate with said applying means to produce total undercolor inking that is a substantially monotonic function of the quantity of undercolor.

6,039,435

IMAGE FORMING APPARATUS WITH RESTRUCTURED IMAGE DATA

Shirou Wakahara, Chiba, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Sep. 1, 1998, Appl. No. 145,004
Claims priority, application Japan, Sep. 9, 1997, 9-244329
Int. Cl.[7] B41J *2/04*
U.S. Cl. 347—55 **11 Claims**

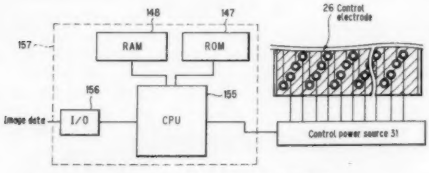


Image forming control unit configuration

1. An image forming apparatus at least comprising:

a supplying means having a developer support carrying a developer;

an opposing electrode disposed facing the developer support;

a high-voltage power source for supplying a high voltage to produce a potential difference between the developer support and the opposing electrode;

a control electrode at least comprising:

an insulative substrate disposed between the developer support and the opposing electrode;

a plurality of gates formed in the insulative substrate for forming a passage of the developer;

one or more electrode groups provided covering a multiple number of the gates; and

a control means for applying multiple potential states to each electrode group of the control electrode, wherein the control means controls the passage of the developer through the multiple number of the gates by applying a designated voltage to the electrode groups so as to form an image on a surface of a recording medium which is being conveyed over the opposing electrode, characterized in that, when a value as to a certain image-quality indicator for a first image, which is an ideal image to be formed on the recording medium surface, differs from a value as to an image-quality indicator for a second image, which is a predicted image to be formed on the recording medium surface, beyond a predetermined range, the control means restructures image data so that a desired image is obtained,

wherein the image forming apparatus further includes a memory and the ideal image and the predicted image are formed in the memory using the image data, the ideal image being formed when the developer passes through the multiple number of the gates in an ideal manner and the predicted image being formed when the developer passes through the multiple number of the gates in a predicted manner,

wherein the control means, at least, performs control of an arbitrary gate of the multiple number of the gates so as to cause the developer to transfer toner through the arbitrary gate in three different ways: a first type transfer in which the passage of the developer through the arbitrary gate will not be affected by a previous passage of the developer through the arbitrary gate; a second type transfer which occurs after the developer transfer of the first type and in which the passage of the developer is affected by the first type transfer; and a third type transfer which occurs after the developer transfer of the first and the second types and in which the passage of the developer is affected by the second type transfer, and the control means further comprises an image processing means for restructuring the image data so that the desired image can be formed, by taking advantage of at least one of a plurality of characteristics of the first, the second and the third transfer types, and

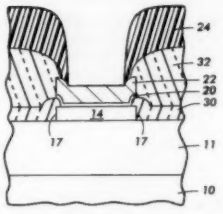
wherein the image processing means restructures the image data by at least complementing or thinning pixels of data which will be of a dot formed of toner transfer of the second or the third type.

6,039,436

THERMAL INK-JET PRINTHEAD WITH LATERAL THERMAL INSULATION FOR THE HEATING ELEMENTS

John R. Andrews, Fairport; Peter A. Torpey, Webster; Cathie J. Burke, Rochester, and Eduardo M. Freire, Webster, all of N.Y., assignors to Xerox Corporation, Stamford, Conn.

Filed Mar. 12, 1998, Appl. No. 41,305
Int. Cl.[7] B41J *2/05*
U.S. Cl. 347—62 **8 Claims**



1. A thermal ink-jet printhead comprising at least one ejector, the ejector comprising:

a structure defining a channel for passage of liquid ink therethrough;

a heating element, defining a substantially rectangular heating element area within the channel, the heating element area defining at least a first lateral edge and a second lateral edge, the first lateral edge and second lateral edge not having an electrode associated therewith, the heating element including a layer of polysilicon defining a thickness, the polysilicon being uniformly doped from the first lateral edge to the second lateral edge; and

a first insulator disposed along the first lateral edge and the second lateral edge, the insulator defining a thickness not less than the thickness of the heating element at the perimeter of the heating element area, a portion of the first insulator extending over a portion of the heating element.

6,039,437

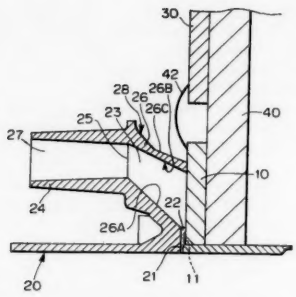
INK-JET HEAD AND INK-JET PRINTING APPARATUS INCORPORATING THE SAME

Akira Tsujimoto, Yokohama, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jan. 26, 1996, Appl. No. 592,179
Claims priority, application Japan, Jan. 31, 1995, 7-014014
Int. Cl.[7] B41J *2/05*
U.S. Cl. 347—63 **20 Claims**

1. An ink-jet head comprising:

a substrate having a plurality of ejection energy generating elements arranged thereon and a plurality of wirings for driving said elements, respectively, and a connecting portion for electrically connecting said wirings at a rear end portion thereof;



an upper plate member fitted to said substrate and having a plurality of ink ejection openings, a plurality of nozzle portions which are part of a plurality of ink passages communicated with said ink ejection openings, a recessed portion comprising at least one common liquid chamber communicated with said nozzle portions, and an opening portion communicated with said recessed portion, said common liquid chamber having a first inner side surface extending from the ink ejection opening side to the opening portion and a second inner side surface extending from the side opposite to the ink election opening side to the opening portion; and

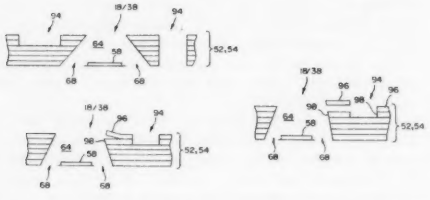
wherein the first inner side surface of said common liquid chamber is tilted in a direction opposite to an ink ejecting direction, the second inner side surface of said common liquid chamber is tilted in a same direction as said first inner side surface, and a tilting angle of the second inner side surface is greater than a tilting angle of the first inner side surface.

6,039,438

LIMITING PROPAGATION OF THIN FILM FAILURES IN AN INKJET PRINTHEAD

Tim Beerling, Corvallis, Oreg., assignor to Hewlett-Packard Company, Palo Alto, Calif.

Filed Oct. 21, 1997, Appl. No. 955,193
Int. Cl.[7] B41J *2/05*
U.S. Cl. 347—63 **20 Claims**



1. An inkjet pen for ejecting ink droplets onto a print medium, said pen comprising:

an inkjet printhead and a surface to which the inkjet printhead is coupled;

the inkjet printhead comprising a substrate and a plurality of layers and having a plurality of printing elements formed in the plurality of layers, the plurality of layers overlaying the substrate, wherein each one printing element of said plurality of printing elements comprises:

(a) a resistive element for heating ink to generate said ink droplets, the resistive element formed in a conductive layer of said plurality of layers;

(b) a firing chamber having a base supporting said resistive element, the firing chamber defined by a chamber wall, the wall formed by one or more layers of said plurality of layers;

(c) an ink feed channel for supplying ink to said firing chamber through a firing chamber entrance; and

(d) a nozzle in communication with the firing chamber through which ink droplets are ejected, the nozzle having a nozzle opening occurring in at least an outermost layer of the plurality of layers, said outermost layer being furthest of the plurality of layers from the substrate;

wherein said nozzle opening from respective ones of said plurality of printing elements together form a plurality of nozzle openings,

wherein respective non-plugged openings are formed in at least said outermost layer of said plurality of layers in regions of the printhead between respective nozzle openings of said plurality of nozzle openings.

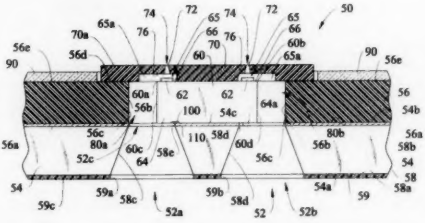
INK JET HEATER CHIP MODULE

Steven Robert Komplin; Ashok Murthy, both of Lexington, and Carl Edmond Sullivan, Versailles, all of Ky., assignors to Lexmark International, Inc., Lexington, Ky.

Filed Jun. 19, 1998, Appl. No. 100,544
Int. Cl.[7] B41J *2/05*
U.S. Cl. 347—65 **9 Claims**



1. A heater chip module comprising:

a carrier adapted to be secured to a container for receiving ink;

a heater chip coupled to said carrier, said carrier including a support substrate having at least one passage which defines a path for ink to travel from the container to said heater chip, said support substrate being a silicon plate of thickness of from about 400 microns to about 2500 microns; said carrier including a spacer secured to said silicon plate and having a cavity in which said heater chip is located; and

a nozzle plate positioned adjacent to said heater chip.

6,039,440

INK-JET HEAD

Seiichi Osawa, Oyama, and Takeo Komiyama, Higashikurume, both of Japan, assignors to Citizen Watch Co., Ltd., Tokyo, Japan

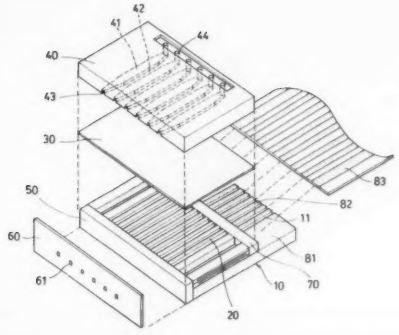
Division of application No. 08/714,077, filed as application No. PCT/JP95/00583, Mar. 28, 1995, Pat. No. 5,761,783. This application Nov. 18, 1997, Appl. No. 972,254.
Claims priority, application Japan, Mar. 29, 1994, 6-58423
Int. Cl.[7] B41J *2/045*
U.S. Cl. 347—70 **5 Claims**

1. An ink-jet head comprising:

an insulating base;

a plurality of juxtaposed multilayer piezoelectric elements each formed by alternately stacking first piezoelectric plates polarized in a first direction with regard to the thickness and second piezoelectric plates polarized in a second direction opposite to said first direction, with interposing conductive members and having first and second nondriven layers which are not distorted even when voltage is applied thereto and disposed at the opposite ends thereof with respect to the direction of stacking;

an elastically bendable oscillation plate; and



a flow passage plate provided with a plurality of ink outlets at the front end thereof, and a plurality of juxtaposed ink chambers connected to the ink outlets;

wherein the surface of the first nondriven layer of each multilayer piezoelectric element is bonded to the base, a first flat surface of the oscillation plate is bonded to the surfaces of the second nondriven layers of the multilayer piezoelectric elements, and the flow passage plate is bonded to a second flat surface of the oscillation plate with the ink chambers arranged in the direction of distortion of the multilayer piezoelectric elements, and

a front member made of a rigid material is bonded to the base, and a front end portion of the first flat surface of the oscillation plate is bonded to the front member to support the front end portion of the flow passage plate through the oscillation. plate, and

a back member made of a rigid material is bonded to the base and a back end portion of the first flat surface of the oscillation plate is bonded to the back member to support the front end portion of the flow passage plate through the oscillation plate by the front member.

INK JET RECORDING UNIT

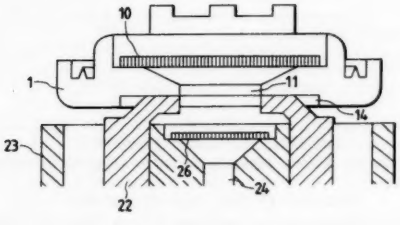
Ichiro Tomikawa; Mitsuhide Soga; Katsuyuki Fujii; Katsuhide Ogawa; Junichi Yoshida, all of Ebina; Shigeo Kawachi, and Takehiko Noda, both of Yao, all of Japan, assignors to Fuji Xerox Co., Ltd., Tokyo, Japan

Filed Sep. 25, 1996, Appl. No. 720,149

Claims priority, application Japan, Sep. 28, 1995, 7-250811; Sep. 28, 1995, 7-250812

Int. Cl.[7] B41J *2/175*

U.S. Cl. 347—86 **6 Claims**



1. An ink jet recording unit comprising:

a recording head with an ink ejecting means for ejecting ink, the recording head having a recording head ink passage;

an ink tank, detachably attached to said recording head along a common axis, for supplying ink to said recording head, the ink tank having an ink tank ink passage, the ink tank ink passage and the recording head ink passage defining the common axis and having an ink tank ink passage direction and a recording head ink passage direction;

an elastic jointing member, provided on said recording head, for jointing said recording head ink passage and said ink tank ink passage, said elastic jointing member including an umbrella-like portion having an opening formed at a top thereof and a space therein, wherein the space expands in the recording head ink passage direction of the common axis and the jointing portion forms a jointing ink passage connecting the ink tank ink passage and the recording head ink passage.

6,039,442

ELECTROSTATIC INK JET RECORDING DEVICE HAVING A STIRRING SYSTEM

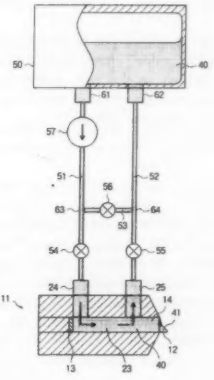
Yoshihiro Hagiwara; Junichi Suetsugu; Tadashi Mizoguchi; Hitoshi Minemoto; Hitoshi Takemoto; Kazuo Shima, and Toru Yakushiji, all of Niigata, Japan, assignors to NEC Corporation, Japan

Filed Dec. 23, 1997, Appl. No. 996,804

Claims priority, application Japan, Dec. 23, 1996, 8-348588

Int. Cl.[7] B41J *2/18*

U.S. Cl. 347—89 **7 Claims**



1. An electrostatic ink jet recording device, comprising:

an ink jet recording head defining an ink chamber having an ink ejection slit;

an ink reservoir operable to receive pigmented ink therein; and

a circulation section operable to circulate said pigmented ink between said ink chamber and said ink reservoir, said circulation section including:

a first tube having a first point and a second tube having a second point, said first and second tubes each coupled between said ink chamber and said ink reservoir,

a bypass tube coupled between said first point and said second point for bypassing said ink chamber, said bypass tube having a first valve therein,

a second valve disposed in said first tube between said ink chamber and said first point,

a third valve disposed in said second tube between said ink chamber and said second point, and

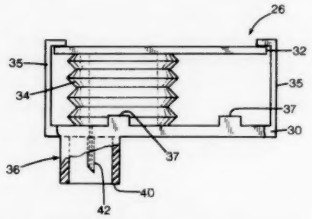
a pump disposed in said circulation section, said pump circulating the ink at least through said first and second tubes.

6,039,443

APPARATUS AND METHOD OF PRIMING INK SUPPLY TUBES IN AN INK JET PRINTER

Katherine Ann Dunphy, Lafayette, Ind.; Susan T Schnapp, Vancouver, Wash., and David C Johnson, Portland, Oreg., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Dec. 12, 1997, Appl. No. 990,156
Int. Cl.[7] B41J *2/19*
U.S. Cl. 347—92 **16 Claims**



1. An ink jet printer comprising:

a body defining a paper path and having a carriage operable to reciprocate across the paper path;

an ink supply receptacle on the body and spaced apart from the carriage;

an ink conduit extending between the ink supply receptacle and the carriage;

a suction apparatus on the carriage defining an expandable chamber having an inlet connected to the conduit and operable between a collapsed position and an expanded position, such that ink may be drawn from an ink supply connected to the receptacle to displace at least some of the air from the conduit; and

wherein the carriage defines a pen receptacle including an electrical connection to printer circuitry, and wherein the suction apparatus is received in the pen receptacle, such that the suction apparatus must be removed from the carriage before a pen is installed in the pen receptacle.

6,039,444

RECORDING MATERIAL

Kenichi Mori; Katsuya Ito; Tooru Kotani; Toshitake Suzuki, and Yasushi Sasaki, all of Otsu, Japan, assignors to Toyo Boseki Kabushiki Kaisha, Osaka, Japan

Filed Apr. 9, 1998, Appl. No. 57,764
Claims priority, application Japan, May 30, 1997, 9-141915; May 30, 1997, 9-141916
Int. Cl.[7] B41M *5/00*
U.S. Cl. 347—105 **8 Claims**

1. A method of ink jet recording comprising ink jet recording on an ink-receiving layer of a recording material including a substrate and an ink-receiving layer formed thereon, the ink-receiving layer containing both a water-absorbing anionic polymer and a water-absorbing cationic polymer, wherein the water-absorbing anionic and cationic polymers are in the form of water-absorbing resin particles.

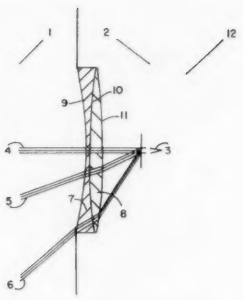
6,039,445

AFOCAL WATER-AIR LENS WITH GREATLY REDUCED LATERAL COLOR ABERRATION

Harold R. Suiter, Panama City, Fla., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Jul. 20, 1998, Appl. No. 120,876
Int. Cl.[7] G02C *1/00;11/08;* **G02B** *9/00*
U.S. Cl. 351—43 **8 Claims**

1. An afocal lens arrangement configured as a protective barrier separating first and second mediums having two different indices



of refraction and dispersion values, said afocal lens arrangement comprising compensating means for reducing lateral chromatic aberration;

wherein said compensating means comprise:

(a) a first portion adjacent to said first medium and comprising a negative lens of relatively high dispersion value and having two concave sufaces; and,

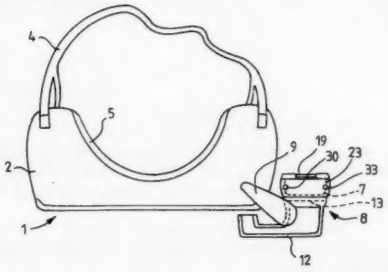
(b) a second portion adjacent said second medium and said first portion and comprising a positive lens of relatively low dispersion value and having two concave surfaces.

6,039,446

FACE SHIELD, INCORPORATING A WRIST WATCH DISPLAY

Ari Lähteenmäki, Helsinki, Finland, assignor to Suunto Oyj, Espoo, Finland

Filed Nov. 12, 1998, Appl. No. 191,285
Claims priority, application Finland, Nov. 28, 1997, 974367
Int. Cl.[7] G02C *1/00*
U.S. Cl. 351—43 **20 Claims**



1. A face shield for detachably receiving a wrist watch-shaped apparatus including a display, said face shield comprising a lens, holding means for detachably receiving said wrist watch-shaped apparatus, and an optical apparatus disposed to visually couple the display to the lens whereby information provided by the display is transmitted to an area of the lens.

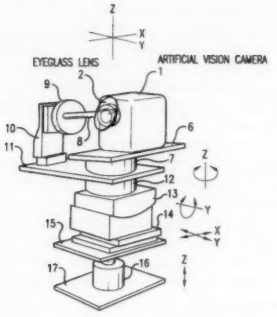
6,039,447

ARTIFICIAL VISION SYSTEM

Atsuo Minato, Tokyo, Japan, assignor to Hoya Corporation, Japan

Filed Feb. 25, 1999, Appl. No. 257,202
Claims priority, application Japan, Mar. 6, 1998, 10-055384
Int. Cl.[7] A61B *3/10*
U.S. Cl. 351—216 **16 Claims**

1. An artificial vision system for simulating a retinal image obtained when an observer views an object through a lens by turning his eyeball, comprising:



an artificial vision camera including an artificial ocular optical system having a simulated turning point and a planar image-pickup;

a lens holder; and

a mechanism operably connected to the artificial vision camera to rotate the artificial vision camera around the simulated turning point relative to a lens held in the lens holder.

6,039,448

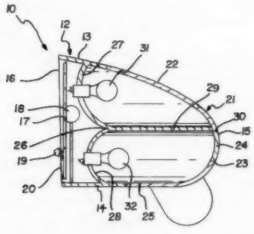
SIDE REARVIEW MIRROR DEVICE

Florin I. Oprea, 12239 Covello St., North Hollywood, Calif. 91605

Filed Oct. 1, 1998, Appl. No. 164,648

Int. Cl.[7] **G02B** *5/08*

U.S. Cl. 359—850 **20 Claims**



1. A side rear view mirror device for mounting to a side of a vehicle, said device comprising:

a housing having an interior, a top, a bottom, a front and a rear, said housing being mountable to the side of a vehicle;

a mirror being mounted to said rear of said housing;

said housing having a frontal opening into said interior of said housing, said frontal opening extending towards said top of said rear of said housing and said bottom of said rear of said housing;

said housing having a cover lens covering said front opening, said cover lens permitting passage of light therethrough;

said cover lens having an upper lens section and a lower lens section and a dividing line extending between said upper and lower lenses of said cover lens;

said upper lens section of said cover lens extending from said front of said housing towards said top of said rear of said housing, said lower lens section of said cover lens extending from said front of said housing towards said bottom of said rear of said housing;

said upper lens section of said cover lens being generally transparent;

said lower lens section of said cover lens having a front region and a bottom region;

said front region of said lower lens section of said cover lens comprising a colored generally translucent material;

said bottom region of said lower lens section of said cover lens being generally transparent;

a reflector member being provided in said interior of said housing, said reflector member having upper and lower reflector portions; and

upper and lower light sources being provided in said interior of said housing, said upper light source being mounted to said upper reflector portion, said lower light source being mounted to said lower reflector portion.

6,039,449

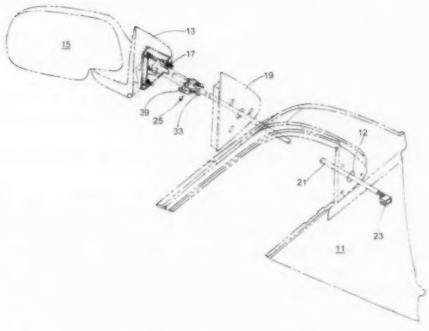
RETAINER CLIP FOR A VEHICLE REARVIEW MIRROR

Daniel J. Dolan, Chalfont, and John S. McPherson, Perkasie, both of Pa., assignors to Delbar Products, Inc., Perkasie, Pa.

Filed Sep. 23, 1998, Appl. No. 158,837

Int. Cl.[7] **G02B** *7/182*

U.S. Cl. 359—871 **18 Claims**



1. A rear view mirror, including a temporary hold-down clip for holding said mirror to a vehicle body panel during vehicle assembly, comprising:

a mirror housing with a mirror affixed thereto;

a plurality of fastening studs secured to said housing and projecting therefrom in a direction of attachment to said vehicle body panel;

a sleeve having an aperture, said sleeve projecting from said housing in the direction of attachment of said studs; and

a set of elongate snap-fit fingers located around an outer periphery of said sleeve, said fingers including shanks projecting outwardly from said housing in said direction of attachment whereby said rear view mirror is temporarily held to said vehicle body by said snap-fit fingers inserted into said body panel, said body panel being a portion of said vehicle body.

6,039,450

EXTERIOR REARVIEW MIRROR WITH CABLE PULL ADJUSTMENT

Jan Schubert, Wedemark, Germany, assignor to Bernhard Mittelhäuser, Wedemark, Germany

Filed Jul. 29, 1998, Appl. No. 126,036

Claims priority, application Germany, Jul. 29, 1997, 197 32 456

This patent is subject to a terminal disclaimer.

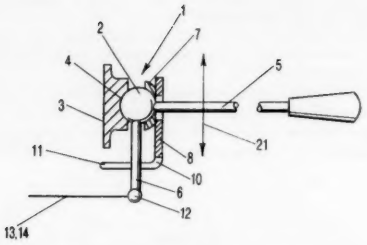
Int. Cl.[7] **G02B** *7/182;* **B60R** *1/06*

U.S. Cl. 359—872 **5 Claims**

1. An exterior rearview mirror for a motor vehicle, said mirror comprising:

a housing (**3**) having a mirror pane (**17**) pivotably connected in said housing (**3**);

first and second cable pulls (**13**, **14**, **15**) having first ends connected to said mirror pane (**17**);



said first and second cable pulls (**13**, **14**, **15**) acting on said mirror pane (**17**) in a same direction to pivot said mirror pane (**17**) about a first axis (**18**) and acting on said mirror pane (**17**) in opposite directions to pivot said mirror pane (**17**) about a second axis (**16**) extending perpendicular to said first axis (**18**);

said first and second cable pulls (**13**, **14**, **15**) having second ends;

a transverse member (**12**);

said second ends of said first and second cable pulls (**13**, **14**, **15**) connected to opposite ends of said transverse member (**12**);

a ball joint (**2**, **4**, **7**) connected to said housing (**3**);

an actuating lever (**5**) connected to said ball joint (**2**, **4**, **7**) and accessible from an interior of the vehicle for actuating said ball joint (**2**, **4**, **7**);

an arm (**6**) connected to said transverse member (**12**) and said ball joint (**2**, **4**, **7**);

said arm (**6**) extending at an angle to said actuating lever (**5**) such that said transverse member (**12**) is positioned laterally adjacent to said ball joint (**2**, **4**, **7**) when viewing said ball joint (**2**, **4**, **7**) and said transverse member (**12**) from the interior of the vehicle in a direction of said actuating lever (**5**);

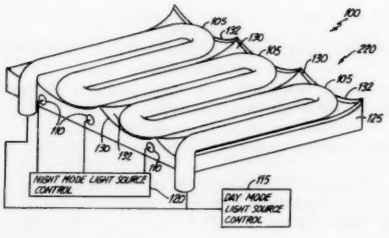
a guide in which said arm (**6**) is guided, said guide (**11**) extending in a direction of said actuating lever (**5**) such that, when said actuating lever (**5**) is moved in an upward or downward direction said arm (**6**) is moved back and forth in said guide (**11**) to thereby cause a transverse movement of said transverse member (**12**) and a movement of said first and second cable pulls (**13**, **14**, **15**) in said same direction.

6,039,451

SCULPTURED TRANSFLECTOR FOR DUAL MODE ACTIVE MATRIX LIQUID CRYSTAL DISPLAY BACKLIGHT

Duane A. Grave, Marion, Iowa, assignor to Rockwell Science Center, Inc., Thousand Oaks, Calif.

Filed Jun. 4, 1998, Appl. No. 90,376
Int. Cl.[7] **G01D** *11/28*
U.S. Cl. 362—29 **20 Claims**



1. An avionics display for use in the cockpit of an aircraft, the display comprising:

a liquid crystal display device;

a day mode light source positioned on a first side of the liquid crystal display device and adapted to controllably provide a first source of light for use by the liquid crystal display device in displaying information during day mode operations;

a night mode light source positioned on the first side of the liquid crystal display device and adapted to controllably provide a second source of light for use by the liquid crystal display device in displaying information during night mode operations; and

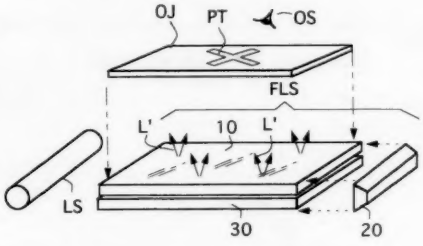
a sculptured transflector positioned between the day mode light source and the night mode light source, a first side of the sculptured transflector adjacent the day mode light source having a transflective material thereon and forming a plurality of arcuate surfaces, wherein the transflective material and the plurality of arcuate surfaces are adapted to maximize a percentage of light from the day mode light source which is reflected toward the liquid crystal display device.

6,039,452

FLAT LIGHT SOURCE WITH U-SHAPED CONFIGURATION

Keiji Iimura, 10-8, Akatsuka 3-Chome, Itabashi-ku, Tokyo 175-0092, Japan

Division of application No. 08/805,699, Feb. 25, 1997. This application May 12, 1999, Appl. No. 310,628.
This patent is subject to a terminal disclaimer.
Int. Cl.[7] **G01D** *11/28*; **G02F** *1/1335*
U.S. Cl. 362—31 **30 Claims**



1. A flat light source with U-shaped configuration, comprising:

a first transparent portion for use for illumination, being composed of a first substantially flat light transmission means;

a second transparent portion for use as bypass light guide, being composed of a second substantially flat light transmission means, positioned substantially parallel with said first substantially flat light transmission means;

a light coupling portion for use as light coupling between said first and second transparent portions, having at least one optical prism;

wherein each of said first and second transparent portions forms a substantially linear cross section of a substantially U-shaped configuration;

wherein said light coupling portion, being positioned near a bottom between said first and second transparent portions, forms a substantially bent cross section of said U-shaped configuration; and

thereby said first transparent portion, said second transparent portion and said light coupling portion form said substantially U-shaped configuration as a whole.

6,039,453

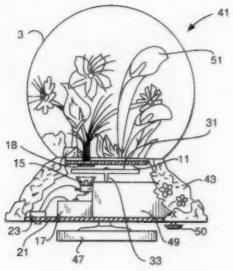
LIGHTED WATER GLOBE

Shiuh-Liang Wang, 815 N. First St., Alhambra, Calif. 91801

Filed Feb. 4, 1998, Appl. No. 18,503
Int. Cl.[7] **F21V** *3/00;8/00;31/00*
U.S. Cl. 362—101 **18 Claims**

1. A lighted water globe comprising:

a base having a hollowed interior;



a water filled sealed glass dome arrangement supported on said base, said glass dome arrangement comprising a glass dome having an open lower extension and a flexible rubber sealing member closing said open lower extension, said flexible rubber sealing member having a hole formed therein, said hole defining a light transmissive window through which light may pass;

a bundle of fiber optic elements disposed within said glass dome arrangement, said fiber optic elements terminating at an end of said bundle adjacent said light transmissive window; and

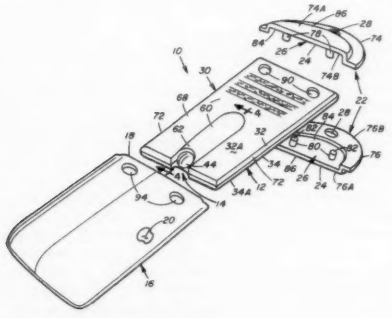
a light source disposed in said base interior directing light to said bundle end through said light transmissive window.

6,039,454

FLAT FLASHLIGHT DEVICE WITH KEY RING ATTACHMENT AND REGISTERABLE AND MATEABE PARTS

Bjarki Hallgrimsson, Ottawa, Canada, assignor to Lumatec Industries, Inc., Austin, Tex.

Filed Apr. 14, 1998, Appl. No. 60,563
Int. Cl.[7] **F21V** *33/00;* **F21L** *7/00*
U.S. Cl. 362—116 **22 Claims**



1. A flashlight device, comprising:

(a) an inner light generating module having means for generating light, said inner light generating module including an inner casing having an upper plate and a lower plate, said upper and lower plates being attachable to one another and together defining a cavity, said upper plate having an actuating portion overlying said cavity, said means for generating light including a bulb, a pair of leads spaced from one another and being connected to and extending from said bulb and a battery disposed between said leads and at one side in electrical contact with a first of said leads, said light generating means being disposed within said cavity of said inner casing between said upper and lower plates thereof such that depression of said actuating portion of said upper plate of said inner casing causes a second of said leads to make contact with an opposite side of said battery and thereby complete an electrical circuit between said bulb and battery for generating light;

(b) an outer protective cover having an open end and defining a pocket receiving said inner light generating module; and

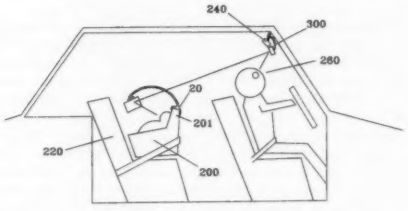
(c) an end cap having an open end and defining a cavity and a hole, said cavity receiving portions of said outer protective cover and inner light generating module, said end cap closing said open end of said outer protective cover and in combination with said outer protective cover enclosing said inner light generating module, said hole for receiving a key ring therethrough.

6,039,455

INFANT OBSERVATION MIRROR ATTACHABLE TO AN INFANT CAR SEAT

Karen Sorenson, RR 4, Site 19, Box 35, Edmonton Alberta, Canada, T5E 5S7

Filed May 12, 1999, Appl. No. 309,635
Int. Cl.[7] **F21V** *33/00;* **G02B** *5/08;7/182*
U.S. Cl. 362—142 **9 Claims**



1. An infant observation mirror attachable to an infant car seat, the infant observation mirror comprising:

(A) fastening assembly means for attachment to an upper edge of the back of the infant car seat;

(B) a curved arm assembly supported at a first end by the fastening assembly means, comprising:

(a) a resilient skeleton; and

(b) a soft covering carried by the resilient skeleton;

(C) mirror assembly means, carried by a second end of the curved arm assembly, for reflecting the face of a baby carried in a rear-facing infant car seat;

(D) adjustment assembly means, carried by the mirror assembly means, for allowing rotation about a horizontal axis and a vertical axis, thereby allowing accurate positioning of the mirror assembly means; and

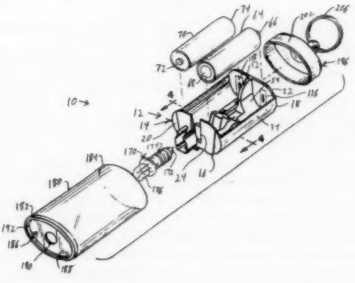
(E) lighting assembly means, supported within the adjustment assembly means, for producing a soft light.

6,039,456

SQUEEZE-ACTIVATED FLASHLIGHT

Paul R. Chabria, Wayne, Ill., assignor to Press-A-Lite Corporation, West Chicago, Ill.

Filed Jun. 4, 1999, Appl. No. 325,949
Int. Cl.[7] **F21L** *4/00*
U.S. Cl. 362—189 **10 Claims**



1. A flashlight comprising:

a housing having a first end and a second end, said housing including a first end wall at said first end of said housing, said first end wall including an aperture, a second end wall at said second end of said housing, a bottom wall located between said first and second end walls, a first side wall and a second side wall, said first and second side walls being respectively located on opposite sides of said bottom wall, a chamber located between said first and second end walls adapted to receive a first battery and a second battery, a first partition located adjacent said first end wall and between said first and second side walls, a second partition located adjacent said second end wall and between said first and second side walls, said second partition being spaced apart from said first partition, said first and second partitions and said first side wall forming a first cradle adapted to receive the first battery and said first and second partitions and said second side wall forming a second cradle adapted to receive the second battery;

a lamp including a first terminal and a second terminal;

a lamp holder attached to said first end of said housing and located externally of said housing, said lamp holder receiving and retaining said lamp;

a first electrical contact located within said first cradle adjacent said first end wall adapted to electrically engage the first battery, a second electrical contact electrically connected to said first electrical contact, said second electrical contact located between said aperture in said first end wall and said first partition, said lamp electrically engaging said second electrical contact, a third electrical contact located within said second cradle adjacent said first end wall adapted to electrically engage the second battery, said third electrical contact being in electrical communication with said second terminal of said lamp, a fourth electrical contact located in said first cradle at said second end wall adapted to electrically engage the first battery, and a fifth electrical contact located in said second cradle at said second end wall adapted to electrically engage the second battery;

an electrical switch adapted to provide selective electrical communication between the first and second batteries and said lamp, said electrical switch including a first electrical conductor member having a first end and a second end, said first end of said first electrical conductor in electrical communication with said fourth electrical contact, and a second electrical conductor member having a first end and a second end, said first end of said second electrical conductor member in electrical communication with said fifth electrical contact, said second end of said second electrical conductor member normally located out of electrical contact with said first electrical conductor member, said second electrical conductor member being resiliently bendable such that said second end of said second electrical conductor member may be selectively pressed into electrical contact with said first electrical conductor member; and

a flexible jacket covering said electrical switch, said jacket adapted to be pressed inwardly and thereby resiliently bend said second electrical conductor member into electrical contact with said first electrical conductor member and thereby illuminate said lamp.

6,039,457

LIGHT BRACKET

Timothy L. O'Neal, Hillsboro, Oreg., assignor to Intex Exhibits International, L.L.C., Beaverton, Oreg.

Filed Dec. 17, 1997, Appl. No. 992,685

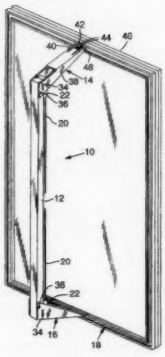
Int. Cl.[7] G09F *13/00;* **F21S** *3/00*

U.S. Cl. 362—217 **32 Claims**

1. A light bracket for mounting and supporting a light adjacent to a surface, comprising:

an elongate member configured to support the light;

a first and a second locking arm, pivotally mounted at opposite ends of the elongate member, each of the arms having an open position extending substantially perpendicular to the elongate member such that each of the arms is configured to mount to the surface and support the elongate member a distance from the surface, and each of the arms being pivotable to a closed position extending substantially parallel to the elongate member such that a space is defined for the light between the first locking arm and the elongate member, and between the second locking arm and the elongate member.



6,039,458

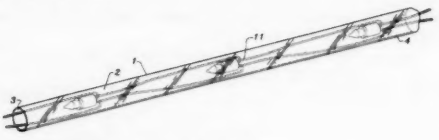
SEGMENTED LIGHT SYSTEM AND METHODS OF USING

Wayne L. Coates, Jr., and David M. Fisher, Jr., both of 1 Riverfront Plz., Suite 650, North Little Rock, Ark. 72114

Filed Oct. 23, 1998, Appl. No. 178,041

Int. Cl.[7] F21V *15/00*

U.S. Cl. 362—249 **15 Claims**



1. A lighting system, comprised of:

at least one string of electrically circuited light bulb sockets having bulbs, and

a plurality of resiliently-rigid light-permeable sub-sleeves, each defining an essentially linear interior cavity and having two opposing open ends, said cavity essentially housing and supporting a respective linear subsection of said light string, each end adapted for cooperating engagement with an end of another of said sub-sleeves aligned therewith, each of said sub-sleeves being cleaved along a longitudinal axis, said cleavage essentially forming a slit along said sub-sleeve thereby essentially creating a first marginal edge both adjacent to and on one side of said slit and a second marginal edge both adjacent to and on the other side of said slit, said sub-sleeves having an essentially closed-slit resting position with said first marginal edge overlapping said second marginal edge along said slit in said resting position.

6,039,459

LIGHTING CIRCUIT AND ANTENNA ARRANGEMENT OF A CELLULAR TELEPHONE

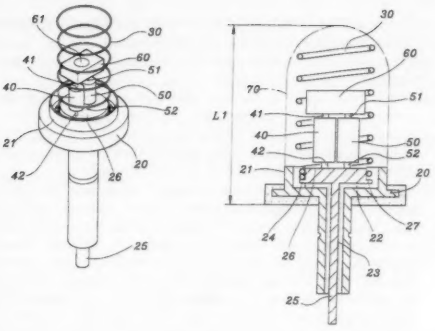
Daniel Chang, Pa-Te, Taiwan, assignor to Auden Technology Mfg. Co., Ltd., Taiwan

Filed Oct. 14, 1998, Appl. No. 172,247

Int. Cl.[7] F21V *33/00*

U.S. Cl. 362—253 **3 Claims**

1. A lighting circuit and antenna arrangement comprising a receptacle covered with a transparent cap, a metal coil holder mounted in said receptacle and insulated from said receptacle by insulative means, a coil mounted on said metal coil holder inside said transparent cap, and a lighting circuit installed in said metal coil holder, wherein said lighting circuit comprises a LED holder



block suspended inside said transparent cap above said metal coil holder within said coil, a LED installed in said LED holder block, said LED having a first end and a second end, a first diode having a first leg at one end connected to the first end of said LED and a second leg at an opposite end connected to said metal coil holder, a second diode having a first leg at one end connected to the second end of said LED and a second leg at an opposite end connected to said metal coil holder.

6,039,460

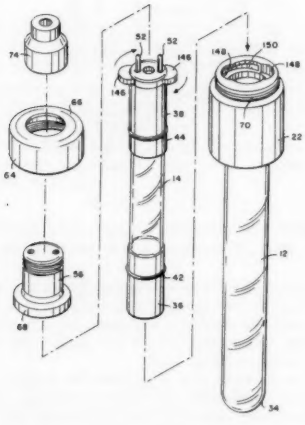
TUBULAR LAMP WITH TRANSPARENT PROTECTIVE OUTER SLEEVE HAVING ONE OPEN END FOR RECEIVING TUBULAR GLASS LAMP BODY WITH TERMINAL PIN ELECTRICAL CONNECTOR

Tony Ng, Chino Hills, and Mike Murphy, Canyon Country, both of Calif., assignors to Aquafine Corporation, Valencia, Calif.

Provisional application No. 60/043,654, Apr. 11, 1997. This application Apr. 10, 1998, Appl. No. 58,257.

Int. Cl.[7] **F21V** *29/00*

U.S. Cl. 362—267 **26 Claims**



1. A tubular lamp mounting arrangement, comprising:

a tubular lamp including an elongated lamp body, and a pair of distal and proximal end caps mounted on said lamp body generally at opposite ends thereof;

a protective sleeve having an open end, said tubular lamp having a size and shape for slide-fit reception into said sleeve, said distal and proximal end caps each including spacer means for positioning said tubular lamp within said sleeve with said lamp body in spaced relation to said sleeve; and

mounting means for mounting said protective sleeve on a substrate with said open end disposed for slide-fit reception of said tubular lamp.

6,039,461

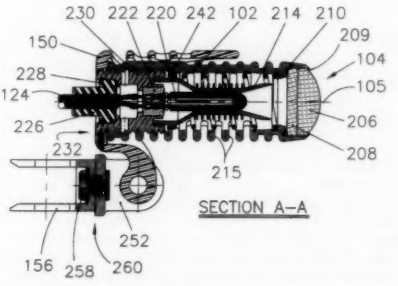
COMPACT HIGH-INTENSITY LIGHTING ASSEMBLY

Tom Cummings, Jackson; David Nowak, Dexter, and Byung Jin Chang, Ann Arbor, all of Mich., assignors to General Scientific Corporation, Ann Arbor, Mich.

Filed Sep. 11, 1998, Appl. No. 151,524

Int. Cl.[7] **F21L** *15/04*

U.S. Cl. 362—287 **7 Claims**



1. A compact, high-intensity light assembly, comprising:

a substantially hollow shell having proximal and distal ends;

a high-intensity light source retained centrally within the shell, the light source having a proximal end connected to electrical wiring which exits through the proximal end of the shell and a distal end which emits light toward and through the distal end of the shell, the light emitted by the source defining an optical axis;

a lens assembly retained within the distal end of the shell, the lens assembly including an optical diffuser and a lens for focussing the light from the source into a preferred illumination area;

a base unit insertable into the proximal end of the shell, the base unit having an apertured proximal end through which the electrical wiring emerges and a distal end including an annular seating lip;

a lamp guide used to hold the light source in a central position within the shell, the lamp guide including a proximal lip configured to rest against the annular seating lip of the base unit; and

a spring disposed within the shell, the spring having a distal end retained within the shell and a proximal end urging the proximal lip of the lamp guide against the annular seating lip of the base unit.

6,039,462

LAMP WITH SAFETY FEATURES

Tom Turner, Whitingsville, Mass., and Robert J. Livergood, Wilmington, Vt., assignors to Holmes Product Corp., Milford, Mass.

Continuation of application No. 08/711,242, Sep. 9, 1996, Pat. No. 5,863,111. This application Jan. 15, 1999, Appl. No. 232,913.

This patent is subject to a terminal disclaimer.

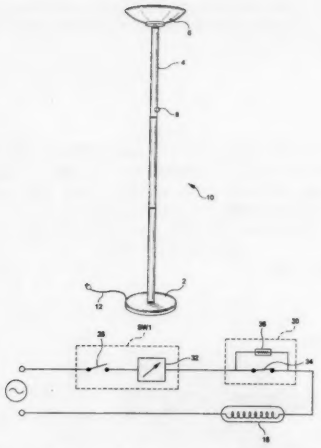
Int. Cl.[7] **F21S** *1//12*

U.S. Cl. 362—410 **16 Claims**

1. A freestanding electric lamp comprising:

a base for supporting the lamp on a floor;

an upwardly directed shade having an open top portion to allow heat to escape upwardly therefrom, the shade defining an interior;



an elongate stem extending between and connecting said shade to said base;

a light bulb socket for supporting a bulb within said shade interior;

a reflector positioned within said shade interior adjacent said socket for directing light generated by the bulb; and

an electrical circuit for providing power to said socket, said circuit including a thermostat electrically connected to said socket, said thermostat sensing ambient air temperature within said shade and being positioned between said reflector and said shade, said thermostat terminating power to said socket in response to sensed ambient air temperature within said shade reaching a predetermined value.

6,039,463

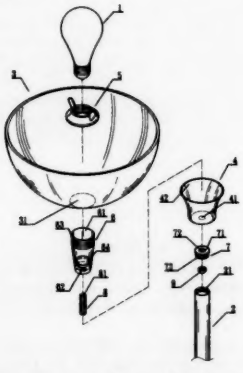
LAMP ASSEMBLY

Shih-Ming Lin, No. 132, Hsi Hsin Street, Chang Ya Tsun, Hsiu Shui Hsiang, Chang Hua Hsien, Taiwan

Filed Sep. 8, 1998, Appl. No. 149,087

Int. Cl.[7] **F21S** *1/12*

U.S. Cl. 362—414 **1 Claim**



1. A lamp assembly, comprising a light bulb, a lamp pole, a lampshade, a lamp cup, a butterfly-shaped nut, a light bulb holder, an end cover, a hollow bolt, and a securing nut, wherein

said lamp pole is provided with an internal threaded section on an upper side thereof;

said lampshade is centrally provided with a through hole;

said lamp cup is provided with a through hole in the center of a bottom portion thereof, and a flared portion on an upper side thereof for supporting a bottom portion of said lampshade;

said end cover is formed with a stop edge on an upper side thereof, a central threaded hole, and a small-diameter portion with external threads below said stop edge;

said hollow bolt is centrally provided with a power source wire protective through hole; and

said light bulb holder is formed with a recess and is provided with a threaded hole in the center of a bottom portion thereof, said light bulb holder further having an external threaded section on an upper side, and a light bulb locking seat extending upwardly from the bottom portion, whereby

in assembly, an upper section of said hollow bolt enters the upper side of said light bulb holder to lock with said threaded hole, with a lower portion thereof inserted into said flared portion on the upper side of said lamp cup and out through said through hole of said lamp cup to lock with said central threaded hole of said end cover, said securing nut being utilized to lock with the remaining portion of said hollow bolt, said external threaded section on the lower side of said end cover being locked screwably with said internal threaded section of said lamp pole, said light bulb holder entering via said through hole on the lower side of said lampshade, said butterfly-shaped nut being utilized to lock tightly with said external threaded section on the upper side of said light bulb holder to cause a bottom portion of said lampshade and said flared portion of said lamp cup to be in tight fit for supporting and positioning purposes, whereby said light bulb can directly lock into said light bulb locking seat in said light bulb seat at the bottom and go relatively deep into said light bulb holder.

6,039,464

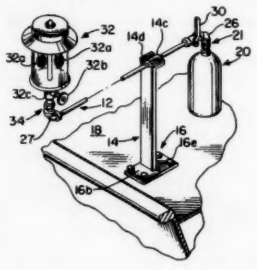
FISHING LIGHT

Lee O. Esprit, 1673 Basile/Eunice Hwy., Basile, La. 70515

Filed Mar. 16, 1998, Appl. No. 39,572

Int. Cl.[7] **B63B** *1/00*

U.S. Cl. 362—477 **11 Claims**



1. An apparatus for connecting a lantern and a fuel source for a lantern to a boat for attracting fish to the boat, the apparatus comprising:

a. an elongated pipe for conveying fuel from a fuel reservoir to a fuel-burning lantern, said pipe having a first end and a second end, said first end of said pipe being adapted to receive a lantern, said second end of said pipe being adapted to receive a fuel reservoir,

b. a pipe holder connected to said boat for holding said elongated pipe, lantern, and said reservoir, said pipe holder being adapted to position said lantern at a distance away from the side of said boat over the water in which said boat may be floating to attract fish to the area beneath said lantern, said pipe holder having a vertical bar extending upwardly from the deck of said boat, said vertical bar having an upper end and a lower end, said pipe being connected to said upper end, said lower end of said vertical bar being connected to a horizontal member, and

c. said boat having a seat connected to a vertical pedestal, said pedestal being connected to the deck of said boat, said horizontal member being connected to said pedestal.

6,039,465

SERVICE COVER FOR A REAR COMBINATION LAMP

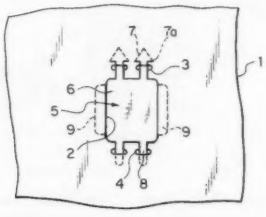
Mineo Hirabayashi; Mamoru Hozumi, both of Aichi-ken, Japan, and Kinsho Fukuta, Derby, United Kingdom, assignors to Kabushiki Kaisha Toyoda Jidoshokki Seisakusho, Aichi-ken, Japan

Filed Oct. 8, 1998, Appl. No. 168,820

Claims priority, application Japan, Oct. 8, 1997, 9-276054

Int. Cl.[7] **F21V** *17/00;* **B60R** *5/00;13/01;* **E06B** *5/00*

U.S. Cl. 362—496 **8 Claims**



1. A service cover which opens and closes a working hole formed in a trim in a trunk room for service work of the rear combination lamp, said service cover comprising:

a substantially rectangular cover body having an area enough to cover the working hole;

first and second retainer portions projecting from a pair of opposite sides of said cover body in opposite directions, respectively; and

jaw portions formed at a tip end of the first retainer portion for preventing the falling of said service cover;

the working hole being closed by inserting said first and second retainer portions into slits formed at both edge portions of the working hole, respectively, the working hole being opened by drawing the second retainer portion away from the corresponding slit and rotating the cover body about the first retainer portion.

6,039,466

MOTOR VEHICLE HEADLIGHT EQUIPPED WITH A DEVICE FOR ADJUSTING THE ANGULAR POSITION OF A REFLECTOR CONTAINED THEREIN

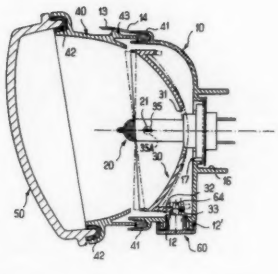
Laurent Duchenne, Etterbeek; Benony Grigorescu, Waterloo, and Jean-Pierre Loiselet, Rebaix, all of Belgium, assignors to Valeo Vision, Bobigny, France

Filed Dec. 16, 1997, Appl. No. 991,366

Claims priority, application France, Dec. 16, 1996, 96 15420; Dec. 16, 1996, 96 15422

Int. Cl.[7] **F21V** *14/04*

U.S. Cl. 362—515 **17 Claims**



1. A headlight comprising:

a casing;

a light source mounted in the casing;

a reflector cooperating with the light source to form a light beam of a predetermined photometry and configured for articulation about an axis through the light source;

a cover disposed to enclose a front opening of the casing; and

an intermediate housing member extending between an anterior edge of the casing and a peripheral edge of the cover and configured to fasten the headlight to a vehicle.

6,039,467

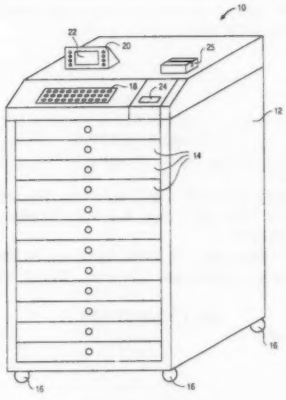
LIGHTING SYSTEM AND METHODS FOR A DISPENSING DEVICE

William K. Holmes, San Diego, Calif., assignor to Omnicell Technologies, Inc., Palo Alto, Calif.

Filed Dec. 5, 1996, Appl. No. 761,726

Int. Cl.[7] **G06F** *17/00;7/00;* **G07F** *11/00*

U.S. Cl. 364—479.01 **27 Claims**



1. A dispensing system, comprising:

a cabinet having at least one storage location;

a plurality of dividers which divide at least a portion of the storage location into a plurality of bins for holding items, wherein at least some of the dividers are adjustable to provide for multiple possible bin arrangements;

a processor having a memory for storing a list of items which are held within the bins and an entry device for entering requests for item removal; and

a plurality of light indicators attached to at least some of the dividers, wherein the light indicators are arranged such that at least one light indicator uniquely identifies one of the bins when lighted, wherein the storage location further includes a plurality of light sources which are in communication with the processor and which provide light to the light indicators, wherein for every possible bin arrangement in said portion of said storage location there is at least one light source and one corresponding light indicator, wherein the processor further includes information relating to the arrangement of the dividers, and wherein selection of one of the items from the list of items causes the processor to send a signal to actuate at least one of the light sources which are associated with the bin having the selected item.

6,039,468

WASHOUT ASSEMBLY FOR CEMENT MIXER VEHICLE

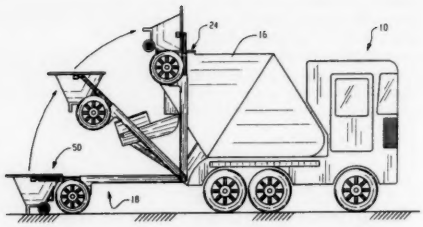
Dennis Kowalcyzk, 7712 Princeton Pl., Middleburg Heights, Ohio 44130

Filed Apr. 2, 1998, Appl. No. 53,979

Int. Cl.[7] **B28C** *5/18;7/14*

U.S. Cl. 366—41 **12 Claims**

1. A concrete mixer truck having a mixing drum and a tag axle assembly which is connected to a rear end of the truck, comprising:



a washout container for receiving and collecting washout material from said mixer truck; and

means for operatively connecting the washout container to the tag axle assembly such that pivotal movement of the tag axle assembly from a ground-engaging position to a raised position causes the washout container to empty said material from the washout container into the mixing drum.

6,039,469

MIXING KNEADER

David Palmer, Groton, Mass., assignor to List AG, Arisdorf, Switzerland

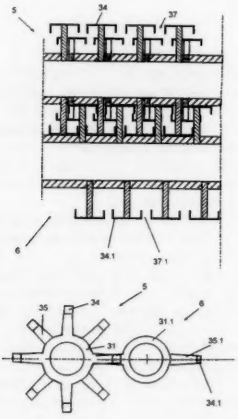
PCT No. PCT/EP96/04145, § 371 Date May 29, 1998, § 102(e) Date May 29, 1998, PCT Pub. No. WO97/12666, PCT Pub. Date Apr. 10, 1997

PCT Filed Sep. 23, 1996, Appl. No. 51,244

Claims priority, application Germany, Oct. 4, 1995, 195 36 944

Int. Cl.[7] **B01F** *7/04*

U.S. Cl. 366—97 **5 Claims**



1. A kneader for kneading and transporting a product through the mixture comprising:

a housing having a product inlet and a product outlet; and

a pair of coaxial shafts rotatably mounted in the housing for transporting the product from the product inlet to the product outlet, each of the pair of coaxial shafts includes a plurality of elements mounted thereon for kneading and transporting the product wherein the plurality of elements on each coaxial shaft are actually spaced thereon to provide a gap therebetween which receives a portion of an element on the other coaxial shaft wherein each element includes a radial carrying element connected to a ring carried on a corresponding coaxial shaft wherein adjacent rings on the coaxial shaft are separated from each other by a tubular section.

6,039,470

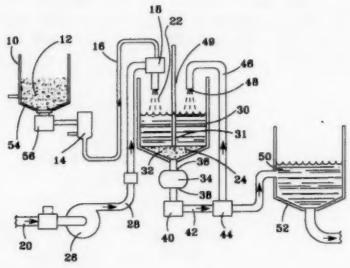
PARTICULATE MIXING SYSTEM

Allyn B. Conwell, 17114 Silverthorne La., Spring, Tex. 77379

Filed Mar. 24, 1997, Appl. No. 823,454

Int. Cl.[7] **B01F** *5/10;15/02*

U.S. Cl. 366—137 **17 Claims**



1. A system for hydrating a dry powder material with a liquid to generate a homogeneous, wetted material, comprising:

a disperser for mixing the dry powder material with the liquid to generate a liquid mixture containing nonwetted particles within said liquid mixture;

a settling tank having an upper end and a lower end, wherein said settling tank is engaged with said disperser for receiving said liquid mixture and for separating said nonwetted particles from said liquid mixture as said nonwetted particles gravitate toward said tank lower end;

a pump having an inlet proximate to and in communication with said tank lower end for removing said nonwetted particles from said tank lower end and further having a pump outlet for discharging said nonwetted particles;

a mixer having a mixer inlet engaged with said pump outlet for processing said nonwetted particles to reduce the size of said nonwetted particles in a process stream, wherein said mixer further has a mixer outlet for discharging said process stream into said settling tank to create the homogeneous wetted material; and

a valve for selectively discharging the homogeneous wetted material.

6,039,471

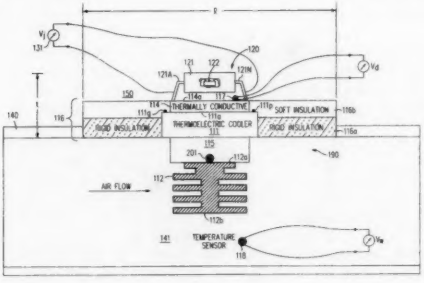
DEVICE FOR SIMULATING DISSIPATION OF THERMAL POWER BY A BOARD SUPPORTING AN ELECTRONIC COMPONENT

Christopher P. Wyland, Santa Clara, Calif., assignor to Integrated Device Technology, Inc., Santa Clara, Calif.

Filed May 22, 1996, Appl. No. 651,224

Int. Cl.[7] **G01N** *25/20*

U.S. Cl. 374—43 **28 Claims**



1. A board simulator comprising:

a thermoelectric cooler having a first side and a second side opposite said first side, said thermoelectric cooler having a power terminal and a ground terminal, said thermoelectric

cooler having the property of using electrical power received between said power terminal and said ground terminal to cause said first side to be at a first temperature different from a second temperature of said second side;

a first temperature sensor thermally coupled to said first side, said first temperature sensor being capable of indicating a measurement of said first temperature;

a heat sink coupled to said second side, said heat sink having the property of dissipating heat from said second side; and

a second temperature sensor located to determine a temperature at a point between said thermoelectric cooler and said heat sink.

6,039,472

METHOD FOR MEASURING THE TEMPERATURE OF A METALLURGICAL FURNACE USING AN ACOUSTIC NOISE PARAMETER AND RATE OF CONSUMPTION OF ELECTRICAL POWER

Oleg Eduardovich Shlik, Netanya, Israel, assignor to Accusteel Ltd., D.N., Hefer, Israel

Filed May 13, 1998, Appl. No. 78,035

Int. Cl.[7] G01K *11/22;11/26*

U.S. Cl. 374—117 **7 Claims**

1. A method of measuring a temperature of a metallurgical furnace, comprising the steps of:

(a) establishing a relationship between a wavelength of acoustic noise in the furnace and a rate of consumption of electrical power by the furnace;

(b) simultaneously:

(i) recording a spectrum of said acoustic noise, and

(ii) measuring said rate of consumption of electrical power;

(c) computing a representative frequency of said acoustic noise from said spectrum; and

(d) inferring the temperature, based on said representative frequency and on a wavelength inferred from said measured rate of consumption of electrical power using said relationship.

6,039,473

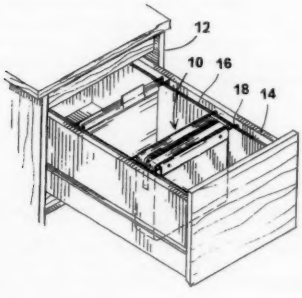
TAMPER EVIDENT FILE HOLDER CONFIGURED FOR HANGING IN A FILE CABINET

Bruce Bond, 9 The Eyrie, Eaglemont, Victoria 3084, Australia

Filed Feb. 18, 1999, Appl. No. 252,316

Int. Cl.[7] B65D *33/34*

U.S. Cl. 383—5 **7 Claims**



1. A tamper evident document file holder comprising:

a substantially rectangular pouch having dimensions compatible with standard file cabinet drawers, said pouch having two opposed substantially rectangular sides, each such side having a flap extending substantially the entire length of said pouch, the flap and the side forming an elongated, open-ended compartment;

a pair of elongated having rods, each such rod extending within a respective said compartment and extending beyond said pouch for hanging said pouch in a file cabinet drawer;

said pouch being fully enclosed except for a zippered opening having a zipper and a locking device, said locking device having means for providing evidence of each opening of said zipper;

wherein said hanging rods are trapped within said compartments for preventing rotation and translation of said rods within said compartments;

further comprising at least one pin extending through each said compartment for pinning said hanger rod.

6,039,474

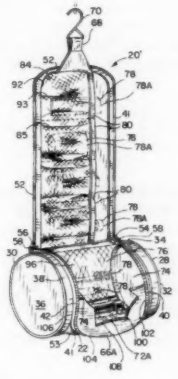
MINIATURE GOLF BAG TRAVEL ORGANIZER

Daniel A. DeChant, 5434 Bremer Rd., McFarland, Wis. 53558

Filed Jul. 31, 1998, Appl. No. 127,470

Int. Cl.[7] B65D *33/25*

U.S. Cl. 383—66 **20 Claims**



1. An organizer for holding utility items comprising:

a miniature golf bag sized to enclose and carry the utility items, the bag having

a tubular main body portion having opposed closed ends, and a reclosable sidewall defining a main body storage compartment, and

a slide fastener having

a first terminus and a second terminus, a track extending between the first and the second terminus,

a pair of self-locking slides mounted on the track, one of each of the pair of self-locking slides associated with one of the two termini, and a pair of pull tabs, one of each of the pair of pull tabs associated with one of the pair of slides;

wherein the slide fastener is incorporated into the tubular main body portion to define the reclosable sidewall, and wherein the pair of self-locking slides of the slide fastener are manipulated to partially open the reclosable sidewall, defining a rectangular flap and a shelf-like portion.

6,039,475

RETAINER FOR ROLLER BEARING AND METHOD FOR MANUFACTURING THE SAME

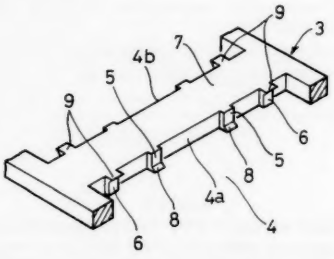
Taichiro Furukawa, Hamamatsu; Kohhei Kondoh, Shizuoka; Atsushi Yamashita, and Seiji Kanbori, both of Fukuroi, all of Japan, assignors to NTN Corporation, Osaka, Japan

Continuation of application No. 08/814,008, Mar. 10, 1997, abandoned, which is a continuation of application No. 08/345,761, Nov. 22, 1994, abandoned. This application Nov. 21, 1997, Appl. No. 976,005.

Claims priority, application Japan, Nov. 30, 1993, 5-300117

Int. Cl.[7] F16C *33/54*

U.S. Cl. 384—580 **2 Claims**



1. A method of manufacturing a retainer for a roller bearing, comprising the steps of forming in a strip a plurality of roller accommodating pockets arranged at intervals with protrusions projecting from both sides of crossbars between said pockets, ironing said protrusions only or said protrusions and the side faces of said crossbars from both directions of thickness of the retainer along the entire thickness of said crossbars, thereby forming roller stopper lugs on both edges of the retainer, and forming said strip into an annular shape.

6,039,476

DRIVE FORCE TRANSMISSION MECHANISM HAVING INCLINED DRIVE SHAFT FOR CAMERA

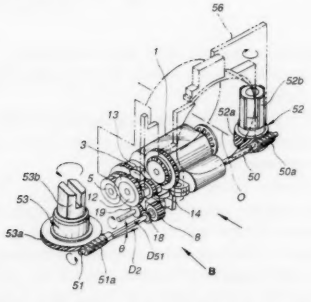
Moriya Katagiri, Tokyo; Yukihiko Sugita, Kokubunji, and Yoshiyuki Kitahara, Tokyo, all of Japan, assignors to Olympus Optical Co., Ltd., Tokyo, Japan

Filed Sep. 11, 1997, Appl. No. 927,612

Claims priority, application Japan, Sep. 13, 1996, H8-243547

Int. Cl.[7] G03B *1/00*

U.S. Cl. 396—418 **17 Claims**



12. A drive force transmission device for a camera, comprising:

first and second drive shafts placed in a non-linear manner so that one of said first and second drive shafts is inclined at an angle relative to another one of said first and second drive shafts, said first and second drive shafts respectively having gears adapted to output a drive force, which is transmitted from a drive source, to wind means or rewind means; and input gears respectively provided on said first and second drive shafts, a drive force transmitted from said drive source being selectively coupling to said input gears by a drive force switching mechanism.

6,039,477

INK RIBBON TAKE-UP MECHANISM HAVING TRANSFER MEMBER

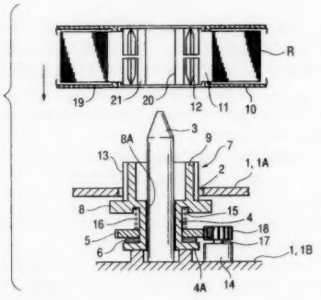
Takanobu Matsuura, Iwate-ken, Japan, assignor to Alps Electric Co., Ltd., Tokyo, Japan

Filed Oct. 2, 1998, Appl. No. 165,607

Claims priority, application Japan, Oct. 16, 1997, 9-283574

Int. Cl.[7] B41J *33/16*

U.S. Cl. 400—236 **2 Claims**



1. An ink ribbon take-up mechanism which comes into engagement with an engaging portion formed on the side of a ribbon cassette loaded onto a carriage of a printer and which uses a rotative driving force of a motor to take up an ink ribbon wound round a pair of cores of said ribbon cassette, said ink ribbon take-up mechanism comprising:

a support shaft projected from a ribbon cassette loading surface of said carriage to a ribbon cassette loading side and adapted to be inserted into said engaging portion formed on the ribbon cassette side to support the ribbon cassette; and

a drive transfer member disposed rotatably on an outer periphery side of said support shaft and adapted to be engaged with said engaging portion formed on the ribbon cassette side to transmit the rotative driving force of said motor to said engaging portion, said drive transfer member having a circular base plate formed with a hole for insertion therein of said support shaft, and a generally cylindrical drive transfer portion formed on an upper surface of said circular base plate, said drive transfer portion having a plurality of engaging portions formed on an outer peripheral surface thereof circumferentially at equal intervals to transmit the rotative driving force to said engaging portion formed on the ribbon cassette side, and said drive transfer member is rotatably fitted on said support shaft so that a tip end side of said drive transfer portion is projected from a projection hole formed in said ribbon cassette loading surface.

ERGONOMICAL KEYBOARD ASSEMBLY

Chin-Wen Chou, Taipei Hsien, Taiwan, assignor to Shin Jiuh Corp., Taiwan

Filed Apr. 16, 1999, Appl. No. 293,058

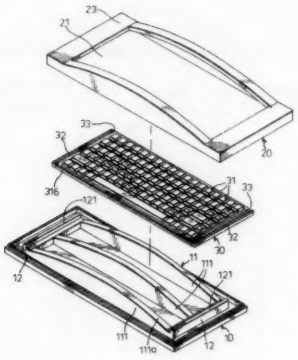
Int. Cl.[7] B41J *5/08*

U.S. Cl. 400—472 **5 Claims**

1. An ergonomical keyboard assembly, comprising:

an upper cover including a hollow frame, and an opening confined by said frame, said opening having opposite ends and an intermediate portion;

a lower base plate connected to said cover; and



a keyboard having a substrate mounted on said base plate below said cover, and a plurality of keys mounted on said substrate having key caps projecting upward and outward from said cover through said opening, said substrate having a top face which is arched and which protrudes upward, said key caps forming an arched overall key surface that projects upward and outward through said opening and that is arched upward from said opposite ends of said opening to said intermediate portion, said substrate comprising a flexible plate forming said arched top face, said base plate including a support to hold said substrate, said support having an arched surface and including a plurality of support strips which extend lengthwise and which project upward from said base plate, said support strips having arched top ends.

6,039,479

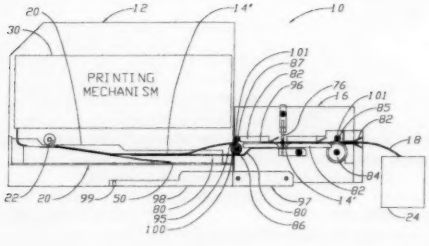
PRINTING ASSEMBLY WITH CONTINUOUS STOCK CUTTER AND SHEET FEEDER FOR FEEDING CUT SHEETS TO PRINTER

Jeffery L. Hill, Mundeline, and Gregory S. Hill, Lake Zurich, both of Ill., assignors to Dynetics Engineering Corporation, Inc., Lincolnshire, Ill.

Division of application No. 08/521,350, Aug. 29, 1995, Pat. No. 5,829,898. This application Aug. 11, 1998, Appl. No. 132,219.

Int. Cl.[7] B41J *11/70*

U.S. Cl. 400—621 **5 Claims**



1. In a printing assembly having a discrete sheet printer with a discrete sheet supply tray and means for automatically transporting a discrete sheet from the supply tray to the printer for printing, the improvement being a continuous discrete sheet supply enhancement apparatus, comprising:

an open tray for receipt through space of at least one discrete sheet;

means for cutting a supply of continuous stock into discrete sheets;

means for transferring a free end of the continuous stock to the cutting means at a feed-in speed; and

means for ejecting a discrete sheet cut from the free end of the continuous stock away from the cutting means with a falling trajectory, through space, that moves the discrete sheets into the open tray for operative engagement with the discrete sheet transporting means of the printer,

said ejecting means including means for ejecting the discrete sheets into space at a feed-out speed greater than the feed-in speed, and

said feed-out speed being sufficiently greater than the feed-in speed to create a gap through space between successive discrete sheets, said gap being of sufficient gap width to enable each discrete sheet to fall sufficiently in its falling trajectory before a next successive sheet is ejected to avoid collision between successively ejected discrete sheets.

6,039,480

METHOD AND APPARATUS FOR FORMING TRANSFER IMAGES AND TRANSFER DRUM USED IN THE SAME

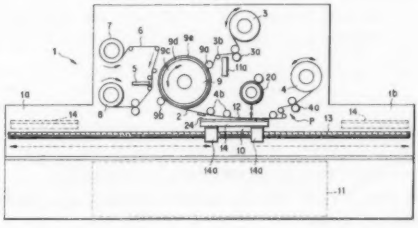
Tomio Andoh; Shiro Shibata, and Tomoyuki Marugame, all of Tokyo, Japan, assignors to Toppan Printing Co., Ltd., Tokyo, Japan

Filed Aug. 27, 1998, Appl. No. 141,139

Claims priority, application Japan, Sep. 2, 1997, 9-236925

Int. Cl.[7] B41J *11/14*

U.S. Cl. 400—662 **16 Claims**



1. A transfer drum for use in a transfer image forming apparatus which causes a thermal head and an ink ribbon to print a transfer image on a transfer film in contact with a surface of the transfer drum and transfers the transfer image to a specific position on an image-transferred member, said transfer drum comprising:

a drum base;

a cushion layer provided on a surface of said drum base; and

a rigid layer with a surface finish of less than 2.0 μm provided on a surface of said cushion layer.

6,039,481

PAPER WIDTH DETECTING APPARATUS AND METHOD FOR INK-JET PRINTER

Sang-Man Ham, Suwon, Rep. of Korea, assignor to SamSung Electronics Co., Ltd., Kyungki-do, Rep. of Korea

Continuation-in-part of application No. 09/001,468, Dec. 31, 1997, abandoned. This application Jan. 4, 1999, Appl. No. 224,956.

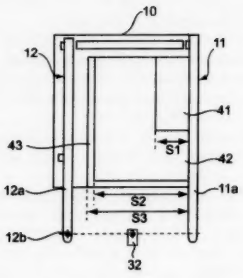
Claims priority, application Rep. of Korea, Dec. 31, 1996, 96/80906

Int. Cl.[7] B41J *29/18*

U.S. Cl. 400—708 **16 Claims**

1. A paper width detecting apparatus for an inkjet printer, comprising:

a right paper support integrally formed with a right home position detecting rib, the right paper support being a home position reference of a paper sheet for printing;



a left paper guide integrally formed with a left paper end detecting rib, the left paper end detecting rib having a light emitting device;

a paper feeding section for receiving at least one paper sheet and for supplying the at least one paper sheet for printing with the left paper guide movable in a left direction and in a right a direction to tightly fix the at least one paper sheet at the home position reference of the right paper support;

a paper feeding roller for supplying for printing the at least one paper sheet received from the paper feeding section;

a carrier that reciprocates for printing on the at least one paper sheet supplied for printing through the rotation of the paper feeding roller; and

a photosensor for detecting a light signal output from the light emitting device mounted on the left paper end detecting rib for determining the paper width of the at least one paper sheet.

6,039,482

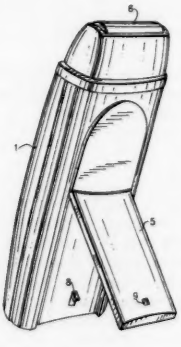
HOT WAX HAIR REMOVER APPARATUS

Henri Smal, Blegny, Belgium, assignor to Conair Corporation, Stamford, Conn.

Filed Jan. 19, 1999, Appl. No. 233,016

Int. Cl.[7] **A46B** *11/08*

U.S. Cl. 401—1 **4 Claims**



1. A hot wax hair remover apparatus comprising a heating sleeve for depilatory wax, equipped with a wax applicator wherein the said heating sleeve is provided with a retractable foot equipped with a spring holding the foot in a deployed position and with means for locking the said foot in the retracted position, against the force of the said spring, controlled by a catch arranged at the base of the said sleeve which releases the said locking means when the said sleeve is put down on a support surface.

6,039,483

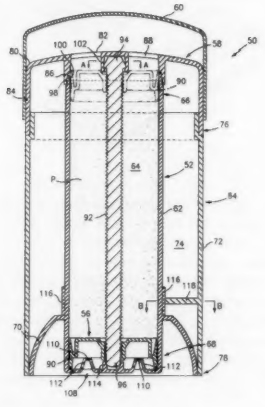
ROTARY DISPENSER

Alex S. Szekely, Jackson, N.J., assignor to The Plastek Group, Erie, Pa.

Continuation-in-part of application No. 08/744,091, Nov. 5, 1996, abandoned. This application Apr. 9, 1999, Appl. No. 289,418.

Int. Cl.[7] **A45D** *40/04*

U.S. Cl. 401—50 **10 Claims**



1. A dispenser assembly, comprising:

an inner housing having an upper end, a lower end, and a wall defining a product space for containing a product to be dispensed;

an outer housing having an upper end, a lower end, and a wall defining an inner space, said lower end of said outer housing at least partially surrounding said lower end of said inner housing, said inner housing being rotatably mounted within said outer housing so that said inner housing can be rotated relative to said outer housing;

means within said inner housing for advancing product toward said upper end of said inner housing responsive to rotation of said inner housing relative to said outer housing; and

a transfer member fixed relative to said outer housing and rotatably associated with said upper end of said inner housing, said transfer member having an applicator surface for applying product to a desired area, and at least one slot in said applicator surface for allowing transfer of product from said product space through said transfer member to said applicator surface.

6,039,484

WRITING INSTRUMENT

Hidehei Kageyama, and Yoshihide Mitsuya, both of Kawagoe, Japan, assignors to Kotobuki & Co., Ltd., Japan

Filed Jun. 22, 1998, Appl. No. 100,942

Int. Cl.[7] **B43K** *25/00*

U.S. Cl. 401—52 **28 Claims**

1. A writing instrument comprising:

a barrel;

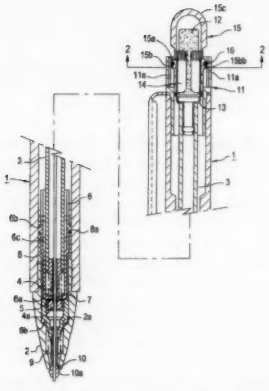
a tip element provided at a front end of the barrel;

means axially movably incorporated within the barrel for advancing a writing medium:

a resilient element incorporated in the barrel for biasing the writing medium advancing means backward;

a knock member inserted in the rear end portion of the barrel and detachably mounted on the rear end of the writing medium advancing means;

the knock member having a pair of spaced apart flanges provided thereon;



cooperating means on the knock member and barrel for preventing the knock member from rotating relative to the barrel;

the cooperating means comprising engaging projection means mounted on the knock member, and engaging groove means formed in an inner portion of the barrel;

the engaging projection means and engaging groove means being engaged with each other, to thereby prevent the knock member from rotating relative to the barrel; and

a rattle-preventive means provided between the pair of spaced apart flanges for preventing the knock member from rattling.

6,039,485

DOUBLE-CHUCK MECHANICAL PENCIL

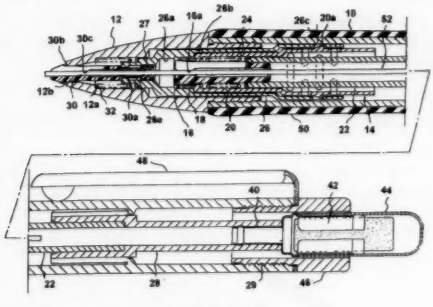
Hidehei Kageyama; Yoshihide Mitsuya, and Tadayoshi Ebinuma, all of Kawagoe, Japan, assignors to Kotobuki & Co., Ltd., Kyoto, Japan

Filed May 11, 1998, Appl. No. 75,335

Claims priority, application Japan, May 13, 1997, 9-122683; Jun. 24, 1997, 9-166901

Int. Cl.[7] **B43K** *21/16*

U.S. Cl. 401—67 **26 Claims**



16. A writing instrument, comprising:

a fitting including a tip;

a first chuck located at the tip of the fitting for holding a writing substance and urged in a first direction; and

a second chuck for delivering the writing substance, the second chuck being movable in a second direction, to deliver the writing substance after the first chuck has been moved in the second direction to release the writing substance,

wherein at least one of the first chuck and the second chuck is formed of a synthetic resin material, and

wherein said synthetic resin material comprises polyoxymethylene in which glass fibers are mixed.

19. A writing instrument, comprising:

a fitting including a tip;

a first chuck located at the tip of the fitting for holding a writing substance and urged in a first direction; and

a second chuck for delivering the writing substance, the second chuck being movable in a second direction, to deliver the writing substance after the first chuck has been moved in the second direction to release the writing substance,

wherein at least one of the first chuck and the second chuck is formed of a synthetic resin material, and

wherein said synthetic resin material comprises polyoxymethylene in which a lubricant is mixed.

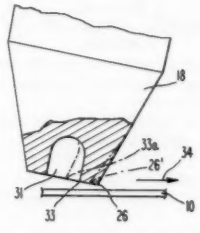
PEN

Daniel V. Breslin, 7934 Ridge Ave., Philadelphia, Pa. 19128

Filed May 15, 1997, Appl. No. 856,969

Int. Cl.[7] **A45D** *40/20*

U.S. Cl. 401—88 **15 Claims**



1. A pen for use on electronically scanned cards and like uses where uniform width of the pen stroke is desirable, comprising:

(a) a pen body adapted to be grasped during use;

(b) a reservoir in the pen body for containing ink;

(c) a deformable tip in communication with said reservoir for receiving ink therefrom, with said tip protruding from an end of the body;

(d) said tip having an unbroken outer periphery; and

(e) a pocket in said tip.

6,039,487

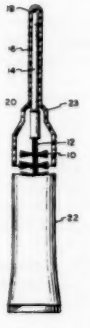
DISPOSABLE DISPENSER OF SAMPLES OF COSMETIC PRODUCT

Gordon Kristiansen, 135 Manor Hill Rd., Stratford, Conn. 06497

Continuation-in-part of application No. 08/724,893, Oct. 3, 1996. This application Dec. 3, 1997, Appl. No. 984,634.

Int. Cl.[7] **A46B** *11/00*

U.S. Cl. 401—126 **3 Claims**



1. A disposable dispenser of samples of cosmetic product comprising:

an applicator having product engaging means, a metal shaft secured at one end to said means, and an elongated plastic rod secured at one end to the other end of said shaft;

an elongated hollow plastic tube sealed at an outer end and open at an inner end, said rod extending within said tube;

an elongated hollow plastic container having a sample quantity of cosmetic product disposed therein, said container being sealed at one end and having an open opposite end designated as a neck, the inner end of the tube being joined to the neck, the region wherein the tube and neck are joined being deliberately weakened; the tube and container having a common direction of elongation;

whereby the tube can be snapped away from the container when separation pressure is applied at the weakened region while the rod remains connected via the shaft to said means, thus permitting the tube and rod to be pulled out of the container to expose the means for use.

6,039,488

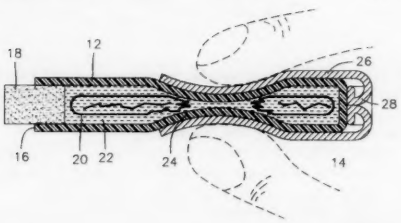
BREAKABLE AMPULE, SWAB AND CAP FOR SCENT MATERIAL

Dwayne M. Krawczyk, LaPlace, and Mabry M. McFarlin, Swartz, both of La., assignors to Louisiana Bucks Unlimited, L.L.C., Monroe, La.

Filed Jun. 25, 1998, Appl. No. 104,202

Int. Cl.[7] B43K *5/14*

U.S. Cl. 401—132 **8 Claims**



1. A dispenser and applicator for scent material comprising a hollow casing having a deformable peripheral wall, said casing including an open end and a closed end, a hollow frangible ampule having a quantity of liquid scent material encapsulated therein, said ampule being positioned within said casing, a dispensing cap removably mounted on and closing said open end of said casing, a porous plug applicator swab in said open end of said casing, said dispensing cap enclosing said swab, said ampule being rupturable within the casing by deforming said peripheral wall inwardly to discharge said scent material into said casing for passage into and through said swabs, said swab being a flexible porous material and extending outwardly of the open end of said casing and receiving liquid scent material from the ampule, when ruptured, to enable the liquid scent material to be directly applied to surface areas by contacting said swab with said surface areas when the dispensing cap is removed and to dispense the liquid scent material directly into the air as an odor from the cap when the cap is mounted on the open end of said casing.

6,039,489

PASTE DISPENSING BRUSH

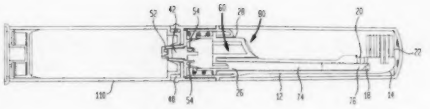
James N. Harman, Brielle, N.J., and Richard J. Upcavage, Fairless Hills, Pa., assignors to ICP Corporation, Brielle, N.J.

Provisional application No. 60/066,529, Nov. 25, 1997. This application Nov. 25, 1998, Appl. No. 199,362.

Int. Cl.[7] B43K *5/02*

U.S. Cl. 401—146 **17 Claims**

1. A stem sealing arrangement for a paste dispensing brush having a paste reservoir and a reciprocating pump for dispensing



the paste to a brush, the pump having a housing defining a housing cavity, and a piston mounted for reciprocating movement within the cavity, the piston separating the housing cavity into a pumping chamber portion and a dry portion, the stem sealing arrangement comprising:

(a) a stem depending from said housing and having proximal and distal end portions, said distal end portion of said stem defining at least one discharge aperture, said stem having a longitudinal bore extending from said proximal end portion and communicating with said at least one discharge aperture;

(b) a sealing boss having a proximal end and a distal end, said sealing boss also having a raised annular ridge, said sealing boss extending from the piston into said longitudinal bore at said proximal end portion of said stem, said raised annular ridge forming an outer surface of said sealing boss forming an interference fit in said longitudinal bore at said proximal end portion of said stem to create a seal in said longitudinal bore at said proximal end portion of said stem, said sealing boss defining an interior channel therethrough communicating with said pumping chamber at said proximal end of said sealing boss and with said longitudinal bore at said distal end of said sealing boss; and

(c) a shut-off member having a proximal end and a distal end, said shut-off member depending from said distal end of said sealing boss and extending through said longitudinal bore in said stem to said at least one discharge aperture, said shut-off member having a shut-off surface for selectively closing said at least one discharge aperture, whereby paste pumped by the reciprocating movement of the piston passes from the pumping chamber portion of the housing cavity through said interior channel of said sealing boss, through said longitudinal bore, and through said discharge aperture, and is prevented by said sealing boss from entering said dry portion of the housing cavity.

6,039,490

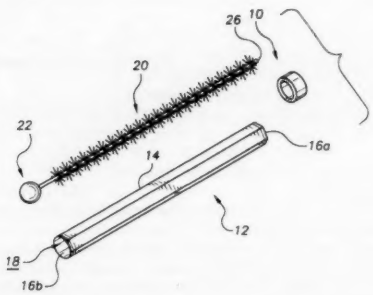
DRINKING STRAW CLEANING SYSTEM

Beverly L. Banks, and Tony C. Banks, both of 5606 John Burruss Rd., Cumming, Ga. 30040

Filed Feb. 17, 1999, Appl. No. 251,866

Int. Cl.[7] B43M *11/06*

U.S. Cl. 401—185 **2 Claims**



1. A drinking straw cleaning system comprising:

a flexible, tubular brush structure having a tubular cavity formed therein between a closed insertion end and an open ended, an externally threaded squeeze bulb reservoir connecting end, a number of cleaning solution dispensing orifices provided along the length of said flexible tubular brush structure and a

number of multi-length bristles extending radially outward from said flexible tubular brush structure; and

a resilient, spherical squeeze bulb reservoir having an internal cleaning solution reservoir cavity in connection with a threaded fitting companionately threaded to engage and connect with said threaded squeeze bulb reservoir connecting end of said flexible tubular brush structure;

said resilient, spherical squeeze bulb reservoir having an internal cleaning solution reservoir cavity in connection with the threaded fitting compassionately threaded to engage and connect with said externally threaded squeeze bulb reservoir connecting end of said flexible tubular brush structure.

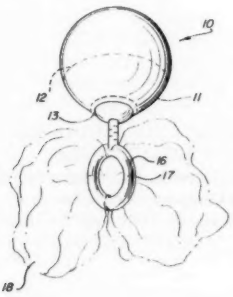
LIQUID SOAP APPLICATOR, AND METHOD

Connie M. Badillo, 2518 N. Shady Forest La., Orange, Calif. 92867

Filed Aug. 7, 1998, Appl. No. 131,216
Int. Cl.[7] B43M *11/06*
U.S. Cl. 401—186 **2 Claims**



1. A method for applying liquid soap from a deformable soap reservoir to a washing means with only one hand, thereby reducing the possibility of a user becoming unbalanced, the reservoir defining a sealable port, and a dispensing connector means defining a filling end, a discharge end, and a perforated, soap dispensing manifold removably connected to the discharge end, the filling end of the connector means being removably inserted into and sealing the sealable port of the reservoir; and, washing means attached to the soap dispensing manifold, the method comprising: A. storing liquid soap in the reservoir in the absence of pressure being applied thereto, the reservoir being adapted for application of pressure with only one hand, pressurizing soap through the sealable port, and through the perforations in the manifold for capture by the washing means; and, B. filling the reservoir by disengaging the connector from the reservoir and disconnecting the connector from the manifold, inserting the discharge end of the connector into the reservoir, and supplying soap through the filling end of the connector and through the discharge end into the reservoir.

6,039,492

PEN

Wei-Chin Chen, 10-3F No. 72, Sec 1, Min-Chuan E. Rd., Taipei, Taiwan

Filed Dec. 4, 1998, Appl. No. 205,355
Int. Cl.[7] B43K *29/00*
U.S. Cl. 401—195 **12 Claims**

1. A pen comprising:

a pen body;

a head member connected to said pen body at one end, said head member comprising a recessed receiving chamber, and a locating groove for securing a display item in said recessed receiving chamber; and

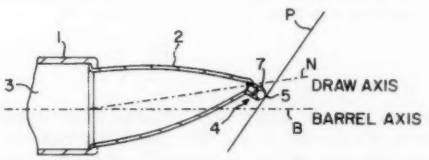
a cover covered on said head member to keep said recessed receiving chamber from sight, said cover having a first lateral side connected to a first lateral side of said head member and a second lateral side detachably secured to a second lateral side of said head member by lock means, said lock means comprising a retaining hole at the second lateral side of said head member and a spring hook at the second lateral side of said cover.

6,039,493

BALL POINT PEN

Mark Arthur Seddon, Reading, and Clive Barnes, Comnor, both of United Kingdom, assignors to The Gillette Company, Boston, Mass.

Continuation of application No. PCT/US97/16272, Oct. 7, 1997. This application Feb. 22, 1999, Appl. No. 253,992.
Claims priority, application United Kingdom, Oct. 8, 1996, 9620985
Int. Cl.[7] B43K *7/00*
U.S. Cl. 401—209 **9 Claims**



1. A ball point writing instrument comprising an ink reservoir within a generally cylindrical body, a hollow nib member connected to a forward end of the body and projecting therefrom, a portion of the reservoir immediately adjacent the nib member having a longitudinal axis, the nib member having a leading end positioned on a longitudinal axis of the nib member and spaced laterally from the axis of the reservoir, and a tip element including the writing ball attached to the leading end of the nib member and extending therefrom towards the axis of the reservoir, the writing surface of the ball being spaced from the axis, in the same direction as that in which the leading end of the nib member is spaced from said axis.

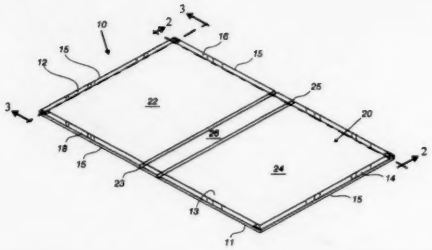
6,039,494

CASING BOARD INCLUDING CLEAR OVERLAY DEFINING EXTERIOR POCKET

Jerry W. Pearce, 2649 Cherry La., Denver, N.C. 28037

Filed Jun. 8, 1998, Appl. No. 93,329
Int. Cl.[7] B42D *3/02*; **B32B** *31/18*
U.S. Cl. 402—73 **14 Claims**

1. A casing board used in the manufacture of articles for organizing, storing, protecting and displaying communications media,



such as papers, audio cassettes, video cassettes and compact discs, said casing board comprising:

a substrate made of a relatively rigid material and comprising a front cover portion, a rear cover portion and a spine portion, said spine portion of said substrate positioned between and hingedly connected to said front cover portion and said rear cover portion, said substrate further comprising an exterior surface, an interior surface opposite said exterior surface and a periphery defined by the longitudinal and lateral edges of said substrate;

an outer wrap made of a flexible polyolefin material and having longitudinal and lateral dimensions greater than the longitudinal and lateral dimensions of said substrate, said outer wrap positioned adjacent said exterior surface of said substrate such that the longitudinal and lateral edges of said outer wrap are turned over said periphery of said substrate and affixed to the interior surface thereof; and

a clear overlay made of a flexible polyolefin material and having a longitudinal dimension greater than the longitudinal dimension of said substrate, said clear overlay positioned adjacent said outer wrap such that the longitudinal edges of said clear overlay are turned over said periphery of said substrate and affixed to the longitudinal edges of said outer wrap, said clear overlay defining a transparent exterior pocket that extends between the longitudinal edges of the casing board;

wherein the longitudinal edges of said clear overlay are affixed to the longitudinal edges of said outer wrap on said interior surface of said substrate by thermal welding.

6,039,495

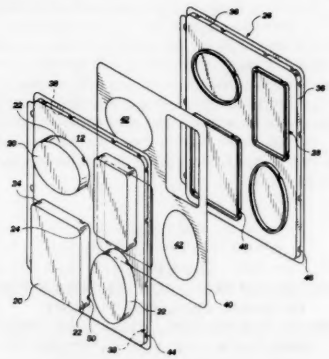
STORAGE PAGE FOR THREE-DIMENSIONAL ITEMS

Julie G. Zimmerman, Draper, and Alex W. Jacobsen, Stansbury Park, both of Utah, assignors to Kallman Corporation, West Jordan, Utah

Filed Apr. 3, 1998, Appl. No. 54,659

Int. Cl.[7] **B42F** *13/00;* **B65D** *73/00;* **A47G** *1/06*

U.S. Cl. 402—79 **15 Claims**



1. A storage page having a three-dimensional cavity for storing and displaying three-dimensional objects, the storage page comprising:

a first sheet of semi-rigid material having a three-dimensional pocket formed therein, the pocket having a transparent front wall and a side wall depending from the front wall;

a second sheet of semi-rigid material having a raised section extending essentially normal to the second sheet, the raised section sized and configured to snugly fit inside the first sheet three-dimensional pocket against the first sheet three-dimensional pocket side wall; and

connecting means for connecting the first sheet three-dimensional pocket to the second sheet raised section and maintaining the connection therebetween to define the three-dimensional cavity, the connection means comprising:

means defining an indentation formed in the second sheet raised section; and

a projection formed in the first sheet three-dimensional pocket side wall that is in registration with, and insertable into, the second sheet raised section indentation, in order to removably retain the second sheet raised section and first sheet three-dimensional pocket together.

6,039,496

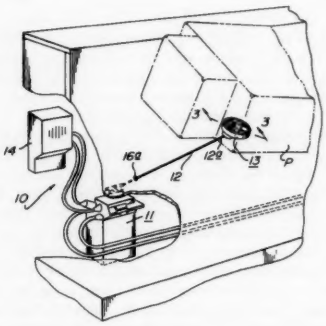
RETRACTOR CABLE CONNECTOR FOR TETHERED PRODUCT DISPLAY

J. Merrill Bishop, Lansdale, Pa., assignor to Vulcan Spring & Manufacturing Company, Telford, Pa.

Filed Jan. 30, 1998, Appl. No. 16,059

Int. Cl.[7] **F16G** *11/00*

U.S. Cl. 403—4 **20 Claims**



1. A device for securing a retractor cable to a product in a tethered product display, comprising:

a base having a cable guideway opening into a recess for receiving a terminal end fitting of a cable and having a rear mounting surface juxtaposed with respect to said guideway and said recess, and

a locking element having a slot affording lateral engagement with said cable adjacent to said terminal end fitting and having a surface operably engagable with said recess surface when said cable is disposed in said cable guideway and tensioned such that said locking element fits within said recess but not through said cable guideway, and

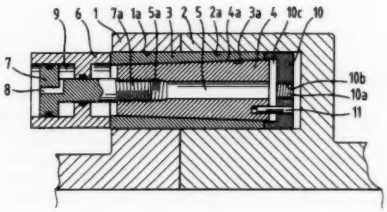
means on said base for fastening said base mounting surface to said product in an abutting relationship such that said recess is closed by the product and said locking element is blocked from exiting said recess.

6,039,497

METHOD FOR COUPLING AND A COUPLING DEVICE

Lars Gullberg, Vasa, Finland, assignor to Wartsila Diesel International Ltd Oy, Helsinki, Finland

Filed Aug. 12, 1997, Appl. No. 911,104
Claims priority, application Finland, Aug. 13, 1996, 963172
Int. Cl.[7] F16B *2/14*
U.S. Cl. 403—16 **14 Claims**



1. An article of manufacture comprising:

a first shaft provided with a flange having a through bore,

a second shaft provided with a flange having a blind bore aligned with the through bore in the flange of the first shaft,

a coupling device including an adapting bolt having an external tapered surface and an axial hole open at the narrower end of the adapting bolt and a cylindrical sleeve element having an internal tapered surface corresponding to the external tapered surface of the adapting bolt, the adapting bolt being within the sleeve element and the coupling device being located in the aligned bores so that the narrower end of the adapting bolt is toward the flange of the first shaft and an end surface of the sleeve element is exposed through the bore in the flange of the first shaft,

a means for engaging the adapting bolt at the axial hole and applying a force tending to displace the adapting bolt relative to the sleeve element in the direction from the wider end of the adapting bolt toward the narrower end thereof, and

a separate end piece in the blind bore and having an annular abutment shoulder for engaging the sleeve element and surrounding a recess for receiving the adapting bolt with a clearance fit, whereby the adapting bolt can be moved relative to the sleeve element in the direction from the narrower end of the adapting bolt toward the wider end thereof without interference from the end piece.

6,039,498

SECURITY SYSTEM

Roger Leyden, Willow Springs, and Terrance Surma, Bloomingdale, both of Ill., assignors to Se-Kure Controls, Inc., Franklin Park, Ill.

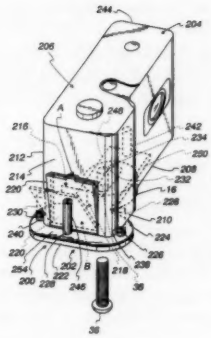
Filed Jun. 9, 1998, Appl. No. 94,131
Int. Cl.[7] E05B *73/00*
U.S. Cl. 403—61 **27 Claims**

1. A security apparatus for an article to be monitored, said security apparatus comprising:

a) a security assembly comprising:

a plate assembly having a first surface facing in a first direction for placement against one surface on an article to be monitored, a first post projecting from the plate and defining a second surface facing transversely to the first direction for placement against another surface on an article to be monitored, and a second post projecting from the plate and defining a third surface for placement against a surface on an article to be monitored; and

a fastener for maintaining the security assembly operatively connected to an article to be monitored; and



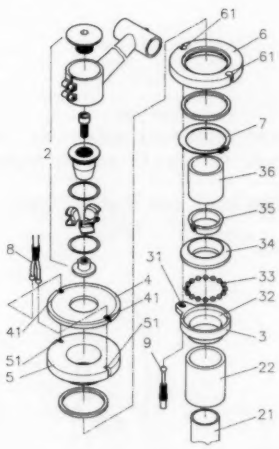
b) an elongate flexible cable connected to and extending from the plate assembly usable to monitor an article to which the security assembly is operationally connected.

6,039,499

SUPPORTING BRACKET FOR BRAKING CABLE OF BICYCLE

Douglas Chiang, 487, Ko-Chung Rd., Ta-Li City, Taichung Hsien, Taiwan

Filed May 4, 1998, Appl. No. 71,595
Int. Cl.[7] B62K *21/12*
U.S. Cl. 403—78 **1 Claim**



1. An improved supporting bracket for a braking cable of a bicycle, comprising:

an external tube (**22**) which at least partially envelopes a vertical tube (**21**) of a front fork member of a bicycle;

an annular lower braking cable socket (**3**) having a truncated shape, said socket (**3**) being biased against a top end of said external tube (**22**);

a retaining emboss (**31**) provided on one side of said socket (**3**);

a receiving slot (**32**) provided within a top of said socket (**3**);

a plurality of steel balls (**33**) movably disposed within said receiving slot (**32**);

a covering lid (**34**) provided on top of said socket (**3**) so as to enclose said balls (**33**) within said receiving slot (**32**);

a first C-type retainer (**35**) disposed between said lid (**34**) of said socket (**3**) and said vertical tube (**21**) such that said lid (**34**) is secured onto said vertical tube (**21**);

a sliding collar (**36**) movably arranged on said vertical tube (**21**) above said lid (**34**);

an upper rotational disk (**5**) arranged on said sliding collar (**36**), said upper rotational disk (**5**) having a pair of retaining slots (**51**) formed on opposite peripheral sides thereof and a lower extension;

a lower rotational disk (**6**) arranged coaxially around said lower extension of said upper rotational disk (**5**), said lower rotational disk (**6**) having at least one retaining slot (**61**) formed on a peripheral side thereof;

a second C-type retainer (**7**) arranged to connect said lower rotational disk with said lower extension of said upper rotational disk (**5**) such that said upper and lower rotational disks (**5** & **6**) move together in an axial direction;

a bowl-type assembly (**2**) disposed at a top end of said vertical tube (**21**);

a primary rotational disk (**4**) disposed on said bowl-type assembly (**2**) above said upper and lower rotational disks (**5** & **6**), said primary rotational disk (**4**) having a pair of retaining slots (**41**) aligned with said retaining slots (**51**) of said upper rotational disk (**5**);

an upper braking cable (**8**) which is branched into two parts, each end of said two parts being disposed within a respective one of said retaining slots (**41** & **51**) of said primary rotational disk (**4**) and said upper rotational disk (**5**); and

a single lower braking cable (**9**) having an end which is disposed within said retaining emboss (**31**) of said socket (**3**) and said at least one retaining slot (**61**) of said lower rotational disk (**6**).

6,039,500

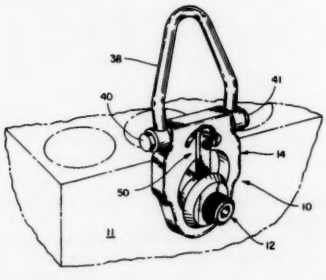
QUICK CHANGE SIDE FULL HOIST RING ASSEMBLY

Yong Chin Kwon, 1901 Mora Ct. Apt. 201, Schaumburg, Ill. 60193

Filed May 5, 1998, Appl. No. 72,823

Int. Cl.[7] **F16D** *1//12*

U.S. Cl. 403—78 **12 Claims**



1. A hoist ring assembly, comprising: an anchor bushing having a fastener adapted to connect to a load, a swivel member rotatable on the anchor bushing, quick release means interfitting the swivel member and the anchor bushing permitting the swivel member to be quickly attached and detached to the anchor bushing, and a shackle pivotally mounted to the swivel member, said swivel member being a hanger lying in a plane transverse to a longitudinal axis of the anchor bushing, said quick release means being operable by sliding the hanger in its own plane.

6,039,501

MODULAR FURNITURE

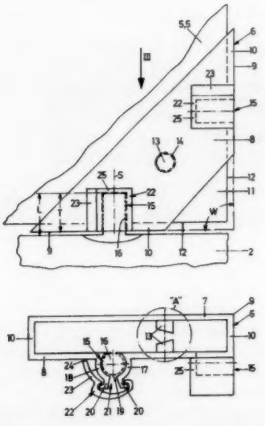
Hubert Rüther, Elbring 12. D-21217, Seevetal, Germany

Filed Jan. 27, 1998, Appl. No. 14,105

Claims priority, application Germany, Jan. 29, 1997, 297 02 242 U

Int. Cl.[7] **B25G** *3/00*

U.S. Cl. 403—231 **7 Claims**



1. A piece of furniture of modular built-up, comprising

a frame (**1**) to be composed of frame pieces (**2**) and frame corner joints (**3**) circumscribing a frame compartment, and

an insert plate (**5**) to be mounted in the frame compartment by means of corner fittings (**6**) as basic structural elements, each corner fitting (**6**)

being detachably mounted on the insert plate (**5**),

having at least one laterally accessible receptacle (**15**) parallel to a plane of the plate for a retaining pin (**16**) mounted on the frame (**1**), and

a locking mechanism (**22**) for arresting the retaining pin (**16**) in the receptacle (**15**), wherein the corner fitting is a clip element (**6**) to be slipped on a corner of the insert plate (**5**) and having internal and external lateral sides (**7**, **8**) that flank a front and rear of the insert plate (**5**) and are connected by connecting legs (**10**) which run at right angles to the plane of the plate, and

wherein the receptacle (**15**) for the retaining pin (**16**) is disposed on an internal lateral side (**8**) of the clip element (**6**), the receptacle (**15**) comprising two springy locking arms (**17**, **18**), which are applied by injection-molding and form therebetween a plug-in opening (**19**) for the retaining pin (**16**).

6,039,502

METHOD OF FORMING A FORMLOCKING CONNECTION OF TWO TELESCOPIC TUBES AND A FORMLOCKING CONNECTION FORMED THEREBY

Dominik Näff, Triesen, Liechtenstein, and René Lörenz, Dornbirn, Austria, assignors to Etablissement Supervis, Vaduz, Liechtenstein

Filed Oct. 1, 1997, Appl. No. 942,081

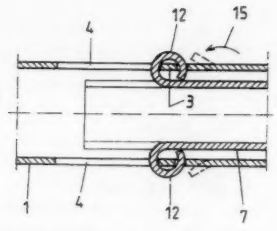
Claims priority, application Germany, Oct. 2, 1996, 196 40 776

Int. Cl.[7] **F16B** *7/00*

U.S. Cl. 403—282 **14 Claims**

1. A formlocking connection of two telescopic tubes axially displaceable relative to each other upon being subjected to an action of an axial force exceeding a predetermined value, comprising:

two elongate cut-outs formed at two diametrically opposite locations in one of the two tubes, respectively, each of the two



cut-outs being separated by at least one web dividing the cut-out in two sections; and

least two strips formed in another of the two tubes at two diametrically opposite locations and rolled over the cut-out dividing webs as a result of a telescopic connection of the two tubes effected by pushing the two tubes toward each other, with the strips of the another of the two tubes being pressed against a forming tool inserted into the elongate cut-outs of the one of the two tubes.

6,039,503

EXPANSION JOINT SYSTEM

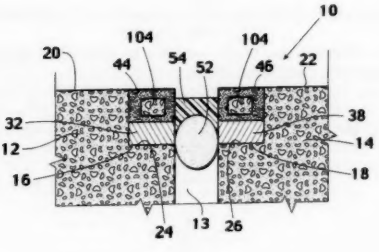
Joe Ray Cathey, Claremore, Okla., assignor to Silicone Specialties, Inc., Tulsa, Okla.

Filed Jan. 29, 1998, Appl. No. 15,741

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **E01C** *11/02;11/06;* **E01D** *19/06*

U.S. Cl. 404—67 **16 Claims**



1. A method to produce an expansion joint for adjacent roadway slabs having an expansion gap therebetween, which method comprises:

a. cutting or forming a recess into the surface of each said adjacent roadway slab to form a pair of recesses adjacent said expansion gap;

b. cleaning the surfaces of said recesses;

c. installing a form spanning said expansion gap;

d. installing a leveling layer of a semi-self leveling mortar mixture of slightly resilient chemically curing polymer and aggregate into each recess;

e. placing high-strength filler blocks on top of said leveling layer;

f. installing said semi-self leveling mortar mixture of slightly resilient chemically curing polymer and aggregate into each recess to form a pair of nosings parallel to and adjacent said expansion gap;

g. inserting a temporary backing between said nosings in said expansion gap; and

h. installing an initially liquid sealant between said nosings to form a flexible seal in said expansion gap between said pair of nosings.

6,039,504

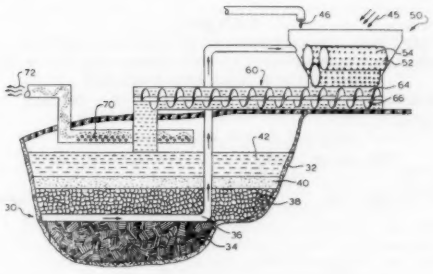
PROCESS AND APPARATUS FOR THE TREATMENT OF WASTE

Armond Muscat, P.O. Box 251, Algonquin, Ill. 60102

Filed Sep. 21, 1998, Appl. No. 157,653

Int. Cl.[7] **B09B** *1/00*

U.S. Cl. 405—129 **14 Claims**



1. A waste treatment process for the treatment of waste comprising the steps of:

first preparing a landfill by first placing a layer of compacted coal at the bottom of said landfill;

covering said layer of compacted coal with a layer of granular coal;

covering said layer of granular coal with a layer of lye;

transporting waste to a processing location near said landfill;

grinding said waste and mixing said waste with a fluid to form a slurry; and

transporting said slurry to said landfill.

6,039,505

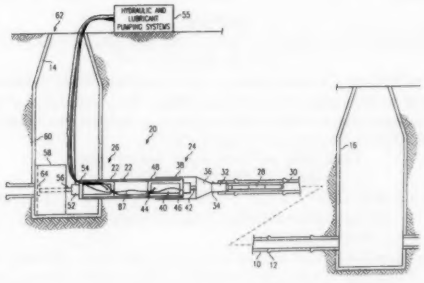
TECHNIQUE FOR ADMINISTERING A LUBRICANT IN AN UNDERGROUND PIPE REPLACEMENT SYSTEM

Albert A. Tenbusch, II, 2206 Marble Falls, Carrollton, Tex. 75007

Division of application No. 08/584,525, Jan. 8, 1996, Pat. No. 5,816,745, which is a continuation-in-part of application No. 08/098,454, Jul. 27, 1993, Pat. No. 5,482,404. This application Mar. 2, 1998, Appl. No. 33,940.

Int. Cl.[7] **F16L** *55/18;1/00*

U.S. Cl. 405—156 **10 Claims**



1. A method of determining frictional forces in an underground pipe replacement system of the type having a frontal hydraulic jack for pushing an expander forwardly so that old pipe can be broken, and a rear hydraulic jack for pushing new pipe sections forwardly together with the frontal jack and the expander, comprising the step of:

activating the rear jack to push the new pipe sections forwardly without pushing the expander forwardly;

activating the frontal jack to push the expander forward; and

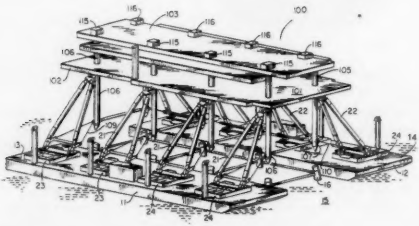
monitoring a hydraulic pressure of at least one of the rear jack or the frontal jack to thereby determine a skin friction resulting from the movement of the new pipes and to determine a penetration friction attributable to the forward movement of the expander.

6,039,506

METHOD AND APPARATUS FOR THE OFFSHORE INSTALLATION OF MULTI-TON PACKAGES SUCH AS DECK PACKAGES AND JACKETS

Jon E. Khachaturian, 5827 Rhodes Ave., New Orleans, La. 70131

Filed Sep. 8, 1997, Appl. No. 925,929
This patent is subject to a terminal disclaimer.
Int. Cl.[7] E02B *17/00*
U.S. Cl. 405—204 **20 Claims**



1. A catamaran work barge apparatus comprising:

a) a pair of barges, each defining a base that can support a large multi-ton load;

b) a work platform supported respectively by the barges that can be positioned next to a package to be lifted, for forming a load transfer between the barges and the package to be lifted;

c) a plurality of diagonally extending lift booms, each lift boom having a lower end attached to a barge and an upper end that can be attached to the work platform;

d) lower connection members for forming attachments between the barges and the work platform;

e) each boom having a free end with a lifting end portion; and

f) a receptacle attached to the work platform that receives the boom lifting free end portion.

6,039,507

METHOD AND DEVICE FOR ASSEMBLING CLUSTER PLATFORMS

Kevin Kennelly, Jakarta Selatan; Ian Gardiner, South Jakarta, both of Indonesia; David Noble, Plano, Tex., and Achmad R. Muliadiredja, Pondok Gede, Indonesia, assignors to Atlantic Richfield Company, Los Angeles, Calif.

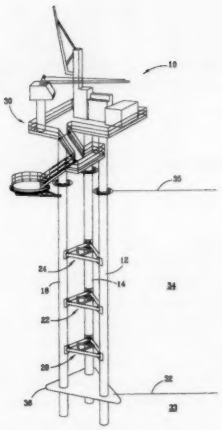
Filed Jun. 26, 1998, Appl. No. 105,650
Int. Cl.[7] E02B *17/00;17/02*
U.S. Cl. 405—227 **7 Claims**

1. A method for constructing a cluster platform in a body of water, the method comprising:

a) embedding three conductors in soil underlying the body of water, the conductors extending above a water surface and being positioned at the corners of a triangular area;

b) fabricating at least one bracing element comprising three surfaces configured to matingly contact the three conductors, the three surfaces being joined by at least three longitudinal members, at least two of which are joined to each surface to configure the bracing element to a triangular configuration having the surfaces positioned to matingly contact the three conductors;

c) lowering the bracing element between the conductors with one surface beneath the other two surfaces to a selected depth;



d) maintaining the one surface at the selected depth and rotating the other surfaces downwardly relative to the one surface to position the one surface and other surfaces in contact with the conductors with the other surfaces being in engagement with the conductors above the one surface;

e) wet welding the surfaces to the conductors, so that the bracing element is wet welded to at least a first conductor of the conductors at a first elevation and wet welded to at least a second conductor at a second elevation above the first elevation; and

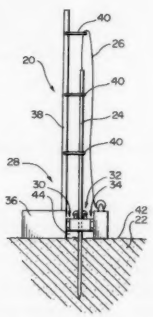
f) securing a deck atop the conductors.

6,039,508

APPARATUS FOR INSERTING ELONGATE MEMBERS INTO THE EARTH

John L. White, Kent, Wash., assignor to American Piledriving Equipment, Inc., Kent, Wash.

Filed Jul. 25, 1997, Appl. No. 900,481
Int. Cl.[7] E02D *7/00;7/26*
U.S. Cl. 405—232 **25 Claims**



1. An apparatus for inserting elongate members into the ground, comprising:

support means for maintaining the elongate member in a desired orientation with respect to the ground;

vibratory means for generating a vibratory force;

shock absorbing means for mounting the vibratory means onto the support means to reduce the transmission of vibratory forces from the vibratory means to the support means;

drive means mounted on the vibratory means for engaging the elongate member such that vibratory loads generated by the vibratory means are transmitted to the elongate member; and

displacing the elongate member along an axis thereof relative to the vibratory means; wherein

the elongate member comprises first and second drive racks arranged on opposing surfaces thereof; and

the drive means comprises first and second gears, where each of the first and second gears engages one of the first and second drive racks to facilitate driving of the elongate member into the ground.

6,039,509

MINE ROOF SUPPORT APPARATUS AND METHOD

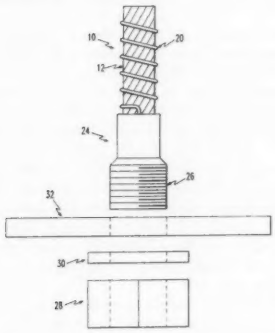
Frank M. Locotos, Bridgeville, Pa., assignor to F. M. Locotos Equipment & Design Co., Bridgeville, Pa.

Continuation of application No. 07/765,374, Sep. 25, 1991, Pat. No. 5,378,087. This application Dec. 30, 1994, Appl. No. 366,985.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **E21D** *20/00;* **E02D** *3/02*

U.S. Cl. 405—302.2 **15 Claims**



1. A mining support for supporting rock within a mine comprising:

a cable;

means for mixing resin in a resin cartridge as the cable is inserted into a bore hole drilled in the rock in which said resin cartridge is disposed, said mixing means positioned about the cable; and

a bending restrictor disposed about the cable such that at least a portion of the cable is prevented from bending as it is inserted into the bore hole.

6,039,510

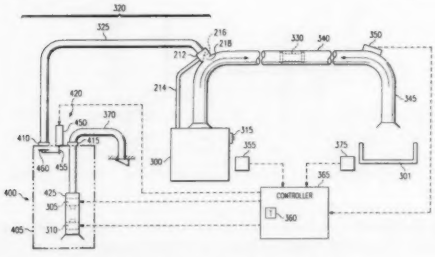
CARRIER AUTOMATIC BRAKING SYSTEM

Harold R. Greene, Lake Kiowa; David W. Carder, Highland Village, and Jack E. Balko, Dallas, all of Tex., assignors to Comco Systems, Dallas, Tex.

Filed Jun. 22, 1998, Appl. No. 102,244

Int. Cl.[7] **B65G** *51/20*

U.S. Cl. 406—21 **21 Claims**



1. A pneumatic transmission system comprising:

a first station for sending or receiving a carrier;

a second station for sending or receiving said carrier;

a transport conduit connected between said first station and said second station, wherein said transport conduit is capable of permitting a transfer of said carrier between said first station and said second station;

a supply/exhaust branch connected to said first station such that air can flow between said supply/exhaust branch and said first station, said supply/exhaust branch having an opening which can serve as an air inlet for providing the air from atmosphere through said supply/exhaust branch to the pneumatic transmission system and as an air vent for exhausting the air from the pneumatic transmission system through the supply/exhaust branch to the atmosphere;

a first motor blower positioned within said supply/exhaust branch, wherein said first motor blower is capable of moving a volume of the air through said supply/exhaust branch and said transport conduit in a first direction;

a valve positioned within said supply/exhaust branch, wherein said valve is capable of stopping the flow of the air through said supply/exhaust branch and said transport conduit;

a sensor associated with said transport conduit so that said sensor is capable of detecting a presence of said carrier at a predetermined location in said transport conduit associated with an approach of said carrier to one of said first station and said second station and of generating a control signal in response to a detection of said carrier by said sensor;

a controller coupled to said sensor and to said first motor blower, wherein said controller activates said first motor blower to move said carrier between said first station and said second station and then deactivates said first blower motor and closes said valve in response to said control signal from said sensor, indicating the detection of said carrier at said predetermined location to thereby form an air block within said supply/exhaust branch to decrease a differential pressure across said carrier and cause said carrier to slow down as said carrier approaches said one of said first station and said second station; and

a timer capable of providing a timing control signal when a predetermined amount of time has elapsed, and wherein said controller activates said timer in response to the detection of said carrier at said predetermined location in said transport conduit associated with the approach of said carrier to said one of said first station and said second station and said controller opens said valve in response to said timing control signal.

6,039,511

CARRYING APPARATUS FOR SPHERICAL OBJECTS

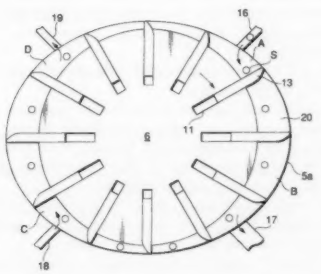
Nobuo Sakai; Migaku Ishida, and Junichi Irie, all of Fukuoka, Japan, assignors to Mitsui High-tec Inc., Fukuoka, Japan

Filed Jul. 9, 1998, Appl. No. 112,382

Claims priority, application Japan, Aug. 22, 1997, 9-226909

Int. Cl.[7] **B65G** *53/00;53/08*

U.S. Cl. 406—46 **13 Claims**



1. An apparatus for carrying spherical objects comprising:

a housing;

a cylindrical rotor arranged in the housing, including a plurality of recess grooves which are open to the outer circumferential

surface, the plurality of recess grooves being arranged radially from the center of the rotor;

a guide ring arranged in the housing, the guide ring including an inner hole, the section of which is elliptical, in which the cylindrical rotor is accommodated;

a plurality of vanes slidably arranged in each recess groove so that a forward end portion of each of the vanes can be contacted with an inner wall of the inner hole;

a first carrier atmosphere feeding pipe connected with a converting section of the guide ring in which the inner hole is changed from a small diameter section to a large diameter section;

a first carrier atmosphere discharging pipe connected with a converting section of the guide ring in which the inner hole is changed from a large diameter section to a small diameter section;

a second carrier atmosphere feeding pipe connected with a converting section of the guide ring in which the inner hole is changed from a small diameter section to a large diameter section; and

a second carrier atmosphere discharging pipe connected with a converting section of the guide ring in which the inner hole is changed from a large diameter section to a small diameter section.

6,039,512

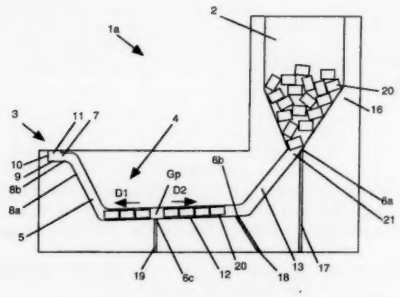
FEEDER SYSTEM AND METHOD FOR SUPPLYING ELECTRICAL COMPONENTS TO A PICKUP LOCATION

Kon Hing Chooi, 50 Lintang Bukit Kecil 3; Ka Tiek Lim, 27 Jalan Sungai Ara 4 Taman Sungai Ara Bayan Lepas, both of Penang, Malaysia, 11900, and Ping Chow Teoh, 123, Taman Mahawangsa, SBG Jalan Putra, Alor Setar, Kedah, Malaysia, 05150

Filed Sep. 18, 1997, Appl. No. 933,190

Int. Cl.[7] B65G *53/66;53/04;53/34*

U.S. Cl. 406—85 **10 Claims**



1. A feeder system for supplying electrical components to a pick-and-place machine, the feeder system comprising:

at least one storage means for storing said components;

a pickup location for supplying said components to said pick-and-place machine;

a passage providing communication between said storage means and said pickup location;

a first air outlet associated with said storage means for providing air blasts to agitate said components stored therein;

a second air outlet located in a surface of said passage for providing air blasts to move said components along said passage towards said pickup location;

a third air outlet located in a surface of said passage for providing air blasts, said third air outlet being disposed between said pickup location and said second air outlet;

a pressurised air supply means operatively coupled to said first, second, and third outlets by respective valves; and

a controller for selectively controlling said valves to concurrently supply air blasts to said second and third air outlets to thereby retain at least at least one of said components therebetween.

6,039,513

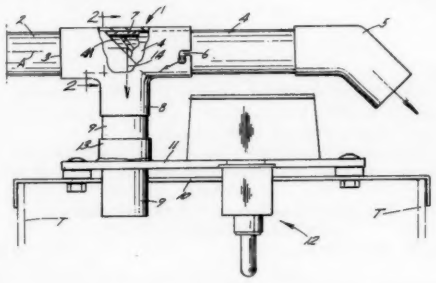
SEPARATOR FOR AIR CONVEYED PELLETS

R. Thomas Law, 448 S. First, #300, Hillsboro, Oreg. 97123

Filed Sep. 15, 1997, Appl. No. 929,046

Int. Cl.[7] B65G *53/60*

U.S. Cl. 406—171 **1 Claim**



1. A separator for removing pellets from an air flow transporting the pellets from a stored area to a hot melt glue tank and venting the air flow, said separator including:

a conduit having an inlet in which the air flow and the pellets borne thereby are received, a pellet discharge outlet in communication with the tank, and an air outlet for venting the air flow,

tubular support means carried by the tank and in communication with said pellet discharge outlet and through which pellets may be discharged into the hot melt glue tank,

a screen in said conduit and supported thereby in inclined relationship to said inlet to divert the airborne pellets impacting the screen toward said pellet discharge outlet for deposit into the glue tank, and

supplemental screens having openings therein of a cross-sectional size different from the like openings in said screen, and locking means confining said screen and said supplemental screens in said conduit.

6,039,514

APPARATUS AND METHOD FOR DRILLING HOLES IN DIMENSIONAL LUMBER

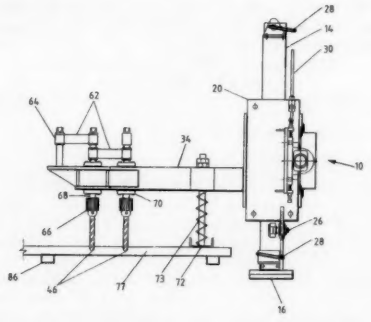
Tim O'Donovan, Sioux Lookout, and Don Fenelon, Hudson, both of Canada, assignors to McKenzie Forest Products. Inc., Ontario, Canada

Filed Oct. 6, 1998, Appl. No. 167,610

Claims priority, application Canada, Nov. 13, 1997, 2221072

Int. Cl.[7] B23B *35/00*

U.S. Cl. 408—1 R **9 Claims**



2. A method of drilling holes in a plurality of elongate pieces of lumber of uniform width comprising the following steps:

conveying the lumber into a position wherein the lumber is arranged in a plane below a plurality of drill bits;

stabilizing the lumber in a drilling position wherein the longitudinal axes of the pieces of lumber are parallel to each other, adjacent pieces of lumber are in contact with each other and an exposed surface of each piece of lumber is perpendicular to a drilling direction;

simultaneously driving a plurality of drill bits such that each drill bit drills a hole in a piece of lumber;

retracting the drill bits from the pieces of lumber;

releasing the lumber from stabilization; and

conveying the drilled lumber away from the drilling position.

6,039,515

DRILL HAVING RADIALLY OVERLAPPING INDEXABLE CUTTING INSERTS

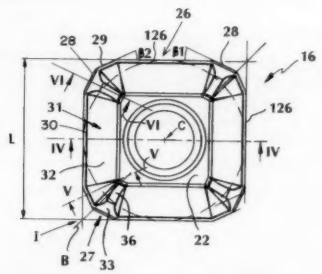
Fredrik Lamberg, Linköping, Sweden, assignor to Seco Tools AB, Fagersta, Sweden

Filed Apr. 30, 1998, Appl. No. 69,764

Claims priority, application Sweden, Apr. 30, 1997, 9701664

Int. Cl.[7] **B23B** *51/02*

U.S. Cl. 408—188 **8 Claims**



1. A drill comprising a shank, a central insert, and a peripheral insert;

the shank defining a central axis of rotation and having a central pocket receiving the central insert, a peripheral pocket receiving the peripheral insert, a pair of chip flutes extending rearwardly in an outer periphery of the shank from respective ones of the pockets for conducting chips cut by the central and peripheral inserts, respectively;

the peripheral insert including a first operative cutting edge projecting laterally outwardly beyond the shank to form a diameter of a hole cut by the drill;

the central insert being substantially square and including a second operative cutting edge overlapping the first operative cutting edge at an overlap region spaced radially from the axis of rotation, the second operative cutting edge extending inwardly past the axis of rotation, the central insert forming a rake surface adjacent to the second cutting edge, the rake surface including a first portion disposed at the axis of rotation and a second portion disposed at the overlap region, the second portion having a larger rake angle than the first portion.

6,039,516

EXTENDING SYSTEM

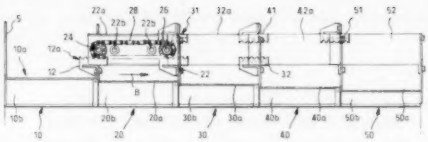
H. Wolfgang Diels, Pfitznesgstrasse 11 80807, München, Germany

Filed Jul. 14, 1998, Appl. No. 115,065

Claims priority, application Germany, Jul. 16, 1997, 197 30 500

Int. Cl.[7] **B23Q** *11/08;* **B23C** *9/00;* **E05D** *15/06*

U.S. Cl. 409—134 **15 Claims**



1. Extending system with at least four extending elements (**10**, **20**, **30**, **40**, **50**) which are disposed behind one another and can be moved relative to one another in a direction of extension (B) as well as a direction of insertion (A) opposed thereto between an inserted position and an extended position, wherein a group of three extending elements (**10**, **20**, **30**) disposed immediately behind one another are connected to one another by way of a coupling arrangement (**12**, **28**, **31**) which, upon relative movement between two extending elements (**20**, **30**) of the group, brings about a forced relative movement between these two extending elements (**20**, **30**) and the third extending element (**10**) of the group, characterized in that the coupling arrangement has a coupling element (**28**) which runs round a return spindle (**24**, **26**), the said return spindle being fixed relative to the middle extending element (**20**) of the group and extending perpendicular to the direction of extension, and the said coupling element (**28**) is movable along a path which is fixed relative to the return spindle (**24**, **26**) and runs round the latter, the coupling arrangement also having two entraining elements (**12**, **31**) which are coupled to corresponding coupling regions (**28***a*, **28***b*) on the coupling element (**28**) and are connected to one of the outer extending elements (**10**, **30**) of the group, wherein the coupling element (**28**) runs at least partially around the return spindle (**24**, **26**) between the coupling regions (**28***a*, **28***b*).

6,039,517

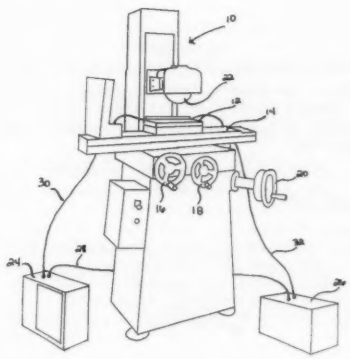
INTERNALLY COOLED MAGNETIC WORKPIECE HOLDER

Daniel Joseph Charewicz, 9712 McConnell Rd., Woodstock, Ill. 60098

Filed Sep. 30, 1997, Appl. No. 941,817

Int. Cl.[7] **B23Q** *3/06;* **B23B** *31/28*

U.S. Cl. 409—135 **42 Claims**



1. An internally cooled magnetic adapter for use between a magnetic chuck and a steel workpiece, the adapter transmitting the magnetic force of the magnetic chuck to the workpiece, the cooled magnetic adapter being formed of a block of non-magnetic material having a first flat planar surface which engages the magnetic chuck, and an opposite flat planar surface upon which a steel workpiece is placed to be held while work is performed on it, said block of non-magnetic material being provided with a plurality of holes extending between said first and opposite flat planar surfaces, a magnetic rod being secured in each of said holes to transmit magnetic force from the magnetic chuck engaging said first planar surface to a workpiece placed on the opposite planar surface, an internal flow path formed through the block of non-magnetic

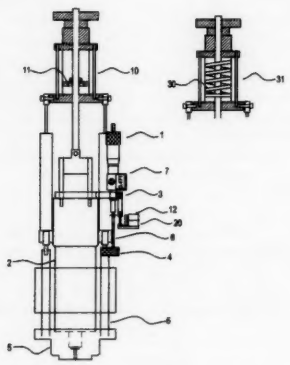
material for receiving a flow of coolant, thereby cooling the adapter and the steel workpiece held thereon.

6,039,518

SURFACE REFERENCED DEPTH CONTROL

Michael E. Day, 2315—B Forest Dr., Suite 35, Annapolis, Md. 21401

Filed Mar. 11, 1997, Appl. No. 815,426
Int. Cl.[7] B23B *49/00*
U.S. Cl. 409—218 **10 Claims**



1. An apparatus for depth control of a spindle assembly comprising:

a. a stop positioned between a pressure foot linkage and the spindle to halt downward travel by the spindle;

b. a means for setting the distance for travel by the spindle relative to the pressure foot linkage; and

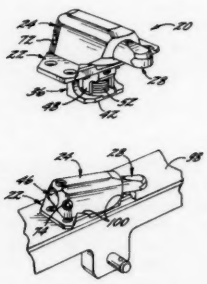
c. a means for absorbing excessive downward travel applied by a Z-drive to the spindle.

6,039,519

IMPACT-RESISTANT RESTRAINT FOR CARGO

John J. Jones, Los Angeles; Rosario S. Saggio, Arcadia; Karlton K. Okamoto, Lakewood, and Isidor Lenoil, West Hills, all of Calif., assignors to McDonnell Douglas Corporation, St. Louis, Mo.

Filed Jun. 25, 1998, Appl. No. 104,878
Int. Cl.[7] B60P *7/08*
U.S. Cl. 410—69 **16 Claims**



1. A device for restraining cargo from movement along a first axis, comprising:

a support adapted to be mounted to a vehicle structure;

a housing mounted to the support such that the housing is rotatable relative to the support about the first axis, the housing being adapted to be generally secured in a predetermined deployed position relative to the support;

a plunger mounted within the housing such that the plunger is slidable relative to the housing along a second axis which is generally perpendicular to the first axis, the plunger having a cargo-engaging end which projects outward from the housing in an extended position of the plunger, the plunger being substantially restrained against movement relative to the housing except along the second axis; and

a plunger-biasing member connected between the housing and the plunger for biasing the plunger toward the extended position;

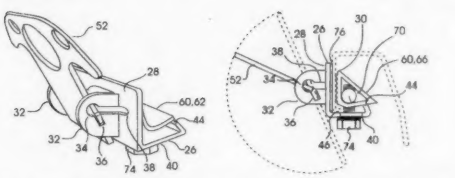
the device resiliently yielding to impact loads thereon such that cargo impacting the plunger generally along the second axis direction depresses the plunger into the housing, and cargo impacting the plunger generally along a third axis direction orthogonal to the first and second axes causes the housing to rotate about the first axis, the plunger being self-deploying such that upon cessation of impact loads thereon the plunger is urged into the extended position so that the plunger is capable of engaging cargo to prevent movement of the cargo along the first axis direction.

6,039,520

TRUCK BED TIE DOWN ANCHOR CLEAT

John C. Cheng, 688 E. Las Flores Dr., Altadena, Calif. 91001

Filed Jan. 6, 1998, Appl. No. 3,109
Int. Cl.[7] B60P *7/08*
U.S. Cl. 410—106 **13 Claims**



1. A truck bed tie down anchor cleat for a utility vehicle having a truck bed with side rails comprising:

a) a structural clamp bracket essentially in a U-shape with a vertical face equivalent in height to a truck bed side rail and a pair of outwardly extending arms formed from said vertical face,

b) a pivoting latch plate disposed movably between said outwardly extending arms for tying down objects within the truck bed,

c) a wedge member contiguously positioned between said clamp bracket and the truck side rail on opposed ends, for removable attachment to the truck body,

d) a rod shaped nut coterminous and centrally superimposed upon said wedge member in a pivotal manner, and

e) tensioning means connected to said nut through said clamp bracket such that a continuous compressive force is exerted between the nut and bracket drawing the wedge member into intimate contact with the truck side rail using the clamp bracket as a fulcrum therebetween and said nut's pivotability permitting variation in wall thickness and shape of the truck side rails.

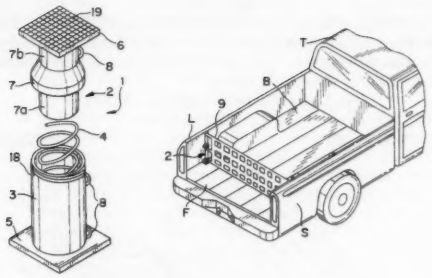
6,039,521

TRUCK BED ENCLOSURE ATTACHMENT POSTS

William T. Sullivan, 318 Whiting Ct., Daphne, Ala. 36526

Filed Jan. 17, 1997, Appl. No. 784,069
Int. Cl.[7] B60P *7/14*
U.S. Cl. 410—118 **7 Claims**

1. A tailgate enclosure attachment post assembly in combination with a cover for enclosing at least a portion of a truck bed, comprising:



means for enclosing a portion of a truck bed,

said means for enclosing a portion of a truck bed extending from one side of said truck bed to another side of said truck bed,

means for securing said post assembly to said truck bed,

means for preventing said post assembly from horizontal slippage with respect to said truck bed,

means for adjusting the height of said post assembly, whereby said post assembly is capable of fitting different size truck beds, and

means for attaching said means for enclosing a portion of a truck bed to said post assembly, and

wherein said cover has a center section and two side sections,

each of said center section and said side sections having fastening means for attaching said cover to a vehicle, and

wherein there is a flap attached to said center section on opposite sides of said center section, and

wherein said center section is wider than said side sections.

AUTOMATIC LOCKING AND UNLOCKING SHORING BAR

Edgardo Cardona, Atchison, Kans., assignor to Kinedyne Corporation, North Branch, N.J.

Filed Jan. 19, 1999, Appl. No. 232,612

Int. Cl.[7] **B60P** *7/14;7/135*

U.S. Cl. 410—127 **7 Claims**

1. A shoring bar comprising elongated first and second telescopingly interconnected tubes, a spring biased actuator interposed between said tubes selectively biasing said tubes longitudinally to increase the shoring bar length, said actuator including elongated first and second elements connected to said first and second tubes, respectively, spring means interposed between said elements longitudinally biasing said elements away from each other, a locking detent mounted upon one of said elements selectively movable between locking and release positions cooperating with a shoulder defined on the other element whereby engagement of said detent and said shoulder occurs in said locking position and retains said elements in a retracted position and disengagement of said detent and said shoulder occurs in said release position and permits said elements to be biased to an extended position, stops defined on said elements limiting relative movement of said elements in said extended position, and a detent shifter fixed with respect to said other element moving said detent between said locking and release positions upon relative axial movement of said elements in a retracting direction.

6,039,523

ADJUSTABLE CONNECTOR SYSTEM

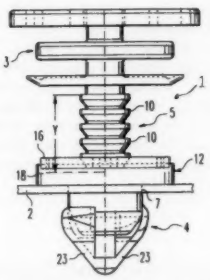
Willibald Kraus, Grünstadt, Germany, assignor to TRW Automotive Electronics & Components GmbH & Co. KG, Germany

Filed Dec. 2, 1998, Appl. No. 204,997

Claims priority, application Germany, Dec. 3, 1997, 197 53 678

Int. Cl.[7] **F16B** *13/06;19/00*

U.S. Cl. 411—48 **49 Claims**



1. An adjustable connector system for holding an associated plate element in a spaced-apart relationship relative to an associated support member, the adjustable connector system comprising:

an engagement member adapted for selective embedded engagement within a support opening formed in the associated support member, the engagement member defining a central opening and further being adapted on a first end to spread open and engage a back side surface of the associated support member, the engagement member being formed as a two-component piece and including a holding element made of a first hard material and an embedding element made of a second soft material;

at least one counter-locking unit carried on said holding element to extend radially inwardly into said central opening, the at least one counter-locking unit being formed of said first hard material

a first connector member having an upper piece and a lower piece, the first connector member defining a neck-shaped intermediary region adapted to be received in the central opening of the engagement member; and,

a plurality of locking elements disposed on the neck-shaped intermediary region to selectively lockingly engage the at least one counter-locking unit when the first connector member is received in the central opening of the engagement member, the plurality of locking elements being cooperative with the engagement member to spread apart the first end of the engagement member into engagement with the back side surface of the associated support member when the first connector member is selectively received in the engagement member.

6,039,524

SELF-LOCKING SAFETY WHEEL NUT WITH LOCKING WRENCH

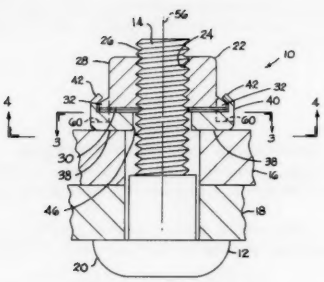
Alistair N. McKinlay, Marina Del Rey, Calif., assignor to Hong Kong Disc-Lock Company Limited, Wanchai, The Hong Kong Special Administrative Region of the People's Republic of China

Filed Sep. 14, 1998, Appl. No. 152,529

Int. Cl.[7] **F16B** *39/24;43/00*

U.S. Cl. 411—149 **12 Claims**

1. A wedge lock fastener assembly comprising:



a threaded nut having a first wedge lock surface, a peripheral flange and first plural circumferentially spaced notches located in said peripheral flange;

a locking washer having a second wedge lock surface and second plural circumferentially spaced notches;

the notches in said washer having the same spacing as the notches in said nut, whereby a tool having circumferentially spaced prongs can be placed so that the prongs extend into the notches in the nut and the washer, after which the tool can be turned to simultaneously loosen the nut and the washer.

6,039,525

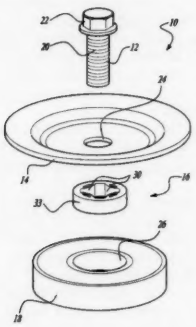
INTEGRATED SPRING RING RETAINER FOR CAPTIVATING A FASTENER TO A WORKPIECE

H. Thad Johnson, 9002 Hidden Trail, Davisburg, Mich. 48350

Filed Oct. 21, 1998, Appl. No. 176,482

Int. Cl.[7] F16B *21/18*

U.S. Cl. 411—353 **13 Claims**



1. A captivated fastener assembly comprising:

a fastener having a head and a threaded shank having a given outer diameter;

a workpiece having an internal bore of a given diameter; and

an annular retainer having a ring portion and a plurality of radially inwardly extending arches, the ring portion having an outer diameter which is greater than the inner diameter of the workpiece bore, the arches defining an inner diameter which is less than the outer diameter of the fastener shank, and the retainer having an outer wall shaped essentially complementary to the shape of the bore to provide a substantially continuous mating surface between the outer wall of the retainer and the inner bore of the workpiece; and

the retainer being press fit within the bore of the workpiece, the shaft of the fastener extending through the retainer, the arches engaging the threaded shank sufficiently to captivate the fastener within the workpiece while allowing axial movement of the fastener shank within the retainer to accommodate external forces on the fastener without disengaging the retainer from the workpiece.

6,039,526

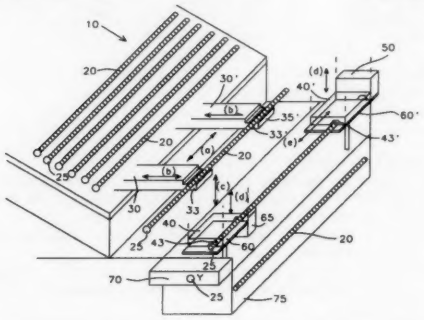
AUTOMATIC PLUG PULLING MACHINE FOR IC TUBES

Chie-Wun Chiou, and Horng-Huei Tseng, both of Hsinchu, Taiwan, assignors to Vanguard International Semiconductor Corporation, Hsin-Chu, Taiwan

Filed May 11, 1998, Appl. No. 75,894

Int. Cl.[7] B65G *47/78*

U.S. Cl. 414—411 **30 Claims**



1. An automatic plug pulling machine for IC tubes comprising:

a rack for placing integrated circuit tubes thereon;

said rack having a plurality of movable robotic arms;

means to move said movable robotic arms;

a plurality of platforms having at least a first and a second platform adjacent to said rack;

a means to move said second platform;

a plurality of movable clamps which can be positioned over said platforms;

a means to move said movable clamps;

a first plug pusher disposed underneath said first platform;

a means to move said first plug pusher;

a second plug pusher disposed above said first platform;

a means to actuate said second plug pusher;

means to collect plug removed with said plug pushers;

means to displace unplugged said IC tube from said platforms; and

means to collect said unplugged IC tube.

6,039,527

CONTAINER COMBINATION AND A MEHTOD OF HANDLING CONTAINERS

Esa Mylläri, Mönsterås, Sweden, assignor to Multilift Oy, Raisio, Finland

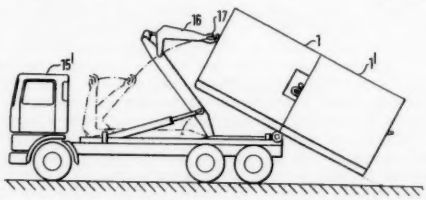
PCT No. PCT/FI95/00036, § 371 Date Jul. 16, 1996, § 102(e) Date Jul. 16, 1996, PCT Pub. No. WO95/20501, PCT Pub. Date Aug. 3, 1995

PCT Filed Jan. 25, 1995, Appl. No. 676,149

Claims priority, application Finland, Jan. 26, 1994, 940396

Int. Cl.[7] B60P *1/64*

U.S. Cl. 414—491 **10 Claims**



2. A combination of containers for use with a vehicle, comprising:

at least two containers, each container of the at least two containers including

at least one grasping component at a front end of the container for permitting separate handling of each container by a loading device of a vehicle equipped with at least one engaging device for engaging with the grasping component and for lifting the container onto the vehicle and for removing it from the vehicle, and

at least one first connecting device at at least one of the front end and the rear end of the container and at least one second connecting device at at least an opposite one of the front end and the rear end of the container than the at least one first connecting device for forming a connection for connecting the container to adjacent containers of the at least two containers such that a combination formed by connected containers of the at least two containers can be handled as one unit by the loading device,

wherein the grasping component at the front end of any container is of sufficient strength to support the unit formed by the connected containers of the at least two containers while a rear lower edge of a rearmost container of the connected containers is supported on the ground and bottoms of the connected containers are otherwise separated off from any support surface, and wherein the connection has sufficient strength to support the at least two containers as a single, rigid unit when the rear lower edge of the rearmost container of the connected containers is supported on the ground and bottoms of the connected containers are otherwise separated off from any support surface such that forces on the containers tend to urge the containers to fold upwardly around the connection, and also when the at least two containers are inclined and are adapted to rest on a rear roller of a vehicle such that forces on the containers tend to urge the containers to fold downwardly around the connection,

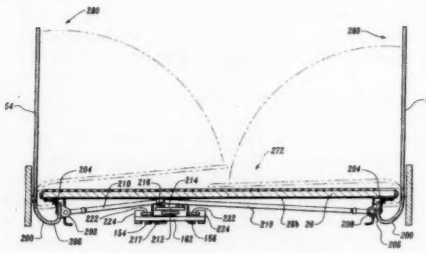
wherein a connecting hook is fixed in a top part of the one of the at least two containers and, in a corresponding place in a top part of the other container of the at least two containers, a connecting rod is provided, the connecting rod being adapted to be fitted to the connecting hook.

6,039,528

WHEELCHAIR LIFT WITH IMPROVED OUTER, INNER, AND SIDE BARRIERS

Alan Cohn, Lockeford, Calif., assignor to Lift-U, Division of Hogan Manufacturing, Inc., Escalon, Calif.

Filed Dec. 31, 1996, Appl. No. 777,583
Int. Cl.[7] B60P *1/44*
U.S. Cl. 414—546 **10 Claims**



1. A wheelchair lift comprising:

(a) a platform frame movable between an extended position and a retracted position;

(b) a wheelchair platform coupled to the platform frame, the wheelchair platform being movable between a raised position and a lowered position; and

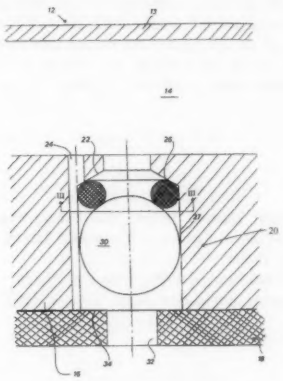
(c) opposing sensitive barriers movably coupled to opposing sides of the wheelchair platform, the sensitive barriers extending upward from an upper surface of the wheelchair platform such that contact between the sensitive barriers and an article on top of the wheelchair platform produces a control signal indicative of the presence of an article contacting the sensitive barrier.

6,039,529

VACUUM LIFTING PLATE WITH SUCTION PASSAGEWAY BALL VALVES

Curt Persson, Torsby, Sweden, assignor to Tepro Machine & Pac-System Aktiebolag, Torsby, Sweden

Filed Nov. 24, 1998, Appl. No. 180,868
Claims priority, application Sweden, May 24, 1996, 9601976
Int. Cl.[7] B66C *1/02*
U.S. Cl. 414—627 **13 Claims**



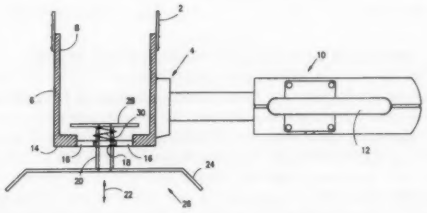
1. An apparatus for lifting and moving articles, comprising at least one arrangement with a cavity, said cavity comprising a vacuum chamber, connected to an arrangement which is capable of producing negative pressure in said vacuum chamber, an underside of a lower plate having an elastic airtight bottom and also having a plurality of first through-passages to said vacuum chamber, wherein each first passage is of cylindrical design with a diameter reduction in a part which is connected to the vacuum chamber, forming a shoulder in each of the first passages, in that each of the first passages contains a body arranged movably in said first passage, in that said body, in planes which are at right angles to the center line of the first passage, has a greatest diameter which is only slightly smaller than the diameter of said first passage, and in that said first passage is provided with a second passage with a considerably smaller diameter than said first passage, said body being capable of essentially blocking said first passage when a negative pressure is obtained in the vacuum chamber with the exception of a given air flow in said second passage.

6,039,530

VACUUM MANIPULATION DEVICE

Kurt Schmalz; Wolfgang Schmalz, both of Dornstetten, and Thomas Eisele, Fluorn-Winzeln, all of Germany, assignors to J. Schmalz GmbH, Glatten, Germany

Filed Apr. 13, 1999, Appl. No. 289,968
Claims priority, application Germany, Apr. 21, 1998, 198 17 754
Int. Cl.[7] B66C *1/02*
U.S. Cl. 414—627 **7 Claims**



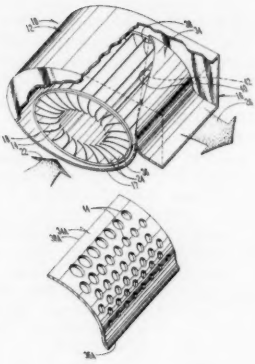
1. A vacuum manipulation device, comprising:

a suction gripper device for placement on an object to be manipulated and for drawing-up the object to be manipulated by suction, said suction gripper device defining a flow cross section into its interior; and

a lifter hose connected to a vacuum-generating device and to said suction gripper device for communicating with the interior of said suction gripper device, wherein:

said suction gripper device includes a weight-actuated regulating element;

said weight-actuated regulating element blocks said flow cross section under the influence of the weight of the object drawn by suction against the suction side of said suction gripper device, and unblocks said flow cross section in the unoccupied state of said suction gripper device.



6,039,531

GAS TURBINE BLADE

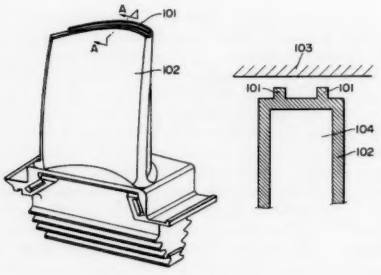
Kiyoshi Suenaga; Yasuoki Tomita, and Hiroki Fukuno, all of Takasago, Japan, assignors to Mitsubishi Heavy Industries, Ltd., Tokyo, Japan

Filed Mar. 3, 1998, Appl. No. 34,130

Claims priority, application Japan, Mar. 4, 1997, 9-049031

Int. Cl.[7] F01D *5/18;5/20*

U.S. Cl. 415—115 **3 Claims**



1. A gas turbine blade comprising:

a blade having a tip end portion defined by arcuate spaced-apart wall portions which generally oppose one another and a cooling passage formed in the blade tip end portion between the wall portions, the wall portions having outer surfaces which collectively define a blade profile, the blade further including a tip end wall which extends between the blade wall portions at the tip end portion of the blade; and

a protrusion formed on an outer surface of the tip end wall, said protrusion having a shape corresponding generally to said blade profile and being defined by a substantially closed wall comprising opposed spaced apart wall portions positioned on said end wall inwardly of the blade profile and directly above said cooling passage wherein said cooling passage is closed at said tip end portion of said blade.

6,039,532

BLOWER FAN BLADE PASSAGE RATE NOISE CONTROL SCHEME

Kenneth G. McConnell, Ames, Iowa, assignor to Iowa State University Research Foundation, Inc., Ames, Iowa

Provisional application No. 60/021,958, Jul. 18, 1996. This application Jul. 17, 1997, Appl. No. 895,726.

Int. Cl.[7] F01D *5/10*

U.S. Cl. 415—119 **2 Claims**

1. An blower of the squirrel cage type having an impeller mounted on its axis in a hollow housing, said housing having an air outlet, an air inlet, a radial wall adjacent said impeller, and an outlet wall partially defining said air outlet on a plane that intersects said impeller, said radial wall and said air outlet intersecting at a cut-off area, said improvement comprising:

a surface extending from said cut-off area between said impeller and said outlet for providing a gradual decrease in air flow area between said impeller and said housing, said surface having a plurality of apertures generally decreasing in size toward said cut-off area.

6,039,533

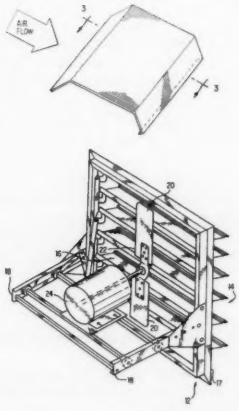
FAN BLADE, STRUCTURES AND METHODS

Francis J. McCabe, #6 Bunker Hill Rd., Ottsville, Pa.

Continuation-in-part of application No. 08/685,134, Jul. 24, 1996, Pat. No. 5,711,653, which is a continuation-in-part of application No. 08/507,129, Jul. 31, 1995, Pat. No. 5,599,172, and a continuation-in-part of application No. 08/990,201, Dec. 13, 1997. This application Jan. 16, 1998, Appl. No. 8,042. This patent is subject to a terminal disclaimer.

Int. Cl.[7] F04D *29/38;25/10*

U.S. Cl. 415—146 **13 Claims**



10. A method of opening and closing a multiple blade damper associated with a motor-driven fan providing thrust upon the operation of the fan, comprising the steps of: movably mounting the fan in proximity to the damper so that the fan can be moved toward and away from the damper; providing and attaching an

operator to and between the blades of the damper and the motor-driven fan to move the blades between open and closed positions upon the operation of the fan to provide thrust.

6,039,534

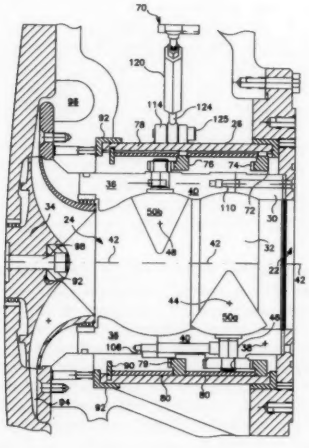
INLET GUIDE VANE ASSEMBLY

George S. Stoner, Portsmouth, N.H., and Peter M. Schoonmaker, Attleboro, Mass., assignors to Northern Research and Engineering Corp, Woburn, Mass.

Filed Sep. 21, 1998, Appl. No. 157,965

Int. Cl.[7] F04D *29/46*

U.S. Cl. 415—162 **19 Claims**



1. An inlet guide vane assembly for a centrifugal compressor comprising:

a guide vane housing having an inlet side for receiving a fluid passing through said compressor at a first flow angle, an outlet side remote from the inlet side and a central axis extending between the inlet and outlet sides of said housing;

a first set of inlet guide vanes pivotally mounted within said guide vane housing between the inlet side and the outlet side thereof for impinging upon said fluid passing through said housing;

a second set of inlet guide vanes pivotally mounted within said housing between the first set of inlet guide vanes and the outlet side thereof for impinging upon said fluid passing through said housing after said fluid has passed through said first set of inlet guide vanes;

a face gear housing supporting a first face gear and a second face gear, the first set of inlet guide vanes being movably connected to the first face gear and the second set of guide vanes being movably mounted to the second face gear, and wherein rotation of said face gear housing about said central axis results in simultaneous rotation of said first and second face gears about said central axis for pivoting said first and second sets of inlet guide vanes, respectively; and

an actuator coupled with said face gear housing for selectively rotating said face gear housing pivoting said guide vanes so as to optimize the efficiency of said centrifugal compressor, wherein movement of said actuator pivots said first set of inlet guide vanes a first angular distance from said central axis while simultaneously pivoting said second set of guide vanes a second angular distance from said central axis, said second angular distance being greater than said first angular distance.

Int. Cl.[7] **B63H** *1/28*

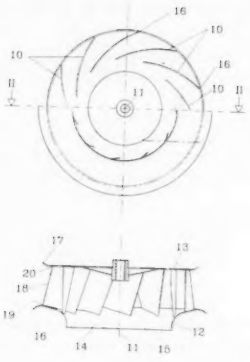
U.S. Cl. 416—186 R **3 Claims**

1. A radial fan wheel for transporting air in ventilation equipment comprising:

a) a number of fan blades (**10**) symmetrically arranged with substantially equal spacing around the rotational shaft (**11**) of the fan wheel,

b) the fan blades being mounted between two end plates (**12**, **13**) that are arranged perpendicularly to said shaft and are provided with blade surfaces which are substantially parallel to said shaft and each of which blade surfaces extends from one point at a distance from said shaft and substantially arched in the direction outwardly toward the periphery of the wheel,

c) one first end plate (**12**) is provided with a central air inlet (**14**), and is shaped with a curve that, in a position radially outwardly from the innermost edges of the blades, substantially arches towards the second end plate (**13**) and further radially outwardly towards the peripheral edge (**18**) of the blades,



d) the peripheral part of the first end plate (**12**) is curved away from the second end plate (**13**),

e) each blade (**10**) is designed having a peripheral segment which extends radially longer outwardly adjacent the first end plate (**12**) than at the second end plate (**13**) and

f) the peripheral edge (**18**) of each blade has a bevel cut edge so that this latter edge meets the first end plate (**12**) at a point (**19**) situated at a distance from the rotation shaft (**11**) which distance is greater than the distance between said shaft and the point (**20**) where the peripheral edge (**18**) of the blade meets the second plate (**13**).

6,039,540

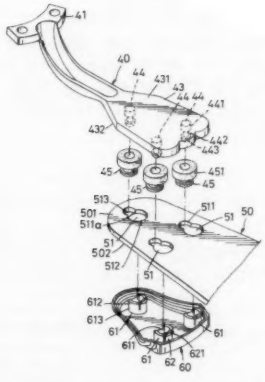
FAN BLADE ASSEMBLY OF A CEILING FAN

San-Chi Wu, No. 69, Sung-Chu Rd., Pei-Tun Dist., Taichung, Taiwan

Filed Oct. 21, 1998, Appl. No. 176,727

Int. Cl.[7] **B63H** *1/20*

U.S. Cl. 416—210 R **3 Claims**



1. A fan blade assembly adapted to be mounted on a rotor of a ceiling fan, said fan blade assembly including a mounting arm having a plate-like blade mounting end portion with a first surface wall, a second surface wall, and a plurality of engaging posts protruding from said second surface wall in a longitudinal direction;

a blade member having a connecting end which has a third surface wall confronting said second surface wall and a fourth surface wall opposite to said third surface wall; and

a cap member having a fifth surface wall confronting said fourth surface wall;

wherein the improvement comprises:

said connecting end further having a plurality of inner peripheral walls that confine respectively a plurality of mounting holes, each of said inner peripheral walls having a constricted portion to divide a corresponding one of said mounting holes into a notch portion and a bore portion of a dimension larger than that of said notch portion;

a plurality of elastomeric coupling members, each of which has a through hole formed therethrough such that a corresponding one of said engaging posts is inserted into and is retainingly engaged in said through hole, each of said coupling members including a shank, and a radial outward peripheral flange projecting from said shank, and being fitted snugly in said notch portion by passing said shank thereinto after said peripheral flange has been brought to pass through said bore portion to rest on said fourth surface wall of said blade member; and

said cap member further having a plurality of annular engaging plugs, each of which extends in the longitudinal direction from said fifth surface wall to form a distal engaging portion and a proximate engaging portion proximate to said fifth surface wall, said distal engaging portion having a guiding portion at a position such that when said engaging plug is brought to be inserted into and fitted snugly in said bore portion of a respective one of said mounting holes, said guiding portion will abut gradually against said constricted portion.

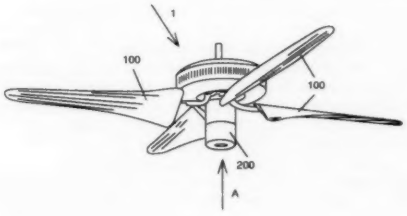
HIGH EFFICIENCY CEILING FAN

Danny S. Parker, Cocoa Beach, Fla.; Guan Hua Su, and Bart D. Hibbs, both of Monrovia, Calif., assignors to University of Central Florida, Orlando, Fla.

Filed Apr. 7, 1998, Appl. No. 56,428

Int. Cl.[7] **F04D** *29/38*

U.S. Cl. 416—223 R **16 Claims**



1. A ceiling fan blade for low speed operation at approximately 50 to approximately 200 revolutions per minute(rpm) for use in overhead ceiling fan systems, the blade comprising:

a positive twist adjacent to a rotor end of the blade, so that blade pitch increases from a tip end of the blade to the rotor end of the blade;

an airfoil having a thicker portion at the rotor end tapering down to a thinner portion at the tip end, for providing high lift and low drag; and

a blade chord having a wider portion from the rotor end tapering down to a narrower portion at the tip end, wherein the blade is operated in a ceiling fan running at low speed ranges of approximately 50 to approximately 200 revolutions per minute(rpm) for use with ceiling fan systems, and provides substantial energy savings and increased air flow over conventional ceiling blades.

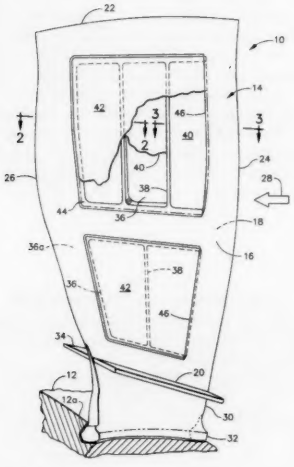
15. A method for operating an overhead ceiling fan system comprising the steps of:

(a) rotating fan blades attached to a ceiling fan at a speed range of approximately 50 to approximately 200 revolutions per minute(rpm);

(b) drawing a power supply of less than approximately 50 Watts; and

(c) generating a downward airflow of up to approximately 6500 CFM from the rotating blades, wherein the ceiling fan system reduces power consumption and enhances axial air flow.

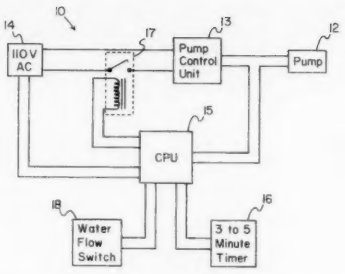
6,039,542
PANEL DAMPED HYBRID BLADE
Jan C. Schilling, Middletown; Jay L. Cornell, Hamilton, and Joseph T. Stevenson, Amelia, all of Ohio, assignors to General Electric Company, Cincinnati, Ohio
Filed Dec. 24, 1997, Appl. No. 997,832
Int. Cl.[7] B64C *11/16*
U.S. Cl. 416—233 **20 Claims**



1. A gas turbine engine fan blade comprising;
a metal airfoil having first and second opposite sides extending radially between a root and a tip, and axially between a leading edge and a trailing edge for pressurizing air channeled thereover, and a pocket disposed in said first side;
a ledge surrounding said pocket at least in part;
an elastomeric filler bonded in said pocket; and
a panel bonded to said filler and to said ledge by said filler for allowing differential movement between said panel and said airfoil for damping vibratory response of said airfoil.

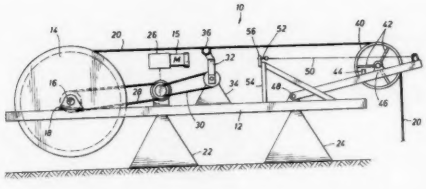
6,039,543
PUMP SHUT OFF SYSTEM
Jerry W. Littleton, 1905 W. 2nd St., Mesa, Ariz. 85201
Filed May 14, 1998, Appl. No. 78,629
Int. Cl.[7] F04B *49/02*
U.S. Cl. 417—12 **8 Claims**

1. A shut off system for a pump, comprising:
a pump having an inlet conduit and an outlet conduit, said pump being for pumping fluid from said inlet conduit to said outlet conduit when said pump is activated, said outlet conduit having a substantially circular lumen with a substantially uniform cross-section along the length of the outlet conduit;
said pump having a primary switch for selectively activating and deactivating said pump;
a processor being electrically connected to said primary switch;
said processor having a timer for measuring a predetermined amount of time;
said timer being activated to measure said predetermined amount of time when said primary switch activates said pump;



said processor deactivating said pump after said timer measures said predetermined amount of time;
said processor having a flow switch, said flow switch having a flow sensor in said outlet conduit, said flow sensor for measuring the fluid flow through said outlet conduit, said flow switch being activated when said flow sensor detects fluid flow through said outlet conduit above a predetermined amount, said flow sensor comprising a paddle arm extending into the lumen of the outlet and pivotally mounted such that flow through said outlet conduit pivots said paddle arm from an orientation wherein a plane of said paddle arm is oriented perpendicular to the flow direction through said outlet conduit; and
said flow switch deactivating said timer to prevent said timer from measuring said predetermined amount of time when said flow switch is activated by said flow sensor when said flow sensor detects fluid flow through said outlet conduit above said predetermined amount during said predetermined amount of time.

6,039,544
OIL LIFT SYSTEM
Charles Strickland, Hampton, Ark., assignor to Jerry Alexander, and Kenneth L. Hofler, Sr., both of El Dorado, Ark.
Filed Feb. 27, 1998, Appl. No. 32,403
Int. Cl.[7] F04B *23/00;* **E21B** *43/00*
U.S. Cl. 417—53 **20 Claims**



1. A well pumping apparatus comprising:
(a) a support adjacent to a wellhead;
(b) a drum storing cable operable in both directions to retrieve or extend therefrom wherein the cable extends into the well borehole;
(d) a bail attached to the end of the cable;
(e) a stinger adapted to insert into the bail on retrieval thereof to enable stinger removal of bail carried oil from the borehole; and
(f) a control system for responsively lowering and raising the bail to thereby remove produced liquids from the well in the

bail and to return the bail in the well borehole for cyclic operation.

6,039,545

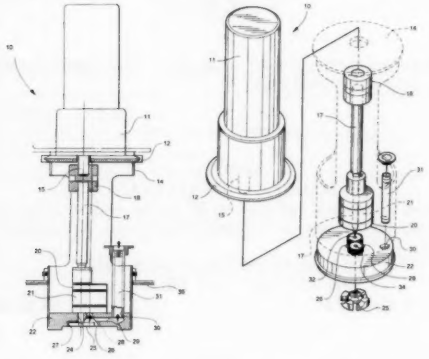
METHOD AND APPARATUS FOR PRECISION METERING OF HIGH VISCOSITY MATERIALS

Mark Everette Cauthen, Charlotte, N.C., assignor to Mahr Corporation, Charlotte, N.C.

Filed Mar. 31, 1998, Appl. No. 52,359

Int. Cl.[7] F04B *19/24*

U.S. Cl. 417—53 **10 Claims**



1. In a gear pump having a material inlet, at least first and second cooperating material pumping gears and a material outlet, the improvement comprising material feeding means positioned upstream from the material inlet for feeding high viscosity material under positive pressure into said material inlet, said gear pump including a motor for driving said material feeding means, and said material feeding means comprises an impeller, and said impeller and said first gear are both driven by said motor.

6,039,546

FLOAT OPERATED PNEUMATIC PUMP TO SEPARATE HYDROCARBON FROM WATER

David H. Edwards, Ann Arbor; Kevin L. Newcomer, Monroe, and K. Lynn Niehaus, Manchester, all of Mich., assignors to QED Environmental Systems, Inc., Ann Arbor, Mich.

Continuation-in-part of application No. 08/721,866, Sep. 27, 1996, abandoned. This application Sep. 29, 1997, Appl. No. 939,775.

Int. Cl.[7] F04B *53/00;* **F04F** *1/06*

U.S. Cl. 417—61 **24 Claims**

1. A pneumatic pump which separates a first and second fluid within a well, where the first and second fluid each have a specific gravity and the specific gravity of the second fluid is less than the specific gravity of the first fluid, comprising:

an outer tube forming an outer chamber therein;

an inner tube forming an inner chamber therein, the inner tube disposed within the outer chamber of the outer tube;

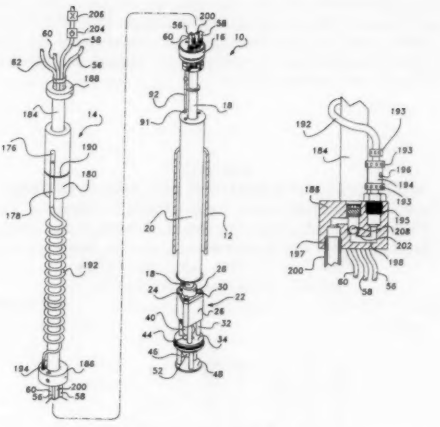
an inlet manifold in proximity to a second end of the inner and outer tubes, the manifold having an internal fluid passage with first and second ends the second end of the fluid passage being connected by a second fluid passage to the outer chamber, the inlet manifold having a valve to enable fluid flow in a first direction from the first end of the fluid passage to the outer chamber and inhibiting fluid flow in an opposite direction;

a well float having a floating fluid inlet disposed in proximity to an interface between the first and second fluids and having a specific gravity such that the well float floats in both the first and second fluids and the inlet remains in proximity to the interface between the first and second fluids, the float including the floating fluid inlet formed thereon for receiving at least one of the first and second fluids;

the conduit providing fluid passage between the floating fluid inlet and the first end of the internal fluid passage;

a fluid separator at a first end of the outer tube, the separator defining a fluid passage between the inner and outer chambers, where in a first configuration, the first fluid exits the pump from the outer chamber while the second fluid remains within the outer chamber, and in a second configuration, the first fluid is sealed from entering the pump from an area exterior to the pump and the second fluid may be discharged from the pump; and

a discharge housing to exhaust air from the pump to enable entry of fluid into the outer chamber and to introduce air into the pump to enable discharge of fluid from the outer chamber via the inner chamber, the discharge housing also having a fluid passage to communicate fluid from the inner chamber of the pump.



6,039,547

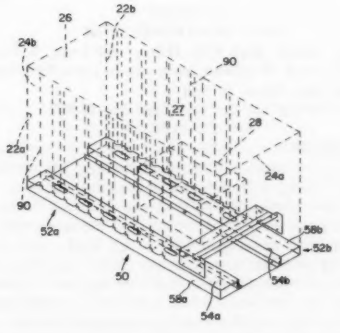
COMPRESSOR WITH COMPRESSOR BASE THAT INCLUDES FLUID SUPPLY OPENINGS

Dean P. Hendrix, Mocksville, and David F. Rowe, Jr., Advance, both of N.C., assignors to Ingersoll-Rand Company, Woodcliff Lake, N.J.

Provisional application No. 60/057,488, Sep. 4, 1997. This application Sep. 4, 1998, Appl. No. 149,157.

Int. Cl.[7] F04B *53/00*

U.S. Cl. 417—234 **8 Claims**



1. A compressor, comprising: a base; a housing supported on said base, said housing and base defining a compression chamber;

and a compression module supported on said base within said compression chamber, said base including at least two support channels, each of the at least two support channels including a first group of flow openings for supplying a volume of uncompressed fluid to the compression module.

6,039,548

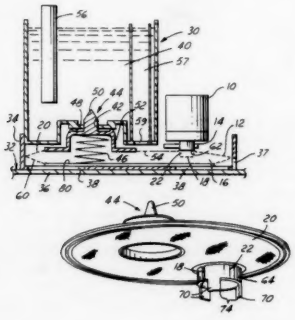
FUEL PUMP WITH CONTROLLED VAPOR INTAKE

Wayne A. Ley, Middletown, Conn.; David E. Mroczka, Port Washington, N.Y., and Edward J. Talaski, Caro, Mich., assignors to Walbro Corporation, Cass City, Mich.

Filed May 22, 1998, Appl. No. 83,300

Int. Cl.[7] **F04B** *39/06;* **F02M** *37/00*

U.S. Cl. 417—313 **13 Claims**



1. A fuel pump module to be disposed within a fuel tank comprising:

a fuel pump having an inlet through which fuel is drawn into the fuel pump and an outlet through which fuel is delivered under pressure;

a filter disposed adjacent to the bottom of the tank and having an upper wall and a lower wall defining an enclosure communicating with the fuel pump inlet for drawing fuel from the tank through the filter and into the fuel pump inlet;

at least one vapor inlet within the enclosure disposed above and communicating with the fuel pump inlet, and having a smaller flow area than the fuel pump inlet flow area whereby large fuel vapor bubbles within the enclosure adjacent the filter upper wall are divided into smaller vapor bubbles upon passing through the vapor inlet to reduce and limit the maximum amount of fuel vapor drawn into the fuel pump at one time.

6,039,549

VOLUTE COMPRESSOR

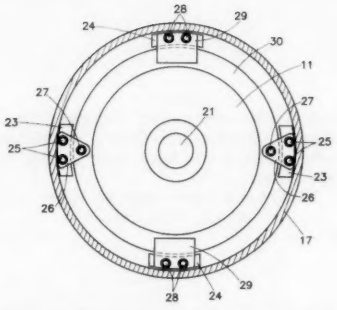
Guang-Der Tarng, Hsin Chu Hsien, and Lung-Tsai Chang, Hsin Chu, both of Taiwan, assignors to Rechi Precision Co., Ltd., Taoyuan Hsien, Taiwan

Filed Apr. 2, 1998, Appl. No. 53,685

Int. Cl.[7] **F01C** *1/02*

U.S. Cl. 418—55.5 **5 Claims**

1. A volute compressor comprising a housing, a frame mounted inside said housing, a fixed volute coupled to said frame at a top side, and a rotary volute mounted on said frame and defining with said fixed volute a plurality of compression chambers, wherein said frame comprises a plurality of first locating blocks and a plurality of second locating blocks at a top side thereof, said first locating blocks and said second locating blocks being spaced around said fixed volute and said rotary volute; a plurality of spring plates are connected between said first locating blocks and a shoulder of said fixed volute to stop said fixed volute from rotary motion relative to said rotary volute; a plurality of stop plates are fixedly mounted on said second locating blocks, said stop plates each having a free end



suspending above the shoulder of said fixed volute to limit upward movement of said fixed volute.

6,039,550

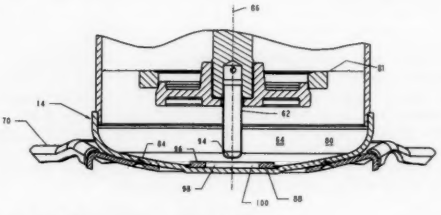
MAGNETIC DEBRIS TRAP

Vernon E. Friedley, and Thomas R. Barito, both of Arkadelphia, Ark., assignors to Scroll Technologies, Arkadelphia, Ak.

Filed Jul. 18, 1997, Appl. No. 896,446

Int. Cl.[7] **F04C** *29/02;* **F01M** *1/10*

U.S. Cl. 418—55.6 **6 Claims**



1. A sealed compressor, comprising:

an enclosure including a center shell extending along an axial length, and sealed at one end by an end cap, said end cap being welded to said center shell;

an electric motor housed within said center shell, and receiving a driveshaft extending along a drive axis;

a compressor pump unit mounted adjacent one end of said motor spaced from said end cap, and being connected to be driven by said driveshaft; and

a lubrication system to transfer lubricant within said sealed compressor through said driveshaft and to said compressor pump unit, a magnet being held on said end cap by holding structure being positioned radially outwardly of said magnet, and said magnet being generally centered on said rotational axis of said driveshaft.

6,039,551

GEAR PUMP FOR USE IN AN ELECTRICALLY-OPERATED SEALED COMPRESSOR

Yoshiharu Takeuchi; Kiyoji Aburaya, both of Otsu; Toshiharu Yasu, Yasu-gun; Masahiro Tsubokawa; Manabu Sakai, both of Kusatsu; Shoji Aoshika, Otsu, and Tsutayoshi Narita, Omihachiman, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

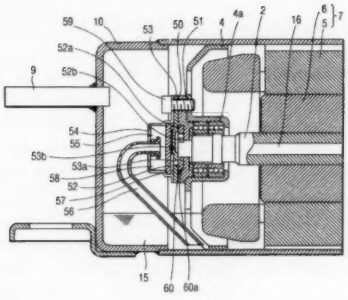
Filed May 28, 1997, Appl. No. 864,614

Claims priority, application Japan, Jun. 7, 1996, 8-145379

Int. Cl.[7] **F04C** *29/02*

U.S. Cl. 418—88 **14 Claims**

1. A gear pump for use in an electrically-operated sealed compressor including a compression mechanism, an electric motor for



driving the compression mechanism, and a crankshaft for transmitting a rotational force of the electric motor to the compression mechanism, said gear pump comprising:

a first gear connected to an end of the compressor crankshaft;

a second gear in mesh with said first gear;

a strainer for capturing foreign substances contained in oil which is introduced to said first gear and said second gear; and

a pump cover for covering said strainer, said pump cover having a shoulder portion in which said strainer is received, said strainer having a height greater than that of said shoulder portion so that said strainer protrudes from one end surface of said pump cover.

6,039,552

ROTARY COMPRESSOR

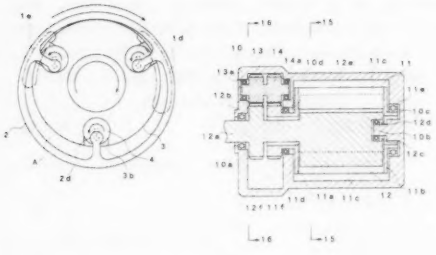
Kenji Mimura, 29-1105, Wakabadai 4-chome, Asahi-ku, Yokohama-shi, Kanagawa 241-0801, Japan

Filed Mar. 9, 1998, Appl. No. 36,786

Claims priority, application Japan, Mar. 11, 1997, 9-055797

Int. Cl.[7] F01C *1/10*

U.S. Cl. 418—166 **5 Claims**



1. A rotary compressor comprising a casing having an inflow port and an outflow port for a fluid which open on its inner surface, a cylindrical outer rotor rotatably housed in the casing, and a cylindrical inner rotor rotatably supported at an eccentric position within the outer rotor, said rotors being rotated in a predetermined direction to introduce a fluid from the inflow port into a space between the rotors, the fluid being discharged through the outflow port, wherein:

said outer rotor has an inner peripheral surface provided with at least one or more protruding portions for partitioning which are radially inwardly raised and are circumferentially spaced apart from one another;

said inner rotor has an outer peripheral surface provided with at least one or more recessed portions for partitioning which are radially inwardly recessed and are circumferentially spaced apart from one another; and

said outer rotor and said inner rotor are connected to each other in such a manner that said protruding portions for partitioning of said outer rotor move circularly in a non-contact manner along inner surfaces of said recessed portions for partitioning of said inner rotor.

6,039,553

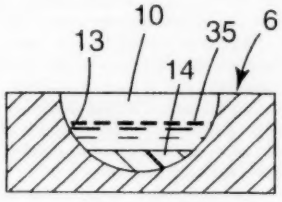
APPARATUS FOR MOLDING LIGHT EXTRACTION STRUCTURES ONTO A LIGHT GUIDE

David J. Lundin, Woodbury, and Kevin M. Eliason, St. Paul, both of Minn., assignors to 3M Innovative Properties Company, St, Paul, Minn.

Filed Dec. 2, 1998, Appl. No. 203,948

Int. Cl.[7] B29C *33/42*

U.S. Cl. 425—115 **17 Claims**



12. A system for continuously fabricating an illumination device, comprising:

a) a source for supplying continuous lengths of light guide;

b) a movable endless segmented mold assembly including a plurality of open mold segments coupled together to form the endless segmented mold assembly, each of the plurality of open mold segments rotating about an axis that is perpendicular to the length of the light guide, contacting the light guide after the light guide exits the source during a portion of the rotation, wherein each of the plurality of open mold segments includes:

(i) an inner surface having a cross sectional shape that matches at least a portion of a desired outer surface cross sectional shape of the overlay of the light guide;

(ii) at least one microstructure having a shape that is a replica of a desired light extraction structure; and

(iii) a reservoir having a volume sufficient to admit the light guide and a curable material such that when the curable material is added to the reservoir the curable material completely submerges the microstructure; and

c) a container of curable material fluidically coupled to a reservoir of one of the plurality of open mold segments when the one of the plurality of open mold segments contacts the light guide.

6,039,554

MOLDING APPARATUS FOR PRODUCING SOLIDIFIED ARTICLES

Tokuji Akutagawa, Tokyo, Japan, assignor to Akutagawa Confectionery Co., Ltd., Tokyo, Japan

Filed Dec. 16, 1996, Appl. No. 767,368

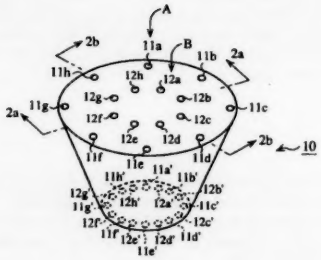
Int. Cl.[7] B29C *45/16*

U.S. Cl. 425—130 **8 Claims**

1. A molding system for use in producing a solidified article having a predetermined composite pattern formed of at least two kinds of viscous fluids distinct from each other in color, said system comprising:

a unit mold for molding a single solidified article,

at least one discrete passage per each of said viscous fluids for separately guiding each of the viscous fluids to said unit mold for forming said single solidified article, said each of the



viscous fluids having been measured separately to have a predetermined amount,

each of said discrete passages having at least one discrete passage inlet and at least one discrete passage outlet, each of said at least one discrete passage outlet discharging said viscous fluid guided through the discrete passage,

said discrete passage outlets being arranged in a single plane facing the unit mold, and

at least one uniting passage in communication with said discrete passage outlets discharging at least two kinds of the viscous fluids among all of said discrete passage outlets to unite the viscous fluids discharged therefrom,

said at least one uniting passage having a plate having at least one orifice therein for passing the viscous fluids, said plate being disposed in the middle of the uniting passage in a plane transverse to a flow direction of the viscous fluids through the uniting passage,

said at least one uniting passage having at least one uniting passage outlet provided at one end of said at least one uniting passage, said at least one uniting passage outlet facing said unit mold,

said unit mold receiving said viscous fluids discharged through said outlets to mold a single solidified article.

6,039,555

LIQUID-PERMEABLE TOPSHEET FOR BODY EXUDATES ABSORBENT ARTICLE, APPARATUS AND METHOD FOR MANUFACTURING SAME

Tomoko Tsuji, Kagawa-ken; Hisashi Takai, Ehime-ken, and Hiroki Goda, Kagawa-ken, all of Japan, assignors to Uni-Charm Corporation, Ehime-ken, Japan

Division of application No. 08/808,404, Feb. 28, 1997. This application Oct. 26, 1998, Appl. No. 178,817.

Claims priority, application Japan, Feb. 29, 1996, 8-43223; Feb. 29, 1996, 8-43224

Int. Cl.[7] B29C *43/32;43/44;43/46*

U.S. Cl. 425—362 **3 Claims**

1. An apparatus for manufacturing a liquid-permeable topsheet for body exudates absorbent article comprises:

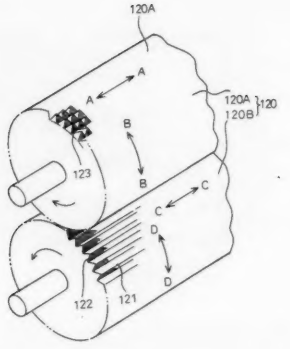
a pair of mutually engageable embossing elements for an embossing treatment of a continuous composite sheet web composed of a liquid-permeable nonwoven fibrous sheet of thermoplastic synthetic resin and a plurality of filaments of thermoplastic synthetic resin extending in one direction parallel to one another and continuously bonded to an upper surface of the nonwoven fibrous sheet;

the embossing elements including a first roll and a second roll;

the first roll being provided on a circumferential surface thereof with cones arranged in a plurality of lines, extending in an axial direction thereof as well as in a circumferential direction thereof;

the second roll being provided on a circumferential surface thereof with crests of an inverted V-shaped cross-section and troughs of a V-shaped cross-section arranged in a plurality of lines in an axial direction thereof so that the crests and troughs are alternatively arranged in a circumferential direction thereof; and

wherein a line of the cones of the first roll arranged in the axial direction thereof is received by the corresponding trough of the second roll while the crest of the second roll is received between two lines of cones which are adjacent to each other in the circumferential direction thereof.



6,039,556

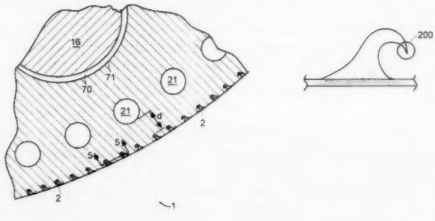
STACKABLE MOLD PLATES HAVING ARRAYS OF LASER-CUT MOLD SURFACES AT THEIR EDGES

Stephen C. Jens, Winchester; Andrew C. Harvey, Waltham, and Richard M. Formato, Shrewsbury, all of Mass., assignors to Velcro Industries B.V., Curacao, Netherlands Antilles

Continuation-in-part of application No. 08/786,226, Jan. 21, 1997. This application Sep. 10, 1997, Appl. No. 926,517.

Int. Cl.[7] B29C *33/42;43/46*

U.S. Cl. 425—363 **19 Claims**



1. A mold plate formed from flat plate stock, having an array of laser-cut mold surfaces at an edge of the mold plate for forming, together with cooperating surfaces, molding cavities shaped to form respective molded fastener elements of a touch fastener product,

at least many of the mold surfaces each forming a point, extending into material of the plate, having a radius of less than about 0.001 inch.

6,039,557

APPARATUS FOR MAKING GAS-FILLED VESICLES OF OPTIMAL SIZE

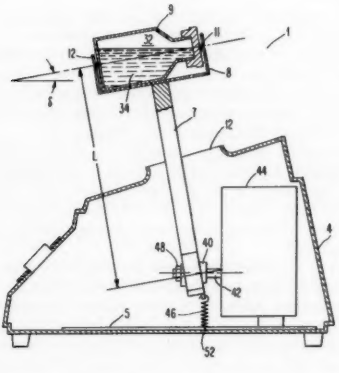
Evan Unger; Thomas McCreery; David Yellowhair, and Terrence R. Barrette, all of Tucson, Ariz., assignors to ImaRx Pharmaceutical Corp., Tucson, Ariz.

Division of application No. 08/482,294, Jun. 7, 1995, Pat. No. 5,656,211, which is a continuation-in-part of application No. 08/307,305, Sep. 19, 1994, Pat. No. 5,773,024, which is a continuation-in-part of application No. 08/159,687, Nov. 30, 1993, Pat. No. 5,585,112, which is a continuation-in-part of application No. 08/076,239, Jun. 11, 1993, Pat. No. 5,469,854, said application No. 08/482,294 is a continuation-in-part of application No. 08/160,232, Nov. 30, 1993, Pat. No. 5,542,935, which is a continuation-in-part of application No. 08/076,250, Jun. 11, 1993, Pat. No. 5,580,575, said application No. 08/076,239 and application No. 08/076,250, each is a continuation-in-part of application No. 07/717,084, Jun. 18, 1991, Pat. No. 5,228,446, and application No. 07/716,899, Jun. 18, 1991, abandoned, said application No. 07/717,084 and application No. 07/716,899, each is a continuation-in-part of application No. 07/569,828, Aug. 20, 1990, Pat. No. 5,088,499, which is a continuation-in-part of application No. 07/455,707, Dec. 22, 1989, abandoned. This application Apr. 7, 1997, Appl. No. 833,489.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] B01J *13/02*

U.S. Cl. 425—429 **48 Claims**



1. An apparatus for making vesicles, comprising:

a) a container containing an aqueous suspension phase and a gaseous phase substantially separate from said aqueous suspension phase;

b) a device for shaking said container by imparting a reciprocating motion thereto so as to form vesicles, said shaking device comprising (i) an arm having a distal end to which said container is coupled, and (ii) means for pivoting said arm back and forth in first and second mutually perpendicular directions so as to reciprocate said container along an arcuate path, wherein said means for pivoting said arm comprises means for pivoting said arm at a frequency greater than approximately 2800 RPM and no greater than approximately 10,000 RPM.

6,039,558

MOLD FOR INJECTION MOLDING OF A PLASTIC PRODUCT

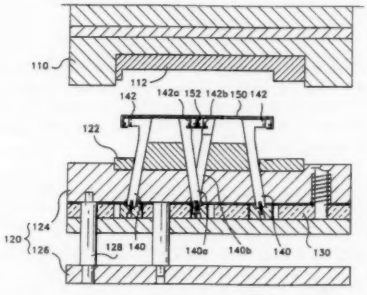
Jong-kwon Park, and Anjai Tsuneji, both of Kwangju, Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Suwon, Rep. of Korea

Filed May 14, 1998, Appl. No. 78,518

Claims priority, application Rep. of Korea, Sep. 29, 1997, 97-49629; Nov. 29, 1997, 97-64501

Int. Cl.[7] B29C *45/44*

U.S. Cl. 425—556 **2 Claims**



1. A mold for injection molding of plastic products, the mold comprising:

a fixing plate including a first cavity-forming portion forming a part of a cavity into which a melted plastic is injected so as to be molded;

a moving plate movably disposed on the fixing plate so as to be movable toward and away from the fixing plate and including a second cavity-forming portion cooperating with the first cavity-forming portion so as to form the cavity therewith;

a plurality of molding pins having prominence-depression portions positionable in the cavity for forming undercut portions in a product molded in the cavity, the molding pins slidably passing through the second cavity-forming portion obliquely thereto; and

an eject plate movable relative to the fixing plate and the moving plate and connected to the molding pin so as to slidably move the obliquely arranged molding pins relative to the second cavity-forming portion such that the prominence-depression portions are separated from the respective undercut portions of the molded product;

wherein two of the molding pins cross over one another and have their respective prominence-depression portions facing one another with no part of the cavity-facing portions being situated therebetween, to form on the molded product a partition wall having undercut portions on opposite sides thereof.

6,039,559

APPARATUS FOR DISPLACING A PLASTICIZING AND INJECTION UNIT

Stefan Eppich, Arbing, Austria, assignor to Engel Maschinenbau Gesellschaft m.b.H., Schwertberg, Australia

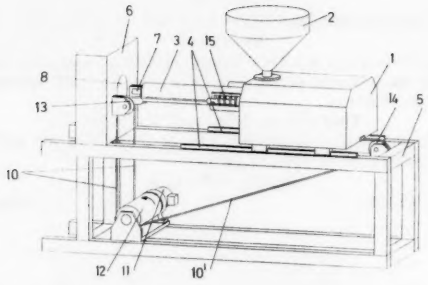
Filed Feb. 27, 1998, Appl. No. 32,559

Claims priority, application Austria, Mar. 5, 1997, 135/97 U

Int. Cl.[7] B29C *45/58*

U.S. Cl. 425—574 **9 Claims**

1. Apparatus for displacing a plasticising and injection unit with respect to a stationary die platen of an injection moulding machine and for producing a contact pressure on a nozzle of said plasticising and injection unit on a mould-half arranged on the stationary die platen, comprising: at least one flexible elongated traction member (**10**, **10'**) connected to the plasticising and injection unit



(1); and drive means engaged with the flexible elongated traction member for applying tractive forces to the plasticising and injection unit (1) for moving the unit away from the mould-half and for moving the unit toward the mould-half and applying the nozzle with force against the mould-half.

6,039,560

LOW NO_x BURNER AND METHOD OF CONTROLLING RECIRCULATION OF EXHAUST GAS

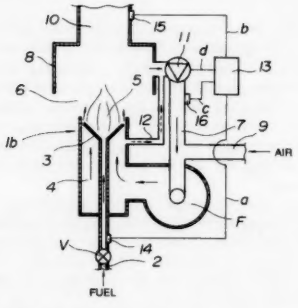
Norikazu Kubota, Gunma-ken, Japan, assignor to Sanyo Electric Co., Ltd., Osaka-fu, Japan

Filed Jan. 30, 1997, Appl. No. 790,194

Claims priority, application Japan, Jan. 31, 1996, 8-035805

Int. Cl.[7] F23M *3/00;* **F23L** *1/00;* **F23J** *11/00;* **F24H** *3/02*

U.S. Cl. 431—9 **11 Claims**



1. A low NO_x burner comprising:

a burner body comprising a combustion chamber, a nozzle that opens into a burner port that in turn opens into said combustion chamber, a fuel supply passage connected to the nozzle, a blower for supplying air for combustion, an air suction passage extending from an air source to said blower, and an air supply passage for supplying air for combustion that extends from the blower to the nozzle and surrounds the nozzle;

an exhaust-gas chamber into which combustion exhaust gas is introduced from said burner body;

an exhaust-gas duct connected to said exhaust-gas chamber, for conducting exhaust gas to an outlet;

an exhaust-gas recirculation passage for supplying combustion exhaust gas from said burner to said air supply passage, the exhaust-gas recirculation passage having an inlet connected to said exhaust-gas chamber and an outlet connected to said air suction passage;

an exhaust-gas recirculation fan provided within said exhaust-gas recirculation passage, to forcibly recirculate exhaust gas from said exhaust-gas chamber to said air supply passage;

a bypass passage formed between said exhaust-gas recirculation passage and said air supply passage, one end of said bypass passage connecting to said exhaust-gas recirculation passage upstream of said exclusive exhaust-gas recirculation fan;

a fuel flow meter and a fuel flow adjustment valve in said fuel supply passage;

a NO_x sensor in said exhaust-gas duct;

a flow rate meter in said exhaust-gas recirculation passage, for detecting the quantity of exhaust gas recirculated; and

a control unit for controlling said exhaust gas recirculation fan.

6,039,561

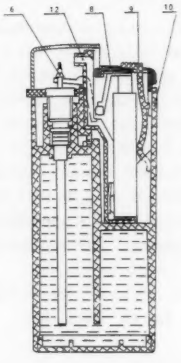
SAFETY PIEZO-ELECTRIC LIGHTER

Hou Chong Lei, Covina, Calif.

Filed Feb. 23, 1998, Appl. No. 28,107

Int. Cl.[7] F23D *11/36*

U.S. Cl. 431—153 **1 Claim**



1. A safety piezo-electric lighter of the type comprising:

a. a hollow body including a reservoir for gas fuel;

b. ignition means provided at one end of the body, the ignition means including:

A. a valve mechanism in fluid connection with the reservoir and operable for selectively discharging gas fuel stored in the reservoir through the valve mechanism;

B. gas-release means connected to the valve mechanism and supported by means on the housing to be movable relative to the housing between a first position where gas is not discharged through the valve mechanism and a second position where gas is discharged through the valve mechanism; and

C. a safety ignition mechanism connected to the gas-release means for igniting the gas fuel discharged through the valve mechanism, wherein the safety ignition mechanism comprises of

i. a thumb-piece connected to the gas release means and slidably supported to move relative to said body and attached to the safety mechanism, said thumb-piece having a horizontal upper surface and a vertical surface, a horizontal slit through the thumb-piece horizontal surface and a longitudinal slit formed through the thumb-piece vertical surface;

ii. a one-piece safety device of flexible material attached to the thumb-piece, an upper protrusion of the one-piece safety device is connected to an underside surface of the thumb piece and is slidably supported along said horizontal slit and includes an operating surface which is exposed on the horizontal upper surface so as to be engaged by a user's thumb during operation of the safety ignition mechanism, said one-piece flexible safety device includes a lower portion positioned in a space defined between the body and the underside of the thumb-piece, a second protrusion formed on a middle portion of said one-piece safety device, said second protrusion arranged to slidably engage the longitudinal slit on the vertical surface of the thumb-piece such that when the safety device is in a locked position, located in the vertical

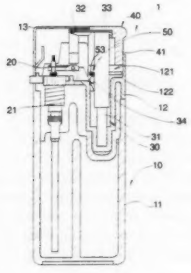
longitudinal slit and positioned between a lower portion of the thumb-piece and an upper portion of the body, so as to block movement of the thumb-piece relative to the body and therefore prevent operation of the gas release means, and the lower portion of the one-piece safety device is formed in an S-shape that is secured in the body to cause a force on the middle portion and the upper portion of the one-piece safety device for biasing the middle portion to the locked position.

6,039,562

PIEZOELECTRIC LIGHTER WITH SAFETY LOCK

Kin Chung Li, 2749 S. Cardillo Ave., Hacienda Heights, Calif. 91745

Filed Jun. 11, 1999, Appl. No. 332,300
Int. Cl.[7] F23D *11/36*
U.S. Cl. 431—153 **18 Claims**



1. A piezoelectric lighter, comprising:

a casing having a liquefied gas storage and a piezoelectric unit casing affixing on top of said liquefied gas storage and defining a pusher cavity therein, wherein at least a locking hole, communicating said pusher cavity with outside, is provided on a first side wall of said piezoelectric unit casing;

a gas ejection nozzle appearing from a ceiling of said casing and communicating with said liquefied gas storage for controlling flow of gas;

a piezoelectric unit, which is fitted in said casing, having a movable operating part extended through said pusher cavity for generating piezoelectricity, and an ignition tip connected thereto;

a pusher cap slidably fitted in said pusher cavity of said casing in a vertically movable manner, exposing a top portion thereof above said casing and being attached to a top end of said piezoelectric unit, wherein an unlocking groove is between an inner side of a bottom portion of said pusher cap and said piezoelectric unit; and

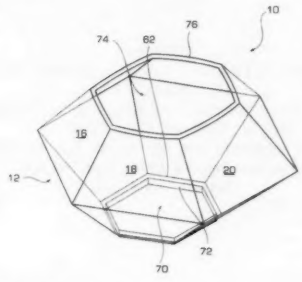
a spring lock unit, which is disposed inside said pusher cavity, comprising a locking heel extended upwardly, a release button sidewardly extended from said locking heel through said locking hole until a pressing end thereof exposed outside, and a spring member integrally extended from said locking heel to another side wall of said piezoelectric unit casing so as to urge said locking heel positioning in a locking condition to block said downward movement of said pusher cap so as to prevent any lighting operation of said piezoelectric unit, wherein to ignite said piezoelectric lighter, said release button is pressed inwards to push said locking heel inwardly to an unlocking condition where said locking heel is aligned with said unlocking groove of said pusher cap, so as to enable said pusher cap to be simultaneously push down to press said moveable operating part of said piezoelectric unit.

6,039,563

STACKABLE HEXAGONAL CANDLE HOLDERS

Christopher Hardy, Springfield, Ill., assignor to Design Ideas, Ltd., Springfield, Ill.

Filed Dec. 23, 1998, Appl. No. 219,523
Int. Cl.[7] F23D *3/16*
U.S. Cl. 431—291 **11 Claims**



1. A candle holder, comprising:

a first set of flat panes joined edge to edge to form an upwardly facing annulus, said upwardly facing annulus comprising an upper edge defining a first plane with an upwardly facing opening therethrough;

a second set of flat panes joined edge to edge to form a downwardly facing annulus, said downwardly facing annulus comprising a lower edge defining a second plane with a downwardly facing opening therethrough;

said first annulus and said second annulus being joined together at a third plane; and

a bottom wall closing said downwardly facing opening along said second plane;

said first, second, and third planes being substantially parallel;

the angles that each of said panes of said first and second set of flat panes forms with any one of said planes being equal to each other; and

wherein said first set of flat panes and said second set of flat panes are joined so as to form a fixed, unitary structure.

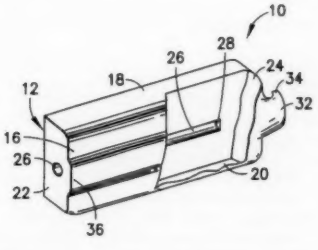
BUCCAL SHEATH AND IMPROVED ORTHODONTIC SYSTEM AND METHOD USING SAME

Paul P. Hendrick, 233 Tremont Park Dr. SE., Lenoir, N.C. 28645-4628

Filed Apr. 5, 1999, Appl. No. 287,220
Int. Cl.[7] A61C *3/00*
U.S. Cl. 433—17 **18 Claims**



1. An orthodontic appliance for attachment to the buccal side of a molar of a patient in need of alignment or movement of teeth of the patient, the orthodontic appliance comprising a buccal sheath, said buccal sheath comprising:

a body member having a base surface for fixedly attaching to the buccal side of a molar of the patient and a generally medially spaced slot in the body member, the slot commencing at an

anterior end surface of the body and continuing a longitudinal distance through the body member and terminating in a position short of an opposite posterior end surface of the body for receiving and retaining an orthodontic wire member for permitting anterior-posterior movement of teeth and/or lateral expansion of the palatal arch of the patient.

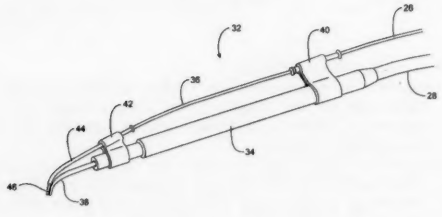
COMBINED ULTRASONIC AND LASER DEVICE AND METHOD OF USE

Marilyn M. Chou; Herrick Tam; King J. J. Yu, and Ken T. Yu, all of 900 Alice St., Oakland, Calif. 94607

Provisional application No. 60/035,093, Jan. 14, 1997. This application Jan. 14, 1998, Appl. No. 6,922.

Int. Cl.[7] A61C *1/07*

U.S. Cl. 433—29 **22 Claims**



1. Apparatus comprising:

a source of laser radiation;

a source of ultrasonic vibration;

means for directing the laser radiation and the ultrasonic vibration onto a common target area; and

a mode switch for selecting between three modes of operation: laser energy only, ultrasonic energy only and combined laser and ultrasonic energy for simultaneously directing laser energy and the ultrasonic energy onto the common target area.

METHOD OF PRODUCING DENTURES AND ARTICULATOR FOR USE THEREWITH

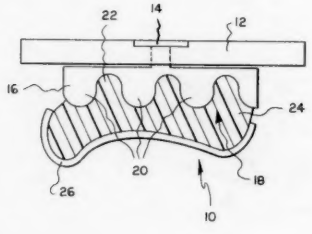
Hanspeter Foser, Balzers, Liechtenstein, assignor to Ivoclar AG, Schaan, Liechtenstein

Filed Sep. 1, 1998, Appl. No. 145,070

Claims priority, application Germany, Sep. 8, 1997, 197 39 220

Int. Cl.[7] A61C *11/00*

U.S. Cl. 433—60 **15 Claims**



14. An articulator comprising:

a retention member including a base (**16**) provided with a plurality of raised portions (**20**) for the detachable engagement with a particular elastic material (**24**) that is carried by a denture plate (**26**) so that the denture plate and elastic material may be removed from the base without destroying it.

6,039,567

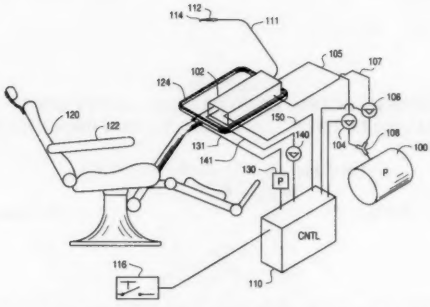
ARRANGEMENT FOR FEEDING ABRASIVE DENTAL POWDER

John D. Abbott, Redwood City, and Arthur Vassiliadis, Dana Point, both of Calif., assignors to Dove Systems, Inc., Redwood City, Calif.

Filed Feb. 3, 1999, Appl. No. 244,255

Int. Cl.[7] A61C *3/02;* **B24C** *7/00*

U.S. Cl. 433—88 **9 Claims**



1. An arrangement for treating teeth with pressurized abrasive powder comprising:

a pressure vessel with an inlet port, an outlet port, a discharge assembly, and a main pressure chamber holding a supply of abrasive powder;

a source of pressurized gas connected to the inlet port;

a dental abrasion tool connected to the outlet port, the abrasive powder being ejected from the pressure vessel and to the abrasion tool via the discharge assembly and the outlet port;

a feeding and metering auger mounted within the pressure vessel;

a motor that is connected to the auger, the abrasive powder within the pressure vessel being fed to the discharge assembly by motor-driven rotation of the auger;

a pressure transducer sensing an internal pressure in the pressure vessel; and

control means connected to the motor for adjusting a rate of rotation of the motor, and thereby a feed rate of the auger, as a pre-determined function of the internal pressure in the pressure vessel.

6,039,568

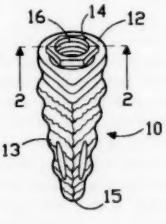
TOOTH SHAPED DENTAL IMPLANTS

Kenneth F. Hinds, 4 Costa Del Sol, Monarch Beach, Calif. 92629

Filed Jun. 2, 1998, Appl. No. 88,911

Int. Cl.[7] A61C *8/00*

U.S. Cl. 433—175 **24 Claims**



1. A dental implant to be implanted into a jawbone to support an abutment and tooth analogue in the shape of an anterior tooth to replace an anterior tooth, comprising:

a. a tapered rounded triangular-shaped implant having an exterior surface, a collar with a top surface, and configured to

taper from the collar to an apex wherein the general cross-section of the implant from the collar to its apex is rounded triangular shape in cross-section;

b. the rounded triangular shaped implant for being embedded into a precut opening in the jawbone wherein the precut opening is the same shape as the rounded triangular shaped implant so that the rounded triangular shaped implant is for being press fitted into the opening with the apex located deepest into the jawbone and the collar is adjacent a gumline or bone; and

c. means for retaining an abutment on the tapered rounded triangular shaped implant and means for retaining the tooth analogue in the shape of an anterior tooth on the abutment;

d. whereby the rounded triangular shaped implant provides an improved structural support and cosmetic fit for the anterior tooth analogue.

AERATION-CAVITATION DEMONSTRATION CONSOLE

Frank Garner, Lake Orion, and Joseph Klamecki, Attica, both of Mich., assignors to Aeroquip Vickers, Inc., Maumee, Ohio

Filed Jan. 8, 1998, Appl. No. 4,695

Int. Cl.[7] G09B *9/00*

U.S. Cl. 434—126 **9 Claims**

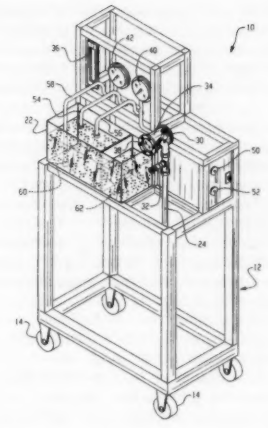
1. A hydraulic demonstration apparatus comprising:

a hydraulic system including a reservoir, an inlet line and an outlet line;

an air valve at the inlet line for introducing air so as to create aeration in the hydraulic system;

a restricting valve at the inlet line for creating cavitation in the hydraulic system;

a hydraulic pump having a clear cover for observing the effects of aeration and cavitation inside the pump; and



a flow meter having a clear housing, for observing the air in the system and the reduction of pump efficiency caused by aeration.

6,039,571

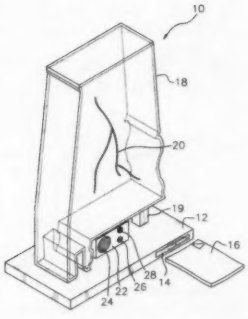
GEOGRAPHICAL AREA TERRARIUM

Lillie Hughes, 4265 Washington Ferry Rd., Montgomery, Ala. 36108

Filed Dec. 11, 1998, Appl. No. 209,807

Int. Cl.[7] G09B *25/06*

U.S. Cl. 434—151 **1 Claim**



1. A terrarium representative of a geographical area comprising, in combination:

a base defined by a top face with a generally planar rectangular configuration, a bottom face with a generally planar rectangular configuration, and a thin periphery formed therebetween and comprising an elongated front face, an elongated rear face, and a pair of short side faces, the front face having a rectangular recess formed therein between the top face and the bottom face and positioned adjacent one of the side faces of the periphery of the base, wherein a study guide may be removably positioned in the recess which contains information regarding the specific geographical area;

an enclosed housing constructed from a transparent material and including a planar front face bounded by a front face peripheral edge, a planar rear face bounded by a rear face peripheral edge aligned with said front face peripheral edge, and a peripheral wall extending between said front face peripheral edge and said rear face peripheral edge and orthogonal to the front face and the rear face wherein the peripheral wall of the housing has a width less than a width of the base a portion of

the peripheral wall being coupled to the base and extending upwardly from the base such that the front face and the rear face of the housing are spaced from a front face and a rear face of the base, respectively, and the front and rear faces of the housing are in parallel relationship, wherein at least one stanchion is coupled to the base and extended upwardly therefrom for supporting the housing, the housing having an interior space with soil, rocks, and foliage situated therein which are commonly found in the geographical area;

indicia positioned on at least one of the front face and the rear face of the housing for representing cities and bodies of water in the geographical region; and

an audio assembly including a housing positioned between the top face of the base and the enclosed housing, a speaker mounted on a front face of the housing for emitting audible sounds upon the receipt of audio signals, a volume dial mounted on the front face of the housing for selectively determining a magnitude of the audible signals, and an actuation button mounted on the front face of the housing for effecting the emission of audible sounds from the speaker representative of information regarding the geographical region upon the depression of the actuation button.

6,039,572

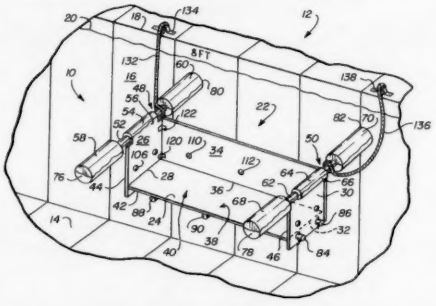
FLOAT PLATFORM FOR AQUATIC INSTRUCTION AND THERAPY

William R. Meier, and Maureen E. Meier, both of Star Rte. 62, Box 18B, Great Barrington, Mass. 01230

Filed Oct. 27, 1998, Appl. No. 179,772

Int. Cl.[7] **A63B** *69/12*

U.S. Cl. 434—254 **17 Claims**



1. A float platform for aquatic instruction and therapy of users of the platform, the float platform comprising:

a. a frame including a base platform, a first end wall secured to a first side of the base platform, a second end wall secured to a second side of the base platform opposed to the first side of the base platform, a back wall secured between the first and second end walls to a back side of the base platform so that the first and second end walls and back wall extend above the base platform and cooperate to partially surround a user support area on the base platform having an unrestricted entry-exit between the first and second end walls above a front edge of the base platform opposed to the back edge of the platform; and,

b. a first flotation arm and a second flotation arm secured to the frame by fastening means for securing the flotation arms to the frame above the base platform so that the flotation arms float top edges of the first and second end walls near a surface of the water wherein the base platform is below the surface of the water, thereby enabling users on the user support area to be partially supported above a surface of the water and enabling users to readily swim into and exit the support area through the unrestricted entry-exit, wherein the fastening means includes a first strut hook defined in a the top edge of the first end wall, a second strut hook defined in the top edge of the second end wall, the first and second strut hooks each being dimensioned to define an interior having a diameter that is about the same diameter as diameters of first and second struts of the first and second flotation arms, the first and second strut hooks each also being dimensioned to define an opening to the interior that is a distance that is slightly shorter than diameters of the first and second struts so that each strut is detachably secured within an interior of each strut hook by elastic compressive forces of the hook.

PORTABLE APPARATUS FOR SIMULATING ULTRASONIC EXAMINATIONS

Jörg Petrick, Berlin, and Michael Stähle, Falkensee, both of Germany, assignors to Schering Aktiengesellschaft, Berlin, Germany

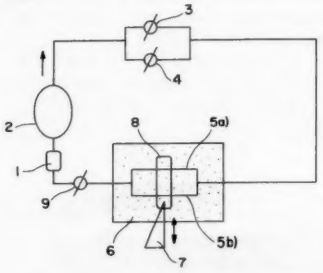
PCT No. PCT/EP96/05855, § 371 Date Jun. 19, 1998, § 102(e) Date Jun. 19, 1998, PCT Pub. No. WO97/23855, PCT Pub. Date Jul. 3, 1997

PCT Filed Dec. 19, 1996, Appl. No. 91,500

Claims priority, application Germany, Dec. 21, 1995, 195 49 240

Int. Cl.[7] **G09B** *23/28*

U.S. Cl. 434—268 **13 Claims**



1. A portable flow model for simulating ultrasound studies, comprising individual components including an injection point (**1**), a pump (**2**), a choke (**3**) to which a clocked valve (**4**) is connected in parallel, a study chamber (**6**) that is equipped with a study window (**8**), and another choke (**9**), whereby the individual components are connected together by a tube system in a closed circuit.

6,039,574

TIME MONITORING PORTABLE GAME SYSTEM

Jocelyn D. Standiford, 5304 Charles St., Racine, Wis. 53402, and Candius L. Edgerle, 4019 N. La., Franksville, Wis. 53126

Filed Mar. 11, 1999, Appl. No. 267,008

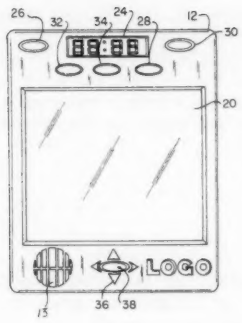
Int. Cl.[7] **G09B** *19/12*

U.S. Cl. 434—304 **9 Claims**

1. A child educational entertainment device comprising, in combination:

a housing having a planar rectangular front face, a planar rectangular rear face and a thin periphery formed therebetween defined by a short top edge, a short bottom edge and a pair of elongated side edges, the rear face having a battery compartment formed therein with a removable cover for allowing selective access to batteries stored therein, one of the side edges having a port formed therein adjacent to the bottom edge for releasably receiving a first end of an adapter the second end of which has a vehicular cigarette lighter plug mounted thereon for being connected to a cigarette lighter port of a vehicle for receiving power therefrom;

a square liquid crystal primary display mounted on the front face of the housing and spaced from the top edge and the bottom



edge thereof, the liquid crystal primary display having a light for illuminating the same upon the actuation thereof;

a light emitting diode digital display mounted on the front face of the housing adjacent to the top edge thereof for displaying numerals representative of a clock;

an actuation toggle switch mounted on the front face of the housing for actuating the device upon the depression thereof;

a light actuator button mounted on the front face of the housing for actuating the light of the liquid crystal primary display upon the depression thereof;

a pause button mounted on the front face of the housing;

a clear button mounted on the front face of the housing;

a select button mounted on the front face of the housing;

a plurality of direction buttons mounted on the front face of the housing and positioned between the liquid crystal primary display and the bottom edge of the housing;

an enter button mounted on the front face of the housing and positioned between the direction buttons;

a speaker mounted on the front face of the housing for emitting sound signals upon the receipt thereof; and

control means positioned within the housing and connected between the displays, switch, and buttons, the control means, upon the actuation of the device, adapted to prompt a user to enter an amount of time via the direction buttons with the subsequent depression of the enter button whereafter a decrementing timer is displayed on the digital display counting down from the entered amount of time, wherein the control means is reset and again prompt the user to enter the amount of time upon the simultaneous depression of the clear button and the enter button;

said control means having a plurality of modes of operation and adapted to switch between each of the modes of operation by the depression of the select button, the modes of operation including:

a first mode wherein the control means is adapted to display a matrix on the primary display with a number of columns and rows to define a plurality of spaces, the number of columns equal to a number of hours included with the entered amount of time and each column being representative of one of the hours, the spaces of each of the four rows each representative of a quarter of an hour and having a unique color associated with the row, wherein the spaces of each column are illuminated with the associated color upon the cessation of each quarter of an hour increment as indicated by the decrementing timer depicted on the digital display, wherein the decrementing timer may be paused upon the depression of the pause button and further restarted upon the subsequent depression of the pause button,

a second mode wherein the control means is adapted to display a matrix on the primary display with a number of columns and rows to define a plurality of spaces each having a unique alphabetical letter positioned therein, wherein any one of the spaces may be selected via the direction buttons after which the same may be cleared from the primary display upon the depression of the enter button, wherein the control means transmits a sound signal to the speaker when the enter button is depressed,

a third mode wherein the control means is adapted to display a matrix on the primary display with a number of columns and rows to define a plurality of spaces each having at least one of a shape and a color positioned therein, wherein any one of the spaces may be selected via the direction buttons after which the same may be cleared from the primary display upon the depression of the enter button, wherein the control means transmits a sound signal to the speaker when the enter button is depressed,

a fourth mode wherein the control means is adapted to display a matrix on the primary display with a number of columns and rows to define a plurality of spaces each having unique picture positioned therein, wherein any one of the spaces may be selected via the direction buttons after which the same may be cleared from the primary display upon the depression of the enter button, wherein the control means transmits a sound signal to the speaker when the enter button is depressed, and

a fifth mode wherein the control means is adapted to display a matrix on the primary display with a number of columns and rows to define a plurality of spaces each having unique errand positioned therein, wherein any one of the spaces may be selected via the direction buttons after which the same may be cleared from the primary display upon the depression of the enter button, wherein the control means transmits a sound signal to the speaker when the enter button is depressed.

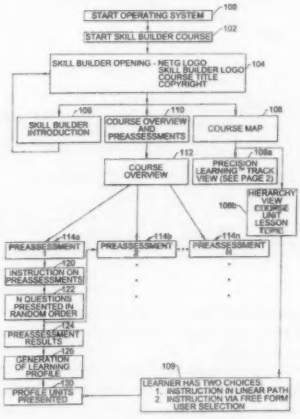
INTERACTIVE LEARNING SYSTEM WITH PRETEST

James J. L'Allier, Batavia; Sally H. Welsh, Naperville; Boyd W. Nielsen, Batavia; Kurt W. Miles; Ken L. Myers, both of Naperville; Stephen P. Henrie, Woodridge; Michael I. Norberg, Downers Grove, and Laura I. Helliwell, Naperville, all of Ill., assignors to National Education Corporation, Naperville, Ill.

Filed Oct. 24, 1996, Appl. No. 738,038
Int. Cl.[7] **G09B** *7/00*
U.S. Cl. 434—323 **7 Claims**



1. A computer based method of automatically providing a paperless, individualized, learning sequence comprising:

storing in a computer readable database a plurality of questions directed toward assessing an individual's understanding of a selected learning objective for each member of a plurality of different learning objectives;

automatically evaluating the individual by randomly and sequentially selected from the database at least one question

associated with each member of the plurality of learning objectives and displaying each selected question to the individual for a response wherein each response is received and evaluated relative to a predetermined standard before the next question is selected;

accumulating at least some of the results of the evaluations in a computer storage unit in computer readable form;

processing the results to automatically produce a specific sequence of instructional units in response to those responses which varied materially from the respective standard; and

presenting the sequence of instructional units on a display for the individual wherein the individual can interact with each of the units via the display.

5. An apparatus for providing an automatic, paperless, individualized learning sequence to a user comprising:

a programmable processor;

a visual display coupled to the processor;

a unit coupled to the processor, for reading control information and a database from a medium and providing that information to the processor and wherein, in response to that information, the processor accesses the database and wherein the processor includes circuitry for randomly selecting from the database a plurality of assessment questions and circuitry for presenting the plurality of questions to the user on the display;

a user operable input device coupled to the processor, whereby the user provides responses to the processor to at least some of the assessment questions and wherein the processor includes further circuitry for evaluating the responses and in response thereto for establishing a sequence of selected topics for presentation to the user.

6,039,576

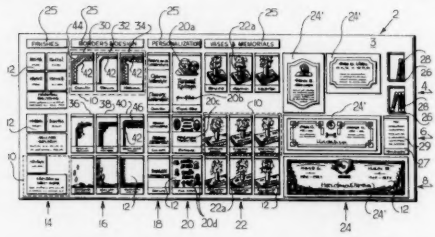
MERCHANDISING SELLING SYSTEM AND DISPLAY UNIT

Joseph A. Gabig, and David B. Jones, both of Allegheny County, Pa., assignors to Matthews International Corporation, Pittsburgh, Pa.

Continuation of application No. 09/019,510, Feb. 5, 1998, Pat. No. 5,882,209, which is a continuation of application No. 08/784,972, Jan. 16, 1997, Pat. No. 5,759,045, Provisional application No. 60/010,121, Jan. 17, 1996. This application Mar. 8, 1999, Appl. No. 264,529.

Int. Cl.[7] **G09B** *25/00*

U.S. Cl. 434—367 **1 Claim**



1. A product display board for display of product lines of memorial products, said display board comprising:

a planar member; and

a plurality of horizontally arranged linear arrays mounted on said planar member, each said array displaying one product line and including a plurality of cells, each said cell including a product sample displaying at least one design feature, said at least one design feature comprising at least one design option for a memorial product, wherein each said at least one design feature is selected from the group consisting of finishes, borders, border decorations, lettering fonts, personalized designations, floral holders and combinations thereof, wherein each said at least one design option comprises a plurality of design options, such that each said cell displaying said at least one design feature is linearly and vertically arranged with another of said cells displaying said at least one design feature, wherein, a plurality of said linearly arranged cells comprise finished product samples, wherein at least one of said arrays displays a product line having a different grade than another of said product lines, whereby a plurality of product lines each having a plurality of design features are displayed.

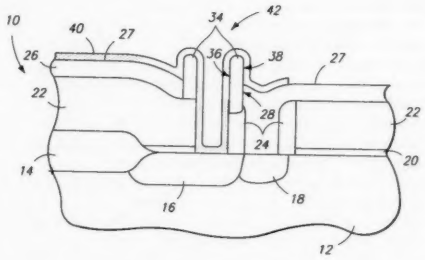
METHOD OF FORMING DIODES

Martin Ceredig Roberts, Boise, Id., assignor to Micron Technology, Inc., Boise, Id.

Continuation of application No. 08/788,617, Jan. 24, 1997, Pat. No. 5,770,496, which is a continuation of application No. 08/409,505, Mar. 23, 1995, Pat. No. 5,635,418. This application Apr. 9, 1998, Appl. No. 58,236.

Int. Cl.[7] **H01L** *21/8234*

U.S. Cl. 437—237 **12 Claims**



1. A semiconductor processing method of forming a back-to-back diode construction, comprising:

providing a circuit node;

forming a first electrically insulative material outwardly of the node;

forming an opening in the first electrically insulative material over the node, the opening having an opening width and sidewalls;

forming a second electrically insulative material outwardly of the first material and within the opening to a thickness which is less than one-half the opening width to less than completely fill the opening with second electrically insulative material, the first and second materials being selectively etchable relative to one another;

anisotropically etching the second material to form a substantially vertically extending sidewall spacer within the opening and to outwardly expose an upper surface of the first material adjacent the sidewall spacer, the sidewall spacer having an inner lateral surface and an outer lateral surface;

removing a portion of the first material to outwardly expose at least a portion of the sidewall spacer outer lateral surface;

providing a conformal layer of a semiconductive material over the exposed outer lateral sidewall spacer surface and over the inner lateral sidewall spacer surface within the opening to define a container shape of semiconductive material within the opening, the container shape making electrical connection with the circuit node; and

doping the conformal layer to define two discrete doped regions separated by an intervening region, the doped conformal layer comprising back-to-back diodes.

6,039,578

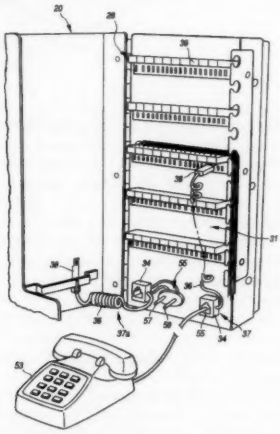
NETWORK INTERFACE DEVICE FOR LINE TESTING

Louis Suffi, Willow Springs, and Arnold M. Ladd, Des Plaines, both of Ill., assignors to Reltec Corporation, Mayfield Heights, Ohio

Provisional application No. 60/015,398, Apr. 2, 1996. This application Mar. 25, 1997, Appl. No. 825,144.

Int. Cl.[7] H04M *1/24*

U.S. Cl. 439—54 **5 Claims**



1. An interface test assembly for use in a telephone communication network including an incoming central office cable and outgoing customer telephone lines comprising:

a housing;

the housing including at least one terminal block assembly having at least one telephone line interconnect element for selectively interconnecting the incoming central office cable to at least one of the outgoing customer telephone lines;

a normally inactive receptacle element fixedly mounted in the housing and coupled to a plug member;

the plug member is positioned adjacent the terminal block assembly in the housing and is structured and dimensioned to be individually coupled to a selected one of the telephone line interconnect elements of the terminal block assembly to disconnect interconnection through the selected telephone line interconnect element between the incoming central office cable and an outgoing customer telephone line thereby isolating the incoming central office cable from the selected outgoing customer line while simultaneously causing the normally inactive receptacle element coupled to the plug member to be activated enabling testing of the incoming central office cable for default conditions by coupling a test device to the receptacle element;

the receptacle element remaining inactive until the plug member is coupled to at least one of the telephone line interconnect elements of the terminal block assembly.

6,039,579

SEALED SOCKET ASSEMBLY FOR A PLUG-IN LAMP AND A METHOD FOR ASSEMBLING SAME

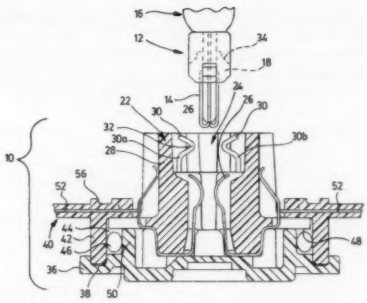
Donald C. Paul, Downers Grove; Joseph C. Bennett, Lisle; Joseph A. Bettini, Naperville, all of Ill., and Edward J. Gordon, Grand Blanc, Mich., assignors to Tricon Industries, Incorporated, Lisle, Ill.

Division of application No. 08/603,874, Feb. 22, 1996, Pat. No. 5,800,183. This application Jul. 24, 1998, Appl. No. 121,935.

Int. Cl.[7] H01R *9/09*

U.S. Cl. 439—56 **4 Claims**

1. A method for assembling a sealed plug-in lamp assembly, the method comprising the steps of:



providing a lamp having a plurality of electrical leads extending therefrom;

providing a lamp socket having a plurality of electrical contacts; said contacts include a plurality of end portions within the lamp socket, and extending around to an exterior of the lamp socket to rest against a vertical sidewall of the lamp socket;

inserting the lamp into the lamp socket providing electrical connection between the plurality of electrical leads and the plurality of end portions of the contacts within the interior of the lamp socket;

providing a circuit carrier having a plurality of sealed circuits molded into the circuit carrier; and

inserting the lamp socket into the circuit carrier providing electrical connection between the plurality of contacts resting against the vertical side wall and the plurality of sealed circuits in a sealed manner.

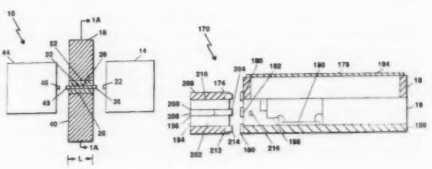
RF CONNECTOR HAVING A COMPLIANT CONTACT

William A. Sciarretta, Lexington; Paul Setzco, Wellesley, and James D. Arangio, Saugus, all of Mass., assignors to Raytheon Company, Lexington, Mass.

Filed Jul. 16, 1998, Appl. No. 116,839

Int. Cl.[7] H01R *9/09*

U.S. Cl. 439—63 **17 Claims**



1. An RF system comprising:

an RF element having at least one conductive pad and a ground pad; and

an RF connector comprising:

a conductive support having at least one aperture;

an electrical insulator disposed within said aperture of said conductive support and having an aperture,

a conductive contact having a portion disposed within said aperture of said electrical insulator and a compliant end adjacent to an end of said aperture and capable of being compressed when said compliant end contacts said conductive pad of said RF element; and

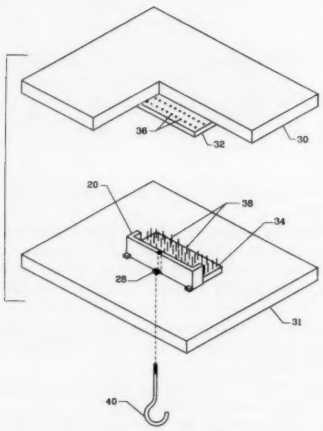
a compliant conductive member disposed concentrically around said conductive contact and electrically insulated from said conductive contact by said electrical insulator, wherein said compliant conductive member contacts said ground pad of said RF element when said compliant end of said conductive contact contacts said conductive pad of said RF element.

6,039,581

ELECTRICAL CONNECTOR FOR CIRCUIT CARD ASSEMBLIES

Mario DiMarco, Scottsdale, Ariz., assignor to Honeywell Inc., Minneapolis, Minn.

Filed Dec. 30, 1997, Appl. No. 773
Int. Cl.[7] H01R *9/09;* **H05K** *1/00*
U.S. Cl. 439—74 **8 Claims**



1. An apparatus for providing an electrical connection between parallel mounted first and second circuit card assemblies comprising:

a male electrical connector with a plurality of electrical connection pins extending therefrom, wherein said male electrical connector is in mechanical and electrical connection with the first circuit card assembly;

a female electrical connector with a plurality of electrical connection holes for receiving the electrical connection pins, wherein said female electrical connector is in mechanical and electrical connection with the second circuit card assembly; and

a connector guide attached to the first circuit card assembly adjacent to the male electrical connector which contacts the female connector during the electrical connection of the male and female connectors and provides a guide for inserting the connector pins into the connector holes, wherein the guide has a threaded hole formed therein which is aligned with a hole through the first circuit card assembly, wherein said hole in the guide and said hole in the first circuit card assembly are configured to receive a threaded tool inserted in both the holes until the tool contacts the second circuit card assembly and pushes the first and second circuit card assemblies apart.

DISCHARGE LAMP BALLAST HOUSING WITH SOLDERLESS CONNECTORS

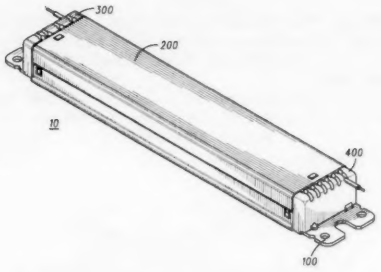
David G. Geis, Niles; Peter Doikas, Arlington Heights, and Jeffrey Demonaco, West Dundee, all of Ill., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Sep. 30, 1998, Appl. No. 163,818
Int. Cl.[7] H01R *9/09*
U.S. Cl. 439—76.1 **23 Claims**

1. A housing for a gas discharge lamp ballast, comprising:

a base for mounting a circuit board thereon, the base including an input end, an output end opposite the input end, a left end adjacent to the input and output ends, and a right end opposite the left end and adjacent to the input and output ends, wherein:

(i) the left and right ends include edges having a thickness substantially less than that of the rest of the base; and



(ii) the input and output ends of the base each include at least one aperture defined therein;

a cover having a top side, a left side at approximately right angles with the top side, and a right side at approximately right angles with the top side and remote from the left side, wherein the cover has an input end and an output end each having at least one aperture therein, the left and right sides each including a channel therein for mating with the edges on the left and right ends of the base;

an input connector adapted to serve as a first end-cap of the housing, the input connector including a plurality of receptacles for receiving input wires and a plurality of tabs for mating with the corresponding apertures in the input ends of the base and cover; and

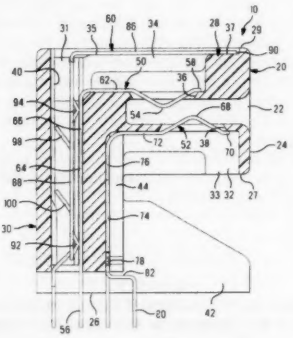
an output connector adapted to serve as a second end-cap of the housing, the output connector including a plurality of receptacles for receiving output wires and a plurality of tabs for mating with the corresponding apertures in the output ends of the base and cover.

6,039,583

CONFIGURABLE GROUND PLANE

Iosif Korsunsky, Harrisburg; Dimitry Grabbe, Middletown; Alex Hasircoglu, Columbia; Richard Schroepfer, Thompsontown, and Daniel Robert Ringler, Elizabethville, all of Pa., assignors to The Whitaker Corporation, Wilmington, Del.

Filed Mar. 18, 1998, Appl. No. 40,680
Int. Cl.[7] H01R *4/66*
U.S. Cl. 439—101 **8 Claims**



1. An electrical connector comprising:

a housing,

a unitary ground plane extending in the housing, and

first contacts in first passages in the housing,

the first contacts comprising a number of signal contacts and a number of ground contacts according to a desired ratio of signal contacts to ground contacts,

the unitary ground plane having projecting unitary contacts engaging selected ones of the first contacts in the first pas-

sages to provide said number of ground contacts according to said desired ratio of signal contacts to ground contacts,

the unitary ground plane extending beside said number of signal contacts in the first passages and providing shielding for said number of signal contacts in said first passages, and

the unitary ground plane having projecting unitary lances engaging the housing and urging the unitary ground plane toward the first contacts in the first passages, whereby the unitary ground plane is urged with the unitary contacts to engage the selected ones of the first contacts in the first passages.

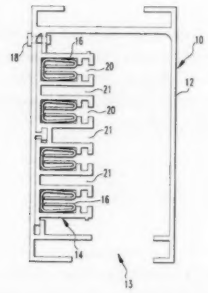
ELECTRICAL POWER DISTRIBUTION SYSTEM

Steven L. Ross, Pittsburgh, Pa., assignor to Universal Electric Corporation, Bridgeville, Pa.

Filed Nov. 9, 1998, Appl. No. 188,612
Int. Cl.[7] H01R *25/14*
U.S. Cl. 439—115 **24 Claims**



1. An electrical power distribution system comprising:

at least two track sections connected end-to-end, each said track section including an elongated metal enclosure, an elongated insulating support member secured in said enclosure and at least one electrically conducting busbar in said support member for providing electricity to a take-off device installed at any point along the length of said track;

said at least one electrically conducting busbar made of copper strip material about 0.010 to 0.125 inch thick having a generally U-shaped cross section including a base portion between a pair of spaced apart legs and an integral interior re-entrant flange on the end of each leg opposite said base, said re-entrant flanges being substantially parallel and cooperating to define a slot therebetween for receiving an electrically conductive stab on a take-off device installed in said track and provide interfacial pressure contact against said stab; and

an electrically conductive connector bar in each said busbar interconnecting it with a busbar in the adjacent track section.

6,039,585

CONNECTOR ASSEMBLY WITH SELF ACTIVATING ENVIRONMENTAL SEAL

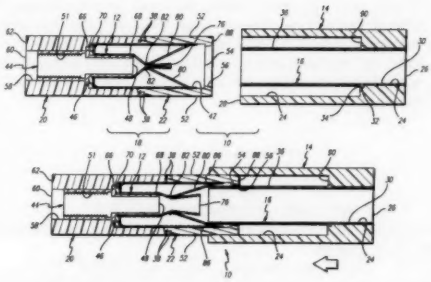
Derek Kim, Northridge, and Thomas Lopez, Los Angeles, both of Calif., assignors to Reynolds Industries Incorporated, Angeles, Calif.

Filed Mar. 10, 1997, Appl. No. 814,496
Int. Cl.[7] H01R *13/44*
U.S. Cl. 439—137 **23 Claims**

1. A connector assembly for connecting a first and a second contact, comprising:

a male housing having a rigid projection and an interior surface defining a longitudinal passageway sized to mount the first contact therein;

a female housing having an interior surface defining longitudinal passageway sized to mount the second contact therein;



a resilient sleeve having an interior surface defining longitudinal passageway between a first opening and a second opening, the resilient sleeve being elastically deformable from a resting position wherein the passageway is open and a collapsed position wherein the passageway is closed, the passageway of the sleeve in the resting position sized to accept the first contact therein, the sleeve mounted adjacent to the interior surface defining the passageway of the female housing to allow the first contact to pass into the sleeve and connect with the second contact upon the connection of the male and female housings; and

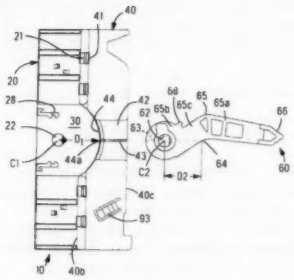
a spring mounted adjacent to the passageway of the female housing, the spring located to engage the sleeve and bias the sleeve toward the collapsed position, the spring also located to interferingly engage the rigid projection of the male housing such that upon the connection of the male and female housings the projection forces the spring to release from engagement with the sleeve, whereupon the sleeve deforms to the resting position to accept the first contact therein.

6,039,586

LEVER TYPE CONNECTOR

Hiroshi Kitamura, Kanagawa, Japan, assignor to The Whitaker Corporation, Wilmington, Del.

Filed Sep. 4, 1997, Appl. No. 923,221
Claims priority, application Japan, Sep. 6, 1996, 8-257637
Int. Cl.[7] H01R *13/62*
U.S. Cl. 439—157 **11 Claims**



1. A lever-operated electrical connector, comprising

a housing having opposing walls;

an operating lever having parallel arms connected at outer ends thereof;

first pivot members comprising posts on outer surfaces of the opposing walls and second pivot members comprising openings extending from inner sections of the parallel arms;

biasing surfaces on the housing for biasing the inner section of the parallel arms outwardly as movement of the operating lever results in movement of the inner sections along the biasing surfaces and the opposing walls; and

co-operable rib and groove guide means comprising first guide members on the biasing surfaces and second guide members

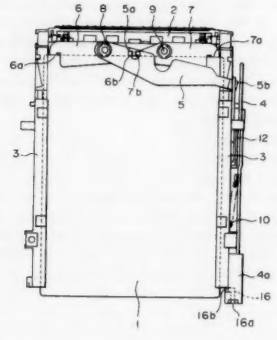
on the inner sections guiding the inner sections along the biasing surfaces an the opposing walls to align the pivot members, permitting the inner sections to move inwardly to bring the first and second pivot members into engagement, whereby the operating lever can pivotally move relative to the housing.

6,039,587

IC CARD CONNECTOR DEVICE

Wataru Oguchi, Furukawa, Japan, assignor to Alps Electric Co., Ltd., Japan

Filed Sep. 18, 1998, Appl. No. 156,990
Claims priority, application Japan, Sep. 19, 1997, 9-255393; Jan. 5, 1998, 10-000342
Int. Cl.[7] H01R *13/62*
U.S. Cl. 439—159 **16 Claims**



1. An IC card connector device comprising a frame for supporting an IC card so that it can be inserted and withdrawn, a push rod capable of reciprocating between a push position and a projecting position, and check means for locking the movement of the push rod and releasing the push rod at the push position of the push rod; wherein when the IC card is inserted, the push rod is located at the push position, said movement of the push rod at the push position being locked by said check means, the push rod is moved to the projecting position by releasing said check means and thereafter by a first push motion of the push rod, and the IC card is discharged by a second push motion of the push rod executed at this projecting position.

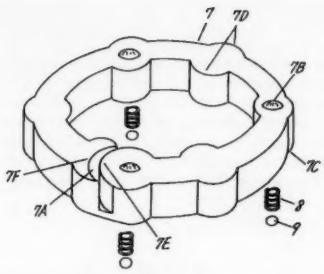
6,039,588

ROTARY CONNECTOR

Toshio Osawa, Ikoma, Japan, assignor to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Jul. 13, 1998, Appl. No. 114,351
Claims priority, application Japan, Jul. 11, 1997, 9-186341
Int. Cl.[7] H01R *35/04*
U.S. Cl. 439—164 **20 Claims**

1. A rotary connector comprising:
(a) a cylindrical outside case,
(b) an inside case having an inner tube, rotatably installed in said outside case,
(c) a wound flat cable installed in a space formed between said outside case and said inside case,
said wound flat cable being flexible,
a first end of said wound flat cable being connected to said outside case, and further connected to an electric circuit,
a second end of said wound flat cable being connected to said inside case, and further connected to said electric circuit, and
said wound flat cable having a U-shaped inverted portion, and



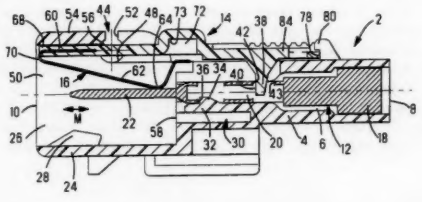
(d) a guide ring having a notch, movably installed in the space formed between the outside case and the inside case,
wherein said inverted portion of said wound cable is inverted through said notch of said guide ring,
said guide ring contacts to said inside case and said outside case,
a first frictional resistance between said guide ring and said inside case being greater than a second frictional resistance between said guide ring and said outside case, and
when said inside case is rotated, said guide ring moves by said first frictional resistance.

6,039,589

ELECTRICAL CONNECTOR WITH A SHUNT INCORPORATED INTO A SECONDARY LOCKING MEMBER

Jacques LaLange, Pontoise, and Olivier Pamart, Ecouen, both of France, assignors to The Whitaker Corporation, Wilmington, Del.

Filed Sep. 30, 1997, Appl. No. 941,559
Int. Cl.[7] H01R *29/00*
U.S. Cl. 439—188 **10 Claims**



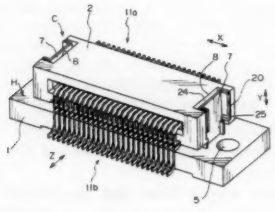
1. An electrical connector comprising a housing having terminal receiving cavities extending therethrough from a terminal receiving end to a mating end, and terminals comprising a connection section, contact section for mating with a complementary terminal of a complementary connector, and secondary locking shoulder, and primary retention means acting between the housing and the terminal to retain the terminal within the cavity, the connector further comprising a secondary locking member supported at a support to the housing and comprising a locking protrusion engageable behind the terminal secondary locking shoulder for retaining the terminal in the cavity characterized in that the connector further comprises a shunt contact for short circuit bridging two or more of the terminals of the connector, the shunt contact being attached to the secondary locking member.

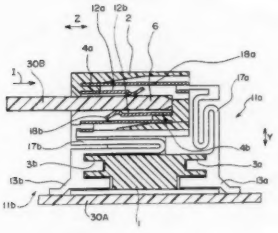
6,039,590

ELECTRICAL CONNECTOR WITH RELATIVELY MOVABLE TWO-PART HOUSING

Shinsuke Kunishi, Hadano, Japan, assignor to Molex Incorporated, Lisle, Ill.

Filed Aug. 13, 1997, Appl. No. 915,550
Claims priority, application Japan, Feb. 14, 1997, 9-047208
Int. Cl.[7] H01R *13/64*
U.S. Cl. 439—247 **19 Claims**





1. An electrical connector, comprising:

a dielectric housing having a first housing part and a second housing part, the housing parts being movable relative to each other; and

at least one terminal mounted between the two housing parts and including

a termination end secured in the first housing part,

a contact end having a contact arm secured in the second housing part,

a first flexible section between said ends to allow for relative movement of the housing parts in a first given direction,

a second flexible section between the first flexible section and the contact arm to allow for relative movement of the housing parts in a second given direction generally transverse to said first given direction, the second flexible section being in juxtaposition with the contact arm, and

a stiffening section between the second flexible section and the contact arm.

6,039,591

LOCKING ELECTRICAL CONNECTOR

Richard N. Marsh, Cool, and Demian T. Martin, Oakland, both of Calif., assignors to Monster Cable Products, Inc., Brisbane, Calif.

Filed Jul. 3, 1997, Appl. No. 887,885
Int. Cl.[7] H01R *13/15*
U.S. Cl. 439—265 **26 Claims**

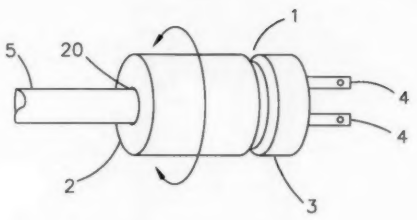
1. A multiple-connector electrical plug providing increased security of mechanical attachment and increased efficacy of electrical connection, the connector comprising:

a shell;

a plug body in operative combination with said shell;

a plurality of reversibly expandable and electrically conductive blades disposed on said plug body; and

a swage mechanism in operative combination with said shell, said plug body and at least one of said plurality of reversibly expandable and electrically conductive blades for reversibly



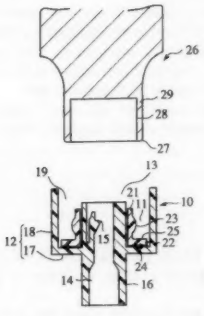
expanding said one of said plurality of reversibly expandable and electrically conductive blades.

6,039,592

METHOD OF FIXING PACKING AND STRUCTURE FOR FIXING PACKING

Akira Shinchi, Shizuoka-ken, Japan, assignor to Yazaki Corporation, Tokyo, Japan

Filed Feb. 27, 1998, Appl. No. 31,803
Claims priority, application Japan, Feb. 28, 1997, 9-046281
Int. Cl.[7] H01R *13/52*
U.S. Cl. 439—271 **8 Claims**



1. A method of fixing a packing to a member, said packing having a ring-shaped flange section, said flange including a ring-shaped groove section, said member having a contacting section capable of being brought into contact with said flange section, and said flange section and said contacting section being formed by mutually soluble resins, said method of fixing comprising the steps of:

contacting said flange section of said packing to said contacting section of said member;

inserting an ultrasonic horn into the ring-shaped groove section of said flange section; and

exciting by an ultrasonic wave from the ultrasonic horn a ring-shaped contact section between said flange section and said contacting section and fusing said flange section and said contacting section in a ring shape.

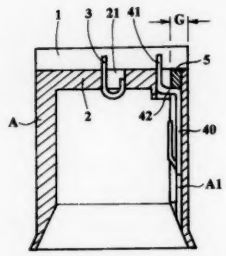
6,039,593

LAMP BASE STRUCTURE OF A SERIES OF CHRISTMAS LAMPS

Ching Chao Chen, No. 511, Sec. 3, Ton-Ta Rd., Hsin-Chu City, Taiwan

Filed Jan. 23, 1998, Appl. No. 12,222
Int. Cl.[7] H01R *13/52*
U.S. Cl. 439—280 **5 Claims**

1. A lamp base structure of a series of Christmas lamps comprising:



a groove located in an end of said base structure, said groove being defined by a groove seat having edge portions located at each end thereof and by sidewalls extending between said edge portions;

a through hole in a central portion of said groove seat and an engaging hole in one of the edge portions of said groove seat, said engaging hole being defined by a first wall portion that is located in a direction toward said groove seat central portion and by a second wall portion that is located in a direction away from said groove seat central portion;

a central conducting piece located in the through hole;

an outer conducting piece located in said engaging hole and comprising,

an upper end penetrating portion;

a lower end portion; and

a bent portion located between the upper end penetrating portion and the lower end portion so that the upper end penetrating portion is engaged by said engaging hole first wall portion and the lower end portion is parallel to and engages said second wall portion; and

an engaging block located on said outer conducting piece bent portion and adjacent to said engaging hole second wall portion.

6,039,594

BODY FOR ELECTRICAL OUTLET OR PLUG

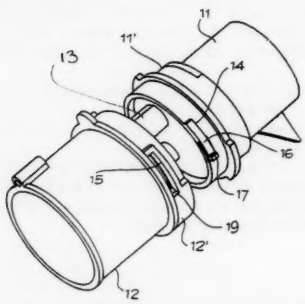
Riccardo Zuppa, Brescia, Italy, assignor to Palazzoli S.p.A., Brescia, Italy

Filed Oct. 26, 1998, Appl. No. 179,132

Claims priority, application Italy, Dec. 3, 1997, BS97U0117

Int. Cl.[7] H01R *4/54;13/62*

U.S. Cl. 439—318 **10 Claims**



1. An electrical outlet or plug for industrial and/or tertiary use, the electrical outlet or plug comprising:

a body enclosing a connecting jack, said body including a grip element and a jack-holding element, which are joined in an axial direction by means of a bayonet connection and by positioning at least one spring-like stopping means between said grip element and said jack-holding element, one of said grip element and said jack-holding element of said body having radial fins and the other of said grip element and said jack-holding element of said body having radial fin seats for accommodating and holding said radial fins and following a corresponding rotation of one element in relation to the other, said spring-like stopping means including a spring-like tongue which forms a single piece with one of said grip element of said body and said jack-holding element of said body and engages, by spring action, with a support shoulder on the other of said grip element of said body and said jack-holding element of said body.

6,039,595

ELECTRICAL CONNECTOR

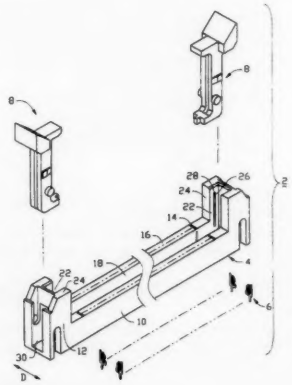
Gwou-Jong Tseng, and Yuh-Huey Kang, both of Tu-Chen, Taiwan, assignors to Hon Hai Precison Ind. Co., Ltd., Taipei Hsien, Taiwan

Filed Aug. 3, 1999, Appl. No. 366,160

Claims priority, application Taiwan, Apr. 27, 1999, 88206557

Int. Cl.[7] H01R *13/64*

U.S. Cl. 439—377 **3 Claims**



1. An electrical connector adapted for connecting a memory module to a circuit board, comprising:

an elongate housing including:

an elongate body including a plurality of cavities formed in opposite side walls thereof and an elongate slot defined between the two side walls in communication with the cavities for insertion of the memory module, the slot being slightly wider than the memory module; and

a pair of arms extending from opposite ends of the body, each arm defining a channel in an inner surface thereof in communication with the slot of the body for guiding the memory module into the slot, a pair of elongate ribs projecting from opposite inner surfaces of opposite side walls of each arm for abutting against the memory module thereby restricting movement of the memory module along a lateral direction;

a plurality of contacts received in the cavities of the housing and exposed to the slot for mating with the memory module; and

an ejector secured to the housing for ejecting the memory module from the slot of the housing;

wherein each rib projects from a lower portion of the inner surface of the side wall of the arm proximate the slot of the body to an upper portion of the arm;

wherein a chamfer is formed in a top portion of each rib for guiding the memory module to abut against the rib;

wherein the surface of each rib is arcuate for making a line contact with the memory module thereby reducing a frictional force between the ribs and the memory module.

6,039,596

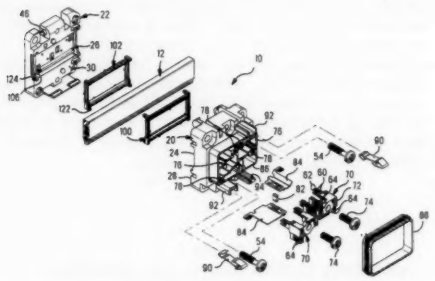
GASKETS FOR POWER CABLE TAP CONNECTOR

Robert Neil Whiteman, Jr., Middletown; Earl William McCleerey, Mechanicsburg, and Jeffrey Byron McClinton, Harrisburg, all of Pa., assignors to The Whitaker Corporation, Wilmington, Del.

Provisional application No. 60/064,998, Nov. 10, 1997. This application Oct. 13, 1998, Appl. No. 170,348.

Int. Cl.[7] H01R *4/20*

U.S. Cl. 439—404 **13 Claims**



1. An assembly for sealing around a termination site of an electrical cable within an electrical connector, comprising:

upper and lower housings having respective cable faces defining therebetween a cable-receiving channel through which extends the cable;

upper and lower gaskets each having side sections coextending along respective sides of said cable-receiving channel and each having end sections coextending between said side sections and traversing said cable-receiving channel proximate ends of said cable-receiving channel, said side and end sections defining a continuous loop around an enclosed region on respective upper and lower surfaces of said cable;

each of said upper and lower gaskets including cable-facing surfaces of said side and end sections protruding into said cable-receiving channel to be engaged and compressed by said cable upon said upper and lower housings being fastened about a length of said cable, sealing within said enclosed region an area along upper and lower surfaces of said cable for penetration of insulation of said cable by contacts of at least one of said upper and lower housings to electrically connect said contacts to conductors of said cable.

6,039,597

LAMPHOLDER FOR COMPACT FLUORESCENT LAMPS

Arkady Getselis, Staten Island; Walter Newman, Bayside, and Anthony Tufano, North Massapequa, all of N.Y., assignors to Leviton Manufacturing Co., Inc., Little Neck, N.Y.

Division of application No. 08/687,864, Jul. 26, 1996, Pat. No. 5,758,952. This application Jun. 1, 1998, Appl. No. 88,476.

Int. Cl.[7] H01R *4/24*

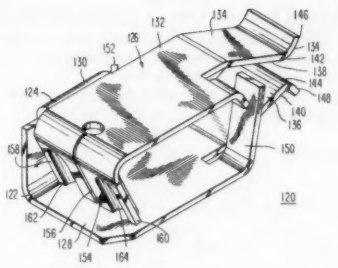
U.S. Cl. 439—441 **8 Claims**

1. An electrical contact comprising:

a) a contact body having a first end and a second end;

b) said contact body made up of a top wall and a bottom wall partially joined to one another by a partial side wall and arranged to form a box with an open side wall;

c) said top wall at said first end having a first inwardly directed segment in a direction towards said bottom wall, followed by a first outwardly directed segments in a direction away from said bottom wall and a first curved segment between said first inwardly and first outwardly directed segments;



d) said bottom wall at said first end having a second inwardly directed element in a direction towards said top wall, followed by a second outwardly directed segment in a direction away from said top wall and a second curved segment between said second inwardly and second outwardly directed segments, said first and second curved segments separated by a distance to permit the entry and retention of an electrical contact therebetween; and

e) a first cantilevered member extending from said bottom wall at said second end of said contact body, said cantilevered member bent inwardly towards an inside surface of said bottom wall and having a free end spaced apart from an inside surface of said top wall to engage the bared end of a conductor inserted between said free end and said inside surface of said top wall, said cantilevered member acting a an independent one-way clutch to prevent the removal of an inserted conductor.

6,039,598

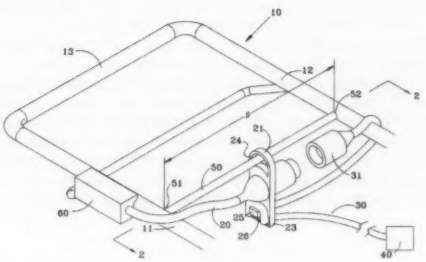
ELECTRIC EQUIPMENT INTERCONNECTION

Nicholas Ciavarella, Cleveland, Ohio, assignor to MTD Products Inc., Cleveland, Ohio

Filed Jan. 26, 1998, Appl. No. 13,155

Int. Cl.[7] H01R *13/58*

U.S. Cl. 439—451 **20 Claims**



1. An electric apparatus comprising:

a deck;

first (**11**) and second (**12**) handle bars extending from said deck;

a rod (**50**) operatively connected to said first and second handle bars;

a power receiver adapted to receive power through an associated extension cord plugged into an external source of power; and,

a connection member fixedly connected to said power receiver for use in connecting said power receiver to the associated extension cord, said connection member comprising:

a body;

a first opening in said body for slidingly receiving said rod, said connection member thereby being slidable along said rod;

a second opening in said body adapted to selectively receive a loop of the associated extension cord; and, a tab over which the loop of the associated extension cord may be looped, said tab protruding from said body.

6,039,599

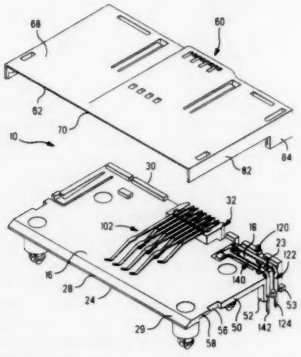
SWITCH FOR A CARD READER ASSEMBLY

Karen Elizabeth Benjamin, Harrisburg, and James Henry Hyland, Hummelstown, both of Pa., assignors to The Whitaker Corporation, Wilmington, Del.

Provisional application No. 60/051,322, Jun. 30, 1997. This application Jun. 29, 1998, Appl. No. 106,437.

Int. Cl.[7] H01R *3/00*

U.S. Cl. 439—489 **8 Claims**



1. A switch for a card reader assembly including a housing having a card receiving cavity, said switch being disposed in said cavity, said switch including first and second terminals, said terminals being in one position when a card is in said cavity and in an other position when said card is not in said cavity, said switch comprising:

said first terminal including a board mounting section at an end thereof, a body portion having a retention section and a contact section spaced from the board mounting section;

said second terminal including a board mounting section at one end, an intermediate portion having a retention section and a switch portion at an opposed second end, said switch portion having a card engaging end and a contact engaging end spaced therefrom and a fulcrum engaging portion therebetween, said contact engaging end being in said one position relative to said contact section of said first terminal;

said housing defines a fulcrum adapted to support said fulcrum engaging portion of said second terminal;

whereby, upon inserting a card into said card receiving cavity, said card engages said card engaging end of said second terminal causing said fulcrum engaging portion of said second terminal to pivot about said fulcrum thereby moving said switch portion to said other position relative to said contact section of said first terminal, providing an electrical signal indicating that said card is fully inserted into said cavity.

6,039,600

MALE CONNECTOR FOR FLAT FLEXIBLE CIRCUIT

Harry N. Etters, Plainfield; Robert M. Fuerst, Maple Park, and Russell J. Watt, Chicago, all of Ill., assignors to Molex Incorporated, Lisle, Ill.

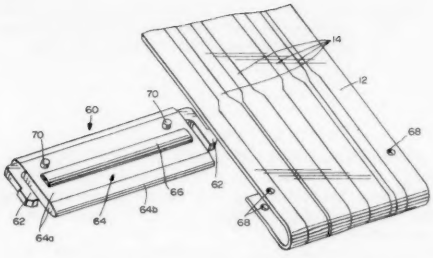
Filed Oct. 10, 1997, Appl. No. 948,759

Int. Cl.[7] H01R *9/07*

U.S. Cl. 439—496 **12 Claims**

1. A male connector for electrically interconnecting conductors of a flat flexible circuit to conductors of a complementary mating connecting device without the use of conductive terminals, comprising:

a relatively rigid male body member on which the flexible circuit is positioned with the conductors of the circuit facing away from the body member, the body member including positioning means formed integrally thereon for locating the flexible circuit relative to the body member, the positioning means comprising bosses integrally formed on the body member and adapted to be received in corresponding holes formed in the flexible circuit, and further including at least one latching member integrally formed on the body member and adapted to latchingly engage within a corresponding latch-receiving opening in the mating connecting device and



a relatively yieldable backing structure of generally uniform thickness attached to the body member for resiliently biasing the conductors of the flexible circuit against the conductors of the mating connecting device when the connector is mated with the device, wherein the backing structure is formed of a different material than the body member.

6,039,601

CONTACT SPRING HAVING AN IMPROVED ELECTRICAL CONTACT

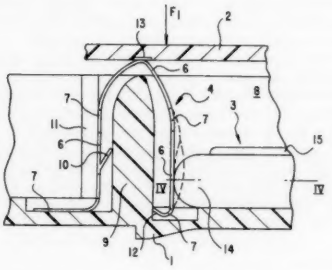
Josef Kraiczyk, Regensburg, and Stephanus Mulders, Hagelstadt, both of Germany, assignors to Siemens Aktiengesellschaft, Munich, Germany

Filed Mar. 6, 1998, Appl. No. 36,651

Claims priority, application Germany, Mar. 6, 1997, 197 09 188

Int. Cl.[7] H01R *3/00*

U.S. Cl. 439—500 **7 Claims**



1. A portable electronic device, comprising:

a housing;

first and second electrical components disposed in said housing; and

a contact spring electrically connecting said first and second electrical components to one another;

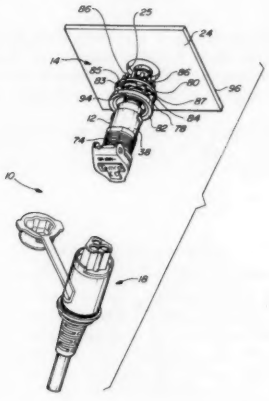
said contact spring having a plurality of mutually parallel, cutout slits formed therein and a plurality of spring arms defined between said slits, said contact spring being preshaped such that when said first and second electrical components are inserted in said housing, said contact spring is subjected to mechanical pressure by said first electrical component, said contact spring transferring at least a portion of the mechanical pressure to said second electrical component and causing at least two of said spring arms to rest with mechanical prestressing on said first electrical component, and at least two others of said spring arms to rest with mechanical prestressing on said second component.

6,039,602

BUMPER MOUNTED CORD SET

Ireneusz Witkowski, and Claudio Zubin, both of Winnipeg, Canada, assignors to Phillips & Temro Industries Ltd., Canada

Filed Jun. 5, 1998, Appl. No. 92,527
Int. Cl.[7] H01R *13/73*
U.S. Cl. 439—550 **19 Claims**



1. A cord set housing adapted to couple a cord set to a structure, said cord set including a first cord having a first end connectable to a power source and a second end connected to a plug, a second cord having a first end connectable to the electrical device and a second end connectable to the plug, said cord set housing comprising:

a body defining an axis, an outer surface, and a cavity; and

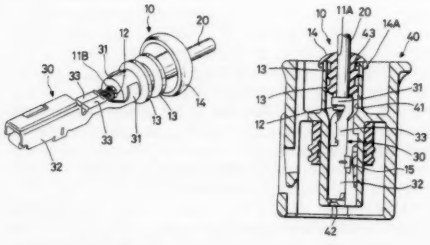
a first coupler for coupling said cord set housing to the structure, said first coupler including axially spaced ribs extending from the outer surface of said body, said axially spaced ribs having a pitch angle of zero relative to said body axis.

6,039,603

RUBBER PLUG FOR WATERPROOF CONNECTOR

Shigekazu Wakata, and Eiji Saijo, both of Yokkaichi, Japan, assignors to Sumitomo Wiring Systems, Ltd., Mie, Japan

Continuation of application No. 08/249,931, May 26, 1994. This application Jan. 28, 1998, Appl. No. 14,617.
Claims priority, application Japan, Jun. 14, 1993, 5-168437
Int. Cl.[7] H01R *13/40*
U.S. Cl. 439—587 **7 Claims**



1. A rubber plug for use in a waterproof connector, the rubber plug comprising:

a hole and a wire passed through the hole, the rubber plug and the wire being insertable into an open end of a tubular portion of the waterproof connector to form a seal between a wall of the tubular portion and the wire; and

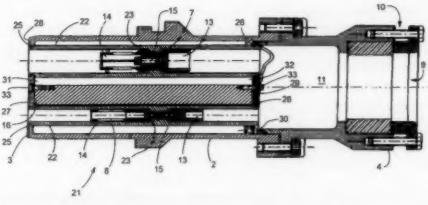
an end plug positioned at a side of the waterproof connector at which the open end is disposed, the end plug closing the open end and having a convex shaped outer surface so as to cover the open end and direct water away from the wire and the hole.

6,039,604

CABLE COUPLING ASSEMBLY

Glenn Andrew Tindall, North Parramatta, Australia, assignor to Metal Manufactures Limited, New South Wales, Australia

Continuation-in-part of application No. 08/772,843, Dec. 24, 1996, abandoned. This application Jan. 14, 1998, Appl. No. 6,949.
Claims priority, application Australia, Sep. 30, 1996, PO2684
Int. Cl.[7] H01R *13/40*
U.S. Cl. 439—598 **19 Claims**



1. An electrical cable coupling assembly including:

a body having a first end configured for receiving a complementary coupling assembly and a second end configured for receiving an electrical cable having a plurality of cores;

a plurality of conductive connectors each adapted to receive a a corresponding one of the cores at one end and a corresponding conductive connector member associated with the complementary coupling assembly at the other end to allow electrical connection between the corresponding core and the corresponding connector member, and releasable electrical connection between the corresponding core and a corresponding core in the complementary coupling assembly;

a plurality of substantially tubular insulators each captively retained at least partially in the body and at least partially enveloping a corresponding one of the connectors;

a first plate disposed at the first end of the body and coupled to the body and having a plurality of apertures each of which is in axial alignment with one of the insulators; and

a second plate spaced from the first plate and disposed between the first and second ends of the body and coupled to the body and to the first plate and having a plurality of apertures each of which is in axial alignment with one of the insulators, each of the insulators being clamped at least partially between the first and second plates.

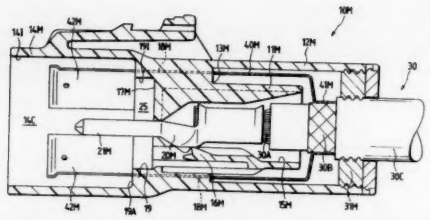
6,039,605

SHIELD CONNECTOR WITH ENHANCED INSULATION OF A SHIELD SHELL

Tsutomu Tanaka, Nagoya, Japan, assignor to Harness Systems Technologies Research, Ltd., Nagoya; Sumitomo Wiring Systems, Ltd., Mie, and Sumitomo Electric Industries, Ltd., Osaka, all of Japan

Filed Jul. 6, 1998, Appl. No. 110,267
Claims priority, application Japan, Jul. 22, 1997, 9-196130
Int. Cl.[7] H01R *9/03*
U.S. Cl. 439—610 **5 Claims**

1. A shield connector extending along an axis and having a female connector housing and a male connector housing that to releasably connect together, the male connector housing including a male-side fitting surface and a male metal terminal with a distal end portion projecting from the male-side fitting surface mounted in the male connector housing, the female connector housing



including a female-side fitting surface, each of the male and female connector housings including a shield shell extending in an axial direction, the male-side fitting surface and the female-side fitting surface extending radial relative to the axis and forming a gap therebetween when the male and female connector housings are releasably connected together, the shield connector comprising:

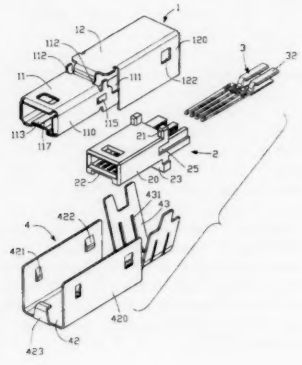
a step portion formed on one of the male connector housing and the female connector housing and exposed to the distal end portion of the male metal terminal through the gap, a respective one of the shield shells extending through the step portion.

6,039,606

CABLE CONNECTOR

Song-Rong Chiou, Lin-Kou, Taiwan, assignor to Hon Hai Precision Ind. Co., Ltd., Taipei Hsian, Taiwan

Filed Jun. 28, 1999, Appl. No. 342,659
Claims priority, application Taiwan, Sep. 25, 1998, 87215984
Int. Cl.[7] H01R *13/648*
U.S. Cl. 439—610 **7 Claims**



1. A cable connector comprising:

a first shield having a base and a first shell connected with a top surface of the base, the top surface of the base having an opening in opposite sides proximate the first shell, side walls of the base each forming a tongue proximate the first shell, a bottom surface of the base having two end edges coupled together to form an inwardly longitudinal protrusion along a central portion thereof, an insertion piece extending from a distal end of the longitudinal protrusion proximate the first shell;

a dielectric housing substantially received in the base, the dielectric housing having a pair of posts projecting from a top surface thereof for insertion into the openings of the base and a board projecting from a bottom surface thereof, the bottom surface having a longitudinal recess for snappingly receiving the longitudinal protrusion, side walls of the dielectric housing each forming a notch for receiving the tongue of the base, the board defining a slot in communication with the longitudinal recess for receiving the insertion piece; and

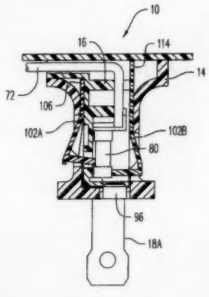
a second shield having a second shell engaged with the first shell and a cover extending from the second shell for enclosing a cable, the second shell forming a latch opposite the cover for mating with the slot of the dielectric housing; wherein said first and second shells are U-shaped.

6,039,607

ELECTRIC PLUG

Tat Kwong Cheung, Kowloon, The Hong Kong Special Administrative Region of the People's Republic of China, assignor to Top Power Supply Cord Set Co, Limited, The Hong Kong Special Administrative Region of the People's Republic of China

Filed Dec. 15, 1998, Appl. No. 210,838
Int. Cl.[7] H01R *13/68*
U.S. Cl. 439—622 **10 Claims**



1. An electric plug comprising a body member to which switching means and at least first and second electrically conductive leg members are mounted, wherein an electric cable comprising at least first and second electric wires is connectable to said body member, wherein said leg members are electrically connectable to a source of electricity, wherein said first leg member is electrically connectable in series with said first electric wire via a fuse member releaseabley attachable to and movable with said switching means, and wherein said switching means is operable to move siad fuse member between a first position in which said fuse member is in electrical connection with said first leg member, and a second position is which said fuse member is out of electrical connectin with said first leg member, wherein said body member comprises a housing member and a core member which is slidably received therein, wherein said fuse member, said switching means and said leg members are carried by said core member, and wherein said housing member comprises a plurality of wall members joined with a bottom member, wherein said bottom member comprises at least two apertures each for receiving therethrough one of said leg members.

6,039,608

ADAPTER SYSTEM

Willard F. Amero, Jr., Flowery Branch, and John E. Herrmann, Lawrenceville, both of Ga., assignors to Motorola, Inc., Schaumburg, Ill.

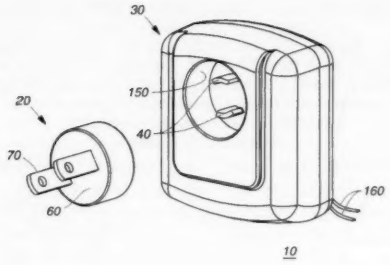
Filed Feb. 27, 1998, Appl. No. 31,605
Int. Cl.[7] H01R *25/00*
U.S. Cl. 439—651 **3 Claims**

1. An adapter system comprising

a. an adapter with plug prongs on its front face and apertures on its back face, and adapter contacts within it; and

b. a power supply with power supply prongs disposed outwardly, which prongs have undercuts at their distal ends;

where the power supply contacts can be inserted into the apertures of the adapter, and the adapter is then rotated along the axis of insertion, mechanically securing the adapter to the



power supply and simultaneously making electrical contact between the adapter and the power supply.

6,039,609

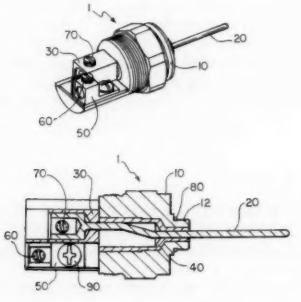
POWER INSERTER CONNECTOR

Bruce C. Hauver, Sr.; Ronald P. Locati, both of Elmira, N.Y., and Larry Michael Massaglia, Crestline, Calif., assignors to Thomas & Betts International, Inc., Sparks, Nev.

Provisional application No. 60/021,926, Jul. 17, 1996. This application Jan. 13, 1997, Appl. No. 783,398.

Int. Cl.[7] **H01R** *17/18*

U.S. Cl. 439—668 **28 Claims**



1. A power inserter connector comprising:

an electrically conductive body open on each of a first end and a second end, said body having a central bore disposed therethrough, said first body end having a mounting surface;

an electrically conductive terminal having a first end and an elongated second end, said first terminal end including a first seizure mechanism comprising a central bore having a diameter greater than or equal to an AWG #14 conductor and a threaded bore for receiving a first seizure screw, said first seizure screw for securing a first power conductor sized between AWG #14 and AWG #2 and placed within said central bore of said first seizure mechanism;

an insulator for isolating said terminal from said body, said insulator mounted on said mounting surface of said first body end and configured to receive and secure said first terminal end, said insulator having a bore through which said elongated second terminal end extends; and

a second seizure mechanism disposed within and in electrical contact with said first body end, said second seizure mechanism comprising a central bore having a diameter greater than or equal to an AWG #14 conductor and a threaded bore for receiving a second seizure screw, said second seizure screw for securing a second power conductor sized between AWG #14 and AWG #2 and placed within said central bore of said second seizure mechanism.

6,039,610

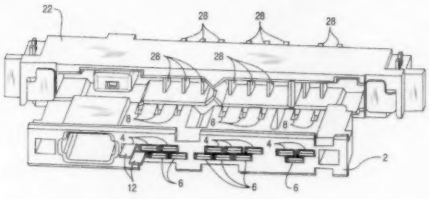
MULTIPLE CIRCUIT FORK CONTACT CONNECTOR

William Vito Pauza, Palmyra, and Harold William Kerlin, Elizabethville, both of Pa., assignors to The Whitaker Corporation, Wilmington, Del.

Provisional application No. 60/081,105, Apr. 8, 1998. This application Jun. 12, 1998, Appl. No. 97,280.

Int. Cl.[7] **H01R** *13/10*

U.S. Cl. 439—682 **15 Claims**



10. An electrical connector comprising:

(a) a first housing comprising an insulating material and having first and second arrays of linearly aligned rectangular channels extending inwardly through a front part of the first housing; the first array being parallel to and spaced apart from the second array; the channels of the first array being linearly offset from and partially overlapping the channels of the second array; each of said channels of the first array of channels extending inwardly through to a channel of a third array of rectangular channels at a rear part of the first housing, each channel of said third array being perpendicular to the corresponding channel of said first array, and each of said channels of the second array of channels extending inwardly through to a channel of a fourth array of rectangular channels at a rear part of the first housing, each channel of said fourth array being perpendicular to the corresponding channel of said second array;

(b) a forked metallic contact mounted in each of the channels of the first and second array of channels; each forked metallic contact comprising a planar base having two longitudinal ends; a pair of parallel, coplanar prongs at one of the ends separated by a gap; each forked metallic base mounted in a channel of the first array of channels with the prongs positioned in one of the channels of the third array of channels and each forked metallic base mounted in a channel of the second array of channels with the prongs positioned in one of the channels of the fourth array of channels, wherein the base of each contact is coplanar with the longest of the length or width dimension of its channel face; and

(c) a second housing, at least one array of linearly aligned electrical contact blades extending out of said second housing, each blade being positioned between the prongs of one of the forked electrical contacts within a channel of the third or fourth array of channels.

6,039,611

CONNECTOR

George Yang, Shih-Lin District, Taiwan, assignor to All Best Electronics Co., Ltd., Taipei, Taiwan

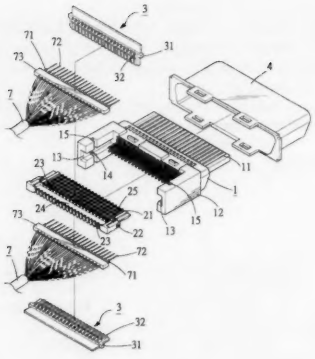
Filed Jun. 16, 1999, Appl. No. 334,716

Int. Cl.[7] **H01R** *13/502*

U.S. Cl. 439—701 **1 Claim**

1. An electrical connector comprising a plastic body, a steel case housing a front part of said plastic body, an insertion body assembled to a rear end of said plastic body, two covers, and two interconnecting cables symmetrically connected to upper and lower sides of said insertion body at a rear portion thereof;

said plastic body being provided at a front surface with upper and lower rows of alternately arranged insertion terminals and at two lateral sides with two rearward extended side walls that are formed at respective inner surface with a guiding rail



having a retaining hole provided at a predetermined suitable position, and two vertically extended insertion slots being symmetrically provided at inner surfaces of said two side walls at the respective predetermined positions;

said insertion body being provided at top and bottom front surfaces with two rows of terminal slots corresponding to said insertion terminals on said plastic body and at two lateral sides of said insertion body with protrusions corresponding to said retaining holes in said guiding rails of said plastic body; said insertion body also being provided between adjacent rear ends of said terminal slots with partitioning ribs, two transverse receiving recesses being separately provided on upper and lower surfaces of said insertion body to divide said partitioning ribs into discontinued front and rear sections;

each of said interconnecting cables including a plurality of conductors that are arranged corresponding to said insertion terminals and fixed in place by clamping said conductors between two transversely extended clamping pieces, such that bared front ends of said conductors forward project from a front side of said clamping pieces, and said clamping pieces being suitable for positioned in said receiving recesses of said insertion body with said bared front ends of said conductors located in corresponding terminal slots on rear ends of said insertion terminals in the same said terminal slots; and

said two covers being symmetrically formed and having at each lateral end a centered projection corresponding to said vertical insertion slot in said plastic body and each of said covers having a front edge including a plurality of forward projected pressing ribs corresponding to said terminal slots on said insertion body;

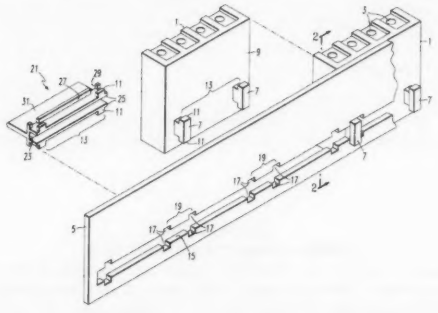
said insertion body being inserted into said plastic body with rear ends of said insertion terminals located in said terminal slots between front sections of two adjacent partitioning ribs, said clamping pieces with conductors clamped therebetween being set in said receiving recesses on said insertion body with said conductors separately located between two adjacent partitioning ribs and said bared front ends of said conductors located on and contacting with rear ends of said insertion terminals correspondingly located in said terminal slots, said two covers being located onto said clamping pieces with said lateral projections aligning with said vertical insertion slots on said plastic body and being received said recesses of said insertion body and said pressing ribs forward projected from said covers located in said terminal slots above said bared fronts of said conductors and said insertion terminals to tightly press said conductors together, and rear edges of said covers being firmly connected to rear sections of said partitioning ribs and said pressing ribs to said front sections of said partitioning ribs at two sides of said terminal slots by means of radio heating; whereby each bared front end of said conductors is located in one said terminal slot to tightly contact with only one said insertion terminal to free said connector from short circuits at contact points.

6,039,612

ARRANGEMENT FOR MOUNTING TERMINAL BLOCKS IN A MOUNTING PANEL

Jack L. Brown, Hendersonville; Rodney William Bruner, Fletcher; Neal Edward Rowe, Asheville; William Edward Wilkie, II, Fletcher, and Robert Yanniello, Asheville, all of N.C., assignors to Eaton Corporation, Cleveland, Ohio

Filed Mar. 3, 1999, Appl. No. 261,796
Int. Cl.[7] H01R *9/26*
U.S. Cl. 439—716 **14 Claims**



1. Apparatus comprising:

at least one molded block supporting electrical terminal members, said at least one molded block having at least of pair of spaced, oppositely directed hooks extending rearwardly therefrom; and

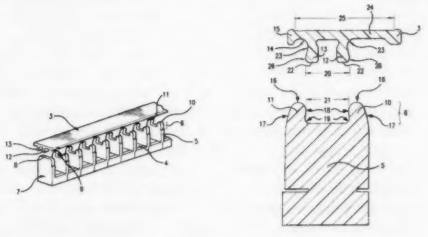
a mounting panel having therein an elongated mounting slot, said elongated mounting slot having at least a pair of lateral extensions forming notches spaced and sized for passage of said hooks therethrough for engaging said mounting panel with said at least one molded block displaced in said slot so that said hooks are out of registration with said notches.

6,039,613

BARRIER STRIP COVER AND BARRIER STRIP FOR POWER DISTRIBUTION PANELS

Peter Bullard, Schwenksville, Pa., assignor to Ron Francis, Aston, Pa.

Provisional application No. 60/065,412, Nov. 13, 1997. This application Nov. 13, 1998, Appl. No. 191,644.
Int. Cl.[7] H01R *9/22*
U.S. Cl. 439—718 **14 Claims**



1. An electrical barrier strip having connectors for making contact with wires comprising:

a. a base;

b. electrical connectors secured to the base;

c. partitions extending upwards from the base above each connector and between each connector and at the ends of the base;

d. a cover;

e. a forward extension and a rearward extension, both located on the bottom of the cover for engaging the partitions between

each connector, the forward cover extension and the rearward cover extension having an inner edge and an outer edge;

f. a forward extension and a rearward extension, both located on the top of each partition between each connector for engaging the bottom of the cover, the forward partition extensions having a shape complementary to the forward cover extension and the rearward partition extension having a shape complementary to the rearward cover extension, wherein the distance separating the extensions on the partitions is slightly less than the distance of the outer edges of the extensions on the bottom of the cover so that the cover extensions and partition extensions releaseably engage each other when the cover is placed upon the barrier strip;

g. means located on the cover for engaging the partition at at least one end of the base; and

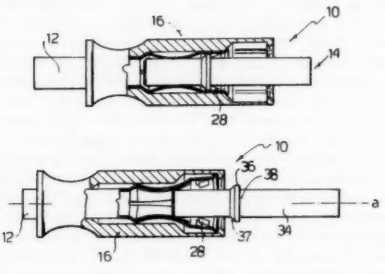
h. means located on the partitions at the end of the base for engaging the cover.

6,039,614

FAST COUPLING AUTOMATIC LATCHING CONNECTOR RELEASABLE BY MOVEMENT OF AN EXTERNAL BODY

Luigi Ramari, Via A. Casati, 135-20043 Arcore, Italy

Filed Aug. 5, 1997, Appl. No. 905,925
Int. Cl.[7] H01R *13/00*
U.S. Cl. 439—843 **11 Claims**



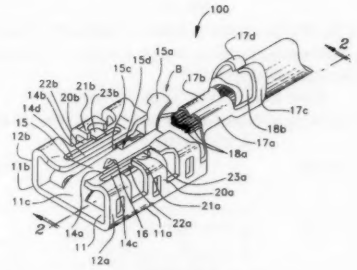
1. A fast coupling connector assembly for connection of electric cables of a type comprising a male element and a female element engageable one with the other and a body element or sleeve which houses both the male element and the female element in an engaged position, the body element being slidable for a length on the female element between a locking position, wherein it locks the male element and female element in the engaged position, and a release position wherein it allows release of the male element and female element, retaining means being provided to restrain the male element and the female element in the position wherein they are engaged one with the other, wherein said female element comprises a retaining part with elastic fingers which, in a non-deformed condition, not forced, are spread apart, at least one of said fingers having a retaining tooth towards an interior of the female element, said retaining tooth/teeth forming said retaining means, said male element comprises a shoulder surface for co-operating, in the engaged position, with said retaining means of the female element, said body element is configured with an internal housing which comprises at least a first chamber, shaped with dimensions such as to house the retaining part of the female element in a contracted condition with the fingers close one to the other.

6,039,615

FEMALE ELECTRICAL TERMINAL HAVING OVERSTRESS MEMBERS

Mitsuru Suzuki, Kanagawa, Japan, assignor to The Whitaker Corporation, Wimington, Del.

PCT No. PCT/US97/04002, § 371 Date Aug. 26, 1998, § 102(e) Date Aug. 26, 1998, PCT Pub. No. WO97/34341, PCT Pub. Date Sep. 18, 1997
PCT Filed Mar. 13, 1997, Appl. No. 125,951
Claims priority, application Japan, Mar. 15, 1996, 8-059068
Int. Cl.[7] H01R *11/22*
U.S. Cl. 439—849 **6 Claims**



1. A female electrical terminal for electrical connection to a mating tab terminal, comprising

a base plate having side plates extending upwardly from the base plate;

upper contact parts located at ends of the side plates extending over the base plate and substantially parallel to the base plate;

a lower contact part extending rearwardly from a forward part of the base plate and having a projection thereon for engaging a hole in the mating tab terminal; and

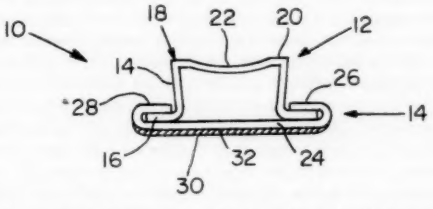
arm parts extending upwardly from the base plate with free ends of the arm parts being disposed above the upper contact parts to provide overstress protection to the upper contact parts.

6,039,616

CIRCULAR ELECTRICAL CONNECTOR

John Pereira, Rehoboth, Mass.; Manuel Machado, Hope, and Stephen Antaya, West Kingston, both of R.I., assignors to Antaya Technologies Corporation, Cranston, R.I.

Filed Nov. 25, 1998, Appl. No. 199,810
Int. Cl.[7] H01R *4/10*
U.S. Cl. 439—874 **13 Claims**



1. An electrical connector useful for making electrical contact with a coated glass surface, comprising:

an electrically conductive post member having first and second ends, said post member including a cylindrical portion having a top at said first end and a foot portion at said second end; and

an electrically conductive base member mounted to said foot portion, said base member having a top surface and a bottom surface facing away from said post member, said bottom surface including at least one standoff extending from said bottom surface, said foot portion being mounted directly on said top surface;

whereby when said base member bottom surface is rested against a contact surface to which said electrical connector is to be soldered, said at least one standoff raises said bottom surface to defines a minimum volume between said bottom surface and said contact surface which, when filled with solder, is sufficient to hold said electrical connector to said contact surface.

6,039,617

TILT CYLINDER DEVICE FOR OUTBOARD MOTOR

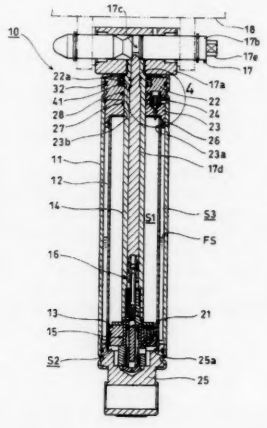
Tamotsu Nakamura, Saitama, Japan, assignor to Showa Corporation, Saitama, Japan

Filed Nov. 9, 1998, Appl. No. 188,924

Claims priority, application Japan, Mar. 24, 1998, 10-076285

Int. Cl.[7] B63H *21/26*

U.S. Cl. 440—61 **2 Claims**



2. A tilt cylinder device for an outboard motor attachable to a boat stern, at selectable arbitrary positions when the motor is swung from its in-use position to its stand-by position, said tilt cylinder device being interposed between the stern and said motor to moderate a shock sustained by the motor during running, the device comprising a piston, a hollow piston rod extending in one direction from the piston, a cylinder for movably holding the piston rod, a hollow piston rod-side oil chamber and an opposite-side oil chamber which is opposite from said hollow piston rod-side oil chamber and which defined in said cylinder by said piston, an accumulator chamber provided outside of said cylinder for also serving as a volume compensating chamber for compensating the volume of oil which flows in and out of said opposite-side oil chamber as said hollow piston rod is advanced or withdrawn, said piston being formed with communication passage means for bringing said two oil chambers into communication with each other, said communication passage means being provided with a relief valve which opens when pressure in said hollow piston rod-side oil chamber exceeds a set pressure, said hollow piston rod being provided therein with a delay mechanism for delaying a closing operation of said relief valve by pushing the body of said relief valve in its valve opening direction for a predetermined time period after said relief valve is opened, and said tilt cylinder device including an exterior operating rod capable of forcibly opening and closing said relief valve through said delay mechanism.

6,039,618

EXHAUST ARRANGEMENT FOR OUTBOARD MOTOR

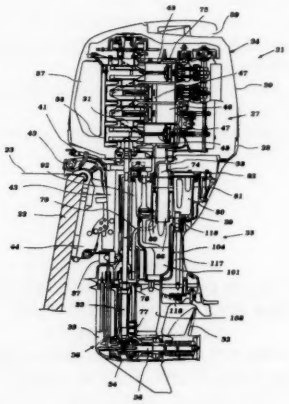
Noriyoshi Hiraoka, and Masanori Takahashi, both of Hamamatsu, Japan, assignors to Sanshin Kogyo Kabushiki Kaisha, Hamamatsu, Japan

Filed Jul. 22, 1998, Appl. No. 120,614

Claims priority, application Japan, Jul. 22, 1997, 9-210154; Aug. 29, 1997, 9-247556

Int. Cl.[7] B63H *1/00*

U.S. Cl. 440—89 **26 Claims**



1. An outboard motor comprised of a power head and a drive shaft housing and lower unit depending from said power head, said power head containing a powering, four cycle, internal combustion engine and a surrounding protective cowling, a propulsion device contained within said lower unit for propelling an associated watercraft through a body of water in which it is operating, a transmission system for transmitting drive from said engine to said propulsion device, an expansion chamber formed in said drive shaft housing, an exhaust pipe depending from said engine into said expansion chamber for delivering of exhaust gases to said expansion chamber, an oil tank for said engine disposed in said drive shaft housing at the upper area of said expansion chamber and in proximity to said exhaust pipe, said expansion chamber communicating with the atmosphere through a below the water high speed exhaust gas discharge, an above the water low speed exhaust gas discharge formed above the normal water level, and means for communicating exhaust gasses from said engine to said above the water low speed exhaust gas discharge through a path that extends vertically above the level of oil in said oil tank.

6,039,619

METHOD AND APPARATUS FOR MANUFACTURING PARTITION WALL OF PLASMA DISPLAY DEVICE

Young-Cheol Kang, Suwon; Byung-Hak Lee, Ansan, and Man-Ho Song, Seoul, all of Rep. of Korea, assignors to Samsung Display Devices Co., Ltd., Kyungki-do, Rep. of Korea

Filed May 22, 1998, Appl. No. 83,048

Claims priority, application Rep. of Korea, May 22, 1997, 97-11978; May 22, 1997, 97-19976; May 22, 1997, 97-19977; Jul. 15, 1997, 97-32827

Int. Cl.[7] H01J *9/00*

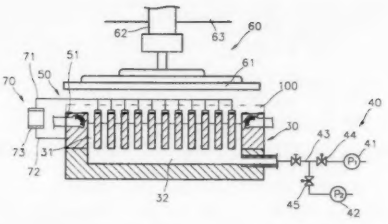
U.S. Cl. 445—24 **22 Claims**

1. A method for manufacturing a partition wall of a plasma display device comprising:

(a) providing a substrate and a block in which partition wall forming grooves having the same pattern as that of partition walls are formed;

(b) providing a substrate including a coating layer for easily separating the block from the substrate;

(c) positioning the substrate on the block;



(d) pressing the substrate against the block such that part of the substrate is inserted into the partition wall forming grooves to form partition walls; and

(e) separating the substrate from the block.

6,039,620

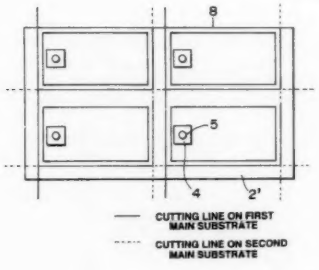
METHOD OF MANUFACTURING VACUUM HERMETIC VESSELS

Shigeo Itoh; Yoshio Makita; Takeshi Tonegawa; Yoshihiko Hirata, and Akira Kadowaki, all of Mobara, Japan, assignors to Futaba Denshi Kogyo K.K., Mobara, Japan

Filed Jul. 2, 1997, Appl. No. 887,083

Int. Cl.[7] H01J *9/26*

U.S. Cl. 445—25 **3 Claims**



1. A method of manufacturing a vacuum vessel comprising the steps of:

forming plural exhaust holes in a first main substrate at predetermined positions thereon, said first main substrate from which plural first substrates can be obtained;

superposing a second main substrate over said first main substrate with said plural exhaust holes formed therein, said second substrate from which plural substrates are obtained, and placing plural getter boxes on said first main substrate so as to cover said exhaust tubes formed therein;

hermetically sealing said first main substrate and said second main substrate superposed and, at the same time, hermetically sealing said getter boxes and said first main substrate placed together;

evacuating spaces between said first substrates and said second substrates using said plural getter boxes sealed with said first main substrate, and then sealing said plural getter boxes; and

cutting said first main substrate and said second main substrate evacuated and hermetically sealed, at predetermined positions, while lead-out electrodes formed on each of said first substrates and lead-out electrodes formed on each of said second substrates are not covered by another substrates, whereby plural hermetic vessels each formed of a first substrate and a second substrate evacuated and sealed together are obtained at the same time.

6,039,621

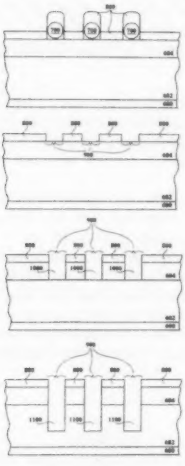
GATE ELECTRODE FORMATION METHOD

Kishore K. Chakravorty, and Philip J. Elizondo, both of San Jose, Calif., assignors to Candescent Technologies Corporation, San Jose, Calif.

Filed Jul. 7, 1997, Appl. No. 889,622

Int. Cl.[7] H01J *9/02*

U.S. Cl. 445—49 **33 Claims**



1. A method for forming a gate electrode, said method comprising the steps of:

a) depositing a gate metal over an underlying substrate such that a layer of said gate metal is formed above said underlying substrate, said layer of said gate metal deposited to a thickness approximately the same as a desired thickness of said gate electrode;

b) depositing polymer particles onto said layer of gate metal;

c) depositing a hard mask layer over said polymer particles and said layer of said gate metal, wherein step c) comprises depositing a hard mask layer of nickel over said polymer particles and said layer of said gate metal is comprised of aluminum;

d) removing said polymer particles and portions of said hard mask layer which overlie said polymer particles such that first regions of said layer of said gate metal are exposed, and such that second regions of said layer of said gate metal remain covered by said hard mask layer;

e) etching into said first regions of said layer of said gate metal such that openings are formed into said layer of said gate metal at said first regions, said second regions of said layer of said gate metal protected from said etching by said hard mask layer; and

f) removing remaining portions of said hard mask layer which overlie said second regions of said layer of said gate metal.

6,039,622

METHOD OF FORMING BARRIER RIBS OF DISPLAY PANEL

Tadayoshi Kosaka; Osamu Toyoda, and Fumihiro Namiki, all of Kawasaki, Japan, assignors to Fujitsu Limited, Kawasaki, Japan

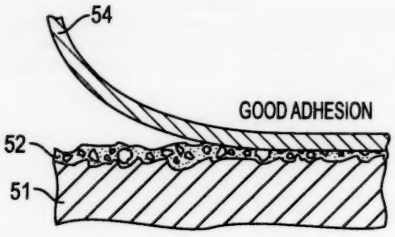
Filed Jul. 8, 1997, Appl. No. 889,195

Claims priority, application Japan, Jan. 13, 1997, 9-003975

Int. Cl.[7] H01J *9/00;9/14*

U.S. Cl. 445—52 **22 Claims**

1. A method of forming barrier ribs of a display panel comprising:



forming a layer of a dielectric paste comprising a powdery component and a binder component as a layer of a barrier rib material in a predetermined thickness on a substrate;

forming a mask pattern on the dielectric paste layer before firing;

jetting a cutting medium onto the dielectric paste layer through the mask pattern to partially cut the dielectric paste layer to thereby form a cut barrier rib layer; and

firing the cut barrier rib layer to make barrier ribs,

wherein, prior to forming the mask pattern, the unfired dielectric paste layer is coated with a bind film which does not contain a powdery component for fixing the powdery component of the dielectric paste in a free state on a surface of the unfired dielectric paste layer and then the bind film is dried.

6,039,623

DEFLECTING YOKE GRADIENT ADJUSTING APPARATUS

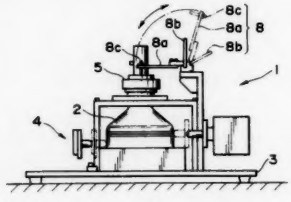
Satoshi Osuga, and Yoshihiro Inamoto, both of Saitama, Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Jun. 7, 1996, Appl. No. 661,403

Claims priority, application Japan, Jun. 14, 1995, 7-147250

Int. Cl.[7] H01J *9/00*

U.S. Cl. 445—63 **3 Claims**



1. A deflecting yoke gradient adjusting apparatus comprising a base for mounting a CRT, positioning means for adjusting the position of said CRT mounted on said base, horizontal positioning means for positioning said deflecting yoke positioned within said horizontal positioning means which can move in a horizontal direction toward or away from said deflecting yoke tentatively mounted on said CRT and vertical positioning means for positioning said deflecting yoke in a direction perpendicular to the surface of said base.

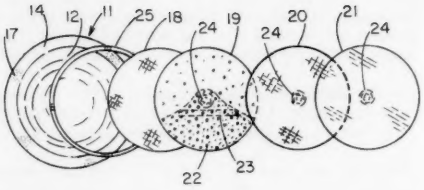
Filed May 6, 1999, Appl. No. 307,347
Int. Cl.[7] A41C *3/04*
U.S. Cl. 450—57 **8 Claims**

8. A nursing pad adapted for attachment to a cup of a user's bra and interposed between the cup of the bra and the user's breast received in the cup of the bra, said nursing pad comprising:

a generally hemispherical exterior layer having a center region, a generally circular outer perimeter, a concave inner face, and a convex outer face;

said exterior layer having an outwardly radiating annular outer flange around said outer perimeter of said exterior layer;



said outer face of said exterior layer having an adhesive provided thereon along said outer flange of said exterior layer;

said adhesive of said exterior layer being adapted for adhesively coupling said outer flange to a cup of a bra of a user;

said exterior layer comprising a flexible water impermeable material;

said outer flange of said exterior layer having a plurality of apertures therethrough extending between said inner and outer faces of said exterior layer;

said concave inner face of said exterior layer defining a generally hemispherical inner space;

a plurality of coextensive generally hemispherical inner layers being disposed in said inner space of said exterior layer;

said plurality of inner layers comprising first, second, third and fourth inner layers each having centers coaxial with said center of said center of said exterior layer and each having a generally outer perimeter located inside and concentric with said outer perimeter of said exterior layer;

said first inner layer being positioned adjacent said inner face of said exterior layer, said second and third inner layers being interposed between said first and fourth inner layers, said third inner layer being interposed between said second and fourth inner layers;

said first and third inner layer comprising a woven fabric material;

said second inner layer comprising a water absorbing material, said second inner layer having a lower region comprising a water absorbent material having a greater absorption capacity than a remainder region of said second inner layer;

said second inner layer having a guide line displayed on a face of said second inner layer facing outwards away from said inner face of said exterior layer, said guide line being positioned between said lower region of said second inner layer and said center of said second inner layer;

said fourth inner layer comprising a water permeable material;

said second, third and fourth inner layers each having a nipple receiving depressions located at the center of the respective inner layer, said nipple receiving depressions being coextensive with one another and extending towards said exterior layer; and

an annular water impermeable seal being disposed around said outer perimeters of said inner layer and being coupled to said outer perimeters of said inner layers and to an inner periphery of said outer perimeter of said exterior layer to coupled said outer perimeters of said inner layers and said exterior layer together.

APPARATUS AND METHOD FOR CALIBRATING PRESSURE EXISTING BETWEEN OPTICAL FIBERS AND A POLISHING PAD DURING A POLISHING PROCESS

William Keith Chandler, Woodsboro; Nadir Shah, Elkridge; Waqar Mahmood, Odenton, and Andrei Csipkes, Savage, all of Md., assignors to Ciena Corporation, Linthicum, Md.

Filed Feb. 27, 1998, Appl. No. 31,816

Int. Cl.[7] **B24B** *49/00*

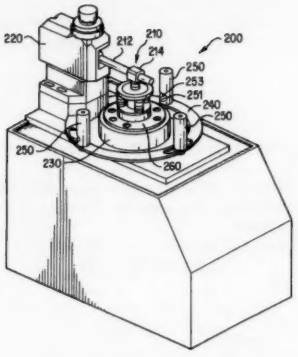
U.S. Cl. 451—6 **12 Claims**

1. A calibration apparatus for a polishing machine, comprising:

a polishing pad;

a polishing arm vertically arranged above said polishing pad;

a leveling device attached to a lower end of said polishing arm, said leveling device having a plurality of optical fiber ends



extending downwardly from a lower surface thereof for contacting said polishing pad;

a ferrule surrounding said polishing pad wherein said polishing pad is disposed within a central opening of said ferrule; and

a plurality of sensors attached to said ferrule.

6,039,631

POLISHING METHOD, ABRASIVE MATERIAL, AND POLISHING APPARATUS

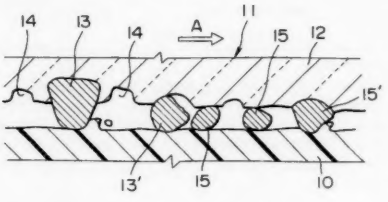
Shuzo Sato, Kanagawa, and Hiizu Ohtorii, Tokyo, both of Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Apr. 24, 1998, Appl. No. 65,444

Claims priority, application Japan, Apr. 28, 1997, 9-110789

Int. Cl.[7] **B24B** *1/00;7/00;33/00*

U.S. Cl. 451—37 **9 Claims**



1. A polishing method comprising the steps of:

providing an abrasive wheel having fixed abrasive grains and particles of a pore-forming material being dispersed in a soft binder, said particles of the pore-forming material being eluted when contacted with a solvent,

polishing a surface of a member to be polished by rotating and sliding the abrasive wheel on the surface while supplying free abrasive grains to the surface of the member to be polished.

SOLID STATE LASERS

John Robertson, Paisley, United Kingdom, assignor to Barr & Stroud Limited, Glasgow, United Kingdom

PCT No. PCT/GB96/02592, § 371 Date Jan. 27, 1998, § 102(e) Date Jan. 27, 1998, PCT Pub. No. WO97/17746, PCT Pub. Date May 15, 1997

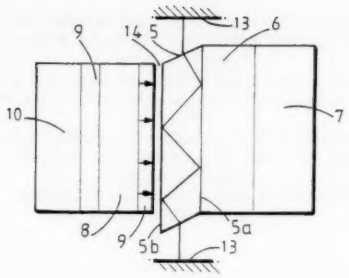
PCT Filed Oct. 22, 1996, Appl. No. 199

Claims priority, application United Kingdom, Nov. 9, 1995, 9522925

Int. Cl.[7] **B24B** *1/00;7/19;7/30*

U.S. Cl. 451—41 **5 Claims**

1. A method of reducing temperature gradients within an optically-pumped elongate solid state lasing medium, wherein the



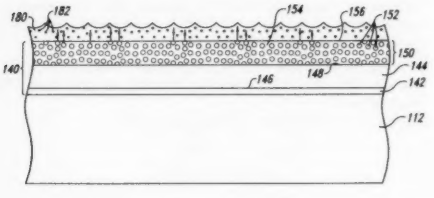
medium is in the form of a slab having a rectangular or square cross-section having two opposed faces which are polished to maximize internal reflections and to thereby support lasing and two opposed faces which are ground so as to be substantially non-reflecting faces for emitting or scattering radiation generated by amplified spontaneous emission (ASE), the method comprising treating said non-reflecting faces to reduce the amount of heat generated by ASE and by pump light radiation passing therethrough by polishing each ground face to be visually smooth and then re-roughening each such face to produce a surface finish which scatters incident light and such that the depth of surface damage at the re-roughened face is less than about five times the lasing wavelength.

6,039,633

METHOD AND APPARATUS FOR MECHANICAL AND CHEMICAL-MECHANICAL PLANARIZATION OF MICROELECTRONIC-DEVICE SUBSTRATE ASSEMBLIES

Dinesh Chopra, Boise, Id., assignor to Micron Technology, Inc., Boise, Id.

Filed Oct. 1, 1998, Appl. No. 164,916
Int. Cl.[7] B24B *1/00*
U.S. Cl. 451—41 **81 Claims**



75. A method for planarizing a microelectronic-device substrate assembly, comprising:

removing material from the substrate assembly by pressing the substrate assembly against a planarizing surface of a polishing pad in the presence of a planarizing fluid and moving at least one of the polishing pad or the substrate assembly with respect to the other; and

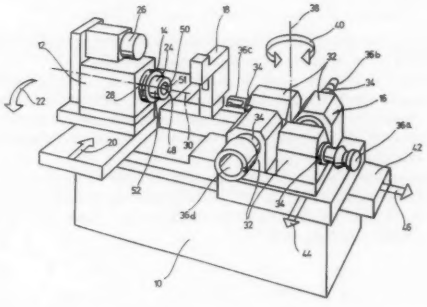
imparting at least a portion of a reaction control element to the planarizing fluid from the planarizing surface of the polishing pad to control an aspect of the interaction between the planarizing fluid and the substrate assembly.

6,039,634

HARDENED WORKPIECE FINISHING PROCESS

Guenther Bach, and Heinz Naumann, both of Besigheim, Germany, assignors to Komet Praezisionswerkzeuge Robert Breuning GmbH, Germany

PCT No. PCT/EP95/05017, § 371 Date Jun. 20, 1997, § 102(e) Date Jun. 20, 1997, PCT Pub. No. WO96/19317, PCT Pub. Date Jun. 27, 1996
PCT Filed Dec. 16, 1995, Appl. No. 878,851
Claims priority, application Germany, Dec. 21, 1994, 44 45 621
Int. Cl.[7] B24B *1/00*
U.S. Cl. 451—49 **18 Claims**



1. A method for finishing rotationally symmetrical workpiece surfaces, wherein a hardened workpiece which has been premachined leaving an overmeasure is clamped into a rotationally driven workpiece spindle of a grinding machine and is machined using a grinding tool effecting the removal of part of the overmeasure, the grinding tool rotating about a tool axis which is variably eccentric with respect to the workpiece spindle and/or to the rotationally symmetrical workpiece surface to be machined, the grinding tool further being advanceable perpendicularly to the workpiece surface and being oscillatingly displaceable parallel with respect to the workpiece surface, and wherein before the grinding process a lathe tool comprising a drill shank having a cutting edge for internal hard turning or for external hard turning is exchanged into a coaxially aligned position with respect to the workpiece spindle and/or the rotationally symmetrical workpiece surface to be machined in place of the grinding tool, the lathe tool being rotated about an axis which is aligned with respect to the axis of the workpiece spindle and being advanced axially in the direction of the workpiece while effecting a machining which removes part of the overmeasure.

6,039,635

SURFACE POLISHING APPARATUS INCLUDING A DRESSER

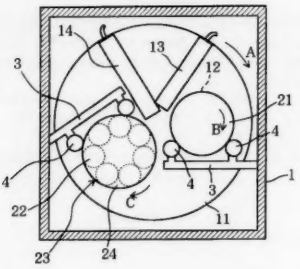
Masashige Mitsuhashi; Kenichi Ohno, and Kenichi Yoshida, all of Tokyo, Japan, assignors to NEC Corporation, Tokyo, Japan

Filed Aug. 27, 1998, Appl. No. 141,421
Claims priority, application Japan, Aug. 29, 1997, 9-234512
Int. Cl.[7] B24B *7/04*
U.S. Cl. 451—72 **13 Claims**

1. A surface polishing apparatus for polishing a surface of a work piece pressed into contact with a processing surface of a disk-shaped polishing tool of the surface polishing apparatus while rotating and supplying abrasive slurry to said processing surface, said surface polishing apparatus comprising in order:

an abrasive slurry-supply mechanism for supplying abrasive slurry to said processing surface of said disk-shaped polishing tool;

a dresser for setting said processing surface of said disk-shaped polishing tool; and



an abrasive slurry-suction mechanism for sucking and collecting said abrasive slurry on said processing surface;

wherein said work piece is positioned between said abrasive slurry-supply mechanism and said dresser such that the abrasive slurry supplied by said abrasive slurry-supply mechanism contacts said dresser prior to being sucked by said abrasive slurry-suction mechanism;

wherein said abrasive slurry-suction mechanism comprises shallow trenches which capture abrasive slurry in an outer margin of an abrasive slurry-suction surface which faces said disk shaped polishing tool.

6,039,636

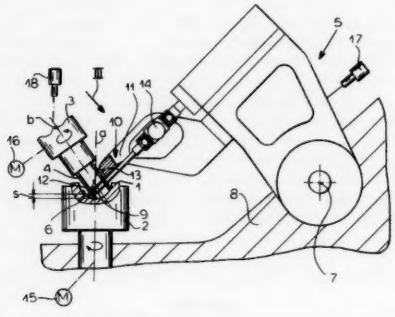
PRECISION GRINDING OF A PART-SPHERICAL RECESS

Peter C. Di Nardi, Livonia, Mich., assignor to Ernst Thielenhaus GmbH & Co. KG, Wuppertal, Germany

Filed Jul. 7, 1998, Appl. No. 110,707

Int. Cl.[7] B24B *7/00*

U.S. Cl. 451—178 **8 Claims**



1. An apparatus for precision machining a part-spherical recess of a workpiece centered on a workpiece axis, the apparatus comprising:

a workpiece holder adapted to hold the workpiece;

means for rotating the workpiece holder about a symmetry axis of the recess;

a honing tool;

means for rotating the tool about a tool axis inclined to the workpiece axis and for simultaneously urging the tool along the tool axis against a surface of the recess to hone the surface;

a spacer body displaceable generally along the workpiece axis and engageable in a use position with the surface; and

a pair of feelers mounted on the spacer body and having in the use position of the spacer body tips that are spaced along the workpiece axis from the spacer body, and symmetrically diametrally flank the workpiece axis, and engage the surface.

6,039,637

SECURITY DEVICE FOR DESTROYING THE INFORMATION BEARING LAYER AND DATA OF A COMPACT DISC

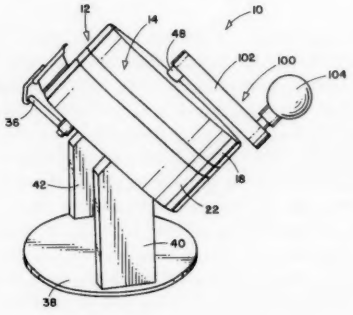
Roger S. Hutchison, Golden, Colo., and Phua Swee Hoe, Singapore, Singapore, assignors to CD-Rom USA, Inc., Golden, Colo.

Continuation-in-part of application No. 09/079,579, May 15, 1998, Pat. No. 5,954,569. This application Nov. 13, 1998, Appl. No. 192,062.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] B24B *7/00*

U.S. Cl. 451—271 **40 Claims**



39. A device for removing the information bearing surface and the data carried thereby from the substrate layer of a compact disc while maintaining the integrity and identification of the substrate layer, said device comprising:

a housing defining a central cavity, said housing including a first portion defining a first cavity chamber, a second portion having an interior surface and selectively attachable to said first portion to enclose said interior surface within said cavity chamber, said interior surface being sized and shaped to engage a compact disc, and a third portion defining a second cavity chamber contiguous with said first chamber;

a mounting element for selectively securing a compact disc within said first chamber;

an abrading assembly disposed within said first chamber for physically removing the information bearing surface of a compact disc positioned on said mounting means by reducing it to particulate material;

a mechanism for biasing said abrading assembly against the information bearing surface of a compact disc positioned on said mounting element as said information bearing surface is converted to particulate material;

a grinding member disposed in said second chamber for reducing the size of said particulate material to less than 250 microns; and

an agent for actuating said abrading assembly.

6,039,638

WORK PLANARIZING METHOD AND APPARATUS

Hitoshi Nagayama, and Motoi Nezu, both of Ayase, Japan, assignors to Speedfam Co., Ltd., Tokyo, Japan

Filed Feb. 2, 1998, Appl. No. 17,010

Claims priority, application Japan, Feb. 6, 1997, 9-038429

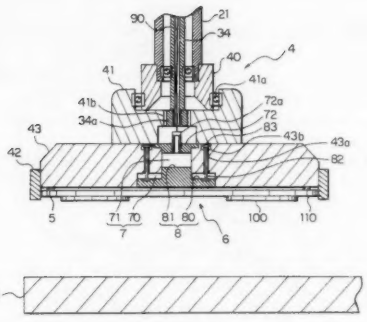
Int. Cl.[7] B24B *5/00*

U.S. Cl. 451—288 **16 Claims**

1. A work planarizing method comprising the steps of:

attaching works to a lower surface of a planar block; disposing an annular ring to encircle said works in a peripheral portion of said block;

contacting works attached to a lower surface of a planar block to a surface plate;



providing an adjustable central pressing member and outer peripheral pressing member to said block;

planarizing the surfaces of said works by rotating said surface plate while pressing the peripheral portion of said block by means of said outer peripheral pressure member through said ring and concurrently pressing said central portion of said block by said adjustable central pressure member so as to correct irregularities in the distribution of the urging force applied between an outer peripheral portion and an inner peripheral portion of each of said works, thereby applying uniform urging force to each of said works.

6,039,639

MOTOR DRIVEN HAND TOOL WITH IMPROVED ELASTIC SUPPORTING MEMBERS CONNECTING AN OSCILLATING WORK TOOL CARRIER WITH THE TOOL HOUSING

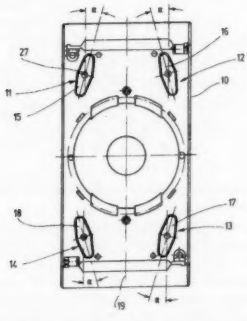
Julian Pfaundler, Gerlingen, Germany, assignor to Robert Bosch GmbH, Stuttgart, Germany

Filed Feb. 20, 1998, Appl. No. 27,274

Claims priority, application Germany, Feb. 27, 1997, 197 07 938; Jan. 2, 1998, 198 00 042

Int. Cl.[7] **B24B** *23/04*

U.S. Cl. 451—356 **13 Claims**



1. A motor driven hand tool comprising a hand tool housing (**2**), an oscillatory work tool carrier (**10**) arranged on the hand tool housing (**2**) and at least one elastic supporting member (**11** to **14**,**111**, **211**, **311**, **411**, **511**) connecting the oscillatory work tool carrier to the hand tool housing (**2**) in order to hold the oscillatory work tool carrier on the hand tool housing;

wherein said at least one elastic supporting member (**11** to **14**, **111**, **211**, **311**, **411**, **511**) each comprise a one-piece plastic part, said one-piece plastic part consists of at least one approximately rod-shaped spring element (**20** to **25**; **120**,**125**; **220** to **225**, **234** and **235**; **320** to **325**; **420** to **425**; **520** to **525**) and transversely extending base parts (**15**,**26**; **115**,**126**; **215**,**226**) at opposite ends of the at least one approximately rod-shaped spring element, and said base parts contact on respective facing surfaces of the hand tool housing and the work tool carrier and are formed for releasable attachment of said at least one elastic supporting member with the hand tool housing and the work tool carrier.

6,039,640

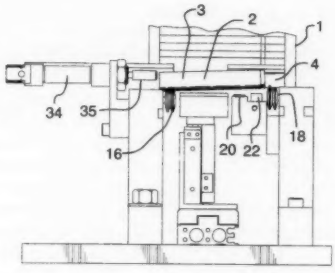
ECCENTRIC GRINDER LOADING SYSTEM

Klaus D. Woerner, Cambridge, and Allen Sommers, Waterloo, both of Canada, assignors to ATS Automation Tooling Systems Inc., Cambridge, Canada

Provisional application No. 60/030,477, Nov. 13, 1996. This application Nov. 13, 1997, Appl. No. 969,569.

Int. Cl.[7] **B24B** *19/00*

U.S. Cl. 451—460 **10 Claims**



1. Apparatus for loading an eccentric shaft in an eccentric chuck, said eccentric shaft having a main body and an eccentric end portion, comprising:

a feeder for presenting a plurality of said eccentric shafts to a pickup location one at a time;

support means for supporting one of said eccentric shaft at said eccentric end portion and at said main body remote from said eccentric end portion;

a lifting mechanism for carrying one of said eccentric shaft from said pickup location to said support means;

distance measuring means positioned opposite said main body adjacent said eccentric end portion for detecting a distance of said main body from said distance measuring means, whereby one of said eccentric shaft may be oriented by rotation to a position where said distance is oriented at a distance wherein said distance is from the group consisting of minimum and maximum distances, thereby establishing the orientation of said eccentric end portion; and

a robot for taking one of said eccentric shaft to said chuck from said support means once said main body is oriented.

6,039,641

BRAZED DIAMOND TOOLS BY INFILTRATION

Chien-Min Sung, No. 4, Lane 32, Chung-cheng Rd., Tansui, Taipei County, Taiwan

Filed Apr. 4, 1997, Appl. No. 835,117

Int. Cl.[7] **B24D** *3/06*

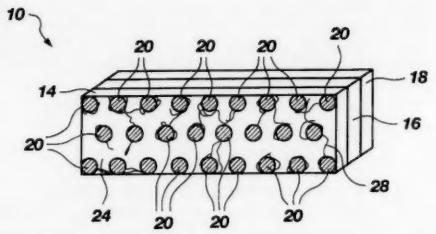
U.S. Cl. 451—540 **18 Claims**

1. An abrasive tool comprising:

a matrix support material configured for holding diamond particles to be used as abrasives;

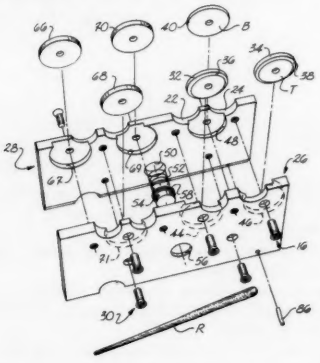
a plurality of diamond particles disposed in the matrix support material in a predetermined pattern, and

an alloy infiltrated through the matrix support material and the diamond particles, the alloy being bonded to the diamond particles and the matrix support materials, the alloy comprising a metal alloy that contains 2 to 50 percent of an element



selected from the group consisting of chromium, manganese, silicon and aluminum.

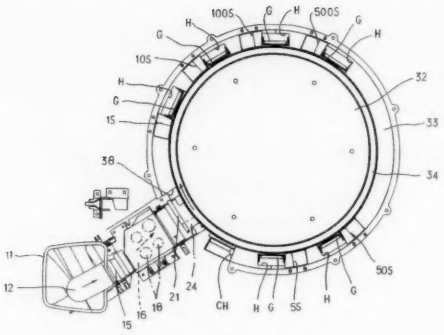
6,039,642
BLADE SHARPENER
Walter W. Collins, P.O. Box 100, North, S.C. 29112
Filed Sep. 15, 1998, Appl. No. 153,163
Int. Cl.[7] B24B *3/54*
U.S. Cl. 451—557 **18 Claims**



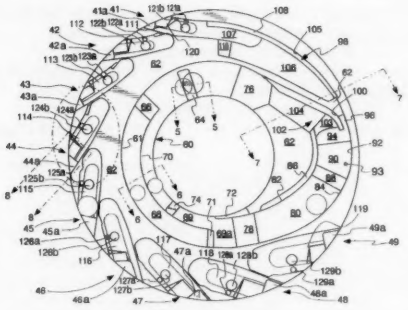
1. A sharpener for a blade, comprising:
an elongated body member;
at least two sharpening wheels mounted for rotation on said body member; a portion of each of said two sharpening wheels overlapping one another to define a first sharpening interface adapted for receiving the blade;
each of said sharpening wheels being of a generally frusto-conical shape and having a base portion and a top portion opposite said base portion, said base portion being of larger diameter than said top portion; and
said base portion of each of said sharpening wheels facing an adjacent sharpening wheel.

6,039,643
COIN DISTRIBUTOR
Motoharu Kurosawa, and Hiroshi Abe, both of Iwatsuki, Japan, assignors to Asahi Seiko Kabushiki Kaisha, Japan
Filed Feb. 24, 1999, Appl. No. 256,576
Claims priority, application Japan, Mar. 2, 1998, 10-090523; Nov. 3, 1998, 10-349299; Nov. 25, 1998, 10-375399
Int. Cl.[7] G07D *3/00*
U.S. Cl. 453—3 **9 Claims**

1. Equipment for dividing a plurality of coins, comprising:
a cover with a low big circular board form;
a slender ring for coin conveyance, which is rotatably mounted along an outside periphery of a bottom of said cover; and
a coin passage device with an approximately ring-shaped inclination board, an outside perimeter of said inclination board being higher than an inside perimeter and said inside perimeter being near an outside periphery of said ring, said coin passage device having a plurality of openings for coin division.



6,039,644
COIN SORTER
Joseph J. Geib, Mt. Prospect; Scott D. Casanova, Roselle; Douglas U. Mennie, Barrington; Richard A. Mazur, Naperville, and Gary P. Watts, Buffalo Grove, all of Ill., assignors to Cummins-Allison Corp., Mt. Prospect, Ill.
Division of application No. 08/587,849, Jan. 11, 1996, Pat. No. 5,865,673. This application Apr. 18, 1997, Appl. No. 824,474.
Int. Cl.[7] G07D *3/16*
U.S. Cl. 453—10 **20 Claims**



18. A coin sorter for sorting a plurality of coins of mixed denominations, comprising:
a coin-driving member having a resilient surface;
a stationary coin-guiding member having a coin-guiding surface opposing said resilient surface of said coin-driving member, said coin-guiding surface being positioned generally parallel to said resilient surface and defining a coin path along which said coins are guided, said resilient surface of said coin-driving member moving the coins along said coin path of said coin-guiding member;
a plurality of exit stations formed on said coin-guiding member for selectively allowing exiting of the coins based upon their respective diameters, said plurality of exit stations being along an end portion of said coin path;
an entry channel formed on said coin-guiding member for receiving said coins, said entry channel being positioned along a beginning portion of said coin path; and
means for increasing positive control over said coins adjacent to a periphery of said coin-guiding member in at least one of said plurality of exit stations, said positive control over said coins increasing toward said periphery of said coin-guiding member.

6,039,645

SOFTWARE LOADING SYSTEM FOR A COIN SORTER

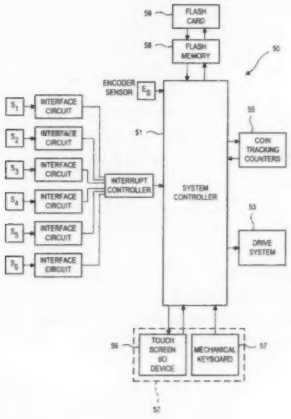
Richard A. Mazur, Naperville, Ill., assignor to Cummins-Allison Corp., Mt. Prospect, Ill.

Filed Jun. 24, 1997, Appl. No. 881,420

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G07D *3/00*

U.S. Cl. 453—10 **12 Claims**



1. A coin sorting system, comprising:

a coin sorter for sorting a plurality of coins;

a system controller coupled to the coin sorter;

an operator interface panel coupled to the system controller, said operator interface panel including a touch screen display for displaying keys associated with operation of the coin sorting system;

a resident memory coupled to the system controller and containing a first version of control software to be executed by the system controller, said first version of control software including a first display setting of the touch screen display; and

a flash card having a flash card memory containing a second version of control software to be executed by the system controller, said second version of control software including a second display setting of the touch screen display, said flash card being adapted to be removably electrically coupled to the coin sorter, said resident memory being adapted to erase the first version of control software and store the second version of control software in response to the flash card being electrically coupled to the coin sorter, said resident memory being adapted to retain the second version of control software in response to the flash card being thereafter removed from the coin sorter.

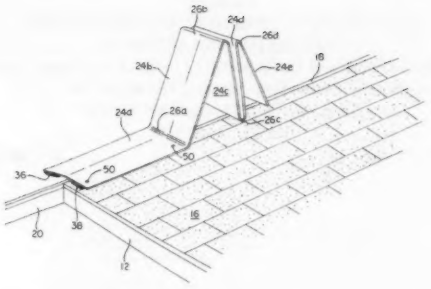
VENTILATING CAP FOR COVERING A VENT OPENING, TRANSPORT CONTAINER, AND METHOD FOR THEIR MANUFACTURE

Gary L. Sells, Mishawaka, Ind., assignor to Cor-A-Vent, Incorporated, Mishawaka, Ind.

Provisional application No. 60/069,527, Dec. 12, 1997. This application Mar. 4, 1998, Appl. No. 34,480.

Int. Cl.[7] F24F *7/02*

U.S. Cl. 454—365 **16 Claims**



1. Ventilating material for covering a vent opening in a roof of a building structure packaged for transport to the structure for installation on the roof comprising an elongated run of said venting material having passages extending there through to provide venting of the structure through said vent opening and the passages when the run of venting material is installed on the roof over the vent opening, said run of venting material being gathered into multiple interconnected layers to condense said run of venting material for transport to the building structure, one of said multiple layers constituting an outer layer, first fastening means for securing some of said layers not including said outer layer together, and second fastening means securing all of the layers together to permit the venting material to be transported to the roof and the outer layer secured to said roof after the second fastening means is released while the layers secured by the first fastening means remain secured together.

6,039,647

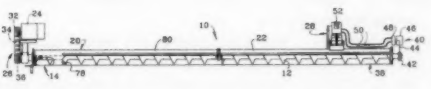
GRAIN SWEEPER DEVICE

Charles W. Weikel, Geneva, Ill., assignor to Agricultural Building Holdings, Inc., Mendota, Ill.

Filed Jun. 9, 1997, Appl. No. 871,219

Int. Cl.[7] A01D *17/02*

U.S. Cl. 460—114 **17 Claims**



1. A sweeper mechanism adapted for directing grain in a circular grain tank to a central location adjacent a center of said tank, said sweeper mechanism comprising:

a) an auger extending outwardly from said central location, said auger being adapted for rotation for directing grain within said grain tank toward said central location, said auger also being adapted to swing on a radius about said central location;

b) a frame which supports said auger;

c) a traction member coupled with the frame radially outwardly from the central opening, said traction member being adapted to engage the floor of the grain tank for driving the frame and auger about said central location;

d) a power source operatively coupled with the auger for transmitting rotational power to the auger; and

e) said traction member is operatively coupled with the auger for receiving rotational power from the auger;

f) a hydraulic pump operatively driven by an end portion of the auger opposite the central location, said hydraulic pump being operatively coupled with a hydraulic motor for driving said hydraulic motor, said hydraulic motor operatively coupled with the traction member for driving said traction member.

6,039,648

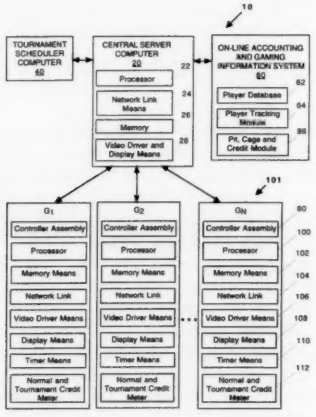
AUTOMATED TOURNAMENT GAMING SYSTEM: APPARATUS AND METHOD

Robert Guinn, and David Richards, both of Las Vegas, Nev., assignors to Casino Data Systems, Las Vegas, Nev.

Filed Mar. 4, 1997, Appl. No. 811,551

Int. Cl.[7] A63F *9/22*

U.S. Cl. 463—16 **27 Claims**



1. An apparatus for tournament play for a plurality of gaming machines, comprising, in combination:

a controller,

a processor,

means coupling said processor and controller to said plurality of gaming machines, said gaming machines including means for receiving wagers and display means for indicating a random outcome,

means for prompting potential players of the inception of a tournament,

means for enabling said plurality of machines to assume a tournament mode, and

further including a pay table display and means operatively coupled to said pay table display for dynamically changing the paytable between a normal mode and a tournament mode.

6,039,649

MONEY-OPERATED ENTERTAINMENT MACHINE

Ullrich Schulze, Wiesbaden, Germany, assignor to NSM Aktiengesellschaft, Bingen, Germany

PCT No. PCT/DE95/01547, § 371 Date Jul. 24, 1997, § 102(e) Date Jul. 24, 1997, PCT Pub. No. WO96/23287, PCT Pub. Date Aug. 1, 1996

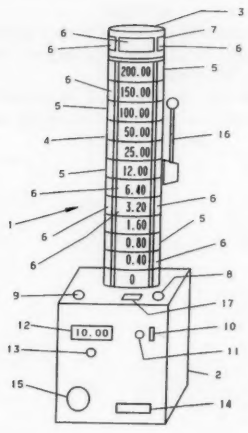
PCT Filed Nov. 3, 1995, Appl. No. 875,578

Claims priority, application Germany, Jan. 24, 1995, 195 01 955; Sep. 9, 1995, 195 33 417

Int. Cl.[7] A63F *9/24*

U.S. Cl. 463—16 **19 Claims**

1. A money-operated entertainment machine having a game device comprising a plurality of display elements displaying individual magnitudes of monetary amounts corresponding directly to a deposit of money, or a portion or multiple thereof, said magnitudes of monetary amounts representing individual wins, which can be illuminated, and having a computer-controlled control unit for controlling the course of the game, wherein the game device is



a risk game device that enables a player to directly increase a monetary amount determined by the deposit of money which directly selects a magnitude of monetary amount, or a portion or multiple thereof, when a risk of loss exists.

6,039,650

CARD DISPENSING SHOE WITH SCANNER APPARATUS, SYSTEM AND METHOD THEREFOR

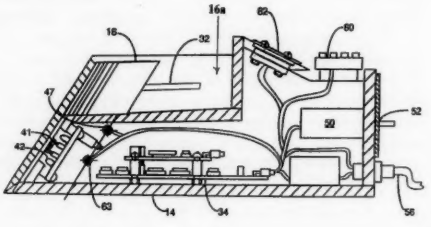
Otho Dale Hill, Las Vegas, Nev., assignor to Smart Shoes, Inc., Las Vegas, Nev.

Continuation-in-part of application No. 08/543,908, Oct. 17, 1995, Pat. No. 5,722,893. This application Feb. 26, 1998, Appl. No. 31,321.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] A63F *1/14*

U.S. Cl. 463—47 **99 Claims**



2. A card delivery and player proficiency evaluation system for playing a card game comprising:

a housing configured to store a plurality of playing cards and configured for dispensing cards to a number of players;

a scanner configured to scan each of the cards dispensed from the housing and to generate a scanner signal representative of the identity of each card dispensed to the players; and

a processor coupled to the scanner and configured to process the scanner signal to count each of the cards dispensed to each of the players playing the card game and to determine at least one statistic in the play of the game relative to predetermined criteria to thereby evaluate the proficiency of the players.

6,039,651

FLEX PLATE AND FLYWHEEL CONFIGURATION

Hirotaka Fukushima, Hirakata, and Mitsuhiko Takenaka, Neyagawa, both of Japan, assignors to Exedy Corporation, Neyagawa, Japan

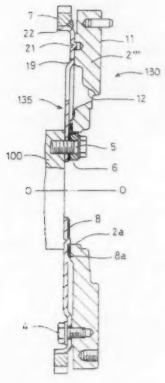
Division of application No. 08/788,802, Jan. 23, 1997. This application Aug. 14, 1998, Appl. No. 134,334.

Claims priority, application Japan, Feb. 9, 1996, 8-024151; Feb. 9, 1996, 8-024152; Feb. 9, 1996, 8-024153; Feb. 9, 1996, 8-024154

This patent is subject to a terminal disclaimer.

Int. Cl.[7] F16D *3/52*

U.S. Cl. 464—98 **5 Claims**



1. A flywheel assembly for transmitting torque from a crankshaft, comprising:

a flexible plate having a circular plate body having flexibility in a bending direction and an annular portion formed proximate an outer periphery of said flexible plate, said annular portion being offset from said circular plate body in an axial direction, said annular portion extending from said circular plate body and away from the crankshaft, said annular portion being formed with at least one protrusion that extends in an axial direction away from the crankshaft; and

a flywheel having an outer peripheral portion fixed to said annular portion such that there is an axial gap between said circular plate body and a radially inward portion of said flywheel, said outer peripheral portion of said flywheel being formed with at least one aperture located such that said protrusion extends into said aperture.

6,039,652

UNIVERSAL JOINT ANGLE DRIVING TOOL

Joel Marks, Los Angeles, Calif., assignor to WorkTools, Inc., Chatsworth, Calif.

Filed Aug. 11, 1997, Appl. No. 907,960

Int. Cl.[7] F16D *3/16;3/84*

U.S. Cl. 464—147 **4 Claims**

1. A Hookes type, double universal joint angle driving assembly including:

a rigid outer housing with openings at each of two ends and an interior cavity between the openings;

a drive shaft rotatably fitted within each opening, the drive shaft comprising a cylindrical body including a length, extending from an outer end exposed outside the housing to an inner end facing the interior cavity, a diameter and an external cylindrical surface;

a recess in the outer end of an output drive shaft, the recess able to receive a removable driven element, including a screwdriver bit;

two slots forming recesses in the cylindrical surface of the drive shaft, the slots having a bottom and two sides, the slots elongated from a first slot end to a second slot end along the length of the drive shaft, the second slot end being nearest the housing interior cavity, the two slots being opposed across the diameter of the drive shaft;

a flat endplate attached to each drive shaft, at least one endplate having an attaching end comprising two substantially parallel legs extending within the slots from the second slot end to the first slot end, and a linked end of the endplate extending into the interior cavity;

the two parallel legs spaced apart and partially surrounding the recess in the outer end;

the endplate linked end comprising two tabs, the tabs forming an end yoke;

each yoke linked to a cross member;

each cross member further linked to yokes of a center linkage, the center linkage positioned between the endplates.

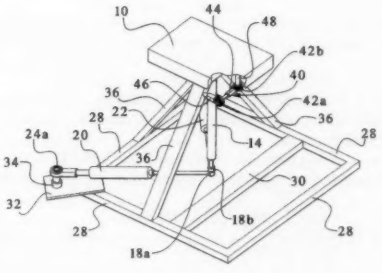
APPARATUS, SYSTEM AND METHOD FOR EXPERIENCING MOTION

Brad Engstrand, 2658 N. Dayton, Chicago, Ill. 50514

Filed Nov. 16, 1998, Appl. No. 192,788

Int. Cl.[7] A63G *31/04*

U.S. Cl. 472—59 **27 Claims**



1. An apparatus for experiencing motion, the apparatus comprising:

a frame;

a base substantially parallel to the frame in a resting position and remotely situated from the frame;

a rod extending from the base in a direction towards the frame;

a first cylinder connected between the rod and the frame; and

a second cylinder connected between the rod and the frame wherein the first cylinder and the second cylinder expand and contract to provide motion to the base and further wherein the first cylinder and the second cylinder are rotatably connected to the rod at a common end of the rod.

6,039,654

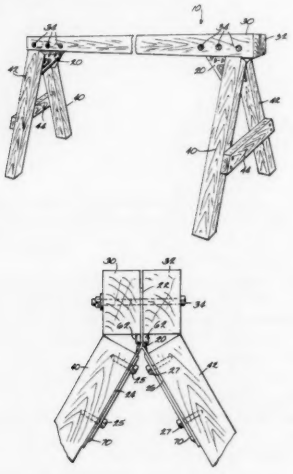
SWING SET BRACKET

Brian K. Zeilinger, Janesville, Wis., assignor to PlayStar, Incorporated, Janesville, Wis.

Filed Apr. 9, 1999, Appl. No. 289,042

Int. Cl.[7] A63G *9/00*

U.S. Cl. 472—118 **15 Claims**



1. A playstation comprising:

a Y-shaped support including,

a top section having a left side and a right side,

a lower left section extending downward from the top section,

a lower right section extending downward from the top section,

a first cross-beam secured against the left side of the top section,

a second cross-beam secured against the right side of the top section, the second cross-beam being substantially parallel to the first cross-beam,

a left leg secured to the lower left section of the Y-shaped support, and

a right leg secured to the lower right section of the Y-shaped support.

6,039,655

BOWLING GAME PLATE

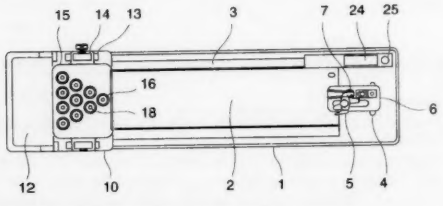
Masatoshi Todokoro, Matsudo, Japan, assignor to Staff Co., Ltd., Tokyo, Japan

Filed Nov. 24, 1998, Appl. No. 198,532

Claims priority, application Japan, Mar. 24, 1998, 10-002830 U

Int. Cl.[7] A63D *3/02*

U.S. Cl. 473—116 **2 Claims**



1. A bowling game plate comprising:

a base plate having a lane with two sides and two ends, and gutter channels on either side of said lane;

a throwing platform provided on a first end of said lane;

a portion which receives pins provided on a second end of said lane;

a portion which collects pins, provided on a side of said portion for receiving pins which is opposite to said lane; and

a member for arranging pins which is vertically movable;

wherein fallen pins may be collected while retaining standing pins by vertically moving said member for arranging pins, pivoting said portion for receiving pins so that fallen pins are collected in said portion which collects pins while standing pins are held by said member for arranging pins.

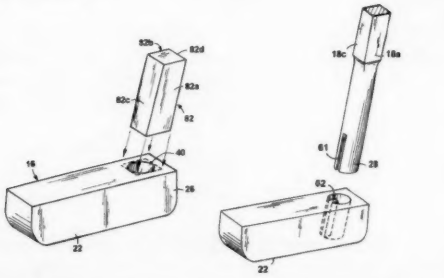
GOLF CLUB

Stephen Fireman, 10 Spooner Rd., Chestnut Hill, Mass. 02167

Continuation of application No. 08/760,418, Dec. 4, 1996, Pat. No. 5,711,719. This application Jan. 22, 1998, Appl. No. 12,082.

Int. Cl.[7] A63B *53/02*

U.S. Cl. 473—131 **5 Claims**



1. A method of assembling a golf club for striking a golf ball in a desired direction, said golf club having a straight shaft member of square or rectangular cross section having first and second pairs of opposing side surfaces extending from a distal end of the shaft member and along a substantial portion of the shaft member, the second pair of opposing side surfaces perpendicular to the first pair of side surfaces; and a head member having a flat ball striking surface and a heel portion, said head member having a square or rectangular hole sized to receive the distal end of the straight shaft member, said method comprising the steps of:

forming said shaft member wherein one of said opposing side surfaces adjacent said distal end of said shaft defines a flat alignment surface;

forming said head member with said square or rectangular hole formed completely therethrough, said hole including at least one flat surface aligned perpendicular to a distal edge disposed along said flat ball striking surface; and,

inserting said distal end of said shaft into said hole in said head member.

6,039,657

SIDE STROKING GOLF PUTTER

Bernard C. Gidney, P.O. Box 368, Ct. Pl., S. China, Me. 04358

Filed Jan. 15, 1998, Appl. No. 7,759

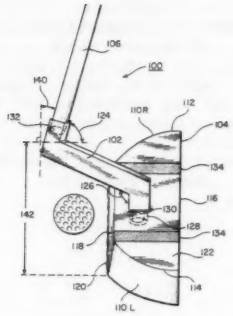
Int. Cl.[7] A63B *69/36;53/02*

U.S. Cl. 473—252 **20 Claims**

13. A croquet-styled golf putter, said croquet-styled putter to be used in a forward facing address position and comprising:

a putter head comprising at least a top surface, a bottom surface, a front face, a rear face;

a double-angle connecting section having a first upper end with a central axis forward of the front face by a distance generally greater than the diameter of a USGA regulation golf ball addressed by said putter head and substantially central to said front face, an angled section overhanging said front face, a



second lower end attached on a substantially central axis to said top surface of said putter head;

a one-handed shaft comprising a grip located substantially within a plane containing said putter head front face, said shaft section having a first upper end, a substantially straight section, a second lower end connected to said first upper end of said double-angle connecting section, and wherein said first upper end of said shaft is centrally located above said putter head.

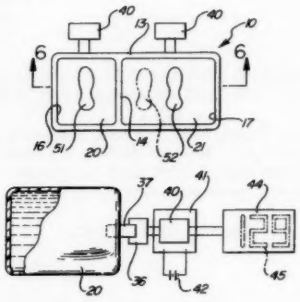
GOLF SWING WEIGHT DISTRIBUTION INDICATOR

Euclid Cecchin, 3624 Victoria Blvd., Windsor, Ontario, Canada, N9E-5E1

Filed Dec. 10, 1998, Appl. No. 209,412

Int. Cl.[7] **A63B** *69/36*

U.S. Cl. 473—269 **14 Claims**



6. A golf swing body weight distribution indicator for indicating a golfer's weight distribution at pre-determined points during a practice swing, comprising:

a pair of aligned, generally flat pads each being of a size for supporting a golfer's foot when the golfer assumes a golf swing stance, and with one of said pads being considerably smaller than the second pad and being of a size for relatively closely receiving and supporting one of the golfer's feet without any substantial lateral movement of said foot relative to the pad, and with the second pad being of a larger size to support the second of the golfer's feet while permitting relatively large lateral movements of the golfer's foot rested thereupon for enabling the golfer to freely move the leg laterally in order to assume a comfortable stance prior to swinging,

each pad being formed of a compressible material which compresses and consequently, produces pressure forces proportional to the weights applied to the pads by the golfer's feet;

each pad having a pressure force sensing device connected thereto which is calibrated for determining the weight applied to its respective pad at pre-determined times during a golf swing, such as immediately prior to the swing, at substantially the maximum back swing and at substantially the maximum forward follow-through swing;

and each pad being connected to a read-out indicator which displays the weights determined by the pad at said times;

whereby a golfer may practice and improve golf swings by observing and attempting to replicate the displayed weights during swing cycles.

6,039,659

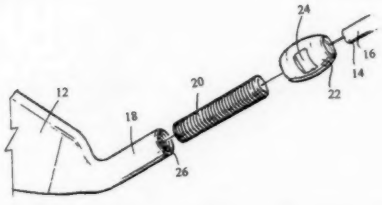
INTERCHANGEABLE SHAFT GOLF CLUB

Jack Hamm, 11190 E. Cimmarron Dr., Englewood, Colo. 80111

Provisional application No. 60/056,802, Aug. 25, 1997. This application Aug. 18, 1998, Appl. No. 136,124.

Int. Cl.[7] **A63B** *53/02*

U.S. Cl. 473—306 **7 Claims**



1. An interchangeable shaft golf club assembly comprising:

a club head, the club head including an internally threaded hosel; and

a club shaft of a select length and stiffness, the club shaft having external threads operatively associated therewith about a first end threadably engaging the internally threaded hosel; and

an internally threaded ferrule threadably receiving the external threads associated with the first end of the shaft and being threaded into abutment with a distal end of the hosel to secure the first end of the shaft within the hosel.

GOLF BALL

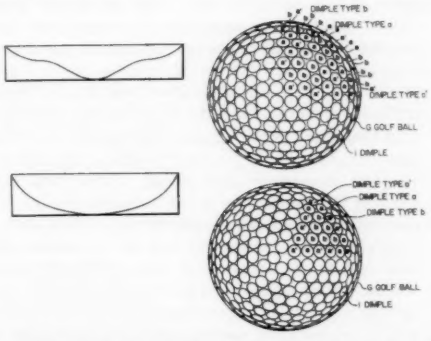
Atsuki Kasashima; Keisuke Ihara, and Hirotaka Shimosaka, all of Chichibu, Japan, assignors to Bridgestone Sports Co., Ltd., Tokyo, Japan

Filed Aug. 12, 1998, Appl. No. 132,779

Claims priority, application Japan, Aug. 15, 1997, 9-235389

Int. Cl.[7] **A63B** *37/14;37/02*

U.S. Cl. 473—378 **10 Claims**



1. A golf ball having a multiplicity of dimples of circular plane shape on its surface, wherein the dimples comprise plural types of

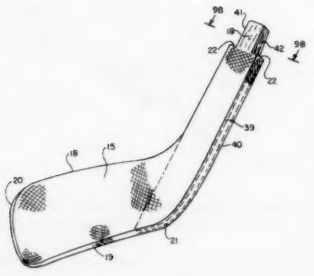
dimples having different diameters, and the dimples of at least one type having the same diameter have at least two different cross-sectional shapes with different volumes.

6,039,661

REINFORCED HOCKEY REPLACEMENT BLADE AND METHOD OF MAKING THE SAME

William D. Christian, and Roger A. Christian, both of Warroad, Minn., assignors to Christian Brothers, Inc., Warrod, Minn.

Filed Aug. 6, 1997, Appl. No. 906,599
Int. Cl.[7] A63B *59/14*
U.S. Cl. 473—562 **15 Claims**



1. A substantially wooden replacement blade adapted for insertion into the lower end of a hockey stick handle, said replacement blade comprising:

a blade portion having top and bottom edges, a pair of blade sides and toe and heel ends;

a shaft portion having a lower end extending from said blade portion, an upper end forming a connection end for insertion into a hollow lower end of a hockey stick handle, a front edge joining with the top edge of said blade portion, a back edge joining with the bottom edge of said blade portion and a pair of shaft sides extending between said front and back edges, said connection end having a free end comprising an uppermost end of shaft portion and a connection end shoulder in at least one of said front and back edges;

a reinforcement strip receiving area and a corresponding reinforcement strip shoulder on each of said pair of shaft sides, each of said reinforcement strip areas extending from said free end, past said connection end shoulder and toward said lower end of said shaft portion and extending from said back edge to its corresponding reinforcement strip shoulder, one of said reinforcement strip shoulders extending between its corresponding reinforcement strip receiving area and one of said blade sides and the other of said reinforcement strip shoulders extending between its corresponding reinforcement strip receiving area and the other of said blade sides;

a reinforcement strip secured to each shaft side in said reinforcement strip receiving area so that each of said reinforcement strips extends from said free end, past said connection end shoulder and toward said lower end of said shaft portion, with an edge of one of said reinforcement strips adjacent to one of said reinforcement strip shoulders and an edge of the other of said reinforcement strips adjacent to the other of said reinforcement strip shoulders.

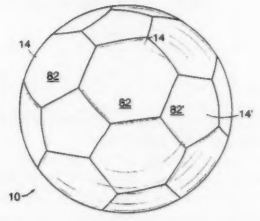
INFLATABLE STITCHED SPORTS BALL AND METHOD OF MAKING SAME

Chong Veng Chan, New Territories, The Hong Kong Special Administrative Region of the People's Republic of China, assignor to Joyful Long International Ltd., Kowloon, The Hong Kong Special Administrative Region of the People's Republic of China

Filed Apr. 21, 1998, Appl. No. 63,555
Int. Cl.[7] H63B *41/08*
U.S. Cl. 473—604 **5 Claims**



1. An inflatable soccer ball having a body comprising:

a multiplicity of discrete panels joined together at seams along respective adjacent edges by stitching to define a volume, and

an inflatable bladder disposed within said volume and having a valve extending through an aperture defined in the outer surface of said body,

each panel of said multiplicity of panels being formed of a multi-layer laminate comprising:

an outer layer of synthetic polymeric material;

an intermediate layer of expanded synthetic polymeric material with a woven or knitted fabric; and

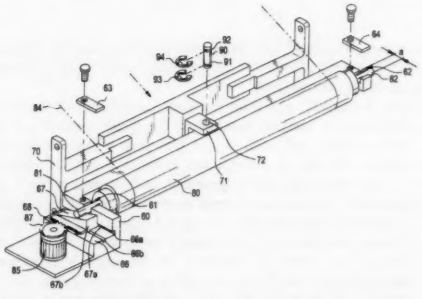
at least one inner layer of woven fabric.

6,039,663

BELT STEERING APPARATUS FOR CONTROLLING INCLINED MOVEMENT OF AN ENDLESS ROTATING BELT

Jae-yong Eum, Suwon, Rep. of Korea, assignor to Samsung Electronics Co., Ltd., Kyungki-do, Rep. of Korea

Filed May 27, 1998, Appl. No. 84,448
Claims priority, application Rep. of Korea, Aug. 14, 1997, 97-22233
Int. Cl.[7] F16H *7/08;7/22*
U.S. Cl. 474—103 **4 Claims**



1. A belt steering apparatus for controlling inclined movement of an endless rotating belt, comprising:

a cylindrical roller having a predetermined portion which contacts the endless rotating belt, the cylindrical roller having a rotary shaft disposed on at least one end thereof;

a first frame which supports the cylindrical roller;

a second frame hinged to the center of the first frame;

a sliding member operative to slide linearly, installed at one side of the first frame, and having an upper surface supporting the rotary shaft disposed at the one end of the cylindrical roller, the upper surface being inclined with respect to a direction of linear movement by a predetermined angle;

a rack gear provided on one side of the sliding member;

a motor having an output shaft and being mounted to the first frame; and

a pinion gear connected to the output shaft of the motor, the pinion gear contacting a predetermined portion of the rack gear to linearly move the sliding member.

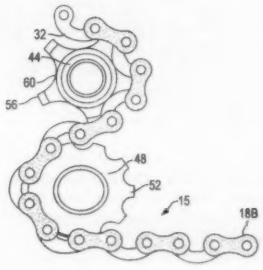
MULTIPLE SPROCKET ASSEMBLY FOR A BICYCLE

Yasushi Nakamura, Itami, Japan, assignor to Shimano, Inc., Osaka, Japan

Division of application No. 08/770,498, Dec. 20, 1996, Pat. No. 5,954,604. This application Mar. 3, 1999, Appl. No. 262,139.

Int. Cl.[7] **F16H** *7/06;55/30*

U.S. Cl. 474—157 **16 Claims**



1. A chain and a sprocket cluster in combination for use in a bicycle transmission,

wherein the chain comprises:

a plurality of intermediate links;

a plurality of pairs of outer links;

a plurality of fasteners, wherein each fastener connects an end of one of the plurality of intermediate links between a corresponding pair of outer links so that the plurality of intermediate links alternate with the plurality of pairs of outer links;

wherein each intermediate link includes a reinforcing rib extending along an intermediate portion thereof between a pair of the plurality of fasteners;

wherein each intermediate link defines a longitudinal bottom recess between each end thereof for receiving a sprocket tooth therein, the recess extending between the fasteners at each end of the intermediate link;

wherein each pair of outer links comprises first and second outer link plates facing each other, wherein each outer link plate includes a laterally curved middle portion, wherein the laterally curved middle portion of the first outer link plate curves away from the second outer link plate, and wherein the laterally curved middle portion of the second outer link plate curves away from the first outer link plate; and

wherein the sprocket cluster comprises:

a plurality of sprockets coaxially mounted together, each sprocket including a plurality of teeth for engaging the chain so that a sprocket tooth extends into the recess of each intermediate link engaging the sprocket.

HYDRAULIC AND MECHANICAL TRANSMISSION APPARATUS

Akihito Okuda; Koichi Fushimi, and Hiroshi Terayama, all of Saitama, Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Jan. 16, 1998, Appl. No. 8,351

Claims priority, application Japan, Jan. 21, 1997, 9-008969

Int. Cl.[7] **F16H** *47/04*

U.S. Cl. 475—72 **4 Claims**

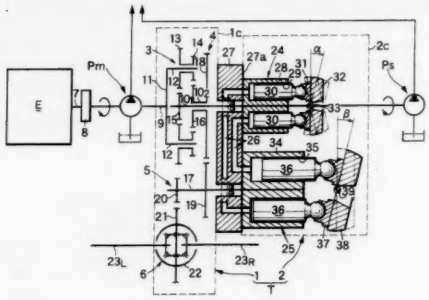
1. A hydraulic and mechanical transmission apparatus comprising:

an input shaft;

a first output shaft;

a second output shaft;

a power dividing device for dividing power inputted from a prime mover to said input shaft into a plurality of portions and transmitting the respective portions to said first and second output shafts;



a hydrostatic continuously variable transmission including a hydraulic pump driven by power outputted from said first output shaft, a hydraulic motor which communicates with said hydraulic pump through a hydraulic closed circuit, and a control panel in which said hydraulic closed circuit is formed, wherein at least one of said hydraulic pump and said hydraulic motor has a variable displacement construction;

a mechanical transmission device connected to said second output shaft,

a power collecting shaft for collecting power respectively outputted from said mechanical transmission device and said hydraulic motor and supplying the collected power to a load; and

oil supplying means for providing a supplement of oil to at least said hydraulic closed circuit,

wherein said hydraulic and mechanical transmission apparatus has a characteristic which allows a rotational speed of said first output shaft and a rotational speed of said second output shaft to decrease and increase, respectively, with an increase in a rotational speed of said input shaft, and

wherein said oil supplying means includes a first oil pump having a discharge flow rate that is proportional to the rotational speed of one of said input shaft and said second output shaft and a second oil pump having a discharge flow rate that is proportional to the rotational speed of said first output shaft.

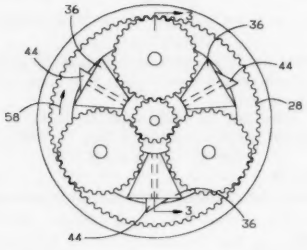
SUN GEAR LUBRICATION AND INSPECTION MECHANISM

Richard A. Schunck, New Berlin, and Gordon L. Sokolowski, Waukesha, both of Wis., assignors to The Falk Corporation, Milwaukee, Wis.

Filed Sep. 24, 1998, Appl. No. 159,454

Int. Cl.[7] F16H *57/04*

U.S. Cl. 475—159 **4 Claims**



1. A planetary sun gear lubricant system for planetary gear set comprising a sun gear having peripheral teeth, plural planet gears supported by a carrier, and a ring gear all located in a housing which acts as a sump for a lubricant, said carrier being mounted for rotation in said housing and having circumferentially spaced apart axially extending spacer members having inner and outer surfaces, the improvement comprising:

at least one of said spacer members having a passageway extending from the outer surface of said spacer to the inner surface of said spacer, the inner end of said passageway being directed toward the teeth of said sun gear,

said one of said spacer members on the outer periphery thereof having a deflector mounted thereon adjacent to the outer end of said passageway, said deflector being angled to the direction of rotation of said carrier,

said deflector being in fluid communication with said passageway whereby rotary movement of the carrier supported deflector through the lubricant within the housing causing inward deflection of the lubricant through the passageway to the teeth of said sun gear.

POWERTRAIN FOR 5-SPEED AUTOMATIC TRANSMISSIONS

Jong-sool Park, Kyungki-do, Rep. of Korea, assignor to Hyundai Motor Company, Rep. of Korea

Filed May 19, 1998, Appl. No. 81,565

Claims priority, application Rep. of Korea, Oct. 8, 1997, 97-51607

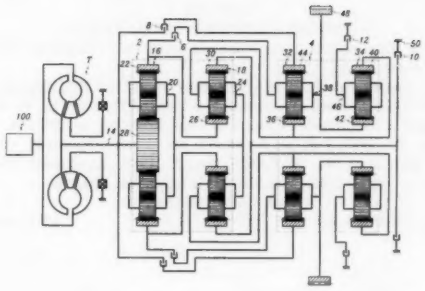
Int. Cl.[7] **F16H** *3/44*

U.S. Cl. 475—275 **42 Claims**

1. A powertrain for a 5-speed automatic transmission comprising:

a first compound planetary gearset comprising first and second simple planetary gearsets having first, second, third and fourth operating elements, said first operating element acting as an input element;

a second compound planetary gearset comprising third and fourth simple planetary gearsets having fifth, sixth, seventh and eighth operating elements, said fifth operating element acting as an output element, said fifth and sixth operating elements being variably connected to said second and first operating elements, respectively, and said seventh operating element being fixedly connected to the third operating element;



clutch means for variably connecting said fifth and sixth operating elements to said second and first operating elements, respectively; and

brake means for selectively connecting the fourth and eighth operating elements to a transmission housing.

6,039,671

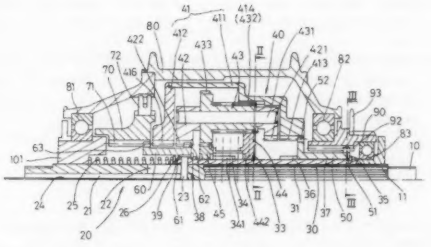
MULTI-SPEED DRIVE HUB FOR A BICYCLE

Josef Keller, Schweinfurt, Germany, assignor to Kun Teng Industry Co., Ltd., Taichung, Taiwan

Filed Feb. 9, 1999, Appl. No. 247,071

Int. Cl.[7] **F16H** *3/56*

U.S. Cl. 475—296 **10 Claims**



1. A multi-speed drive hub for bicycles, comprising:

a hub axle;

a hub sleeve mounted coaxially and rotatably on said hub axle;

an epicyclical gear unit mounted concentrically on said hub axle and having a ring gear, a planet-gear carrier, a plurality of double planet gears mounted rotatably on said planet-gear carrier, and two sun gears meshing with said double planet gears, said ring gear meshing with said double planet gears;

a drive-side coupling gear;

an output-side coupling gear connected to said hub sleeve;

first tooth means for connecting said drive-side coupling gear to one of said ring gear and said planet-gear carrier;

second tooth means for connecting said output-side coupling gear to one of said planet-gear carrier and said ring gear; and

a spring-loaded shift link mounted coaxially on and slidable axially of said hub axle and having a plurality of axially spaced radial lugs provided thereon, said drive-side coupling gear and said output-side coupling gear being connected to said shift link to be displaced therewith along said hub axle, said radial lugs engaging selectively said sun gears when said shift link is displaced along said hub axle.

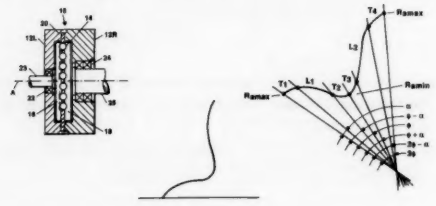
6,039,672
MODIFIED-CAM SPEED CONVERTER

Faruk Bursal, Waltham, Mass., assignor to Synkinetics, Inc., Lowell, Mass.

Continuation-in-part of application No. 08/919,135, Aug. 30, 1997, abandoned, application No. 08/815,128, Mar. 11, 1997, and a continuation-in-part of application No. 08/828,964, Mar. 27, 1997, Pat. No. 5,954,615, and a continuation-in-part of application No. 08/363,625, Dec. 23, 1994, abandoned. This application Mar. 29, 1999, Appl. No. 280,364.

Int. Cl.[7] F16H *1/48*

U.S. Cl. 476—36 **19 Claims**



1. Apparatus for translating motion from a first to a second velocity, the apparatus comprising

three drive devices, including a conjugate pair of the devices and a motion translating device, mounted about a common axis, having an input and output rotatable about the common axis,

one of the devices translating motion of a first of the devices at a first velocity to motion of a second of the devices at a second velocity, the first of the devices coupled to an input of the translating devices and the second of the devices coupled to an output of the translating device, whereby motion of the first of the devices can be translated to motion of the second of the devices,

wherein a first of the pair of conjugate devices comprises a drive cam and the second of the pair of devices comprises a driven cam,

wherein one of said cams each forms a rise flank and a fall flank, wherein a flank is formed having a main drive segment formed according to a first function and at least one transition segment formed according to a second function.

CONTROL SYSTEM FOR AUTOMATIC TRANSMISSION

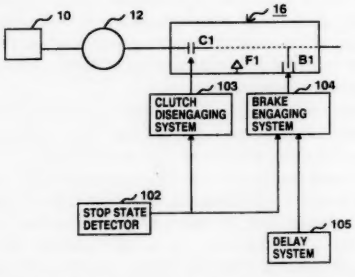
Kazuhiro Mikami; Kazuhito Yamada, and Jiro Nishiwaki, all of Anjo, Japan, assignors to Aisin AW Co., Ltd., Japan

Filed Dec. 7, 1998, Appl. No. 206,152

Claims priority, application Japan, Dec. 8, 1997, 9-337462

Int. Cl.[7] B60K *41/20*

U.S. Cl. 477—93 **7 Claims**



1. A control system for an automatic transmission which includes a hydraulic power transmission connected to an engine, a speed change unit, a clutch which is engaged when a forward driving range is selected, and a brake which is engaged to prevent a vehicle from moving backward and to thereby establish a hill-holding state in the speed change unit, said control system comprising:

a stop state detector which determines a vehicle stopped state by detection that the forward driving range has been selected, that an accelerator pedal is released and that a brake pedal is depressed;

a clutch disengaging system which provides a neutral control wherein the clutch is almost disengaged;

a brake engaging system which initiates a hill-holding control by engaging the brake; and

a delay system which delays timing of initiation of the hill-holding control until after initiation of the disengagement of the clutch by the clutch disengaging system, and which initiates said hill holding control responsive to said clutch reaching the state where it is almost disengaged.

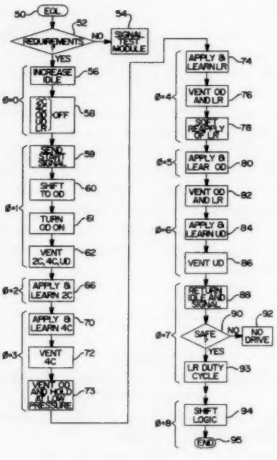
QUICK LEARN PROCEDURE FOR FILL VOLUMES OF AN ELECTRONICALLY CONTROLLED AUTOMATIC TRANSMISSION

Hussein Dourra, Dearborn Heights; Gerald L. Holbrook, Rochester Hills; Colt R. Correa, Lake Orion, and David Parenti, Waterford, all of Mich., assignors to Daimler-Chrysler Corporation, Auburn Hills, Mich.

Filed Mar. 26, 1999, Appl. No. 277,444

Int. Cl.[7] F16H *61/06*

U.S. Cl. 477—166 **11 Claims**



1. A method for determining fill volumes of a plurality of clutch elements in an automatic transmission, said method comprising:

a. providing an automatic transmission attached to a vehicle engine having a plurality clutches wherein said plurality has at least 2C, 4C, LR, UD and OD clutch elements;

b. monitoring a rotational speed of a turbine within a torque converter of said automatic transmission;

c. monitoring a rotational speed of said engine;

d. applying and recording each of said plurality in a predefined order;

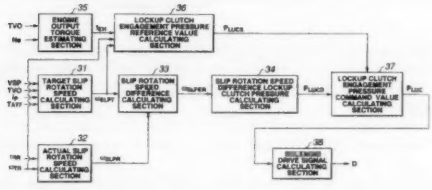
e. determining the fill volume of each of said plurality by applying each said element and recording said fill volume when said rotational speed of said engine varies from said rotational speed of said turbine by a predefined amount, wherein said fill volume of said OD clutch element is determined after said fill volume of said 2C and said 4C clutch element is determined.

6,039,675

SLIP CONTROL SYSTEM FOR TORQUE CONVERTER

Kazutaka Adachi, Yokohama, and Akira Watanabe, Kanagawa, both of Japan, assignors to Nissan Motor Co., Ltd., Yokohama, Japan

Filed Sep. 18, 1998, Appl. No. 156,663
Claims priority, application Japan, Sep. 19, 1997, 9-254989
Int. Cl.[7] F16H *61/14*
U.S. Cl. 477—174 **11 Claims**



1. A slip control system for a torque converter with a lockup clutch, the slip control system controlling a slip rotation speed between a pump impeller and a turbine runner of the torque converter at a target slip rotation speed by controlling an engagement pressure of the lockup clutch, the pump impeller being connected to an engine to receive an engine output torque, the slip control system comprising:

a vehicle condition detector that detects an operation condition of a vehicle equipped with the torque converter and the engine;

an engine output torque determining section that determines the engine output torque on the basis of signals output from said vehicle condition detector;

a turbine runner rotation speed detector that detects a rotation speed of the turbine runner;

a reference value calculating section that calculates a reference value of the lockup clutch engagement pressure on the basis of the engine output torque as determined by the engine output torque determining section, the target slip rotation speed, and the rotation speed of the turbine runner as detected by the turbine runner rotation speed detector;

a slip rotation speed difference lockup clutch engagement pressure calculating section that calculates a slip rotation speed difference lockup clutch engagement pressure which is a change amount of the lockup clutch engagement pressure to adjust an actual slip rotation speed to the target slip rotation speed; and

a lockup clutch engagement pressure command value calculating section that obtains the sum of the lockup clutch engagement pressure reference value and the slip rotation speed difference lockup clutch engagement pressure as a lockup clutch engagement pressure command value and that outputs a signal indicative of the lockup clutch engagement pressure command value.

6,039,676

TRAINING BIKE

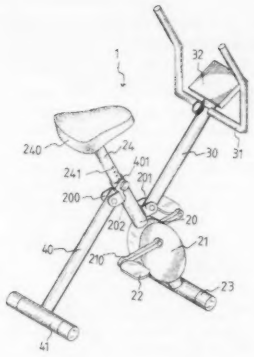
Stevens Clive, 7F, No. 291, Ta Dun 4th St., Taichung, Taiwan

Filed Sep. 7, 1999, Appl. No. 390,375
Int. Cl.[7] A63B *21/00*
U.S. Cl. 482—57 **5 Claims**

1. A training bike comprising:

a main column (**20**) having a seat post (**24**) retractably received in a first end thereof and a support bar (**23**) connected to a second end of said main column (**20**), a cycling means (**21**) connected to said main column (**20**) and a crank (**210**) rotatably connected to said cycling means(**21**);

a rear support (**40**) pivotally connected to said main column at said first end of said main column (**20**), and



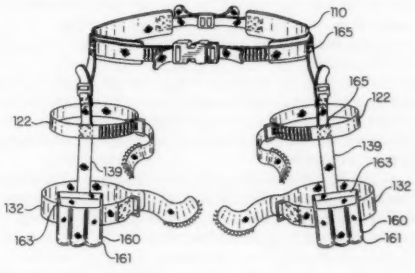
a handlebar tube (**30**) pivotally connected to said main column (**20**) at a position which is located lower than said position where said rear support (**40**) is connected to said main column (**20**).

6,039,677

EXERCISE THIGH WEIGHT SYSTEM

David Spletzer, 203 Bay 23rd St., Brooklyn, N.Y. 11214

Continuation-in-part of application No. 08/847,872, Apr. 28, 1997, Pat. No. 5,868,652, which is a continuation-in-part of application No. 08/676,941, May 6, 1996, abandoned. This application Dec. 14, 1998, Appl. No. 211,019.
Int. Cl.[7] A63B *23/04*
U.S. Cl. 482—105 **20 Claims**



1. An exercise thigh weight system, comprising:

a sturdy, semi-rigid and adjustable waist belt so as to adjust said waist belt to a waist of a user;

a right leg harness assembly attached to said waist belt and a left leg harness assembly attached to said waist belt, each said assembly harness including an upper thigh belt encircling entirely around a user's upper thigh and a lower thigh belt encircling around a user's lower thigh and a bridging member;

each said bridging member having a longitudinal axis and being fixedly connected to each said upper thigh belt at one end and fixedly connected to a weight carrying means at another end;

said upper thigh belt and said lower thigh belt being solely connected to each other by said bridging member;

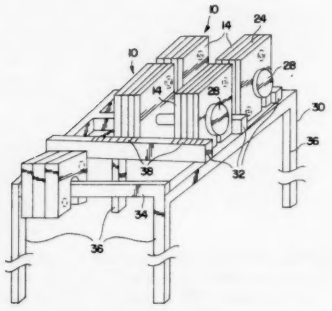
each said weight carrying means including means for securely carrying weights along the longitudinal axis of said bridging member, said weight carrying means including means for carrying at least one weight symmetrically along said bridging member, said means for carrying at least one weight being aligned along and supported by said longitudinal axis substantially centered on said bridging member so that said at least one weight is stabilized.

6,039,678

DUMBBELL SET WITH QUICK RELEASE PLATES

Fredric O. Dawson, 1719 Grant St., Santa Clara, Calif. 95050

Filed Nov. 2, 1998, Appl. No. 184,556
Int. Cl.[7] A63B *21/075*
U.S. Cl. 482—107 **6 Claims**



1. A dumbbell system which comprises:

a tube having an internal thread;

a pair of stop plates, one of said stop plates perpendicularly abutting one end of said tube opposite said other end plate perpendicularly abutting another end of said tube;

each said top plate having an aperture concentric with an opening at an end of said tube;

a pair of threaded shafts, each having a knob on one end and dimensioned to screw into said end of said tube through said stop plate;

a plurality of identical weight plates, each weight plate having an aperture dimensioned to provide that each said shaft is insertable through said aperture of said each weight plate and screwable into an end of said tube opposite said threaded shaft screwed into an opposite end of said tube providing that said weight plate be securely mountable onto said shaft by tightening said knob against said weight plate toward said respective stop plate;

each said weight plate having a straight section of an edge and said aperture in each said weight plate being centrally located;

a straight slot in each said weight plate extending perpendicularly from said straight section of said edge of said weight plate to said aperture;

at least one dimple on each weight plate forming a concavity on one side of said weight plate and a convexity on an opposite side of said weight plate arranged so that the slots of adjacent weight plates are aligned when the convexity on one plate engages the concavity on an adjacent plate;

said dimple, aperture and slot in each said plate operable arranged in combination with one another and dimensioned to permit supporting said dumbbell system on a flat surface with said straight section of each plate against said flat surface whereby said slot of each weight plate is aligned with said slot of a neighboring weight plate and said dimple of each weight plate engages said dimple of a neighboring weight plate and further permitting that an additional weight plate is mountable on said dumbbell system by inserting said shaft through said slot into said aperture of said additional weight plate whereby said at least one dimple of said additional weight plate is aligned with a dimple of one of a neighboring weight plate and said stop plate.

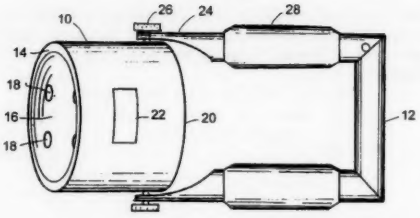
ELECTRONIC DUMBBELL

Simon S. C. Yu, 3806 Whittle Ave., Oakland, Calif. 94602

Filed Aug. 9, 1999, Appl. No. 369,257
Int. Cl.[7] A63B *21/22*
U.S. Cl. 482—110 **13 Claims**



1. An electronic exercising dumbbell comprising:

a tubular main body having first and second ends, said first end having a concave surface, said second end having substantially a flat surface and supporting a plurality of function switches;

a main shaft positioned on the axis of said tubular main body, said main shaft attached between said first and said second end;

a D.C. motor in said main body, said motor spaced from and rotatable around said main shaft, the rotation of said motor around said shaft generating strong vibrations of said dumbbell;

a handle having a "U" shape and being tubular for the storage of batteries for said D.C. motor, the end of each leg of the "U" being pivotally attached across said main body; and

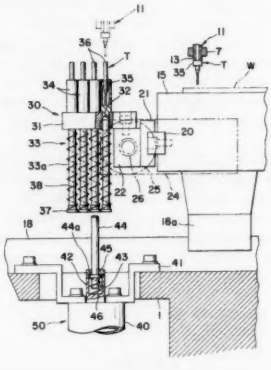
motor rotational speed controls on each leg of said "U" of said handle, said speed controls coupled between said batteries and said motor and activated by compression of said handle legs.

6,039,680

TOOL CHANGING MECHANISM

Tetsuya Oketani, Gifu, and Tadashi Uemura, Anjo, both of Japan, assignors to Howa Machinery, Ltd., Aichi-ken, Japan

Filed Jul. 17, 1998, Appl. No. 118,344
Claims priority, application Japan, Jul. 23, 1997, 9-214024
Int. Cl.[7] B23Q *3/157*
U.S. Cl. 483—57 **19 Claims**



1. A tool changing mechanism to be incorporated into a plate drilling machine having a spindle movable within in a range, said tool changing mechanism comprising:

a tool magazine including a plurality of tool posts, movable to bring one of the tool posts into alignment with the spindle;

a locating mechanism for locating the tool magazine so that one of the tool posts is brought into alignment with the spindle, said locating mechanism comprising a movable work table for mounting a plate to be drilled, and means for supporting the tool magazine on the work table to be movable relative to the work table; and

a tool pressing mechanism disposed in a fixed position on a side of the tool magazine opposite to the spindle at a tool changing

position provided in the range in which the spindle is movable, said tool pressing mechanism being operable to press said one of the tool posts aligned with the spindle toward the spindle for a tool changing operation.

6,039,681

HEATING ROLL

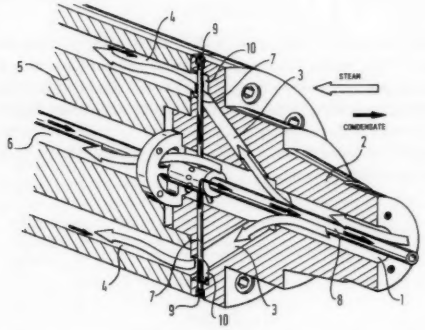
Zaoralek Heinz-Michael, Königsbronn, Germany, assignor to Schwabische Huttenwerke GmbH, Aalen-Wasseralfingen, Germany

Filed Oct. 2, 1996, Appl. No. 720,680

Claims priority, application Germany, Oct. 13, 1995, 195 38 236

Int. Cl.[7] B23P *15/00*

U.S. Cl. 492—20 **17 Claims**



1. A steam-heated roll having a longitudinal axis and a roll center, comprising substantially axially extending heating passages for heat supply and removal, and discharge passages for condensate dewatering extending substantially radially from the heating passages to the roll center, wherein said discharge passages include means for effecting a turbulent mixing of condensate and steam for maintaining the condensate mixed with the steam during passage through the discharge passages, said means for effecting including at least one cross-sectional constriction in said discharge passages.

6,039,682

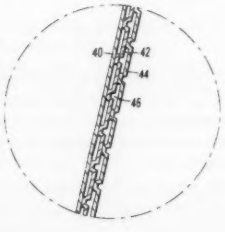
CONTAINERS FORMED OF A COMPOSITE PAPERBOARD WEB AND METHODS OF FORMING

Jerome G. Dees, Appleton, Wis., and Kirk Kimbel, Cincinnati, Ohio, assignors to Fort James Corporation, Deerfield, Ill.

Continuation of application No. 08/736,353, Oct. 23, 1996, abandoned. This application Nov. 20, 1997, Appl. No. 975,059.

Int. Cl.[7] B31B *1/88*

U.S. Cl. 493—58 **7 Claims**



1. A method of forming a composite paperboard container comprising the steps of:

providing a substantially planar sheet of paperboard material;

forming said planar sheet of paperboard material into a container configuration;

providing a first embossed sheet of paperboard material having a plurality of raised portions;

adhering said raised portions of said first embossed sheet of paperboard material to said container configuration formed by said planar sheet of paperboard material;

providing a second embossed sheet of paperboard material having a plurality of raised portions; and

adhering said raised portions of said second embossed sheet of paperboard material to said first embossed sheet of paperboard material to form a container shell.

RECTOSCOPE WITH SEMI-REFLECTIVE TUBE SURFACE

Karl Storz, deceased, late of Tuttlingen, Germany, by Sybill Storz-Reling, executrix, assignor to Karl Storz GmbH & Co. KG, Germany

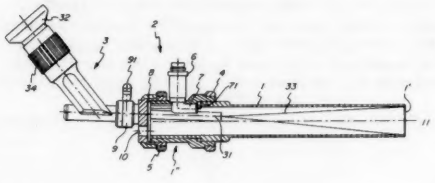
PCT No. PCT/DE96/01989, § 371 Date Jul. 13, 1998, § 102(e) Date Jul. 13, 1998, PCT Pub. No. WO97/14287, PCT Pub. Date Apr. 24, 1997

PCT Filed Oct. 18, 1996, Appl. No. 51,836

Claims priority, application Germany, Oct. 19, 1995, 295 16 561

Int. Cl.[7] A61B *1/06*

U.S. Cl. 600—135 **12 Claims**



1. A rectoscope for examination of a body comprising:

a wide-lumen tube (**1**) having a distal opening (**1'**) which can be inserted into the body;

a light conductor connection (**6**) for transmitting light into said wide-lumen tube (**1**);

a viewing optic (**3**) which can be focused on a center region of the distal opening (**1'**) of said wide-lumen tube (**1**); and

substantially an entire internal side of said wide-lumen tube (**1**) having a semi-reflecting surface such that said internal side of said tube conducts light from said light conductor connection toward the distal opening (**1'**).

6,039,688

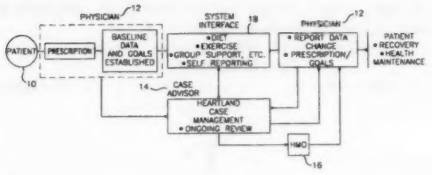
THERAPEUTIC BEHAVIOR MODIFICATION PROGRAM, COMPLIANCE MONITORING AND FEEDBACK SYSTEM

Peter Douglas, Montecito, Calif.; Evan Dudik, Vancouver, Wash.; John Evans, Pittstown, N.J., and Alan Kritzer, Van Nuys, Calif., assignors to Salus Media Inc., Sherman Oaks, Calif.

Provisional application No. 60/029,862, Nov. 1, 1996, Provisional application No. 60/052,222, Jul. 11, 1997. This application Oct. 31, 1997, Appl. No. 962,238.

Int. Cl.[7] A61B *3/00;* **G06F** *15/00*

U.S. Cl. 600—300 **34 Claims**



1. A method for monitoring compliance with a therapeutic behavior modification program, the method comprising the steps of:

providing a therapeutic behavior modification program having a series of milestones for a patient;

inputting patient data at prescribed times;

correlating the patient's data using a microprocessor with the milestones in the therapeutic behavior modification program to determine whether the patient is complying with the program; and

grouping particular data using the microprocessor and linking the data to a remote computer.

6,039,689

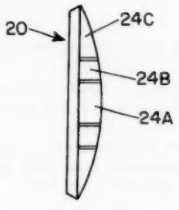
STRIPE ELECTRODE TRANSDUCER FOR USE WITH THERAPEUTIC ULTRASONIC RADIATION TREATMENT

Frederic Lizzi, Tenafly, N.J., assignor to Riverside Research Institute, New York, N.Y.

Filed Mar. 11, 1998, Appl. No. 38,632

Int. Cl.[7] A61B *8/00*

U.S. Cl. 600—439 **10 Claims**



1. Apparatus for providing therapeutic ultrasonic radiation for treatment of tissue, comprising:

a transducer in the shape of a partial sphere formed of piezoelectric material having first and second radially separated surfaces;

a conductive electrode on each of said surfaces, at least one of said electrodes being segmented into electrode segments said electrode segments including segments on opposite sides of a central plane;

and a circuit for selectively providing electrical signals to said electrodes to provide ultrasonic radiation patterns at a focal plane of said transducer which provide a narrow beam width of thermal effect in said central plane and a broad beam width of thermal effect in a plane which is perpendicular to said central plane.

6,039,690

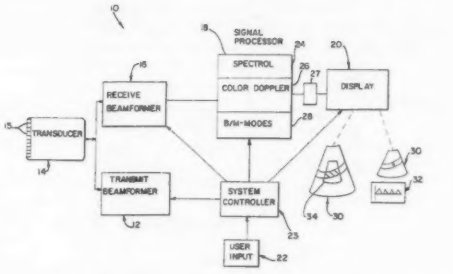
METHOD AND APPARATUS FOR FREQUENCY CONTROL OF AN ULTRASOUND SYSTEM

Gregory L. Holley, Mountain View, and Paul E. Chandler, Santa Cruz, both of Calif., assignors to Acuson Corporation, Mountain View, Calif.

Division of application No. 08/904,829, Aug. 1, 1997, and a continuation-in-part of application No. 08/877,148, Jun. 17, 1997, abandoned. This application Sep. 17, 1998, Appl. No. 156,157.

Int. Cl.[7] A61B *8/00*

U.S. Cl. 600—440 **12 Claims**



1. A method for acquiring data representing a subject during an imaging session with an ultrasound system, said method comprising the following acts:

(a) obtaining M-mode image data representing said subject and responsive to a harmonic receive center frequency of a fundamental transmit frequency during said imaging session, said subject being free of ultrasound contrast agent throughout the entire imaging session; and

(b) displaying at least a M-mode image responsive to said M-mode data.

6,039,691

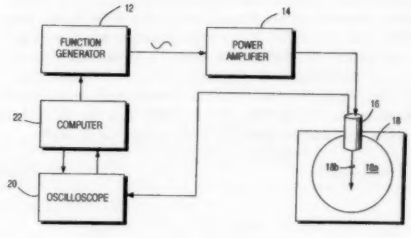
KINETIC ACOUSTIC OCULAR EXAMINATION APPARATUS AND METHOD

William F. Walker, Charlottesville, Va.; Cynthia A. Toth, and Richard E. Davidsen, both of Durham, N.C., assignors to Duke University, Durham, N.C., and Novason Corporation, Charlottesville, Va.

Provisional application No. 60/048,434, Jun. 2, 1997. This application May 29, 1998, Appl. No. 87,148.

Int. Cl.[7] A61B *8/00*

U.S. Cl. 600—452 **21 Claims**



1. A method of examining relatively soft biological tissue comprising the steps of:

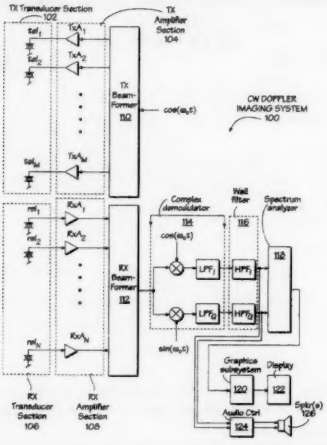
(a) generating a series of ultrasound pulses and directing said series of ultrasound pulses into relatively soft biological tissue such that at least one of the pulses is of sufficiently high intensity to induce physical displacement of the tissue; and

(b) imaging the physically displaced tissue.

6,039,692
METHOD AND APPARATUS FOR PROCESSING ULTRASOUND SIGNALS

Kjell Kristoffersen, Oslo, Norway, assignor to Vingmed Sound A/S, Horten, Norway

Filed Jun. 19, 1998, Appl. No. 99,919
Int. Cl.[7] A61B *8/00*
U.S. Cl. 600—454 **44 Claims**



1. A circuit in an ultrasound system to process signals within the frequency band of a Doppler signal, said circuit comprising:

an input circuit to receive an input signal, said input signal comprising a first component and a second component;

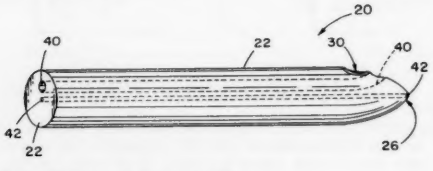
a signal generator coupled to said input circuit, said signal generator generates an approximation signal of said first component; and

a subtractor coupled to said input circuit and to said signal generator, said subtractor subtracts said approximation signal from said input signal to provide an output signal, wherein said output signal represents an approximation of said second component.

6,039,693
VOLUMETRIC IMAGE ULTRASOUND TRANSDUCER UNDERFLUID CATHETER SYSTEM

James Bernard Seward, and Abdul Jamil Tajik, both of Rochester, Minn., assignors to Mayo Foundation for Medical Education and Research, Rochester, Minn.

Continuation of application No. 09/003,248, Jan. 6, 1998, which is a continuation of application No. 08/678,380, Jun. 28, 1996, Pat. No. 5,704,361, which is a continuation-in-part of application No. 08/305,138, Sep. 13, 1994, abandoned, which is a continuation of application No. 07/972,626, Nov. 6, 1992, Pat. No. 5,345,940, which is a continuation-in-part of application No. 07/790,580, Nov. 8, 1991, Pat. No. 5,325,860. This application May 29, 1998, Appl. No. 87,419.
Int. Cl.[7] A61B *8/12*
U.S. Cl. 600—459 **38 Claims**



1. A catheter apparatus, comprising:

an elongated body having a longitudinal axis;

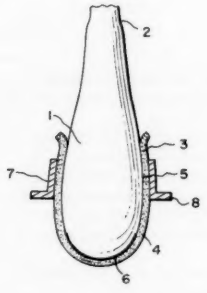
an ultrasonic transducer array longitudinally mounted on the body, the array being operated for transmitting ultrasonic signals for imaging; and

an electrical conductor disposed in the body for electrically connecting the array to a control circuitry.

6,039,694
COUPLING SHEATH FOR ULTRASOUND TRANSDUCERS

Margaret J. Larson, Lummi Island; John W. Rutter, Bellingham, and Larry L. Smith, Seattle, all of Wash., assignors to Sonotech, Inc., Bellingham, Wash.

Filed Jun. 25, 1998, Appl. No. 104,686
Int. Cl.[7] A61B *8/14*
U.S. Cl. 600—459 **35 Claims**



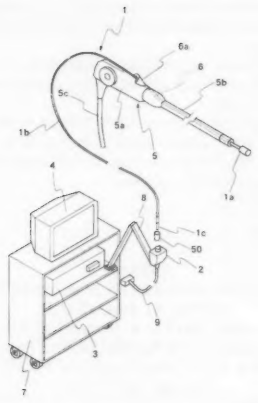
1. A homogeneous, elastic, ultrasound coupling sheath having a shape which is conformal to a medical ultrasound transducer, said sheath comprising a hydrophilic block co-polymer and 20 wt. % to about 95 wt. % biocompatible liquid and having acoustic properties generally equivalent to acoustic properties of a predetermined target, said sheath being lubricous when in contact with said target and providing a microbial barrier between said transducer and said target when said sheath is conformed to said transducer and placed in contact with said target, said sheath being replaceable and disposable.

6,039,695
PROBE COUPLER FOR ULTRASOUND EXAMINATION SYSTEM

Toshio Sakamoto; Toshizumi Tanaka; Hiromu Itoi, and Masatoshi Yoshihara, all of Omiya, Japan, assignors to Fuji Photo Optical Co., Ltd., Omiya, Japan

Filed Jul. 8, 1998, Appl. No. 111,794
Claims priority, application Japan, Jul. 24, 1997, 9-212716
Int. Cl.[7] A61B *8/12*
U.S. Cl. 600—459 **8 Claims**

1. An ultrasound probe coupler for an ultrasound probe of an ultrasound examination system having an ultrasound scanner assembly attached to a nose end of a flexible cord, said ultrasound scanner assembly having an ultrasound transducer element hermetically accommodated within an end cap and said flexible cord being detachably connectable at a tail end thereof to a rotational drive shaft provided on a probe control unit and serving also as an electrode on the side of said probe control unit thereby to remote-control rotation of said ultrasound transducer element for radial scans, said flexible cord member being largely composed of a flexible outer tube and a flexible transmission shaft fitted in said flexible outer tube for rotation therein, said flexible outer tube having a fore end portion thereof detachably connected to said end cap of said ultrasound scanner assembly, and said flexible transmission shaft having a fore end portion thereof connected to said ultrasound transducer element to transmit rotation thereto and



internally providing a passage for a signal cable to said ultrasound transducer element, said probe coupler comprising:

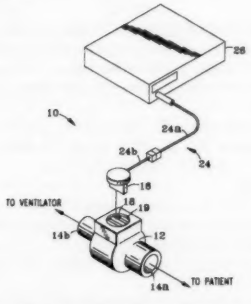
a tail end connector adapted to be provided at said tail end of said flexible cord for connection to said probe control unit, said tail end connector having an electrode member adapted to be provided at a proximal end of said flexible transmission shaft and connected to said signal cable, a stationary ring adapted to be fixedly provided on a tail end portion of said flexible cord, and a rotational coupler for coupling said flexible transmission shaft with a rotational drive means on the part of said probe control unit, said rotational coupler having a rotation transmission pin detachably connected to a lateral side of a projected proximal end portion of said electrode member and projected radially outward of inner periphery of said stationary ring for engagement with a rotational drive means on the part of said probe control unit, said rotation transmission pin being adapted to block axial movements of said electrode member within said stationary ring while transmitting rotation from said rotational drive shaft on the part of said probe control unit to said electrode member.

6,039,696

METHOD AND APPARATUS FOR SENSING HUMIDITY IN A PATIENT WITH AN ARTIFICIAL AIRWAY

Craig J. Bell, E. Swanzey, N.H., assignor to Medcare Medical Group, Inc., East Swanzey, N.H.

Filed Oct. 31, 1997, Appl. No. 962,019
Int. Cl.[7] A61N *5/00*
U.S. Cl. 600—532 **29 Claims**



29. A method for monitoring humidity in a patient with an artificial airway comprising the steps of

installing an Rh sensor humidity sensing device selected from the group consisting of capacitive type and resistive type of Rh sensor technology, in an inspiratory limb of a breathing circuit of said artificial airway in humidity sensing communication with the patient's airflow;

monitoring humidity readings of inspired gas delivered to the patient taken by said Rh sensor humidity sensing device; and

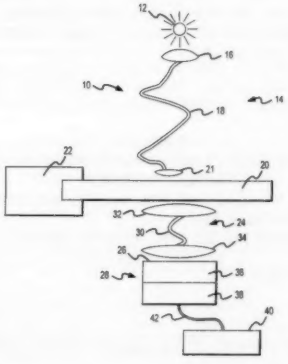
trending the Rh of these inspiratory gases allowing the use of said capacitive type and resistive type of Rh sensor technology.

6,039,697

FIBER OPTIC BASED MULTICOMPONENT INFRARED RESPIRATORY GAS ANALYZER

Thomas A. Wilke, Boulder, and Ziyi Wang, Louisville, both of Colo., assignors to Datex-Ohmeda, Inc., Louisville, Colo.

Filed Mar. 20, 1998, Appl. No. 45,453
Int. Cl.[7] A61B *5/00;5/08;* **G01J** *5/00;5/02*
U.S. Cl. 600—532 **36 Claims**



1. An apparatus for monitoring the composition of a main respiratory gas stream of a patient, said apparatus comprising:

a broad band infrared source capable of producing infrared light having a spectral content distributed at least across a wavelength range from about 4 microns to about 8 microns;

means for detecting infrared signals at a plurality of wavelengths within said wavelength range; and

means for transmitting light between said broad band infrared source and said means for detecting, said light being transmitted at least partially through a respiratory gas conduit outside the patient such that said main respiratory gas stream at said patient can be analyzed free from the need to divert a side stream therefrom for purposes of composition analysis, the main respiratory gas the conduit being adapted for flow of the main respiratory gas stream therethrough, said means for transmitting including fiber optics for transmitting infrared light within said wavelength range.

6,039,698

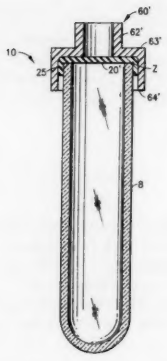
METHOD AND APPARATUS FOR REMOVING BARRIER-TYPE CLOSURES FROM BLOOD COLLECTION TUBES

Henry F. Miller, Clifton, N.J., assignor to Becton Dickinson and Company, Franklin Lakes, N.J.

Filed Sep. 30, 1998, Appl. No. 165,588
Int. Cl.[7] A61B *10/00*
U.S. Cl. 600—576 **12 Claims**

1. In a blood collection tube having an open upper end defined by a perimetrical rim of said tube and a cover having a top surface and a bottom surface and positioned over the open end of said tube, said bottom surface being secured to said rim, a method of lifting said cover from said rim comprising the steps of:

positioning a cap over said cover, said cap being attached to said cover at a location spaced from said rim; and



exerting a force on said cap, in a removal direction, said force being transferred to said cover at said attached location spaced from said rim.

6,039,699

STIFF CATHETER GUIDEWIRE WITH FLEXIBLE DISTAL PORTION

Fernando M. Viera, Hialeah, Fla., assignor to Cordis Corporation, Miami Lakes, Fla.

Filed Jan. 22, 1996, Appl. No. 589,627

Int. Cl.[7] A61B *5/00*

U.S. Cl. 600—585 **22 Claims**

1. A guidewire comprising:

a) an elongated corewire formed from a first material; and

b) an elongated sleeve secured to the corewire such that at least a majority length of the sleeve surrounds at least a portion of the corewire, the sleeve formed from a second material having a relatively greater stiffness than the first material.

6,039,700

DOCKING ASSEMBLY FOR THE EXTENSION OF A GUIDEWIRE

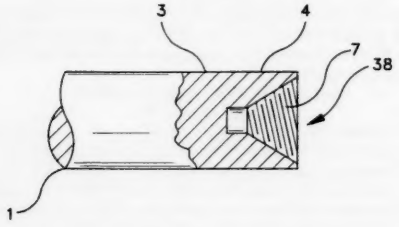
Herbert Sauter, Winkel-Rüti, Switzerland, assignor to Schneider (Europe) A.G., Switzerland

Filed Dec. 12, 1996, Appl. No. 764,531

Claims priority, application European Pat. Off., Jun. 25, 1996, 96110222

Int. Cl.[7] A61B *5/00*

U.S. Cl. 600—585 **3 Claims**



1. A guidewire extension system, comprising:

a flexible guidewire having a distal end, a proximal end, and a conical female screw thread disposed proximate the proximal end thereof;

a flexible extension wire having a distal end, a proximal end, and a conical male screw thread disposed proximate the distal end thereof; and

the conical male screw thread being adapted to releasably mate with the conical female screw thread to form a temporary connection between the proximal end of the guidewire and the distal end of the extension wire.

6,039,701

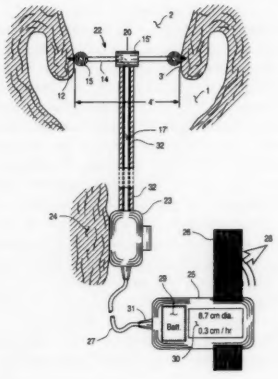
METHOD AND APPARATUS FOR MONITORING CERVICAL DIAMETER

Jack Sliwa, Los Altos, and Lee A. Blumenfeld, San Carlos, both of Calif., assignors to OB Inovations, Inc., San Carlos, Calif.

Filed Sep. 5, 1996, Appl. No. 706,575

Int. Cl.[7] A61B *5/00*

U.S. Cl. 600—588 **70 Claims**



1. A cervimeter comprising:

a loop element which is adapted to be securable to a cervix in a human female, wherein a peripheral length of the loop varies directly with a change in cervical size; and

a gauge coupled to the loop element for measuring the change in loop dimension wherein the gauge is calibrated to show cervical dilation.

6,039,702

MICROCONTROLLER BASED MASSAGE SYSTEM

Stanley Cutler, Van Nuys; Gayle B. Gerth, Dana Point, both of Calif.; Alton B. Otis, Jr., Port Townsend, Wash., and Taylor Chau, Cerritos, Calif., assignors to JB Research, Inc., Bellflower, Calif.

Provisional application No. 60/022,977, Aug. 2, 1996. This application Jul. 28, 1997, Appl. No. 901,374.

Int. Cl.[7] A61H *1/00;23/02*

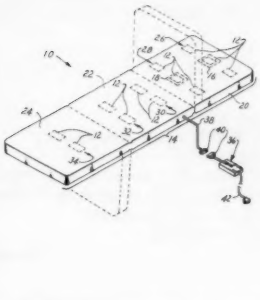
U.S. Cl. 601—15 **21 Claims**

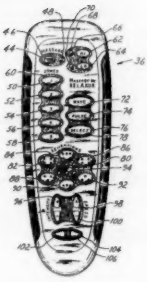
1. A method for massaging a user contacting a pad, using electrical power from a source having a voltage drop as loads are added, the method comprising the steps of:

(a) providing a plurality of eccentric motor vibrators in respective regions of the pad;

(b) providing a microprocessor controller, an array of input elements for interrogation by the controller, and a plurality of drivers for powering the vibrators from the power source in response to the controller;

(c) interrogating the input elements by the controller to determine an intensity control value and vibrators to be activated;





(d) determining a maximum duty cycle being a base duty cycle plus a load increment duty cycle for each of the vibrators to be activated; and

(e) periodically activating the drivers for producing respective operating duty cycles of activated motors being responsive to the intensity control value and limited to the maximum duty cycle.

6,039,703

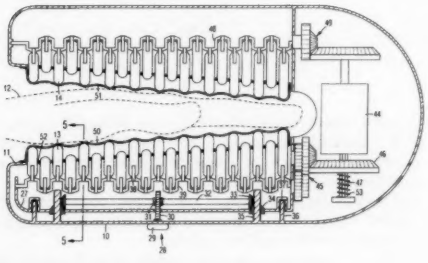
DOUBLE-SIDED MASSAGER

Bernard Badilla, 551 Peralta Ave., San Francisco, Calif. 94110

Filed May 14, 1998, Appl. No. 78,777

Int. Cl.[7] A61H *23/02*

U.S. Cl. 601—61 **9 Claims**



1. A double-sided massager, comprising:

a housing;

a slot extending into said housing for receiving a body part of a person;

a plurality of massaging members arranged on opposite sides of said slot for simultaneously massaging opposite sides of said body part; and

an additional housing with an additional slot and additional massaging members for massaging an additional body part, said housing and said additional housing being hinged together and adjustable in angle relative to each other for enabling said person to position said body part at a comfortable angle relative to said additional body part.

6,039,704

HEAD AND FACIAL MASSAGING APPARATUS

Pierluigi Domenighini, Lallio, and Matteo Clapis, Seriate, both of Italy, assignors to Italian Beauty Inovations, Inc., New York, N.Y.

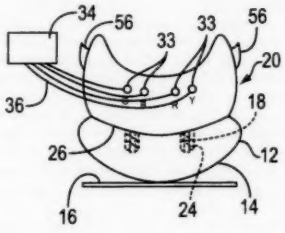
Filed Jun. 25, 1998, Appl. No. 104,380

Int. Cl.[7] A61H *1/00*

U.S. Cl. 601—79 **20 Claims**

1. A head and facial massaging apparatus comprising:

a support base having a generally curved contact surface to contact a supporting surface,



a headrest structure operatively associated with said support base including a mounting structure and a headrest, said headrest being constructed and arranged to receive and support a rear portion of a user's head,

a back shell structure carried by said mounting structure having an upper surface and an opposing lower surface, said upper surface including an expandable bladder structure constructed and arranged to contact a rear portion of a user's head which is not being supported by said headrest,

a front shell structure having a plurality of resilient fingers extending from a surface thereof, said fingers being constructed and arranged to contact certain facial tissue of the user,

connecting structure to secure said front shell structure to said back shell structure to accommodate a users head therebetween such that said front shell structure may move with respect to the user's face,

whereby when said front shell structure is secured to said back shell structure with the user's head therebetween, movement of said bladder structure 1) massages a rear portion of the user's head not being supported by said headrest, and 2) causes the user's head to move with respect to said fingers such that said fingers massage said certain facial tissue while the user's head remains in contact with said headrest,

wherein said mounting structure includes at least one spacer to couple said headrest to said support base so that said headrest is in spaced relation with respect to said support base.

6,039,705

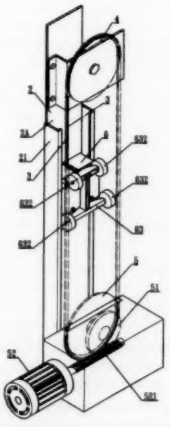
STRUCTURE OF A PAD TYPE ROLLER MASSAGER

Dong-Her Wu, No.141, Sec. 2, Chang Shui Road, Pu Yen Hsiang, Chang Hua Hsien, Taiwan

Filed Jul. 2, 1998, Appl. No. 108,781

Int. Cl.[7] A61H *15/00*

U.S. Cl. 601—99 **5 Claims**



1. An improved structure of a pad type roller massager, comprising:

a limiting frame body, being an elongated high-strength plate having a substantially inverted U-shaped cross section and including two opposed limiting side walls bending inwardly to define a longitudinal recess therebetween, a driven gear and a transmission gear being linked up by a chain and respectively disposed at tip and bottom ends of said limiting frame body, a section of said chain hanging vertically within said recess fo said limiting frame body, said transmission gear being provided with a co-axial driven gear to be screwably connected to a worm gear extended from a spindle of a drive motor so that said motor drives said driven gear of said transmission gear to thereby drive said chain to cyclically move; and

a roller mounting seat, including a seat body fitted into said recess fo said limiting frame body to a certain extent, and limiting bolts fitted with elastic sleeves being provided on both sides of said roller mounting seat and being fitted into both limiting side walls at both sides fo said recess fo said limiting frame body to be subjected to limitation of the vertical sliding displacement thereof, a transverse bolt being utilized to pivotally lock a vertical portion of a substantially T-shaped frame plate to a top side of said roller mounting seat such that said frame plate may displace within a very small angle which is adjustable, both ends of a horizontal portion of said frame plate having movable rollers pivotally mounted thereon a middle portion of the bottom side of said roller mounting seat being positioned on a middle position of said chain, whereby when said chain is driven by said transmission gear, said roller mounting seat will be brought to displace upwardly and downwardly therewith, said movable rollers being configured to project to the from to press against or roll along the back of a user to achieve massaging effects, said elastic sleeves being provided in said limiting frame body to absorb the shock during operation and maintain stability during displacement or movement of said roller mounting seat and said movable rollers.

6,039,706

MEDICAL SPLINT, METAL SHEET FOR SUCH A SPLINT AND ITS USE

Kalman Bolla, and Orsolya Bolla, both of Neuhausen am Rheinfall, Switzerland, assignors to Chrisofix AG, Schaffhausen, Switzerland

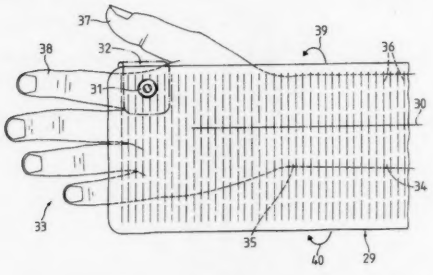
PCT No. PCT/CH96/00450, § 371 Date Aug. 5, 1998, § 102(e) Date Aug. 5, 1998, PCT Pub. No. WO97/22312, PCT Pub. Date Jun. 26, 1997

PCT Filed Dec. 19, 1996, Appl. No. 77,958

Claims priority, application Switzerland, Dec. 20, 1995, 3605/95; Aug. 8, 1996, 1950/96

Int. Cl.[7] A61F *5/00*

U.S. Cl. 602—5 **26 Claims**



1. A medical splint for securing and immobilizing movable body parts, in particular extremities, of a human or an animal along a splint axis, where said splint comprises a sheet metal or plate that is covered on both sides with a covering or a cover layer, characterized in that the sheet metal or the plate is designed so it is corrugated in at least some areas, where the peaks and valleys of the corrugations run essentially across the splint axis,

said splint having an additional reinforcement provided in predetermined areas of said splint, in the form of an inserted strip or plate of sheet metal.

6,039,707

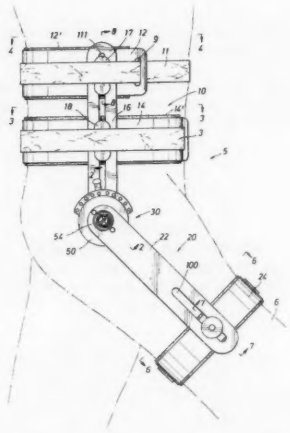
PELVIC SUPPORT AND WALKING ASSISTANCE DEVICE

Michael K. Crawford, 631 Knipp Rd., Houston, Tex. 77024, and James M. Killian, 10215 Sugar Hill, Houston, Tex. 77042

Filed Feb. 16, 1999, Appl. No. 251,010

Int. Cl.[7] A61F *5/00*

U.S. Cl. 602—5 **7 Claims**



1. A pelvic support and walking assistance device comprising,

a trunk support member arranged and designed to be removably secured about a torso of a user, said trunk support member including an upper connection plate,

a thigh linking member arranged and designed to be removably secured about a thigh of said user, said thigh support member including a lower connection plate,

a pivot joint coupled to said upper connection plate and to said lower connection plate and arranged and designed for placement at a side of a hip of said user at a position opposite a hip joint of a user, and

a resilient device coupled between said upper connection plate and said lower connection plate which applies forward torque to said lower connection plate when said user takes a step by raising said thigh,

wherein said trunk support member applies a reactive torque from said torso of said user.

6,039,708

FLEXIBLE CORD COLLAR HARNESS DEVICE

Michael J. Schaming, 82 Sands St., Staten Island, N.Y. 10304

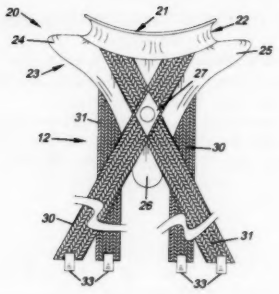
Filed Apr. 9, 1999, Appl. No. 288,561

Int. Cl.[7] A61F *5/00*

U.S. Cl. 602—18 **9 Claims**

1. A collar harness device to protect a user's neck and upper torso from frictional engagement with elongated flexible tubular items including pneumatic hoses and electrical cords wherein the device comprises:

a collar unit including a generally rigid cape member having a collar portion which surrounds the back and a portion of the sides of the user's neck; wherein, the collar portion defines an arcuate trough having an opening that is directed outwardly



from the users neck and dimensioned to receive a portion of a selected one of said elongated flexible tubular items.

6,039,709

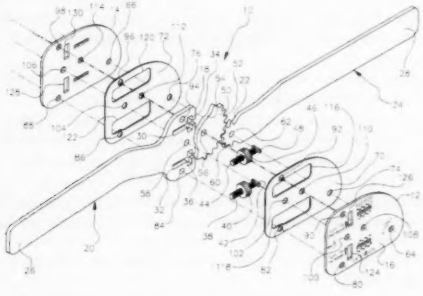
ORTHOPEDIC HINGE ASSEMBLY

Jan J. Bzoch, Treasure Island, Fla., assignor to Orthosis Corrective Systems, Pirellas Park, Fla.

Filed Dec. 16, 1998, Appl. No. 212,224

Int. Cl.[7] A61F *5/00*

U.S. Cl. 602—26 **16 Claims**



15. An orthopedic hinge assembly for use with an orthopedic device comprising:

(a) a top and bottom exterior plate with a first and second spaced apart slot on each top and bottom exterior plate, the first slot on the top exterior plate aligned with a first slot on the bottom exterior plate and the second slot on the top exterior plate aligned with a second slot on the bottom exterior plate;

(b) a first elongated bar having a first end portion attachable to the orthopedic device and having a second end portion containing means to support first and second thumb wheels, each thumb wheel threadably mounted on a screw, the first thumb wheel protruding through the first aligned slots in the top and bottom exterior plates and the second thumb wheel protruding through the second aligned slots in the top and bottom exterior plates;

(c) a second elongated bar having a first end portion adapted to be attached to the orthopedic device and having a second end portion terminated with a circular pattern of gear teeth;

(d) a cam gear juxtaposed to the second end portion of the first elongated bar engageable with the gear teeth of the second elongated bar;

(e) the second end portion of the first elongated bar, the second end portion of the second elongated bar and the cam gear enclosed by the top and bottom exterior plates; and

(f) the exterior plates having corresponding aligned holes through which rivets traverse to retain the hinge assembly together.

6,039,710

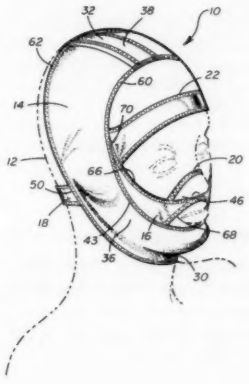
APPARATUS FOR PROVIDING FACIAL SUPPORT

David E. Kelley, Santa Monica; Jeffrey C. Kramer, Sherman Oaks; Jonathan L. Pontell, Beverly Hills; Loretta S. Parral, Studio City; Michelle V. Roth, Venice; Anoush Yergen, Studio City, and Arlene Sanford, Los Angeles, all of Calif., assignors to Twentieth Century Fox Film Corporation, Los Angeles, Calif.

Filed Sep. 29, 1997, Appl. No. 939,694

Int. Cl.[7] A61F *13/12*

U.S. Cl. 602—74 **17 Claims**



16. An apparatus for providing facial support, comprising:

a first band having a first portion, said first band configured to wrap around a human head and said first portion configured to be below a jaw of the human head, said first band being made of a soft stretchable material;

an elastic band separate from and attached to said first band;

a cheek support separate from and attached to said first band, said cheek support in combination with said first band is configured to cover and support at least a portion of both cheeks on the human head, said cheek support and said first band define an aperture for a mouth, said first band and said cheek support are attached at said elastic band; and

a first strap attached to said first band, said first strap designed to fit behind the human bead and cause said cheek support to apply a force to both cheeks on the human head.

6,039,711

SYSTEM FOR LIQUID SEPARATION

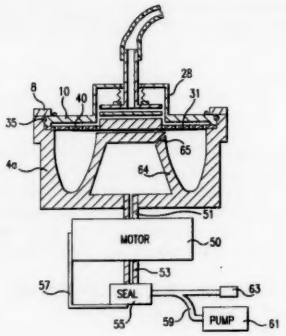
Thomas D. Headley, Wellesley, Mass., and Edward T. Powers, Hampton Falls, N.H., assignors to Transfusion Technologies Corporation, Natick, Mass.

Division of application No. 08/800,085, Feb. 12, 1997, which is a division of application No. 08/322,601, Oct. 13, 1994, Pat. No. 5,733,253. This application Nov. 20, 1998, Appl. No. 197,066.

Int. Cl.[7] A61M *37/00;* **B04B** *11/00*

U.S. Cl. 604—4 **31 Claims**

1. A centrifuge system for accepting a rotor having a rigid mounting member and an elastic diaphragm attached to the mounting member, the system comprising:



means for holding the rigid mounting member of the rotor and for spinning the rotor around an axis; and

means for changing the pressure of a control fluid adjacent the rotor's diaphragm.

6,039,712

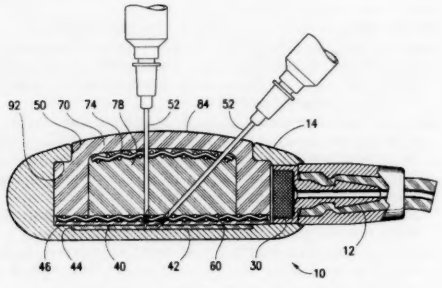
IMPLANTABLE INJECTION PORT

Terence M. Fogarty, 1830 River Ridge Rd., Hudson, Wis. 54016, and Robert A. Arp, Eden Prairie, Minn., assignors to Terence M. Fogarty, Hudson, Wis.

Filed Nov. 4, 1997, Appl. No. 964,473

Int. Cl.[7] A61M *11/00*

U.S. Cl. 604—93 **18 Claims**



1. A low profile implantable injection port for subcutaneous implantation into the body of a patient, comprising:

a generally cup-shaped housing having an open end;

a self-sealing septum mounted to said housing in the open end;

a low aspect ratio fluid channel within the housing below the septum;

a needle-penetrable, non-solid component in the fluid channel to form a low residual fluid-retaining volume within the fluid channel, the component having interconnected pathways for allowing fluid to move through the channel; and

a conduit connector connected to said housing and in fluid communication with said fluid channel for delivering medication from said channel to a patient when attached to a catheter.

6,039,713

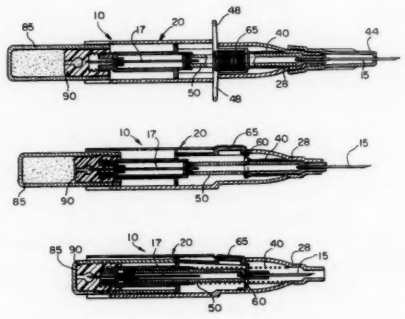
PRE-FILLED RETRACTABLE NEEDLE INJECTION DEVICE

Michael J. Botich, Oxnard; Thor R. Halseth, Simi Valley, and John Barker, Ventura, all of Calif., assignors to MDC Investment Holdings, Inc., Wilmington, Del.

Provisional application No. 60/078,233, Mar. 17, 1998, Provisional application No. 60/058,004, Aug. 28, 1997. This application Aug. 26, 1998, Appl. No. 139,540.

Int. Cl.[7] A61M *5/00*

U.S. Cl. 604—110 **21 Claims**



1. An injection device for use with a pre-filled medication cartridge of the type containing a supply of medication and having a puncturable piston positioned at a forward end therein, the device comprising:

a barrel sized to receive the cartridge and having a forward portion including a bore of a reduced diameter;

a first needle positioned axially within the reduced diameter portion and extending out of the forward portion of the barrel;

a spring positioned in the barrel for exerting a rearward bias on the needle;

a needle retainer positioned in the barrel for retaining the needle within the bore against the rearward bias exerted by the spring;

a second needle in fluid communication with the medication in the cartridge;

a conduit extending between the first needle and the second needle;

an actuator operable to release the needle from the needle retainer;

wherein the spring propels the conduit and the first needle rearwardly upon release of the needle from the needle retainer so that the conduit telescopingly engages the second needle.

6,039,714

COLLAPSIBLE RETENTION BOLSTER FOR GASTROSTOMY AND OTHER OSTOMY TUBES

Raymond F. Cracauer, Plymouth, and Lester D. Michels, Eden Prairie, both of Minn., assignors to Novartis Nutrition AG, Berne, Switzerland

Filed May 12, 1998, Appl. No. 76,443

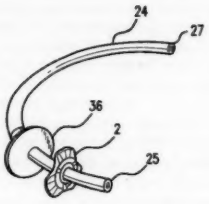
Int. Cl.[7] A61M *5/32;11/00*

U.S. Cl. 604—174 **26 Claims**

1. A collapsible retention bolster for securing an ostomy tube to the inner wall of a body cavity lining of a patient comprising:

a. a central circular base extending outwardly from a central bore with two or more radially disposed, spaced grooves cut therein; and

b. two or more flexible flanges that are grooved along their central axis and extend outwardly from said base portion



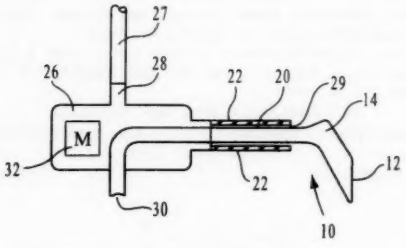
spaced about the periphery thereof and from between the grooves in said base.

6,039,715

ANGULATED PHACOEMULSIFICATION NEEDLE WHOSE OUTER SURFACE CONVERGES AND INNER CHANNEL NARROWS

Richard J. Mackool, 31-27 41st St., Astoria, N.Y. 11103

Filed May 11, 1998, Appl. No. 75,615
Int. Cl.[7] A61M *5/32*
U.S. Cl. 604—272 **15 Claims**



1. A phacoemulsification apparatus comprising:

an elongated, hollow needle body having an evacuation port, a straight portion, and an angulated portion between said evacuation port and said straight portion, said angulated portion changing an angular orientation of said body with respect to said straight portion, said body having an elongated channel that defines said hollow of said body, said body defining said elongated channel to narrow diametrically as the elongated channel extends in a direction toward said straight portion before, at or beyond said angulated portion, said body having an elongated exterior configured to narrow diametrically as the elongated exterior extends in a direction toward said straight portion before, at, or beyond said angulated portion, both said elongated channel and said elongated exterior narrowing in diameter in a direction away from said evacuation port between said straight portion and said angulated portion.

6,039,716

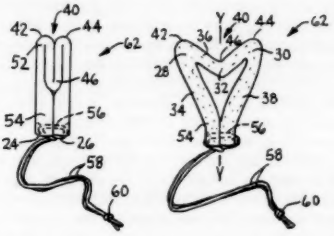
LATERALLY EXPANDABLE TAMPON

James Lyle Jessup, Appleton, and Donald Henry Paalman, Kaukauna, both of Wis., assignors to Kimberly-Clark Worldwide, Inc., Neenah, Wis.

Continuation-in-part of application No. 08/695,494, Aug. 12, 1996, abandoned, and a continuation-in-part of application No. 08/700,599, Aug. 12, 1996, Pat. No. 5,659,934. This application Feb. 27, 1998, Appl. No. 32,232.
Int. Cl.[7] A61F *13/15*
U.S. Cl. 604—385.1 **20 Claims**

15. A tampon comprising:

a) an absorbent having a generally circular cross-sectional configuration;



b) a liquid-permeable cover circumferentially surrounding said absorbent to form an elongated softwind having a first end and a second end, said softwind being folded upon itself at three spaced apart locations to form an M-shaped profile, said softwind being compressed into a cylindrically shaped pledget having an insertion end and a trailing end with said insertion end containing a greater amount of absorbent than said trailing end, said insertion end having a cleft formed therein which is capable of laterally expanding immediately upon insertion into a woman's vagina; and

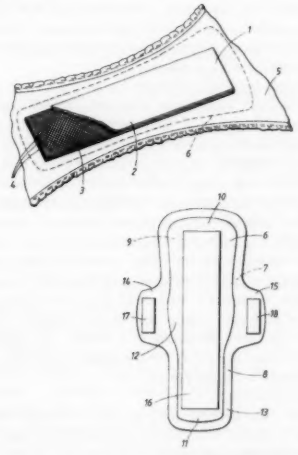
c) a withdrawal string attached to said trailing end of said pledget and passing through an aperture formed through both said absorbent and said cover and securing said first end in direct contact to said second end to form said trailing end of said pledget to restrict expansion of said trailing end of said pledget.

6,039,717

ADHESIVE FASTENING DEVICE

Björn Larsson, Örsviksvägen, Sweden, assignor to SCA Hygiene Products AB, Goteborg, Sweden

PCT No. PCT/SE96/00946, § 371 Date Jan. 23, 1998, § 102(e) Date Feb. 2, 1998, PCT Pub. No. WO97/05842, PCT Pub. Date Feb. 20, 1997
PCT Filed Jul. 12, 1996, Appl. No. 248
Claims priority, application Sweden, Aug. 3, 1995, 9502747
Int. Cl.[7] A61F *13/15*
U.S. Cl. 604—391 **8 Claims**



1. A fastening device for removeable fastening on textile or textile-like material surfaces, comprising a self-adhesive, pressure sensitive adhesive layer with a first surface intended to be permanently joined to a substrate and a second surface intended to serve as a fastening surface onto the textile or textile-like material surface, wherein a non-adhesive covering layer having a thickness which does not exceed 0.5 mm and having a plurality of penetrat-

ing openings or pores arranged essentially perpendicularly to the plane of the covering layer is arranged on and affixed to the fastening surface of the adhesive layer and wherein the distance between two adjacent openings or pores in the covering layer does not exceed 3 mm, wherein the covering layer comprises an essentially incompressible nonwoven material or net material being made of relatively coarse threads or fibres in the order of 5–10 dtex and having a surface weight between 7 g/m^2 and 20 g/m^2, wherein the relation between the dimension of the openings or pores in the covering layer and the coarseness of the fibers is such that the fastening device exhibits adhesion onto textile or textile-like material surfaces, but essentially no adhesion onto smooth material surfaces.

6,039,718

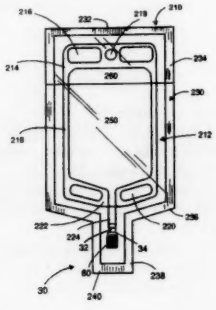
MULTIPLE USE UNIVERSAL CONNECTOR

John J. Niedospial, Jr., Burlington, N.J., assignor to Bracco Research USA, Princeton, N.J.

Continuation-in-part of application No. 09/119,470, Jul. 20, 1998, which is a continuation-in-part of application No. 09/009,487, Jan. 20, 1998. This application Feb. 9, 1999, Appl. No. 246,798.

Int. Cl.^{7} A61B *19/00*

U.S. Cl. 604—408 **20 Claims**



1. A multiple use universal connector and flexible medical container assembly containing a light-sensitive medical fluid therein packaged in an overwrap to prevent degradation of said light-sensitive medical fluid wherein:

(a) said flexible medical container comprises:

first and second transparent polymeric sheets superimposed and sealed together at their periphery defining an interior reservoir for the containment of said light-sensitive medical fluid, said flexible medical container having an inside wall, an outside wall, a top portion and a bottom portion;

an access port located at the bottom portion sealed between said first and second transparent polymeric sheets;

(b) a multiple use universal connector sealed into said access port, said multiple use universal connector comprising:

(1) a connector body of tube-like configuration having a distal end and a proximal end, said distal end being slideably inserted into said access port of said flexible medical container and said proximal end sealing the light-sensitive medical fluid in said flexible medical container by an

(2) elastomeric diaphragm and a

(3) removable cap;

(4) a first cap-locking ring on the proximal end of said connector body which serves as a male thread to receive said removable cap; and

(5) a second cap-locking ring, spaced from said first cap-locking ring towards the distal end of said connector body, which serves as stopping means for the removable cap when the removable cap is threaded onto the connector body;

said elastomeric diaphragm is of M-shaped configuration, capable of flexing under pressure sealing said proximal end of said connector body, and being capable of re-sealing itself after being pierced by an external access means; and

said removable cap being threaded onto the proximal end of said connector body to protect said elastomeric diaphragm from environmental forces to maintain said diaphragam in aseptic condition prior to removal of said removable cap for accessing the light-sensitive medical fluid of the flexible medical container or transferring a light-sensitive medical fluid to said flexible medical container by an external access means;

said flexible medical container and said multiple use universal connector assembly being enclosed in an overwrap,

(c) said overwrap comprises:

first and second tarnapartent UV rays barrier polymeric sheets with an inside wall and an outside wall having a square, round oval, hexagonal, octagonal or rectangualr configuration superimposed and sealed together at their periphery hermetically sealing said flexible medical container and said universal connector assembly preventing penetration of UV rays into the light-sensitive medical fluid container in said flexible medical container.

METHOD AND CATHETER SYSTEM FOR DELIVERING MEDICATION WITH AN EVERTING BALLOON CATHETER

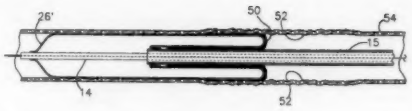
Kirk Johnson, Miami Lakes, Fla., and Merril L. Knudtson, Calgary, Canada, assignors to Cordis Corporation, Miami, Fla.

Division of application No. 08/686,163, Jul. 24, 1996, abandoned. This application Dec. 3, 1997, Appl. No. 984,576.

Int. Cl.[7] A61M *31/00*

U.S. Cl. 604—508 **2 Claims**

1. A process of applying a medication to a diseased portion of a blood vessel with a catheter having a balloon connected to distal ends of inner and outer tubes, comprising:



providing a balloon catheter having an inner and outer tube which are longitudinally adjustable with respect to each other, and a balloon affixed at opposing ends of the balloon to a distal end of one of the inner and outer tubes; the balloon defining a medication portion, and a lumen being defined between the inner and outer tubes;

applying a coating of medication to the medication portion of a surface of the balloon;

positioning distal ends of the inner and outer tubes in closely spaced relationship and folding the balloon on itself such that the balloon assumes an annular everted shape defining inner and outer balloon layers, wherein the entire balloon surrounds some portion of one of the inner and outer tubes; the medication portion of the balloon being arranged on the inner layer which is internal, and the balloon having a shielding portion of the balloon on the outer layer which surrounds the remainder of the balloon;

inserting the catheter into the vessel and positioning the balloon adjacent the diseased portion of the blood vessel;

inflating the balloon by delivering fluid through the lumen defined between the tubes and communicating with the balloon;

continuing the inflation until the shielding portion engages the vessel adjacent the diseased portion;

longitudinally adjusting the inner and outer tubes relatively to unfold the balloon as the inflation continues, thereby bringing the medication portion into contact with the diseased portion of the blood vessel, to apply the medication to the diseased portion; and

deflating the balloon and removing the catheter from the vessel.

6,039,722

DEVICE FOR SECURING THE ENDS OF CATHETER GUIDE WIRES

Michael Greive, Kirchstrasse 4, D-48308 Ottmarsbocholt, Germany

Continuation of application No. 08/525,754, filed as application No. PCT/EP94/04054, Dec. 6, 1994, abandoned. This application Aug. 20, 1998, Appl. No. 137,897.

Claims priority, application Germany, Dec. 23, 1993, 93 19 838 U

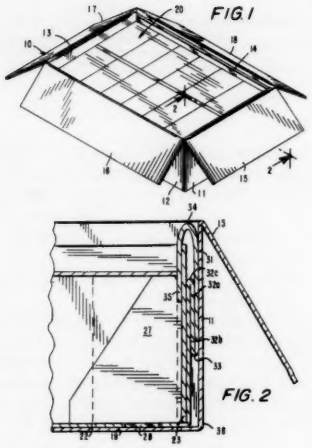
Int. Cl.[7] A61M *25/00*

U.S. Cl. 604—528 **5 Claims**

1. An apparatus for straightening the end of a catheter guide wire, said apparatus comprising;

an elongate tube for storing a catheter guide wire, said tube having end;

an elongate hollow element open at both ends, said element including a cylindrical section dimensioned to receive said end of said tube, and a conical section which tapers in a direction away from said cylindrical section, a U-shaped slit in the wall of said hollow elongate element and extending in the longitudinal direction of said hollow element and defining a first edge, the legs of said U-shaped slit defining a flexible tongue having two ends, said tongue secured at a first end to said wall, the second end of said tongue is free, at least a portion of said tongue depressable into said hollow element, substantially parallel to the longitudinal direction of said elongate hollow element, said at least a portion of said tongue



received in said end of said tube, whereby said tongue engages a catheter guide wire stored in said tube to prevent displacement of said catheter guide wire in said longitudinal direction.

CATHETER

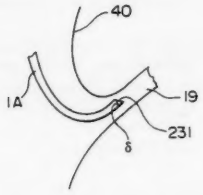
Junichi Tanaka, Angyouhara 930-32, Kawaguchi-shi, Saitama; Kunio Miyoshi, 10-18, Koushien 3-bancho, Nishinomita-shi, Hyougo, and Sensuke Yamashita, 10-4, Kitarokkoudai 3-chome, Nishinomiya-shi, Hyougo, all of Japan, assignors to Junichi Tanaka, Kawaguchi; Kunio Miyoshi, and Sensuke Yamashita, both of Nishinomiya, all of Japan

Filed Nov. 12, 1997, Appl. No. 969,014

Claims priority, application Japan, Nov. 12, 1996, 8-300578; Oct. 14, 1997, 9-280682

Int. Cl.[7] A61M *25/00*

U.S. Cl. 604—532 **15 Claims**



1. A coronary artery angiographic and percutaneous transluminal coronary angioplasty guiding catheter, comprising:

a substantially tubular distal top portion having an open distal end;

a substantially tubular proximal main portion; and

a substantially tubular bend portion connectively provided between said distal top portion and said proximal main portion,

wherein at the distal end of said distal top portion an inclined portion is formed, the inclined portion being inclined such that a length of said distal top portion is shorter on an inside periphery of said bend portion than on an outside periphery of said bend portion and wherein the inclined portion comprises a closed portion being bent and sealed.

6,039,724

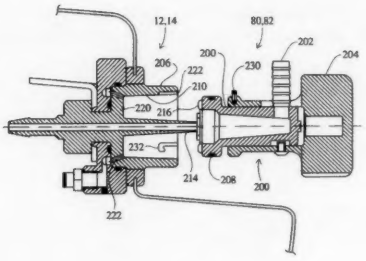
MEDICAL AND BIOLOGICAL FLUID COLLECTION AND DISPOSAL SYSTEM

Raymond C. Seifert, Chardon, and John R. Bradbury, Strongsville, both of Ohio, assignors to Steris Corporation, Mentor, Ohio

Division of application No. 08/571,533, Dec. 13, 1995, Pat. No. 5,776,118. This application Apr. 20, 1998, Appl. No. 62,909. This patent is subject to a terminal disclaimer.

Int. Cl.[7] A61M *25/00*

U.S. Cl. 604—533 **5 Claims**



1. A self-disinfecting fitting assembly comprising:

an inlet fitting including:

a tubular member for frictionally receiving tubing along an outer surface thereof, the tubing member having an internal passage for receiving fluids from the tubing,

an outer peripheral wall surrounding the tubular member,

a base wall interconnecting the peripheral wall and the tubular member to define a well around the tubular member,

a drain outlet extending from a region adjacent an intersection of the peripheral and base walls;

an outer covering member including:

a housing member having a peripheral edge which frictionally engages the inlet fitting peripheral wall in a fluid tight seal,

a plurality of projections for holding the housing member offset from the inlet fitting base wall and defining a fluid passage in fluid communication with the drain outlet,

the housing member defining an internal chamber which surrounds the tubular member in a spaced relationship thereto, and

a fluid inlet into the housing member internal chamber for receiving a disinfectant fluid.

6,039,725

APPARATUS AND METHOD FOR SECURING A MEDICAL INSTRUMENT TO A CANNULA OF A TROCAR ASSEMBLY

Stephen P. Moenning, 124 Hibiscus, Punta Gorda, Fla. 33950, and Charles Manker, 35 N. Greenbay Rd., Lake Forest, Ill. 60045

Division of application No. 08/840,668, Apr. 29, 1997. This application Nov. 3, 1998, Appl. No. 185,335.

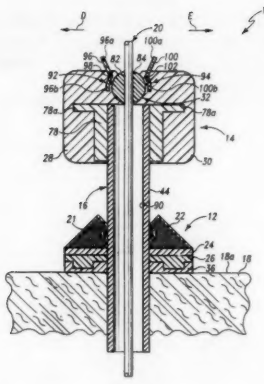
Int. Cl.[7] A61M *25/00*

U.S. Cl. 606—1 **8 Claims**

1. A method for securing a medical instrument to a cannula of a trocar assembly, wherein said cannula defines a cannula passageway extending therethrough, comprising the steps of:

attaching an instrument retainer to said cannula, said instrument retainer including an instrument holder (1) having a passageway extending therethrough and (2) being rotatable secured to said instrument retainer,

inserting said instrument through said passageway, and



rotating said instrument holder relative to said instrument retainer so that said passageway of said instrument holder tilts relative to said cannula passageway.

METHOD AND APPARATUS FOR CONCENTRATING LASER BEAMS

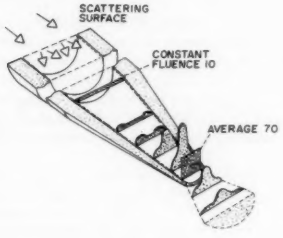
Aaron Lewis; Daniel Palanker, and Igor Turovets, all of Jerusalem, Israel, assignors to Nanoptics, Inc., Jerusalem, Israel

PCT No. PCT/US95/00540, § 371 Date Oct. 15, 1996, § 102(e) Date Oct. 15, 1996, PCT Pub. No. WO95/19811, PCT Pub. Date Jul. 27, 1995

PCT Filed Jan. 23, 1995, Appl. No. 676,223

Int. Cl.[7] A61N *5/06*

U.S. Cl. 606—3 **11 Claims**



1. A device for delivery of an ArF excimer laser beam for microsurgery, comprising:

an elongated, fused silica optical fiber having a conical end portion having an inlet end with a first diameter and an outlet end with a second diameter, said fiber having an energy fluence threshold at which laser light from an excimer laser tends to damage the fiber;

an exit aperture at said outlet end, said exit aperture having a diameter which is smaller than the diameter of said inlet end, said conical portion of said fiber serving as an energy fluence concentrator for an excimer laser beam supplied to said inlet end;

a scattering surface in said fiber prior to said inlet end of said conical portion for scattering the laser beam supplied to the inlet end to increase the divergence of, and to produce peak energy broadening in, the laser beam supplied to said concentrator, the scattering surface being selected to maximize the energy fluence of the exit beam while maintaining an energy fluence level within the tapered portion which is below said threshold; and

said conical portion being tapered inwardly from its inlet end to its outlet end to concentrate the laser beam to permit an increase in energy fluence at the exit aperture which is sufficient to permit ablation of materials in soft tissue microsurgery by the exit beam.

6,039,727

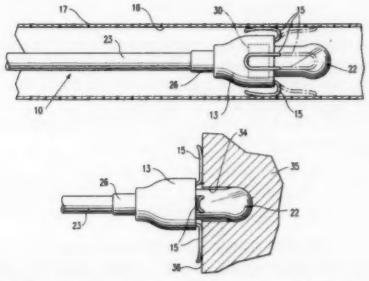
CHANNEL FORMING DEVICE WITH PENETRATION LIMITER

Manuel A. Javier, Jr., Santa Clara; Stephen B. Pearce, Fremont; Randy J. Kesten, Mountain View; Sam G. Payne, Santa Clara, and Kevin Gertner, Campbell, all of Calif., assignors to Cardiogenesis Corporation, Santa Clara, Calif.

Continuation-in-part of application No. 08/482,125, Jun. 7, 1995. This application Jan. 11, 1996, Appl. No. 584,957.

Int. Cl.[7] A61N *5/06*

U.S. Cl. 606—10 **21 Claims**



1. A device for forming a channel into a ventricular wall of a patient's heart comprising:

a) an elongated shaft having a proximal shaft section, a distal shaft section and a distal end;

b) at least one optical probe member disposed on the distal end of the shaft which has a proximal end, a distal end, and an energy emitting surface disposed on the distal end, said energy emitting surface configured for engaging the ventricular wall of the patient's heart, emitting laser energy, forming a channel therein, and mechanically penetrating said channel; and

c) at least one radially expandable member secured to the optical probe member having a penetration limiting surface when in an unconstricted state, the entire penetration limiting surface being spaced proximally from the energy emitting surface of the optical probe member and the penetration limiting surface being configured to limit penetration of the energy emitting surface of the optical probe member into the ventricular wall during formation of the channel therein to a distance substantially equal to a distance between the energy emitting surface and the penetration limiting surface.

6,039,728

WORKING SHAFT FOR PHOTO-THERMAL THERAPY

Hans-Peter Berlien; Gerhard Muller; Jürgen Beuthan, and Carsten Philipp, all of Berlin, Germany, assignors to Ceram Optec GmbH, Bonn, and Huttinger Medizintechnik GmbH, Umkirch, both of Germany

PCT No. PCT/DE93/00321, § 371 Date Dec. 5, 1994, § 102(e) Date Dec. 5, 1994, PCT Pub. No. WO93/19680, PCT Pub. Date Oct. 14, 1993

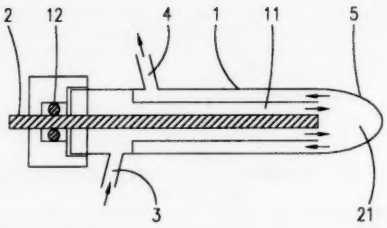
PCT Filed Apr. 2, 1993, Appl. No. 313,256

Claims priority, application Germany, Apr. 6, 1992, 42 11 526; Oct. 30, 1992, 42 37 286

Int. Cl.[7] A61B *17/36*

U.S. Cl. 606—15 **28 Claims**

1. An optical working shaft system for photo-thermal therapy comprising a working shaft for insertion into a working tube of at



least one of an endoscope and a catheter, the working shaft having a distal end defining a distal area in the vicinity thereof, the working shaft further comprising:

means for radiating, in a controlled manner, optical beams through the distal end;

an optical dome disposed at the distal end, being transparent to active components of the optical beams;

a fluid for scattering the beams contained at least in the distal end of said dome and for removing waste heat generated by a scattering of the beams, the fluid being associated with the means for radiating such that, at least in the distal area, a path of beams extends inside the fluid; and

wherein said fluid for scattering and for removing waste heat has multi-phases to effect the scattering.

6,039,729

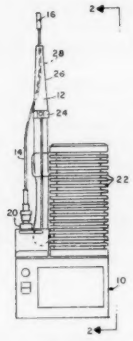
PORTABLE CAUTERY SYSTEM

Frederick M. Durville, Chelmsford; Raymond J Connolly, Pembroke; John C Lantis, Somerville; Robert H Rediker, Watertown, and Steven D. Schwaitzberg, Canton, all of Mass., assignors to Cynosure, Inc., and N. E. Medical Center Hospitals, both of Mass.

Filed Aug. 8, 1997, Appl. No. 910,949

Int. Cl.[7] A61B *17/32*

U.S. Cl. 606—16 **14 Claims**



1. A thermo-coagulator system for the coagulation of body tissue to avoid direct delivery of optical energy to said body tissue, comprising:

a medical instrument having a pair of biasable fingers, each of said fingers having a distal end with a metal tip secured thereon, at least one of said tips having a bore therein, said bore having an open end and an optical energy enclosing closed end;

an optical conduit having a distal end arranged within said bore in said metal tip, said distal end of said optical conduit facing said closed end of said bore; and

a source of optical energy coupled to said optical conduit to provide actuatable heat so as to raise the temperature of said metal tip on at least one of said fingers to permit said forceps to coagulate tissue.

6,039,730

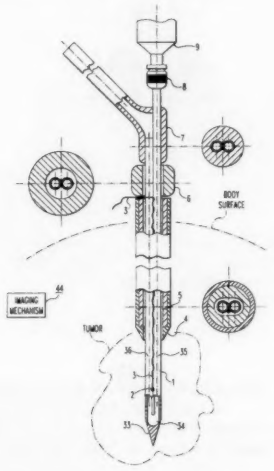
METHOD AND APPARATUS FOR CRYOSURGERY

Yoed Rabin; Thomas Benjamin Julian, and Norman Wolmark, all of Pittsburgh, Pa., assignors to Allegheny-Singer Research Institute, Pittsburgh, Pa.

Filed Jun. 24, 1996, Appl. No. 668,692

Int. Cl.[7] A61B *17/36*

U.S. Cl. 606—23 **20 Claims**



1. An apparatus for cryosurgery comprising:

a cryoneedle having an external surface, a tip at a first end, the cryoneedle has an inlet tube through which cryofluid flows during application of the cryoneedle to the tip and an outlet tube through which cryofluid flows during application of the cryoneedle from the tip; and

a thermal insulation shell disposed about a portion of the external surface of the cryoneedle for reduction of heat transfer from surrounding tissues of a body of a patient or freezing prevention of surrounding tissues of the body of the patient during application of the cryoneedle with the shell, said cryoneedle and shell configured for contact with the body of the patient, said shell about the portion of the external surface of the cryoneedle having an outer diameter of less than 3.2 mm.

ELECTRIC OPERATION APPARATUS

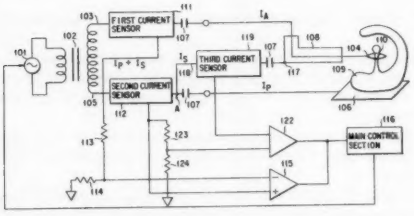
Yoshito Ichikawa, Saitama-ken; Takashi Mihori, Hachioji; Tomohisa Sakurai, Sagamihara, and Yoshitaka Honda, Tokorozawa, all of Japan, assignors to Olympus Optical Co., Ltd., Tokyo, Japan

Filed Apr. 12, 1996, Appl. No. 631,272

Claims priority, application Japan, Apr. 18, 1995, 7-092706; May 1, 1995, 7-107508; May 24, 1995, 7-125148; May 16, 1995, 7-117521

Int. Cl.[7] A61B *17/36*

U.S. Cl. 606—38 **4 Claims**



1. An electric operation apparatus for performing a high frequency treatment on organic tissue, comprising:

selection means for selecting one of a plurality of high frequency output modes, said plurality of high frequency output modes including a spray coagulation mode in which a high releasing voltage is generated so that a breakdown is induced in air to thereby cause arc discharging at an output end, and so that a coagulation effect is generated by a high frequency current which flows when the arc discharging occurs, even though the organic tissue being treated is not in contact with an active electrode;

high frequency generator means, including a waveform generator section for generating waveforms corresponding to respective modes of the plurality of high frequency output modes, for outputting high frequencies corresponding to respective waveforms;

control means for controlling the high frequency generator means in accordance with selection operations performed by the selection means;

an active line connected to the high frequency generator means and including an active electrode;

a counter plate line connected to the high frequency generator means and including a counter plate; and

monitor means for detecting a current value of the high frequency current which flows between the active line and the counter plate line when the spray coagulation mode is selected by the selection means, and for inputting the current value into the control means;

wherein said control means further comprises:

means for holding in advance a threshold value at which the arc discharging is generated at the output end;

means for comparing the current value input by the monitor means and the threshold value, when the spray coagulation mode is selected by the selection means;

means for determining whether arc discharging has occurred at the output end, based on a result of the comparison; and

means for (i) controlling the high frequency generator means to continuously output a waveform corresponding to the spray coagulation mode generated by the waveform generator section if arc discharging at the output end is detected based on the result of the comparison, and (ii) controlling the high frequency generator means to intermittently output at a predetermined cycle a waveform corresponding to the spray coagulation mode generated by the waveform generator section if arc discharging at the output end is not detected based on the result of the comparison.

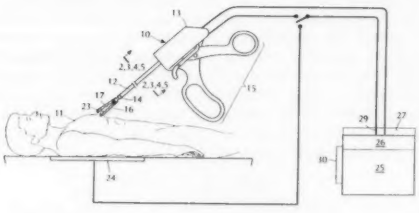
METHOD OF VASCULAR TISSUE SEALING PRESSURE CONTROL

Steven P. Buysse, Longmont; Jenifer S. Kennedy, Boulder; Michael J. Lands, Louisville; Donald R. Loeffler, Longmont; S. Wade Lukianow, Boulder, and Thomas P. Ryan, Fort Collins, all of Colo., assignors to Valleylab, Inc., Boulder, Colo.

Division of application No. 08/530,450, Sep. 19, 1995, Pat. No. 5,776,130. This application Jun. 25, 1998, Appl. No. 104,728.

Int. Cl.[7] A61B *17/36*

U.S. Cl. 606—40 **20 Claims**



1. A method for surgically clamping and sealing tissue, comprising the steps of:

providing an instrument comprising:

an elongated support having a user end and a patient end;

an actuator for operation by a user;

a pair of end effectors proximal to said patient end wherein at least one of said pair of end effectors is attached to said actuator to control the relative motion between said pair of effectors;

a lost motion connection between at least one of said pair of end effectors and said actuator;

an active electrode disposed on one of said pair of end effectors;

a return electrode adapted for contact with the tissue and which completes an electrical circuit between said active and return electrodes;

an electrosurgical energy supply for transmitting electrosurgical energy through said electrical circuit and across said active and return electrodes when the tissue is clamped between said pair of end effectors; and

a control associated with said electrosurgical energy supply to regulate an amount of electrosurgical energy to the tissue in response to the application of the predetermined clamping force;

positioning the tissue between said pair of end effectors;

transferring user manipulation of said actuator to at least one of said pairs of end effectors through said lost motion connection so as to maintain a predetermined clamping force irrespective of the user manipulation during sealing of the tissue between said pair of end effectors;

maintaining a predetermined clamping force during sealing of the tissue between said pair of end effectors; and

applying electrosurgical energy for sealing the held tissue in response to the application of the predetermined clamping force to the tissue between said pair of effectors.

FASTENER

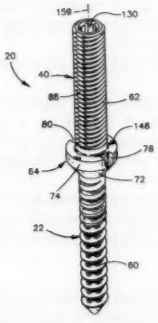
Marcus Maria Sanders, Cleveland Hts.; John Mark Kapitan, Shaker Hts., and Henry John Harding Brown, Solon, all of Ohio, assignors to Depuy Orthopaedics, Inc., Warsaw, Ind.

Continuation of application No. 08/887,832, Jul. 3, 1997, Pat. No. 5,899,902. This application Nov. 5, 1998, Appl. No. 186,567.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] A61B *17/70*

U.S. Cl. 606—61 **31 Claims**



1. A fastener for use in retaining vertebrae in a desired spatial relationship, said fastener comprising

a mount section having threads adapted to engage a vertebra,

a head extending radially outwardly from the mount, the head including an end surface facing away from the mount section, a side surface disposed in a generally coaxial relationship with the threads, and spaced-apart first and second recesses each having an opening that is at least partially defined by the side surface, the first and second recesses being separated by a continuous segment of the end surface that is generally free of discontinuities, and

a retainer coupled to the head and including second external threads adapted to engage an internally threaded member.

6,039,739

TARGETING APPARATUS FOR A LOCKING NAIL

Bernd Simon, Kiel, Germany, assignor to Howmedica GmbH, Germany

Filed Apr. 7, 1999, Appl. No. 287,895

Claims priority, application Germany, Apr. 9, 1998, 298 06 564 U

Int. Cl.[7] A61B *17/56*

U.S. Cl. 606—64 **14 Claims**

1. A targeting apparatus for a locking nail with a first section which is releasably connectable to the allocated end of the nail, with a bow-like second section connected to the first section, which comprises a receiving section running approximately parallel to the nail when the nail is connected to the first section and which comprises at least one transverse bore for the approximate fitting accommodation of a guiding sleeve, wherein the receiving section consists of a first part rigidly formed with the second section and facing the first section, and of an outer second part movable relative to the first part against spring force, wherein the transverse bore extends through both parts and the bore in the parts is selected such that with a relaxed second part the sleeve is held in a slightly clamping manner and with a certain adjustment of the second part towards the first part is freely displaceable in the bore.

6,039,740

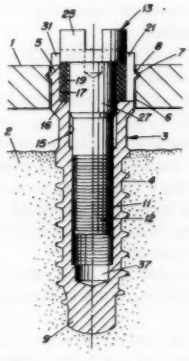
METHOD AND A DEVICE FOR IMPLANT LOCKING

Sven Olerud, Villa Malmen, S-740 11 Länna, Sweden

Filed Aug. 7, 1997, Appl. No. 908,188

Int. Cl.[7] A61B *17/00*

U.S. Cl. 606—72 **19 Claims**



1. An arrangement for locking implant elements to each other, comprising:

a first implant element having an end part;

a second implant element having a hole therein for receiving the end part, the first implant element extending through the hole;

a sleeve-shaped lock, an axial direction of the sleeve-shaped lock coinciding with an axial direction of the end part, the sleeve-shaped lock being arranged in a locking space in the form of an inner annular recess in the end part to rest with a lower end of the sleeve-shaped lock on a lower shoulder of the locking space; and

a tightening element screwed into tightening engagement with the first implant element while being engaged with the sleeve-shaped lock so as to compress the sleeve-shaped lock, the tightening element and the sleeve-shaped lock being arranged to cooperate such that the sleeve-shaped lock, during tightening of the tightening element, exerts a pressure directed at least essentially to all sides on circumferential wall parts of the end part to cause the wall parts to engage the second implant element and lock the first implant element and the second implant element together.

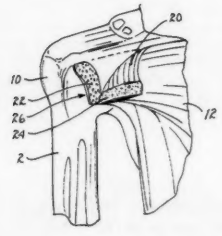
METHOD FOR SURGICAL REPAIR WITH HOOK-AND-LOOP FASTENER

Robert J. Meislin, 6234 N. 47th St., Paradise Valley, Ariz. 85253

Division of application No. 08/911,223, Aug. 15, 1997, Pat. No. 5,906,617. This application May 21, 1999, Appl. No. 316,221.

Int. Cl.[7] A61B *17/00*

U.S. Cl. 606—72 **34 Claims**



1. A method for re-attaching at least one of a tendon and ligament to bone comprising the steps of:

providing a first sheet of material;

providing a first component comprising hooks located on said first sheet of material;

providing a second sheet of material integrally connected to said first sheet of material;

providing a second component comprising loops on said second sheet of material;

each said first sheet and said second sheet of material, said hooks and said loops consisting essentially of tissue repair material, said hooks and said loops located opposite each other to facilitate coupling of said hooks to said loops;

exposing an unattached portion of at least one of a tendon and ligament requiring attachment;

exposing an attachment site on a bone for said unattached portion of said at least one of a tendon and ligament requiring attachment;

affixing one of said first sheet having said first component comprising hooks and said second sheet having said second component comprising loops to said unattached portion of at least one of a tendon and ligament requiring attachment;

affixing the other of said first sheet having said first component comprising hooks and said second sheet having said second component comprising loops to said attachment site on said bone to permit attachment of said unattached portion of said at least one of a tendon and ligament requiring attachment to said attachment site; and

fastening together said first and second components to provide a secure attachment of said bone to said one of a tendon and ligament.

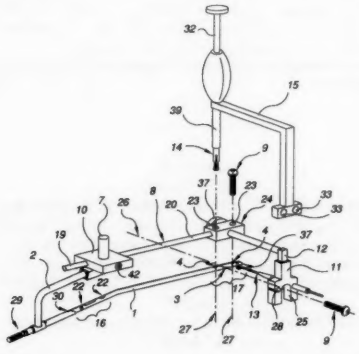
ALIGNMENT DEVICE FOR LOCKING THE BASE PART OF INTRAMEDULLARY NAILS

Christian Krettek, Hannover; Bernd Könemann, Celle, both of Germany; Alexandre Perrier, Basel, and Peter Senn, Waldenburg, both of Switzerland, assignors to Synthes (U.S.A.), Paoli, Pa.

Continuation of application No. PCT/CH97/00172, May 2, 1997. This application Nov. 3, 1998, Appl. No. 185,130.

Int. Cl.[7] A61B *17/58;17/00*

U.S. Cl. 606—96 **19 Claims**



1. An alignment device for positioning and inserting osteosynthetic fasteners in an intramedullary nail implanted in a bone, said alignment device comprising:

an alignment bracket detachably connectable to an intramedullary nail;

a coupling unit connected to the alignment bracket;

a longitudinal alignment bar having a first section which is longitudinally and rotationally movable within the coupling unit and a second section which includes at least one guide hole; and

a first spacing-sensor assembly attachable to the second section of the alignment bar and provided with a spacing sensor having a contact surface for placement against the intramedullary nail;

wherein:

the first section of the alignment bar is adjustable and lockable within the coupling unit for movement along the longitudinal axis of the alignment bar and is pivot-mounted within the coupling unit to permit rotational movement relative to the alignment bracket; and

the first spacing-sensor assembly permits the contact surface of the spacing sensor to shift transversely relative to the alignment bar and transverse to the spacing sensor longitudinal axis.

6,039,743

GUIDE WIRE HAVING DISTAL EXTREMITY WITH ADJUSTABLE SUPPORT CHARACTERISTIC AND METHOD

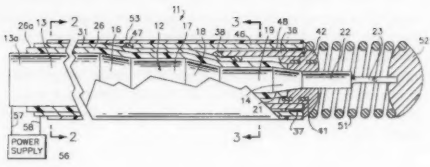
Dignah B. Quiachon, Mountain View; Deepak R. Gandhi, San Jose; Dennis L. Brooks, Windsor; Mir A. Imran, Los Altos Hills, and Roger J. Guidi, Los Altos, all of Calif., assignors to Intella Interventional Systems, Inc., Sunnyvale, Calif.

Division of application No. 08/585,885, Jan. 11, 1996, Pat. No. 5,697,380. This application Jul. 30, 1997, Appl. No. 902,772.

Int. Cl.[7] A61F *11/00;* **A61M** *29/00*

U.S. Cl. 606—108 **1 Claim**

1. A method for delivering a stent into a stenosis in a vessel in a patient by the use of a stent delivery catheter and a single guide wire having an adjustable support characteristic ranging from floppy to stiff comprising advancing the guide wire in the vessel of



the patient while its distal extremity is floppy until the distal extremity has been advanced into the stenosis in the vessel which is to be treated, stiffening the distal extremity of the guide wire, advancing the stent delivery catheter over the guide wire while the distal extremity is stiff, advancing the stent into the stenosis and withdrawing the stent delivery catheter and the guide wire from the vessel of the patient.

6,039,744

ASSEMBLY FOR POSITIONING AN IMPLANT IN AN INTERNAL PASSAGEWAY OF A BODY

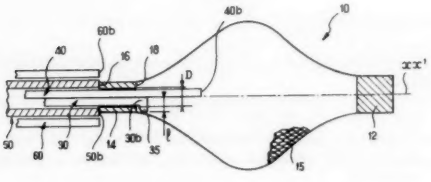
Simon John Forber, Yversay, France, assignor to B. Braun Celsa, Boulogne-Billancourt, France

Filed Dec. 4, 1998, Appl. No. 205,610

Claims priority, application France, Dec. 19, 1997, 97 16147

Int. Cl.[7] A61M *25/01*

U.S. Cl. 606—108 **11 Claims**



1. Assembly for positioning an implant in an internal passageway of a body, wherein the implant has an axis, at least one axial tubular region having an inside diameter, and a structure suitable for adopting a first, radially deployed, state in a situation implanted in the passageway, or a second, radially restricted, state in a positioning situation, said assembly comprising a first and second removable elongated elements slidably mounted inside a catheter having an inside and an outside diameter, the first and second elements cooperating closely for positioning or withdrawing the implant, the first and second elements having a predetermined cross-section and extending substantially parallel to one another, the first element only having, towards the distal end, a lateral protuberance having a radial length, while the other element has no such protuberance, a cumulative cross-section dimensions of the two elements away from their distal end, and the radial length of the lateral protuberance, being smaller than the inside diameter of the tubular region of the implant so that the elements pass through at their distal end in a situation of positioning the implant in the passageway, the lateral protuberance of the first element being disposed outside the catheter when the implant is in its first radially deployed state while the assembly is still retaining the implant, and the radial length of the lateral protuberance being smaller than a inside diameter of the catheter so that, once the implant is released and in place in the passageway, the second element can be pulled through the catheter to be withdraw.

6,039,745

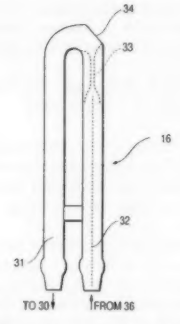
EQUIPMENT FOR MICRODERMOABRASION THROUGH A FLOW OF AIR/REDUCING SUBSTANCES MIX AND RELATIVE HANDPIECE

Dario Di Fiore, and Carlo Stanisci, both of Florence, Italy, assignors to Mattioli Engineering Ltd., London, United Kingdom

Division of application No. 08/496,470, Jun. 29, 1995, Pat. No. 5,810,842. This application Mar. 20, 1998, Appl. No. 44,860. This patent is subject to a terminal disclaimer.

Int. Cl.[7] A61B *17/50*

U.S. Cl. 606—131 **6 Claims**



1. A handpiece for a microdermoabrasion device, wherein the handpiece is a U-shaped monoblock, the handpiece further comprising:

a window being raked at an angel between 30° and 60° with respect to a central symmetrical axis of the handpiece,

wherein the handpiece comprises a pipe arranged in a U-shape,

wherein the pipe has a first portion for receiving an air/reducing mixture for application to a patient, and a second portion for outputting the air/reducing mixture after application to the patient,

wherein the first and second portions are each cylindrically shaped and are spaced substantially parallel with respect to each other with an air gap situated therebetween, and

wherein the window is disposed on the first portion.

6,039,746

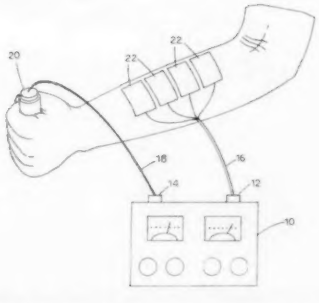
PATCH ELECTROLYSIS SYSTEM AND METHOD FOR REMOVING HAIR FROM SKIN

Hubert L. Cole, 160 S. May St., Southern Pines, N.C. 28387, and Mark H. Chandler, 830 Monticello Dr., Pinehurst, N.C. 28374

Filed Mar. 29, 1999, Appl. No. 280,926

Int. Cl.[7] A61B *17/50*

U.S. Cl. 606—133 **13 Claims**



1. A method of performing electrolysis treatment on a patient via a patch, comprising:

a. securing a patch to a person's skin and providing a gel interface between the patch and the person's skin; and

b. directing a DC current through the patch and in the process directing the DC current to multi-hair follicles underlying the patch so as to perform an electrolysis treatment on certain hair follicles underlying the patch.

6,039,747

ROTATIONAL ATHERECTOMY DEVICE WITH IMPROVED OPTICAL TACHOMETER

Leonid Shturman, Minneapolis, Minn.; Georgiy Morov, and Vladimir Malgichev, both of Moscow, Russian Federation, assignors to Shturman Cardiology Systems, Inc., Minneapolis, Minn.

Filed Apr. 8, 1998, Appl. No. 57,364

Int. Cl.[7] A61B *17/22*

U.S. Cl. 606—159 **18 Claims**

1. A rotational atherectomy device, comprising:

a) a prime mover having a prime mover shaft;

b) a flexible drive shaft rotatable together with the prime mover;

c) a handle having a prime mover carriage which carries the prime mover; and

d) a generally cylindrical optical reflector mounted on the prime mover shaft, the reflector having a light-reflective outer surface, a longitudinal bore through which the prime mover shaft extends and a transverse bore extending through the reflector along an axis which is generally perpendicular to the prime mover shaft so that the prime mover shaft obstructs passage of light along the axis of the transverse bore.

6,039,748

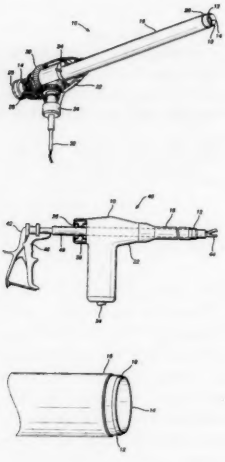
DISPOSABLE LAPAROSCOPIC MORCELLATOR

George M. Savage, Portola Valley; Jeffrey J. Christian, San Jose, and David Curtis Dillow, Cupertino, all of Calif., assignors to FemRx, Inc., Sunnyvale, Calif.

Filed Aug. 5, 1997, Appl. No. 906,358

Int. Cl.[7] A61B *17/14*

U.S. Cl. 606—180 **14 Claims**



1. A device for surgically removing tissue from a patient body, the device comprising:

an outer tube having a proximal end and a distal end;

an inner tube within the outer tube, the inner tube defining a lumen having an open distal end and an open proximal end, the inner and outer tubes defining an annular space therebetween; and

a cutting member which rotates within the annular space relative to the inner and outer tubes, the cutting member having an exposed cutting surface having a position distal the open distal end.

6,039,749

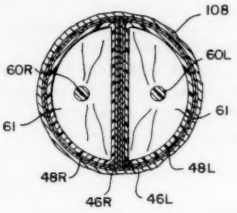
METHOD AND APPARATUS FOR DEPLOYING NON-CIRCULAR STENTS AND GRAFTSTENT COMPLEXES

Michael L. Marin, and Ralph Marin, both of New York, N.Y., assignors to Endovascular Systems, Inc., Cross River, N.Y.

Continuation of application No. 08/537,630, Oct. 2, 1995, Pat. No. 5,695,517, and a division of application No. 08/324,893, Oct. 18, 1994, Pat. No. 5,507,769, and a continuation-in-part of application No. 08/196,278, Feb. 10, 1994, Pat. No. 5,443,477. This application Apr. 15, 1997, Appl. No. 838,126. This patent is subject to a terminal disclaimer.

Int. Cl.[7] A61M *29/00*

U.S. Cl. 606—198 **19 Claims**



1. A stent having a non circular cross-section when expanded, comprising:

a tubular wall defining a curved edge and an alignment edge; and

an orientation marker positioned on said tubular wall with a predetermined rotational relationship relative to said alignment edge.

6,039,750

URETHRAL OCCLUSION DEVICE FOR MAINTAINING URINARY BLADDER RETENTION AND METHOD OF USE

Thomas P. Kubalak, Plymouth, Minn.; Peter Sheperd, Santa Barbara, Calif., and Jeffrey P. LaPlante, Minneapolis, Minn., assignors to Mentor Corporation, Santa Barbara, Calif.

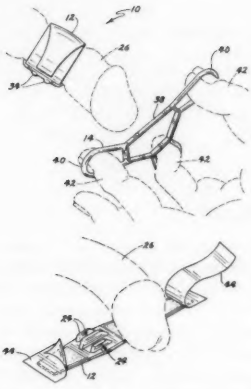
Continuation-in-part of application No. 08/760,906, Dec. 3, 1996. This application Apr. 10, 1997, Appl. No. 838,724.

Int. Cl.[7] A61B *17/00*

U.S. Cl. 606—201 **45 Claims**

1. A urethral occlusion device for retaining urine in the bladder of a male patient having a penis and a urethra by occluding said urethra, said penis also having blood circulating through a vascular system therein, said apparatus comprising:

an occlusion band which is wrapped circumferentially about the penis and is fabricated from a flexible, deformable, elastomeric material, said occlusion band having an inner surface and an outer surface when wrapped about the penis, said occlusion band defining at least one region having an intrinsically tacky surface to contact and adhere to the penis and to said outer surface of said occlusion band, said occlusion band further defining at least one rib member extending from said inner surface of said occlusion band generally inward toward the urethra, said at least one rib member being generally



pliant and deformable, said occlusion band applying sufficient pressure on said at least one rib member so as to press said at least one rib member inwardly into the penis so as to alter the path of the urethra and cause the urethra to stretch and become occluded to obstruct the flow of urine from the bladder, while simultaneously the occlusion band does not significantly interfere with the flow of blood circulating through the vascular system of the penis of the patient.

6,039,751

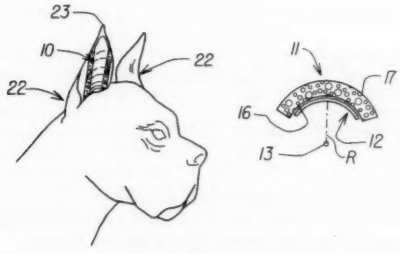
SUPPORT DEVICE FOR NEWLY CROPPED EARS OF DOGS

Cynthia G. Hardee, 117 Arlington Ave., Colonial Heights, Va. 23834

Filed Mar. 8, 1999, Appl. No. 263,537

Int. Cl.[7] A61F *5/08*

U.S. Cl. 606—204.15 **8 Claims**



1. A disposable device for supporting dog's ears, said device comprising:

a) an outer member elongated upon a straight axis and fabricated as a monolithic piece of closed cell polymer foam material bounded by upper and lower transverse edges, parallel concave interior and convex exterior cylindric surfaces having uniform curvatures centered upon-said axis, and opposed longitudinal edges, and

b) a protective piece of thin plastic material adhered to the interior surface of said outer member in a manner to preserve the concave contour of said interior surface, and extending from said upper transverse edge toward said lower transverse edge.

6,039,752

TREATING INSTRUMENT FOR OPERATION AND MEDICAL DEVICE USING THE TREATMENT DEVICE

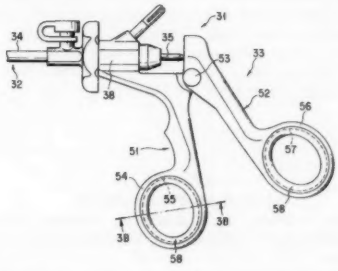
Kenichi Kimura, Hachioji; Akira Shiga, Hidaka; Toshihiko Hashiguchi, Sagamihara; Eiji Murakami, Hachioji, and Katsumi Sasaki, Tokyo, all of Japan, assignors to Olympus Optical Co., Ltd., Tokyo, Japan

Filed Jun. 24, 1997, Appl. No. 881,892

Claims priority, application Japan, Sep. 4, 1996, 8-234280; Jun. 6, 1997, 9-149037

Int. Cl.[7] A61B *17/28*

U.S. Cl. 606—205 **14 Claims**



1. A treating instrument for an operation comprising:

a main body;

an operation section provided on a base end portion of said main body, said operation section including a first handle including first finger contacting means for contacting a first one of an operator's finger, a second handle including second finger contacting means for contacting at least a second one of the operator's fingers, and coupling means for coupling said first and second handles to be relatively movable;

a treating section provided on a top end portion of said main body, said treating section including a movable element which is operable in response to a relative moving operation between said first and second handles; and

load reducing means for reducing a load on the operator's fingers contacting said first and second finger contacting means, said load reducing means being provided on a section of at least one of said first and second finger contacting means which contacts the operator's fingers;

wherein said load reducing means comprises an elastic contacting member which is provided to be freely detachable from at least one of said first and second finger contacting means.

6,039,753

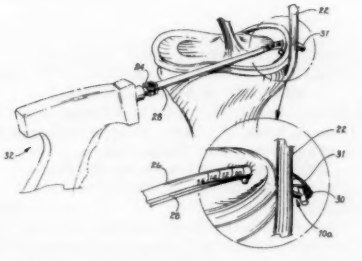
SINGLE UNIT SURGICAL FASTENER AND METHOD

Robert Meislin, 6234 N. 47 St., Paradise Valley, Ariz. 85253

Filed Jul. 16, 1998, Appl. No. 116,512

Int. Cl.[7] A61B *17/00*

U.S. Cl. 606—213 **30 Claims**



1. A system for repairing torn meniscus tissue comprising, in combination:

a single unit surgical fastener comprising:

a base member;

a substantially rod-shaped shaft extending from said substantially rod-shaped member; and

a retaining member at an end of said substantially rod-shaped shaft;

means for positioning and inserting said single unit surgical fastener into said torn meniscus tissue comprising:

a slotted cannula having a first section having an axial bore and a second section continuous with said first section and curved so as to conform to the shape of a knee and to extend laterally from an axis established by said axial bore;

a sharpened tip located at a distal end of said second section;

said slotted cannula being dimensioned to receive said base member of said single unit surgical fastener; and

insertion means dimensioned to fit within said slotted cannula for inserting said single unit surgical fastener through said torn meniscus tissue.

6,039,754

VASCULAR PROSTHESES

Colin Caro, London, United Kingdom, assignor to Imperial College of Science Technology & Medicine, London, United Kingdom

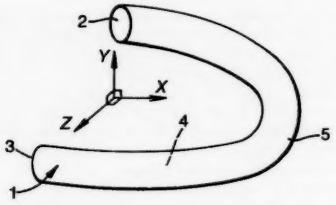
PCT No. PCT/GB94/02023, § 371 Date May 28, 1996, § 102(e) Date May 28, 1996, PCT Pub. No. WO95/09585, PCT Pub. Date Apr. 13, 1995

PCT Filed Sep. 16, 1994, Appl. No. 624,433

Claims priority, application United Kingdom, Oct. 1, 1993, 9320288; Jun. 27, 1994, 9412882

Int. Cl.[7] A61F *2/06*

U.S. Cl. 623—1 **19 Claims**



1. A vascular prosthesis comprising a length of generally hollow tubing having openings at both ends thereof, said hollow tubing having at least a portion lying in one of two mutually perpendicular planes, and including at least one curved portion whose curvature extends out of said two mutually perpendicular planes and thereby induces swirl flow in a liquid medium when such medium flows through said curved portion, the vascular prosthesis maintaining its shape prior to implantation.

6,039,755

RADIALLY EXPANDABLE TUBULAR POLYTETRAFLUOROETHYLENE GRAFTS AND METHOD OF MAKING SAME

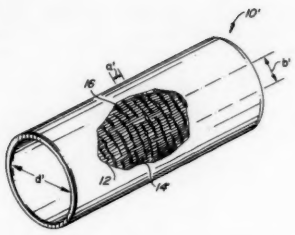
Tarun J. Edwin; Fariba Hurry, both of Tempe, and Christopher E. Banas, Mesa, all of Ariz., assignors to Impra, Inc., a Division of C.R. Bard, Inc., Tempe, Ariz.

Filed Feb. 5, 1997, Appl. No. 794,871

Int. Cl.[7] A61F *2/06;2/04*

U.S. Cl. 623—1 **14 Claims**

1. A continuous tubular structure comprising an expanded polytetrafluoroethylene material having a predetermined wall thickness and a microstructure characterized by a plurality of nodes interconnected by fibrils, the fibrils having an orientation substantially parallel to a longitudinal axis of the polytetrafluoroethylene tubular



material throughout the wall thickness of the tubular structure and the nodes having a longitudinal axis substantially perpendicular to the longitudinal axis of the polytetrafluoroethylene material, the polytetrafluoroethylene material of the tubular structure being capable of undergoing radial deformation from an original unexpanded diameter of the tubular structure to a larger diameter of the tubular structure by application of a positive pressure applied through the lumen of the tubular structure and radially outward therefrom which causes a plurality of the nodes in the microstructure to undergo elongation along the longitudinal axis of the nodes, while substantially retaining an average internodal distance throughout the wall thickness of the radially deformed tubular structure.

6,039,756

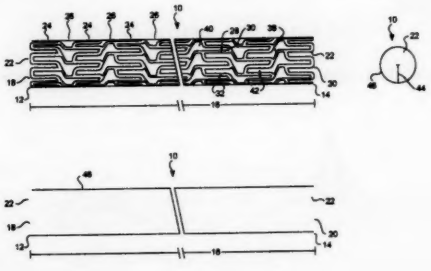
INTRAVASCULAR STENT

G. David Jang, 30725 Eastburn La., Redlands, Calif. 92374

Provisional application No. 60/017,484, Apr. 26, 1996. This application Oct. 14, 1997, Appl. No. 949,865.

Int. Cl.[7] A61F *2/06*

U.S. Cl. 623—1 **9 Claims**



1. A stent in a non-expanded state, comprising:

a first column expansion strut pair, a plurality of the first column expansion strut pair forming a first expansion column;

a second column expansion strut pair, a plurality of the second column expansion strut pair forming a second expansion column; and

a first serial connecting strut, a plurality of first serial connecting struts forming a first connecting strut column, the plurality of first serial connecting struts coupling the first expansion column to the second expansion column and at least a portion of the plurality of the first serial connecting struts have a first stair-step with a first slant angle arc of greater than 90° and a second stair-step stair-step with a second slant angle arc of greater than 90°; and

wherein the first expansion column, the second expansion column, and the first connecting strut column form a plurality of geometric cells and at least a portion of the plurality are asymmetrical geometric cells.

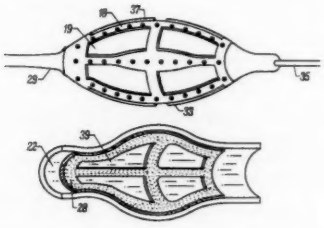
6,039,757
IN SITU FORMED FENESTRATED STENT

Stuart D. Edwards, Portola Valley; Thomas C. Wehman, Cupertino; Theodore L. Parker, Danville; Theodore Kucklick, Los Gatos; Eugene V. Skalnyi, Mountain View, and Alan Stein, Moss Beach, all of Calif., assignors to Cardio-Synopsis, Inc., Sunnyvale, Calif.

Continuation-in-part of application No. 08/857,323, May 16, 1997, which is a continuation-in-part of application No. 08/815,096, Mar. 12, 1997, and a continuation-in-part of application No. 08/982,120, Dec. 1, 1997, and a continuation-in-part of application No. 08/982,247, Dec. 1, 1997, and a continuation-in-part of application No. 08/984,481, Dec. 1, 1997. This application Dec. 1, 1997, Appl. No. 982,246.

Int. Cl.[7] **A61F** *2/06*

U.S. Cl. 623—1 **32 Claims**



1. A fenestrated stent formed in a body lumen comprising:

an article shaped to provide support to a section of a body lumen and allow biological material which would otherwise flow through the body lumen to flow through the article, the article being formed with fenestrations by

delivering a fluent pre-stent composition to a mold space defined by a section of a body lumen and a fluent pre-stent composition delivery device having members which define the fenestrations, and

transforming the fluent pre-stent composition to a non-fluent stent composition within the mold space.

METHOD FOR INTRALUMINALLY DEPLOYING A BIFURCATED GRAFT

Dinah B. Quiachon, San Jose; Alec A. Piplani, Mountain View; Steve G. Baker, Sunnyvale; Ronald G. Williams, Menlo Park; Richard S. Williams, Sunnyvale; Kenneth L. Osborn, Mountain View; Ted W. Layman, Palo Alto, and Peter K. Johansson, San Jose, all of Calif., assignors to Endovascular Technologies, Inc., Menlo Park, Calif.

Continuation of application No. 08/707,179, Sep. 3, 1996, Pat. No. 5,824,044, and a continuation-in-part of application No. 08/241,476, May 12, 1994, Pat. No. 5,628,783. This application Dec. 22, 1997, Appl. No. 996,330.

Int. Cl.[7] **A61F** *2/06*

U.S. Cl. 623—1 **8 Claims**

1. A method for repairing a vessel at a bifurcation using a multicapsule catheter having first, second and third capsules for releasably retaining each terminal end of a bifurcated graft, a torque catheter and a stub nose balloon catheter, comprising the steps of:

performing a surgical technique to gain remote access to each branch of the bifurcated vessel;

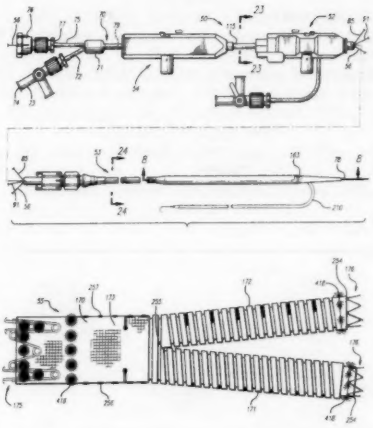
advancing the multicapsule catheter within a first branch of the bifurcated vessel;

configuring the first capsule of the multicapsule catheter in a position distal to the bifurcation;

configuring the second capsule of the multicapsule catheter in the first branch of the bifurcated vessel;

configuring the third capsule of the multicapsule catheter in the second branch of the bifurcated vessel;

releasing the first capsule from the graft;



advancing the torque catheter within the second branch of the bifurcated vessel until the torque catheter engages the third capsule;

removing any undesirable regularities in the graft residing in the second branch of the bifurcated vessel;

releasing the third capsule from the graft;

releasing the second capsule from the graft; and

withdrawing the multicapsule catheter and the torque catheter from the repair cite.

6,039,759
MECHANICAL PROSTHETIC VALVE WITH COUPLED LEAFLETS

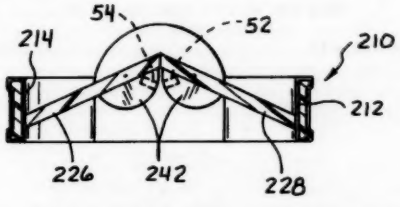
Alain Carpentier, Paris, France; George X. Guo, Dove Canyon, and Stefan G. Schreck, Vista, both of Calif., assignors to Baxter International Inc., Deerfield, Ill.

Continuation-in-part of application No. 08/694,580, Aug. 9, 1996, Pat. No. 5,814,100. This application Jul. 23, 1998, Appl. No. 121,474.

Claims priority, application France, Feb. 20, 1996, 96 02052

Int. Cl.[7] **A61F** *2/24*

U.S. Cl. 623—2 **15 Claims**



1. A valve for human implantation, said valve comprising:

a tubular base portion defining a blood flow pathway therethrough;

a pair of rigid valve leaflets pivotally disposed on an inner surface of said base portion in said blood flow pathway and responsive to blood fluid pressure to pivot between a first position of occluding cooperation both with each other and with said base portion to inhibit blood flow in said pathway, and a second fully open pivotal position opening blood flow in said pathway, wherein a third position is defined substantially intermediate the first and second positions; and

a first means carried on one leaflet for cooperating with a second means carried on the other leaflet to couple the movement of the leaflets between the first and second positions and bias the leaflets toward the third position from both the first and second positions.

6,039,760

COMPOSITE LIVING SKIN EQUIVALENT

Mark Eisenberg, Dover Heights, Australia, assignor to Ortec International, Inc., New York, N.Y.

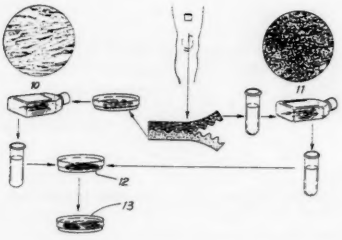
Continuation of application No. 08/123,860, Sep. 20, 1993, abandoned, which is a division of application No. 07/777,419, Nov. 27, 1991, Pat. No. 5,282,859. This application Feb. 16, 1996, Appl. No. 602,271.

Claims priority, application Australia, Apr. 24, 1990, PJ9819; Jan. 22, 1991, PK4302

This patent is subject to a terminal disclaimer.

Int. Cl.[7] A61F *2/10*

U.S. Cl. 623—15 **13 Claims**



1. A composite which comprises relative to a horizontal plane:

a) a first layer comprising a collagen matrix having upper and lower surfaces, said matrix being capable of permitting the growth of fibroblast cells therein, and being essentially non-contractible,

b) a non-porous second layer essentially free of exogenous glycosaminoglycans, said layer comprising a non-porous collagen layer having upper and lower surfaces, the lower surface thereof being in contact with the upper surface of said first layer, and being sufficiently non-porous to be capable of maintaining on its surface keratinocyte cells without the substantial invasion of said cells into said collagen matrix.

6,039,761

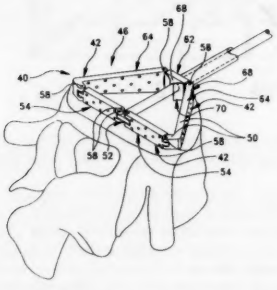
INTERVERTEBRAL SPACER AND TOOL AND METHOD FOR EMPLACEMENT THEREOF

Lehmann K. Li, Milford, and Rhodemann Li, Greenwich, both of Conn., assignors to Li Medical Technologies, Inc., Shelton, Conn.

Filed Feb. 12, 1997, Appl. No. 798,113

Int. Cl.[7] A61F *2/44*

U.S. Cl. 623—17 **20 Claims**



1. An intervertebral spacer comprising a plurality of discrete wall elements connected in series to form a body; said discrete wall elements being collapsible to a first non-expanded configuration, said first non-expanded configuration including at least some of said discrete wall elements being disposed internally of others of said discrete wall elements; and expandable to a second configuration, said second configuration including said discrete wall elements forming said body to define an outer expanded periphery of said body.

6,039,762

REINFORCED BONE GRAFT SUBSTITUTES

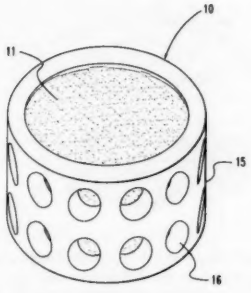
William F. McKay, Memphis, Tenn., assignor to SDGI Holdings, Inc., Wilmington, Del.

Continuation-in-part of application No. 08/485,842, Jun. 7, 1995, Pat. No. 5,702,449. This application Jun. 11, 1997, Appl. No. 872,689.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] A61F *2/44*

U.S. Cl. 623—17 **36 Claims**



1. An interbody fusion spacer, comprising:

a body having an outer surface and a height approximating the height of a human disc space, said body composed of a porous, biocompatible ceramic material for permitting tissue ingrowth therethrough; and

a reinforcing sleeve disposed around said outer surface of said body, said sleeve including a material relatively stronger under compression than said porous, biocompatible ceramic material; and

said reinforcing sleeve having an inner surface defining a chamber, said chamber having an inner dimension that is slightly smaller than said body so as to engage said sleeve to said body.

6,039,763

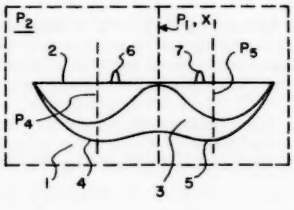
ARTICULATING SPINAL DISC PROSTHESIS

Alexis P. Shelokov, Dallas, Tex., assignor to Disc Replacement Technologies, Inc., Dallas, Tex.

Filed Oct. 27, 1998, Appl. No. 179,324

Int. Cl.[7] A61F *2/44;2/30;2/38*

U.S. Cl. 623—17 **25 Claims**



1. An artificial spinal disc which articulates, said disc comprising:

a first plate having a first outer periphery, a substantially flat first superior surface, a first inferior articulating surface, a first

anterior end, a first posterior end, a first lateral side and a second lateral side; and

a second plate having a second outer periphery, a substantially flat second inferior surface, a second superior articulating surface, a second anterior end, a second posterior end, a third lateral side and a fourth lateral side;

wherein:

said first and second plates can articulate in an anteroposterior fashion when said first inferior surface, said first anterior end and said first posterior end are juxtaposed said second superior surface, said second anterior end and said second posterior end, respectively;

at least one of said first inferior articulating surface and said second superior articulating surface comprises a changing anteroposterior arc of radius; and

said disc has an instant center of rotation in flexion which moves in an anteroposterior direction during anteroposterior articulation of said disc.

6,039,764

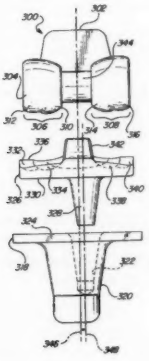
PROSTHETIC KNEE WITH ADJUSTED CENTER OF INTERNAL/EXTERNAL ROTATION

Lawrence A. Pottenger, and Louis F. Draganich, both of Chicago, Ill., assignors to ARCH Development Corporation, Chicago, Ill.

Filed Aug. 18, 1997, Appl. No. 912,506

Int. Cl.[7] A61F *2/38*

U.S. Cl. 623—20 **13 Claims**



1. An implantable prosthetic device adapted to form a knee joint between a femur and a tibia as a replacement for a natural knee joint having a medial tibial eminence corresponding to a natural center of internal/external rotation relative to a longitudinal axis of at least one of said femur and said tibia, said device comprising:

first fixation means adapted for fixation to a remaining portion of a femur;

second fixation means adapted for attachment to a remaining portion of a tibia; and

a bearing element disposed between said first fixation means and said second fixation means;

wherein engagement of at least one of said first fixation means and said second fixation means with said bearing element allows a component of internal/external rotation of said device relative to a longitudinal axis of at least one of said femur and said tibia, said component of internal/external rotation defining a center of internal/external rotation of said device between said femur and said tibia;

wherein said center of internal/external rotation of said device is adjusted to a displaced location to achieve at least one advantage selected from the group consisting of enhancing performance, minimizing wear, compensating for wear and mimicking said natural center of internal/external rotation of said natural joint; and

wherein said adjusted location of said center of internal/external rotation of said device generally corresponds to the location of the natural medial tibial eminence, so as to allow said internal/external rotation of said device to approximate said natural center of internal/external rotation.

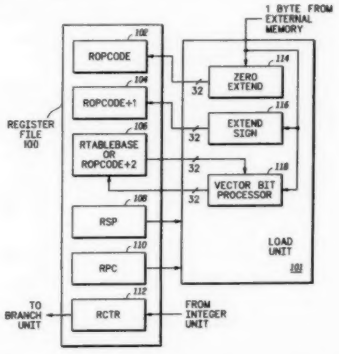
COMPUTER INSTRUCTION WHICH GENERATES MULTIPLE RESULTS OF DIFFERENT DATA TYPES TO IMPROVE SOFTWARE EMULATION

David Wesley Trissel, Austin, Tex., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Dec. 15, 1997, Appl. No. 990,780

Int. Cl.[7] G06F *9/455*

U.S. Cl. 703—26 **27 Claims**



1. A processor capable of executing a multifunction instruction comprising:

a plurality of registers; and

a multifunction instruction execution circuit, wherein:

the multifunction instruction execution circuit moves a plurality of operands in a corresponding plurality of formats into a corresponding plurality of registers from a common location in response to a single execution of the multifunction instruction;

wherein:

a first one of the corresponding plurality of formats is an integer encoded in memory in an unsigned byte format,

a second one of the corresponding plurality of formats is an integer encoded in memory in a signed byte format, and

a third one of the corresponding plurality of formats is generated by the processor by inserting a fixed number of bits from the common location into a fixed location in a third one of the corresponding plurality of registers.

CLEANING PROCESS FOR DRY CLEANING

Yuhei Mizuno, Fukui; Yoshihiro Kawamura, Sakai-gun, and Shiro Kondo, Sabae, all of Japan, assignors to Nicca Chemical Co., Ltd., Fukui, Japan

Filed Oct. 19, 1998, Appl. No. 174,310
Claims priority, application Japan, Nov. 6, 1997, 9-304438
Int. Cl.[7] D06L *1/04;* **C11D** *3/24;3/26*
U.S. Cl. 8—142 **4 Claims**

1. A process for dry cleaning fabric, said process comprising the step of cleaning fabric by applying an effective amount of a cleaning composition for dry cleaning which comprises 1 to 90% by weight of a surfactant containing fluorine and 10 to 99% by weight of a fluorohydrocarbon solvent and/or an auxiliary solubilizing agent, wherein the surfactant containing fluorine is a salt of a phosphoric acid ester of a polyoxyalkylenealkylsulfonamide ether containing fluorine which is represented by general formula (1):

(1)

wherein R^1 represents a perfluoroalkyl group having 3 to 12 carbon atoms, R^2 represents an alkyl group having 1 to 5 carbon atoms, R^3 represents an alkylene group having 2 to 4 carbon atoms, q represents a number of 0 to 10, and r represents a number of 1 or 2,

wherein said step of cleaning with a composition which includes the fluorohydrocarbon solvent includes the further step of providing an alkoxyperfluoroalkane represented by general formula (5):

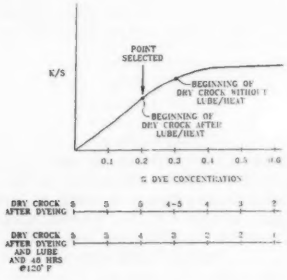
(5)

wherein n represents a number of 3 or 4, and m represents a number of 1 to 3.

6,039,767
BLENDED DYES AND PROCESS FOR DYEING POLYPROPYLENE FIBERS

Geoffrey E. Boyes, Roanoke, Va., and Michel A. Herlant, Charlotte, N.C., assignors to Equistar Chemicals, LP, Houston, Tex.

Filed May 19, 1997, Appl. No. 858,739
Int. Cl.[7] D06P *3/79;1/16*
U.S. Cl. 8—400 **35 Claims**



1. A method of dyeing a polypropylene based material modified with an ethylene copolymer, comprising:

preparing various disperse dye dispersions each comprising an individual disperse dye at a known dye concentration;

contacting undyed polypropylene material samples with each of the various disperse dye dispersions to produce a plurality of dyed polypropylene material samples;

testing the dyed polypropylene samples to determine crocking the characteristics for each of the various disperse dyes;

for each of various disperse dyes, determining a maximum dye concentration which will produce an acceptable crocking test;

for each of various disperse dyes within a common primary color group, selecting a plurality of disperse dyes each substantially at its determined maximum dye concentration;

combining the selected plurality of disperse dyes to form a primary color dye mix;

preparing a disperse dye mix dispersion from the primary color dye mix; and

contacting undyed polypropylene material with the disperse dye mix dispersion to dye the polypropylene material.

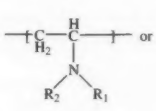
6,039,768
PROCESS FOR THE TREATMENT OF DYED CELLULOSIC FIBER MATERIAL

Philippe Ouziel, Altkirch, France, assignor to Ciba Specialty Chemicals Corporation, Tarrytown, N.Y.

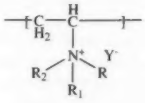
Filed Jun. 6, 1997, Appl. No. 870,626
Claims priority, application Switzerland, Jun. 11, 1996, 1458/96
Int. Cl.[7] D06P *1/52;1/56;3/66*
U.S. Cl. 8—543 **11 Claims**

1. A process for fixing reactive or substantive dyes on cellulosic fibre material, which process comprises treating the fibre before, during or after dyeing in a temperature range from 20 to 70° C. with a liquor comprising a homo- or copolymer containing repeating structures of formula

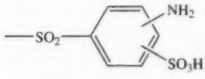
(1a)



(1b)



wherein R_1 is C_1–C_{12}alkyl which is unsubstituted or substituted by hydroxy, carboxy, cyano, carbamoyl, a radical —CONH—(alk)—T, N,N-di-C_1–C_4alkylcarbamoyl, aminophenylsulfonyl, amino or radical $—NHR_3$, $—N(R_3)_2$, $—N(R_3)_3{}^+Y^-$, —COO—(alk)—T or



T is hydrogen or a radical $—NH_2$, $—NHR_3$, $—N(R_3)_2$, $—N(R_3)_3{}^+Y^-$,

R_3 is C_1–C_8alkyl,

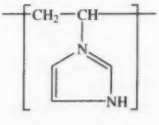
Y^- is an anion,

(alk) is a straight-chain or branched C_1–C_{10}alkylene radical, and

R and R_2 are each independently of the other hydrogen or benzyl or independently have one of the meanings given above for R_1, or

a copolymer containing repeating structures of formula

(2)



which is obtained by polymerising 80 to 20 mol % of vinylimidazole and 20 to 80 mol % of N-vinylformamide or

N-vinylpyrrolidone, or by polymerising N-vinylimidazole, N-vinylpyrrolidone and N-vinylformamide, and where required, with subsequent hydrolysis, or mixtures thereof.

6,039,769

PROCESS FOR THE PREPARATION OF HIGHLY CHROMATIC PERYLENE PIGMENTS

Gregory R. Schulz, and Michael J. Greene, both of Mt. Pleasant, S.C., assignors to Bayer Corporation, Pittsburgh, Pa.

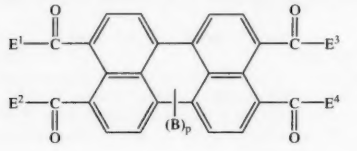
Filed Dec. 15, 1998, Appl. No. 211,728

Int. Cl.[7] **C09B** *67/20;* **C07D** *207/26*

U.S. Cl. 8—574 **6 Claims**

1. A process for preparing a perylene pigment composition comprising reacting

(a) a perylene tetracarboxylic compound having the formula



wherein

E^1 and E^3 are independently OR or $NR'R''$ and E^2 and E^4 are independently OR, or E^1 and E^2 together are O or NA^1 and E^3 and E^4 together are O or NA^2,

each R is independently hydrogen, a metal or ammonium cation, C_1–C_6 alkyl, C_7–C_{16} aralkyl, or C_6–C_{10} aryl,

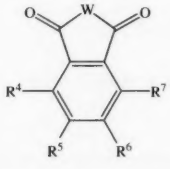
each R' and R" is independently hydrogen, C_1–C_6 alkyl, or C_7–C_{16} aralkyl,

A^1 and A^2 are independently hydrogen, a metal, C_1–C_6 alkyl or substituted C_1–C_6 alkyl, C_5–C_8 cycloalkyl or substituted C_5–C_8 cycloalkyl, C_7–C_{16} aralkyl or substituted C_7–C_{16} aralkyl, or C_6–C_{10} aryl or substituted C_6–C_{10} aryl,

B is C_{1-C6} alkyl, C_1–C_6 alkoxy, a sulfonyl group, amino, ammonium, hydroxy, nitro, or halogen, and

p is zero or an integer of from 1 to 8;

(b) about 0.01 to about 20% by weight, relative to the perylene tetracarboxylic compound, of a non-pigmentary imide having the formula



wherein

W NR[1],

R^1 is hydrogen, a metal, C_1–C_6 alkyl, or —Alk—X,

R^4, R^5, R^6, and R^7 are independently hydrogen, C_1–C_6 alkyl, C_1–C_6 alkoxy, a sulfonyl group, amino, ammonium, hydroxy, nitro, or halogen,

Alk is C_1–C_{18} alkylene, and

X is $—SO_3^-$ or $—COO^-$ electrically balanced with hydrogen or a stoichiometric amount of a metal ion;

(c) ammonia or a primary amine having the formula $R^A—NH_2$ wherein R^A is C_1–C_6 alkyl, C_7–C_{16} aralkyl, or C_6–C_{10} aryl;

(d) optionally, a solvent; and

(e) optionally, one or more additives.

6,039,770

SEMICONDUCTOR DEVICE MANUFACTURING SYSTEM HAVING MEANS FOR REDUCING A PRESSURE DIFFERENCE BETWEEN LOADLOCK AND PROCESSING CHAMBERS

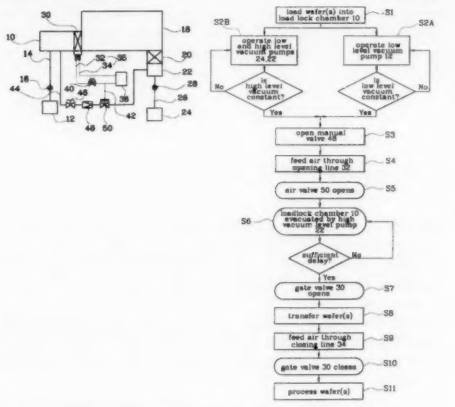
Yun-sik Yang; Hun Cha, both of Suwon, and Seung-ki Chae, Seoul, all of Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Suwon, Rep. of Korea

Filed Jun. 5, 1998, Appl. No. 90,862

Claims priority, application Rep. of Korea, Jun. 25, 1997, 97-27092

Int. Cl.[7] **C23C** *14/00*

U.S. Cl. 29—25.01 **17 Claims**



1. A semiconductor manufacturing system comprising:

a loadlock chamber;

a low level vacuum pump connected to said loadlock chamber so as to create a low level vacuum in said loadlock chamber;

a processing chamber in which a semiconductor manufacturing process is carried out while the processing chamber is maintained at a high level vacuum of a pressure that is less than that of said low level vacuum;

a gate valve interposed between and connecting said loadlock chamber and said processing chamber, said gate valve being movable between a closed position at which said processing chamber is isolated from said loadlock chamber and an open position at which said chambers are open to each other so as to facilitate the transfer of objects from said loadlock chamber to said processing chamber; and

pressure relieving means for reducing the pressure difference between the low level vacuum of said loadlock chamber and the high level vacuum of said processing chamber when the gate valve is moved from said closed to said open position thereof.

6,039,771

FORMULATION AND METHOD OF PREPARATION OF ENERGY FORTIFIED DIESEL FUEL

Charles W. Selvidge, and Dennis A. Vauk, both of Wichita, Kans., assignors to KRC-GP, Inc., Wichita, Kans.

Filed Apr. 23, 1998, Appl. No. 65,237

Int. Cl.[7] **C10L** *1/08*

U.S. Cl. 44—311 **36 Claims**

1. An energy fortified diesel fuel, comprising a mixture of:

a hydrocarbon additive that is the distillate of a heavy hydrocarbon fraction wherein greater than about 50% of said hydrocarbon additive vaporizes at or above about 650° F.; and

a diesel fuel component wherein about 90% of said diesel fuel vaporizes at or below about 640° F., or wherein about 95% of said diesel fuel vaporizes at or below about 698° F.

20. A process for making an energy fortified hydrocarbon additive, consisting of:

(a) distilling a heavy hydrocarbon fraction consisting of slurry oil or heavy cycle oil obtained from an FCC unit or a heavy hydrocarbon fraction obtained from a steam cracker unit to remove contaminants wherein said distillation is performed at a temperature of between about 500 and 750° F. and at a pressure between about 1 mm Hg and 10 psig; and

(b) removing distillate from said step (a) distillation wherein said distillate is used as an energy fortified hydrocarbon additive.

6,039,772

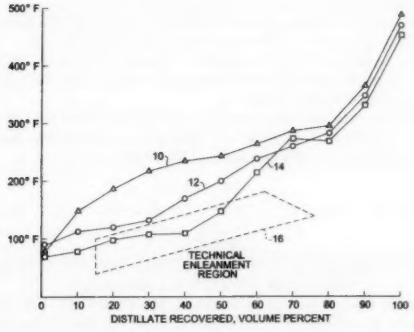
NON LEADED FUEL COMPOSITION

William C. Orr, 1242 S. Gilpin, Denver, Colo. 80210

Continuation of application No. 07/511,896, Apr. 10, 1990, abandoned, which is a continuation of application No. 06/770,836, Aug. 28, 1985, abandoned, which is a continuation-in-part of application No. 06/670,556, Oct. 9, 1984, abandoned. This application Apr. 13, 1995, Appl. No. 421,281.

Int. Cl.[7] **C10L** *1/12;1/18*

U.S. Cl. 44—359 **52 Claims**



1. A fuel composition comprising:

an unleaded hydrocarbon base fuel having an olefinic content;

a cyclopentadienyl manganese tricarbonyl antiknock compound having a manganese concentration from about 0.001 to about 1.0 gram of elemental manganese per gallon of said fuel composition; and

an oxygenate comprising 0.05 to 14.2 weight percent oxygen of the fuel composition and selected from the group consisting of methanol and ethanol and mixtures thereof,

wherein a boiling temperature is associated with the T50 distillate fraction of said fuel composition which is at least 175° F. and is also greater than a corresponding maximum boiling temperature of the Technical Enleanment Region associated with said distillate fraction.

12. A fuel composition comprising:

an unleaded hydrocarbon base fuel having an olefinic content;

a cyclopentadienyl manganese tricarbonyl antiknock compound having a manganese concentration from about 0.001 to about 1.0 gram of elemental manganese per gallon of said fuel composition;

a first oxygenate comprising selected from the group consisting of C_1 to C_6 aliphatic alcohols; and

a second oxygenate different from said first oxygenate and selected from the group consisting of C_2 to C_{12} alcohols, C_3 to C_{12} ketones, C_2 to C_{12} ethers, and mixtures thereof,

wherein a boiling temperature is associated with the T50 distillate fraction of said fuel composition which is at least 175° F. and is also greater than a corresponding maximum boiling temperature of the Technical Enleanment Region associated with said distillate fraction.

18. A fuel composition comprising:

an unleaded hydrocarbon base fuel having an olefinic content;

a cyclopentadienyl manganese tricarbonyl antiknock compound having a manganese concentration from about 0.001 to about 2.0 grams of elemental manganese per gallon of said fuel composition; and

an oxygenate selected from the group consisting of ethanol and methanol and mixtures thereof,

wherein a boiling temperature is associated with the T30 distillate fraction of said fuel composition which is at least 130° F. and is also greater than a corresponding maximum boiling temperature of the Technical Enleanment Region associated with said distillate fraction.

27. A method of minimizing technical enleanment, said method comprising the step of:

providing an fuel composition including (a) an unleaded hydrocarbon base fuel containing olefins, (b) a cyclopentadienyl manganese tricarbonyl antiknock compound having a manganese concentration from about 0.001 to about 1.0 gram of manganese per gallon of said fuel composition, and (c) an oxygenate selected from the group consisting of C_1 to C_6 aliphatic alcohols, C_2 to C_7 ethers, and mixtures thereof, wherein a boiling temperature is associated with the T50 distillate fraction of said fuel composition is at least 175° F. and is also greater than the maximum boiling temperature of the Technical Enleanment Region associated with said distillate fraction.

6,039,773

FUEL COMPOSITIONS CONTAINING POLYAMINES OF POLYALKYL AROMATIC ESTERS

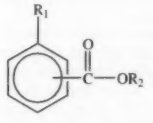
Richard E. Cherpeck, Cotati, Calif., assignor to Chevron Chemical Company LLC, San Francisco, Calif.

Filed Dec. 22, 1997, Appl. No. 995,596

Int. Cl.[7] **C10L** *1/18;1/22*

U.S. Cl. 44—399 **28 Claims**

1. A compound of the formula:



or a fuel-soluble salt thereof;

wherein R_1 is a polyamine moiety having about 2 to about 12 amine nitrogen atoms and about 2 to about 40 carbon atoms, wherein the polyamine moiety is connected to the aromatic ring through one of its amine nitrogen atoms; and

R_2 is a polyalkyl group having an average molecular weight in the range of about 450 to 5,000.

PYROLYTIC CONVERSION OF ORGANIC FEEDSTOCK AND WASTE

Frederick G. McMullen, P.O. Box 396, Gwynedd Valley, Pa. 19437; Dillon G. McMullen, N6640 County Hwy. H, and Roger B. McMullen, N5238 Hwy. 51, both of Irma, Wis. 54442

Division of application No. 08/255,326, Jun. 7, 1994, Pat. No. 5,589,599. This application Dec. 26, 1996, Appl. No. 774,185.

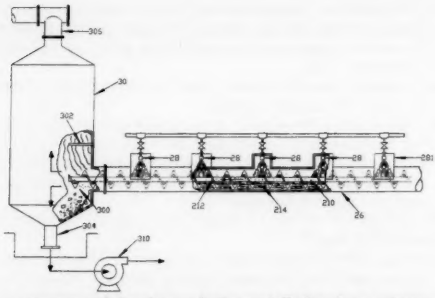
Int. Cl.[7] **C10G** *9/04;* **B01F** *3/02*

U.S. Cl. 48—102 A **12 Claims**

1. A modular flash pyrolysis type plant system to produce an activated carbon matrix product and a clean combustible gas product from an organic feedstock comprising:

at least one feedstock receiving unit to accept, hold and convey a feedstream of at least one solid organic feedstock;

a pair of insulated pyrolytic apparatus to receive contain, convey and convert the solid feedstock at approximately atmospheric



pressure and thereby producing and discharging a mixture of intermediate solid and gas products being both a solid activated carbon type product and a gaseous hydrocarbon type product, wherein said pyrolytic apparatus has at least one gas burner unit as a cavity radiator heat source to provide the heat of pyrolytic conversion;

a jacketed conveyor to accept, contain and convey the intermediate products from each one of the pyrolytic apparatus and allow the temperature of said intermediate products to be reduced by association with ambient air within a jacket around a covered and enclosed portion of the jacketed conveyor;

a spray water section unit to receive, contain, convey and convert the intermediate products from each one the jacketed conveyors, wherein a spray of water adjusts the relative amounts of steam, hydrogen, carbon dioxide and carbon monoxide in the intermediate products to provide an enhanced intermediate mixture of products being an enhanced gas mixture and a carbon slurry product when the flow rate of additional spray water is adjusted to further regulate the temperature of said feedstream;

at least one gas separator/scrubber to accept the carbon slurry and the enhanced gas mixture from the spray water sections, to divide the carbon slurry product from the enhanced gas mixture and to scrub the enhanced gas mixture such that the cooled total product stream is separated;

at least one gas mixture processing unit where the enhanced and scrubbed gas mixture is received from each gas scrubber unit to be processed for storage as a combustible gas mixture in a combustible gas storage unit as well as transported to at least one other energy producing unit of the plant including the pyrolytic apparatus for use as a combustible fuel in at least the pyrolytic apparatus cavity radiator burner units to help produce the heat for pyrolysis;

at least one air supply system including a blower and air duct piping to provide the oxygen for combustion of the combustible gas mixture in at least the pyrolytic apparatus burner units, said air duct piping for each pyrolytic apparatus burner unit being connected with an outer jacket on the jacketed conveyor to increase the temperature of the ambient air of combustion and thereby increase the thermal efficiency of the plant;

at least one dewatering assembly including a drain bin with a condenser, an inclined dewatering conveyor and a quench tank to receive and dewater the carbon slurry pumped from a lower outlet port of the gas scrubber unit, wherein a major portion of the water is removed from the carbon slurry and returned to at least the gas scrubber unit and the spray water section and a wet activated carbon product is produced; and

at least one regenerating apparatus to receive, contain, convey and convert the wet activated carbon product from at least one respective dewatering assembly, said regenerating apparatus having at least one cavity radiator portion being an outer jacket portion containing hot exhaust gases from the cavity radiator of another apparatus to radiate heat to and through regenerating retorts for further drying and pyrolysis of the activated carbon product thereby producing additional gaseous products and a dry enhanced activated carbon matrix, wherein the further gaseous products are discharged from the regenerating apparatus by a gas outlet pipe to the spray water section and the enhanced activated carbon matrix is discharged through a rotary valve at a carbon outlet port by an internal conveyor system including an auger, each said cavity radiator further having at least one exhaust port to discharge the hot exhaust gasses, whereas the enhanced activated carbon matrix and the combustible gas mixture is available for public use.

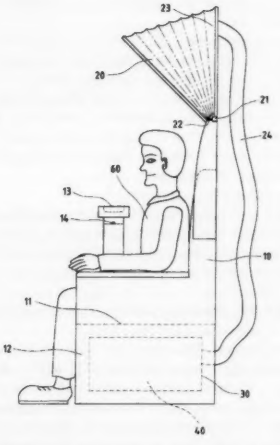
CLEANING DEVICE FOR AVOIDING DISSIPATION OF POLLUTED AIR DUE TO SMOKING

Yung-Ho Liue, Room 18, 13F, No. 4, Shi-Ning South Rd., and Kung-An Chiang, No. 1, Alley 32, Lane 76, Sec. 2, Ho-Ping E. Rd., both of Taipei, Taiwan

Filed Dec. 9, 1998, Appl. No. 208,252

Int. Cl.[7] B01D *53/00*

U.S. Cl. 55—385.1 **2 Claims**



1. A cleaning device for avoiding dissipation of polluted air due to smoking, comprising:

a chair body disposed with a seat pad board and formed with a chamber under the seat pad board, an ash tray being disposed

on an arm rest of the chair body, a sucking motor switch being disposed at a bottom of the ash tray;

a gas-collecting funnel connected with a top end of the chair body by a coupler, the funnel being extensibly downward pullable and openable, a main power switch being disposed on a chair back at an end of the downward pulling travel of the funnel, an end of the funnel being communicated with a sucking port which is communicated with a sucking device by a gas conduit;

a sucking device including a sucking motor, a check valve being disposed on a gas inlet side of the sucking motor, an expansion room being disposed on a rear side of the sucking motor, an expansion valve being disposed in the expansion room, an expansion valve switch being disposed on the expansion valve for switching on/off the power for the sucking motor; and

a filtering box disposed on a rear side of the sucking device and having a smaller gas inlet and a larger gas outlet, a filtering cotton and active carbon being disposed in the filtering box, whereby the sucking device and the filtering box are installed in the bottom of the chair body and a smoker sits on the chair body with the gas-collecting funnel pulled downward to restrain the waste smoke gas within the funnel, the sucking device sucking the polluted air through the gas conduit into the filtering box to be purified.

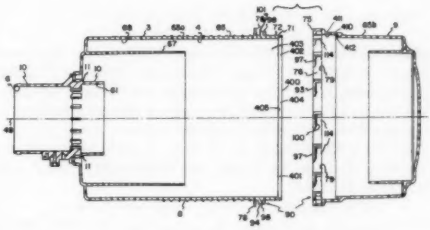
AIR CLEANER ASSEMBLY

Paul R. Coulonvaux, Brussels, Belgium, assignor to Donaldson Company, Inc., Minneapolis, Minn.

Continuation-in-part of application No. 08/928,684, Sep. 12, 1997. This application Sep. 3, 1998, Appl. No. 146,291.

Int. Cl.[7] **B01D** *46/24*

U.S. Cl. 55—498 **21 Claims**



1. An air cleaner assembly comprising:

(a) a body member including a sidewall and an end wall;

(i) said body member defining an open air cleaner interior and an air flow inlet;

(ii) said sidewall defining an open end for selected insertion and removal of an air filter element;

(iii) said body member including a generally cylindrical, cover engagement, surface;

(b) a removable cover sized for selective positioning in covering relation to said sidewall open end;

(i) said cover including a generally cylindrical, body member engagement, surface;

(ii) said body member engagement surface being dimensioned to circumscribe said cover engagement surface;

(c) a rotation activated lock assembly having a first unlocked orientation and a second locked orientation;

(i) said cover being separable from said body member when said lock assembly is in said first, unlocked, orientation;

(ii) said cover being secured to said body member when said lock assembly is in said locked orientation;

(iii) said rotation activated lock assembly being constructed and arranged to selectively move between said unlocked orientation and said locked orientation, by rotational movement of said cover relative to said body member;

(iv) said cover being selectively rotatably slideable relative to said body member, with said cylindrical cover-engagement surface opposed to said cylindrical body member engagement surface, during selected movement of said lock assembly between said locked and unlocked orientations;

(v) said rotation activated lock assembly including a holder arrangement; said holder arrangement comprising a first plurality of p-shaped holders, each having a tail extending generally perpendicular to a direction of rotation of said cover relative to said body member during locking;

(A) said body member being a molded plastic construction with said holders molded thereon and integrally therewith;

(vi) said rotation activated lock assembly including a second plurality of feet; said feet each including a banana shaped segment oriented to engage a selected one of said p-shaped holders during locking;

(A) said tail of each p-shaped holder extending sufficiently far to block rotation of said cover, relative to said body member, by engagement with a portion of a selected foot, beyond a selected amount of rotation, during locking;

(B) said cover being a molded plastic member with said feet molded thereon and integrally therewith; and

(d) a moveable engagement finger selectively positionable between engaged and release positions;

(i) said engagement finger, when in said engaged position, being positioned to secure a portion of a selected holder

between a portion of the engagement finger and a portion of a selected foot member to prevent rotational movement of the cover relative to the body member; and,

(ii) said engagement finger, when in said release position, releasing a selected holder to allow selected rotational movement of the cover relative to the body member.

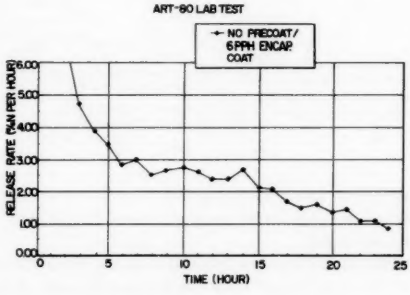
PRECOATED CONTROLLED RELEASE FERTILIZERS AND PROCESSES FOR THEIR PREPARATION

Harvey M. Goertz; Richard J. Timmons, both of Marysville, Ohio, and William R. Johnson, San Jose, Calif., assignors to OMS Investments, Inc., Wilmington, Del.

Filed Jun. 9, 1998, Appl. No. 94,329

Int. Cl.[7] **A01N** *25/00;25/08;25/10;* **C05C** *9/00*

U.S. Cl. 71—1 **35 Claims**



1. A controlled release fertilizer comprising:

a granular core of nutrient material;

a preliminary coating of an organic oil applied on the granular core; and,

a polymeric encapsulating coat applied over the preliminary coating on the granular core while the organic oil is uncured;

the preliminary coating being cured after application of the polymeric encapsulating coat.

PREPARING ORGANIC POWDER BY ANAEROBICALLY TREATING FERMENTATION WASTE FLUID AND AEROBICALLY TREATING THE DIGESTED FERMENTATION LIQUOR

Akio Sota, Kasukabe; Tomoo Okiura, and Masaki Azuma, both of Tokyo, all of Japan, assignors to Kyowa Hakko Kogyo Co., Ltd., Tokyo, Japan

Filed Jan. 16, 1998, Appl. No. 8,296

Claims priority, application Japan, Jan. 29, 1997, 9-015181

Int. Cl.[7] C05F *11/08;1/00;7/00;* **C05B** *9/00;* **A01N** *25/00*

U.S. Cl. 71—10 **28 Claims**

1. A process for producing granulated organic matter comprising the steps of:

(a) obtaining a fermentation waste fluid;

(b) anaerobically fermenting said fermentation waste fluid to obtain a digested fermentation liquor;

(c) aerobically treating said digested fermentation liquor;

(d) subjecting the aerobically treated digested fermentation liquor to precipitation to obtain a precipitated fraction;

(e) drying or dehydrating the precipitated fraction;

(f) blending the dried or dehydrated precipitated fraction with a fermentation waste fluid which has not been aerobically treated; and

(g) granulating the blended fermentation waste fluid and precipitated fraction obtained from step (f).

6,039,783

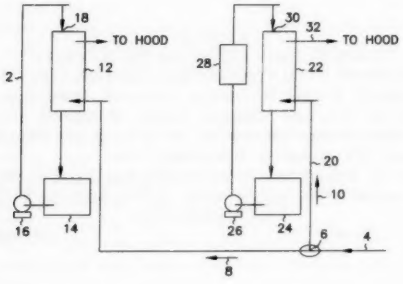
PROCESS AND EQUIPMENT FOR NITROGEN OXIDE WASTE CONVERSION TO FERTILIZER

Dale E. Lueck, Merritt Island, and Clyde F. Parrish, Melbourne, both of Fla., assignors to The United States of America as represented by the Administrator of the National Aeronautics and Space Administration, Washington, D.C.

Filed Dec. 3, 1996, Appl. No. 772,057

Int. Cl.[7] C01B *21/48;* **C05C** *5/02*

U.S. Cl. 71—59 **20 Claims**



15. A process for converting vapor streams containing at least one oxide of nitrogen to a solution comprising potassium nitrate, comprising a) contacting said vapor stream with water to form a solution of oxy acid(s) of nitrogen, b) adding hydrogen peroxide to said solution of oxy acid(s) of nitrogen to form a hydrogen peroxide containing solution, c) sampling said hydrogen peroxide containing solution to determine the relative amount of hydrogen peroxide in said hydrogen peroxide containing solution, d) adding hydrogen peroxide to said hydrogen peroxide containing solution when said sampling determines there is less than an excess of hydrogen peroxide, and e) adding potassium hydroxide to said hydrogen peroxide containing solution to form the solution comprising potassium nitrate.

19. An apparatus for converting vapor streams containing at least one oxide of nitrogen therein to a liquid fertilizer composition comprising:

a) means for carrying a vapor stream containing at least one oxide of nitroaen to a first contact zone,

b) means for providing water to said first contact zone to form oxy acid(s) of nitrogen from said at least one oxide of nitrogen,

c) means for directing said acid(s) as a second stream to a second contact zone,

d) means for providing to said second stream hydrogen peroxide within said second contact zone to convert at least some of any oxy acid(s) of nitrogen other than in the nitrate form present within said second stream to nitrate ions,

e) means for sampling said stream within said second contact zone to determine the relative amount of hydrogen peroxide within said second contact zone,

f) means for adding a solution comprising potassium hydroxide to said second stream to maintain a pH between 5.0 and 11.0 within said second stream within said second contact zone to form a solution of potassium nitrate, and

g) means for removing said solution of potassium nitrate from said second contact zone.

6,039,784

IRON-BASED POWDER COMPOSITIONS CONTAINING GREEN STRENGTH ENHANCING LUBRICANTS

Sydney Luk, Lafayette Hill, Pa., assignor to Hoeganaes Corporation, Riverton, N.J.

Filed Mar. 12, 1997, Appl. No. 820,371

This patent is subject to a terminal disclaimer.

Int. Cl.[7] B22F *1/00*

U.S. Cl. 75—231 **22 Claims**

1. An improved metallurgical powder composition having a polymeric material associated therewith, comprising:

(a) a major amount of a metal-based powder having a weight average particle size in the range of about 25–350 microns;

(b) a minor amount of a polymeric material associated with the metal-based powder, the polymeric material comprising polyetherimides, polyphenylene ethers, polyethersulfones, polycarbonates, polyethylene glycols, polyvinyl acetates, or polyvinyl alcohols; and

(c) a minor amount of a solid compaction lubricant comprising at least about 10 percent by weight of a solid, particulate polyether having the formula:

$$H—[O(CH_2)_q]_n—OH$$

where q is from about 1 to about 7, and n is selected such that the polyether has a weight average molecular weight between about 10,000 and about 4,000,000, wherein said polyether has a weight average particle size between about 25 and 150 microns.

6,039,785

MATERIAL FOR THE POWDER-METALLURGICAL PRODUCTION OF SHAPED PARTS, IN PARTICULAR VALVE SEAT RINGS OR VALVE GUIDES WITH HIGH RESISTANCE TO WEAR

Kirit Dalal, Radevormwald; Ekkehard Köhler, Wetter, both of Germany, and Anil V. Nadkarni, Chapel Hill, N.C., assignors to Bleistahl Produktions-GmbH & Co. KG, Wetter, Germany, and SCM Metal Products, Inc., Research Triangle Park, N.C.

PCT No. PCT/EP97/00837, § 371 Date Oct. 15, 1998, § 102(e) Date Oct. 15, 1998, PCT Pub. No. WO97/30808, PCT Pub. Date Aug. 28, 1997

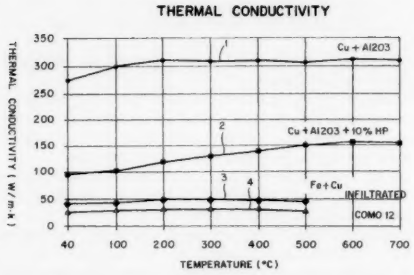
PCT Filed Feb. 21, 1997, Appl. No. 125,612

Claims priority, application Germany, Feb. 21, 1996, 196 06 270

Int. Cl.[7] C22C *1/05;9/00*

U.S. Cl. 75—235 **26 Claims**

1. A material for the powder-metallurgical production of shaped parts with high resistance to wear and corrosion and high thermal conductivity, in particular for the manufacture of valve seat rings or valve guides for internal combustion engines, by pressing,



sintering after-compacting of a starting powder mixture with a copper component of at least about 50% by weight, characterized in that the starting powder mixture consists of a basic powder in an amount of from 50% to 90% by weight, said powder containing the Cu-component, and a powdery molybdenum-containing alloying addition in an amount of from 10% to 50% by weight; and that the basic powder is a dispersion-hardened copper powder.

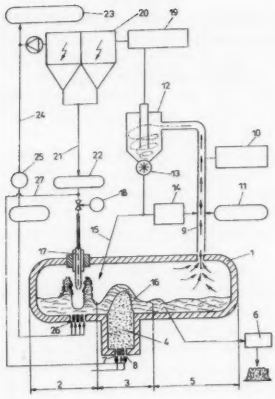
Int. Cl.[7] C21C *5/30;5/32;5/34*

U.S. Cl. 75—531 **10 Claims**

1. A process for treating metallic residues from waste incineration plants and steel works in a converter having tuyeres, said process comprising:



providing molten slag in the converter at a layer height of more than 1.2 m, the molten slag containing the metallic residues;

reacting the molten slag with a metal bath contained in the converter while introducing an oxygen stream through the tuyeres submerged in the metal bath in an amount and at a temperature sufficient to cool the submerged tuyeres and adjust the metal bath to less than 1700° C. in temperature in the vicinity of the tuyeres, said reacting of the molten slag with the metal bath causing the metallic residues of the molten slag to be reduced and passed into the metal bath; and

injecting an inert gas containing carbon into the metal bath to adjust the reduction potential of the metal bath,

wherein the oxygen stream comprises oxygen, at least one member selected from the group consisting of CO_2 and water vapor, and optionally hydrocarbons.

6,039,788

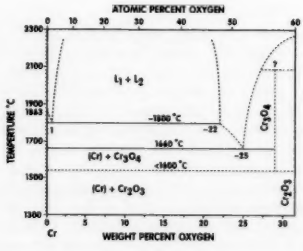
MELTING AND CASTING OF HIGH PURITY CHROMIUM WITH CONTROLLED OXYGEN CONTENT

Raymond K. F. Lam, Park Ridge; Charles E. Melin, Bogota, both of N.J., and Guiseppe Colella, Orangeburg, N.Y., assignors to Sony Corporation, Tokyo, Japan, and Materials Research Corporation, Orangeburg, N.Y.

Division of application No. 08/822,055, Mar. 24, 1997, Pat. No. 5,866,067. This application Apr. 9, 1998, Appl. No. 57,932.

Int. Cl.[7] C22B *34/32*

U.S. Cl. 75—623 **16 Claims**



1. A method of manufacturing a high purity chromium ingot with controlled O content comprising the steps of:

providing a crucible;

charging said crucible with Cr;

adjusting the O level of the Cr to an elevated value between about 1000 and 6000 ppm by the addition of an oxide of chromium, wherein said elevated value is selected to reduce reaction between liquid Cr and the crucible;

heating said crucible to melt the Cr and the oxide of Cr; and casting an ingot from the melt.

6,039,789

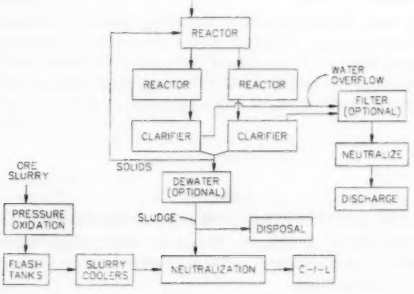
REMOVAL OF BORON AND FLUORIDE FROM WATER

Jacques McMullen, Toronto, Canada; Wilson Tsu, Elko, Nev., and Reinhard Kargel, Toronto, Canada, assignors to Barrick Gold Corporation, Ontario, Canada

Filed Mar. 27, 1998, Appl. No. 49,331

Int. Cl.[7] C22B *3/12*

U.S. Cl. 75—711 **7 Claims**



7. An integrated process for reducing boron and fluoride ion content of feed water, and recovering gold from a refractory auriferous ore containing sulfide sulfur, the process comprising:

contacting said feed water containing greater than 0.8 mg/L boron and greater than 1 mg/L fluoride ion at a temperature in the range of about 85° F. to about 130° F. with a source of magnesium in a dosage of between about 10 and about 80 mg magnesium per liter of feed water in the form of a magnesium sulfate in solution in a contacting zone;

contacting said feed water with a first lime slurry to produce treated water and a magnesium precipitate containing $3MgO.Mg(OH)_2.6SiO_2.6H_2O$, $Mg(OH)_2$, B, and F;

separating the treated water and precipitate into a substantially liquid fraction comprising water having a boron content below 0.7 mg/L and fluoride ion content below 0.9 mg/L and a substantially solid fraction comprising said magnesium precipitate;

transferring a first quantity of said solid fraction to the contacting zone to facilitate nucleation of said magnesium precipitate;

forming an aqueous ore slurry comprising said refractory auriferous ore;

subjecting the aqueous ore slurry to pressure oxidation in an autoclave to produce an oxidized ore slurry;

raising the pH of the oxidized ore slurry to between about 3 and about 4 by contacting said oxidized ore slurry with a second quantity of said substantially solid fraction comprising said magnesium precipitate to produce an intermediate oxidized slurry;

raising the pH of the intermediate oxidized slurry further to between about 10 and about 10.5 by contacting said intermediate oxidized slurry with a second lime slurry to produce a neutralized oxidized slurry; and

recovering gold from said neutralized oxidized slurry.

6,039,790

METHOD FOR RECOVERING NICKEL HYDROMETALLURGICALLY FROM TWO DIFFERENT NICKEL MATTES

Stig-Erik Hultholm, Pori, and Sigmund Peder Fugleberg, Turku, both of Finland, assignors to Outkumpu Technology Oy, Espoo, Finland

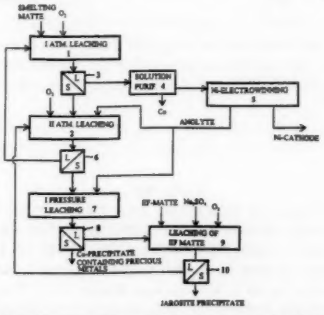
PCT No. PCT/FI96/00432, § 371 Date Feb. 5, 1998, § 102(e) Date Feb. 5, 1998, PCT Pub. No. WO97/07248, PCT Pub. Date Feb. 27, 1997

PCT Filed Aug. 6, 1996, Appl. No. 11,228

Claims priority, application Finland, Aug. 14, 1995, 953832

Int. Cl.[7] C21B *15/00*

U.S. Cl. 75—739 **18 Claims**



1. A method for recovering nickel and other valuable metals and for precipitating iron from first and second pyrometallurgically produced mattes, wherein the first matte contains a smaller proportion of iron than the second matte, comprising:

(a) leaching the first matte in a first leaching cycle including at least one atmospheric leaching step and at least one pressure leaching step each using a leaching solution containing nickel sulfate and sulfuric acid, whereby nickel of the first matte dissolves as nickel sulfate in each leaching step of the first leaching cycle and iron of the first matte dissolves in a leaching step of the first leaching cycle to form an iron-bearing solution,

(b) reducing nickel sulfate solution from the first leaching cycle to metallic nickel,

(c) leaching the second matte in a second leaching cycle using the iron-bearing solution formed in step (a) with pH adjusted to at least 1, whereby the nickel of the second matte dissolves as nickel sulfate, and

(d) using the nickel sulfate solution formed in step (c) as a leaching solution in a leaching step of the first leaching cycle.

METHODS OF FORMING AND USING POROUS STRUCTURES FOR ENERGY EFFICIENT SEPARATION OF LIGHT GASES BY CAPILLARY CONDENSATION

Narasimhan Calamur, Lemont; Martin E. Carrera, Naperville, both of Ill.; David J. Devlin, Los Alamos, and Tom Archuleta, Espanola, both of N. Mex., assignors to Regents of the University of California and BP Amoco Corporation, Chicago, Ill.

Continuation-in-part of application No. 08/881,711, Jun. 24, 1997, abandoned, Provisional application No. 60/050,714, Jun. 24, 1997. This application Jun. 22, 1998, Appl. No. 102,234.

Int. Cl.[7] **B01D** *53/22*

U.S. Cl. 95—45 **22 Claims**

1. A method for separating one or more condensable compounds from a gaseous mixture of two or more compounds of differing volatilities, comprising:

(a) providing a composite porous structure prepared by depositing a coating to one side of a substrate having a defined pore structure, to obtain a composite having a tapered pore structure characterized as tapering from openings of a large dimension at an opposing side of the substrate to smaller openings at the coated side;

(b) priming the pore structure with a liquid solvent;

(c) contacting, under condensing conditions, the coated side of the composite porous structure with a gaseous mixture comprising vapors of a more volatile component and a less volatile component whereby vapors from the mixture are permitted to condense, at least in part, substantially in and adjacent to the openings at the coated side, and to flow in a condensed liquid state, substantially in the absence of vapor, from the openings at the coated side to the openings at the opposing side; and

(d) maintaining conditions of a gaseous sweep adjacent the opposing side of the composite porous structure, whereby the liquid condensate in and adjacent to the openings at the opposing side is caused to evaporate.

PAPER COATING COMPOSITION

Akira Kawamura, Toyonaka; Toshiyuki Hasegawa, Nara, and Akira Tanikawa, Toyonaka, all of Japan, assignors to Sumitomo Chemical Company Limited, Osaka, Japan

Filed Aug. 25, 1998, Appl. No. 139,638

Claims priority, application Japan, Aug. 26, 1997, 9-229264; Aug. 4, 1998, 10-220667

Int. Cl.[7] **C09D** *7/12;201/00*

U.S. Cl. 106—287.2 **8 Claims**

1. A paper coating composition which comprises:

(I) a pigment,

(II) an aqueous binder, and

(III) a crosslinked amine compound obtainable by reacting a heterocyclic amine (a) and a glycidyl compound (b) having at least two glycidyl groups in the molecule.

6,039,800

PRODUCTION OF FOAMED COMPOSITIONS CONTAINING GYPSUM

Mojahedul Islam, Powell, Ohio, assignor to Witco Corporation, Greenwich, Conn.

Filed May 14, 1998, Appl. No. 78,959

Int. Cl.[7] **C04B** *38/10;24/12;11/00*

U.S. Cl. 106—680 **23 Claims**

1. A process for making a foamed gypsum composition, comprising:

(I) combining water and one or more surfactants selected from the group consisting of amphoteric surfactants of formula (a) or (b)

$$R^4—(OC_3H_6)_x—(C(O)NH(CH_2)_{1-3})_y—N(Z^1)(Z^2)_{0-1}—ZCOOX \quad (a)$$

$$R^4—(OC_3H_6)_x—(C(O)NH(CH_2)_{1-3})_y—N(Z^1)(Z^2)_{0-1}ZSO_3X \quad (b)$$

wherein

X is —H, a sodium, calcium, potassium, lithium or ammonium cation, or an amine of the formula $—N^+H(C_{1-20}\ alkyl)_2$ or N^+H_2 (C_{1-20} alkyl); or when a Z^2 group is present there is no X group on —ZCOOX;

R^4 is straight or branched alkyl or alkylene, or cyclic or heterocyclic aromatic which is optionally substituted with alkyl, and contains 4 to 40 carbon atoms and 0–5 carbon-carbon double bonds;

x is 0–1, y is 0–1, and x+y is 0–1;

Z^1 and Z^2 are independently of each other H, C_fH_{2f+1}, or $C_fH_{2f}OH$ wherein f is 1 to 6 or, in formula (a), one of Z^1 and Z^2 may further be —ZCOOX, where Z is $(CH_2)_f$, $CH_2CH_2OCH_2CH_2$ or $CH_2CHOHCH_2$; and

(II) foaming the resulting combination, provided that either:

(A) the water in step (I) contains calcined gypsum slurried therein, and step II is carried out during or after step (I), or

(B) the process during or after step (II) further comprises an additional step (III) of combining the product of step (II) and an aqueous slurry of calcined gypsum.

6,039,801

CONTINUOUS OXIDATION PROCESS FOR CRYSTAL PULLING APPARATUS

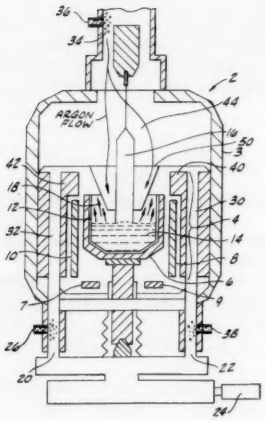
John D. Holder, and Bayard K. Johnson, both of Lake St. Louis, Mo., assignors to MEMC Electronic Materials, Inc., St. Peters, Mo.

Filed Oct. 7, 1998, Appl. No. 167,747

Int. Cl.[7] **C30B** *15/00*

U.S. Cl. 117—20 **26 Claims**

1. A process for reducing the amount of hypostoichiometric silicon dioxide in a crystal pulling apparatus through continuous oxidation of silicon compounds produced during production of silicon ingots by the Czochralski method in a crystal pulling apparatus, the process comprising continuously injecting an argon gas stream into the apparatus above a hot zone within the apparatus during ingot growth such that the argon gas stream flows downwardly within the apparatus through the hot zone and into an exhaust tunnel and continuously injecting an oxygen-containing gas through an inlet in the exhaust tunnel in the apparatus at a



position downstream from the hot zone relative to the direction of flow of the argon gas stream to continuously oxidize silicon monoxide, silicon vapor, and hypostoichiometric silicon dioxide produced during the production of the silicon ingot.

SINGLE CRYSTAL GROWTH METHOD

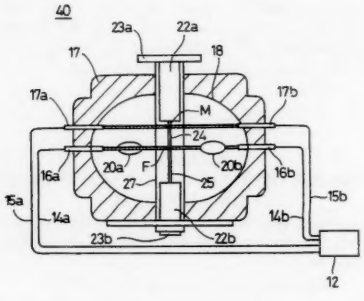
Takenori Sekijima, Shiga-ken; Takashi Fujii, Otsu; Kikuo Wakino, Muko, and Masakatsu Okada, Kyoto, all of Japan, assignors to Murata Manufacturing Co., Ltd., Japan

Filed Mar. 5, 1998, Appl. No. 35,472

Claims priority, application Japan, Mar. 12, 1997, 9-078977

Int. Cl.[7] C30B *13/02*

U.S. Cl. 117—49 **20 Claims**



1. A single crystal growth method comprising the steps of:

providing an incongruent melting polycrystal having a first and a second end, and a single crystal seed crystal joined to the first end thereof;

heating a portion of the polycrystal distant from the first end so as to form a melt zone at that portion of the polycrystal;

moving the melt zone toward the first end of the polycrystal so as to contact the seed crystal; and

growing single crystal by moving the melt zone toward the second end of the polycrystal.

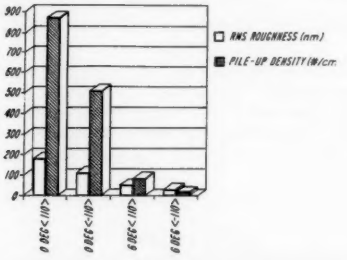
UTILIZATION OF MISCUT SUBSTRATES TO IMPROVE RELAXED GRADED SILICON-GERMANIUM AND GERMANIUM LAYERS ON SILICON

Eugene A. Fitzgerald, Windham, N.H., and Srikanth B. Samavedam, Cambridge, Mass., assignors to Massachusetts Institute of Technology, Cambridge, Mass.

Provisional application No. 60/020,820, Jun. 28, 1996. This application Feb. 27, 1997, Appl. No. 806,741.

Int. Cl.[7] C30B *25/18*

U.S. Cl. 117—89 **13 Claims**



1. A method of processing semiconductor materials, comprising:

providing a monocrystalline substrate of a first semiconductor material having an orientation from 1° to about 8° offset from the [001] direction; and

epitaxially growing a relaxed graded layer of a crystalline second semiconductor material on said substrate, said second semiconductor material including at least said first semiconductor material, and thus forming a semiconductor surface of the relaxed graded layer that has a dislocation pile-up density less than 60 per centimeter, and a threading dislocation density lower than 3×10^6 cm^{-2} and a root-mean square surface roughness of less than 20 nm.

6,039,804

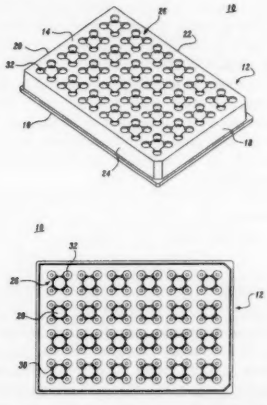
CRYSTALLIZATION TRAY

Hidong Kim, and Lansing Joseph Stewart, both of Bainbridge Island, Wash., assignors to Emerald BioStructures, Inc., Bainbridge Island, Wash.

Filed Sep. 9, 1998, Appl. No. 150,629

Int. Cl.[7] C30B *35/00*

U.S. Cl. 117—206 **22 Claims**



17. A crystallization tray comprising a plurality of crystallization units, each of said crystallization units comprising a reservoir, four drop chambers disposed around said reservoir, and four diffusion channels that connect said drop chambers to said reservoir.

6,039,805

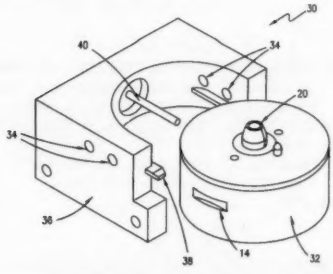
TRANSFER FLUXING METHOD AND APPARATUS FOR COMPONENT PLACEMENT ON SUBSTRATE

John Gillette Davis; Allen Thomas Mays, and Kris Allen Slesinger, all of Charlotte, N.C., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jan. 12, 1998, Appl. No. 5,539

Int. Cl.[7] B05C *1/02;* **B23K** *31/02*

U.S. Cl. 118—74 **11 Claims**



1. A transfer fluxing apparatus comprising: a flux reservoir containing flux; a compliant pad attached to an opening in the flux reservoir; a means for controlling deposition of flux onto the compliant pad; and further means for refilling the flux reservoir with flux, said refilling means comprising a refill device extending through a wall of the flux reservoir.

6,039,806

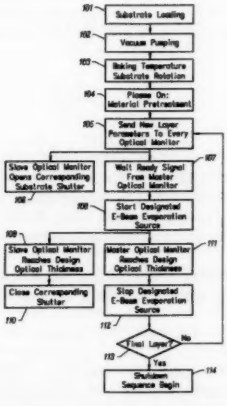
PRECISION THICKNESS OPTICAL COATING SYSTEM AND METHOD OF OPERATION THEREOF

Ming Zhou; Feng Qing Zhou, both of San Jose, and Jing-Jong Pan, Milpitas, all of Calif., assignors to E-Tek Dynamics, Inc., San Jose, Calif.

Filed Apr. 20, 1998, Appl. No. 63,147

Int. Cl.[7] C23C *14/30;14/34;16/48;16/52*

U.S. Cl. 118—665 **31 Claims**



1. A high-volume apparatus for precision coating substrates to form optical elements, said system comprising:

a vacuum chamber;

at least one optical coating material source for generating coating material vapor for deposition;

a plurality of stations, each station holding and rotating a substrate to receive said optical coating material by deposition of said coating material vapor from said optical coating material source; and

a plurality of optical monitoring units, each optical monitoring unit corresponding to one of said stations for monitoring said deposition of said coating material upon said corresponding substrate.

6,039,807

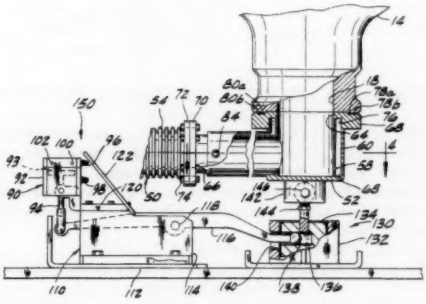
APPARATUS FOR MOVING EXHAUST TUBE OF BARREL REACTOR

Umberto Guarniero, Novara; Franco Magon, Trecate, and Enzo Bonanno, Novara, all of Italy, assignors to MEMC Electronic Materials, Inc., St. Peters, Mo.

Filed Mar. 17, 1998, Appl. No. 40,123

Int. Cl.[7] C23C *16/00*

U.S. Cl. 118—715 **18 Claims**



1. An epitaxial barrel reactor for depositing a material on a semiconductor wafer by a chemical vapor deposition process using a reactant gas, said barrel reactor comprising:

a receptacle defining a reaction chamber sized to receive at least one semiconductor wafer, said receptacle having an inlet port for introducing reactant gas to said reaction chamber and an exhaust port for removing reactant gas from said reaction chamber;

an exhaust tube sealingly engageable with the exhaust port of the receptacle for transporting reactant gas to facility piping to remove said gas from the reaction chamber after the chemical vapor deposition process;

an actuator spaced from the receptacle for moving the exhaust tube between an operating position in which the tube sealingly engages the exhaust port of the receptacle and a maintenance position in which the tube is spaced from the exhaust port to provide access to the receptacle; and

a mechanism operatively connected between the exhaust tube and the actuator for transmitting motion from the actuator to the exhaust tube to move the tube between said operating position and said maintenance position.

6,039,808

CVD APPARATUS FOR CU FORMATION

Yoshihiko Toyoda; Tetsuo Fukada; Takeshi Mori, and Makiko Hasegawa, all of Hyogo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

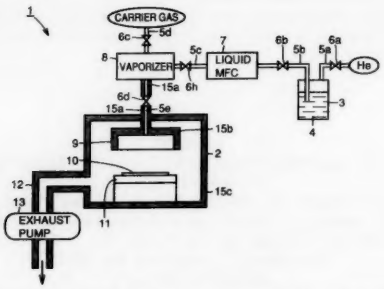
Filed Mar. 17, 1998, Appl. No. 42,693

Claims priority, application Japan, Mar. 18, 1997, 9-064232

Int. Cl.[7] C23C *16/06;16/18*

U.S. Cl. 118—715 **5 Claims**

1. A CVD apparatus for depositing Cu, the CVD apparatus comprising a source container containing a mixture of a solvent and a liquid raw material including Cu hexafluoroacetylacetonate (HFA) and adducted molecules, or a solid raw material including Cu(HFA) and adducted molecules, wherein at least one component of the CVD apparatus has a surface with a fluorinated organic



polymer, a fluorinated metal, an insulator or a Ti compound thereon at a portion where said raw material exists.

6,039,809

METHOD AND APPARATUS FOR FEEDING A GAS FOR EPITAXIAL GROWTH

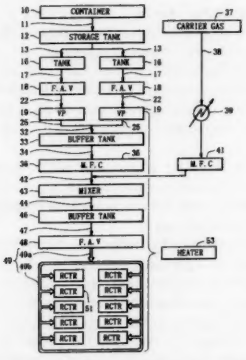
Yoshiharu Toyama; Akikazu Kuroda; Tokuji Kiyama; Sumio Kida; Shunji Yoshida, all of Tokyo; Takashi Yamamoto, and Tetsuya Atsumi, both of Mie, all of Japan, assignors to Mitsubishi Materials Silicon Corporation, Tokyo, and Mitsubishi Materials Polycrystalline Silicon Corporation, Mie, both of Japan

Filed May 28, 1998, Appl. No. 85,750

Claims priority, application Japan, Jan. 27, 1998, 10-014420

Int. Cl.[7] C23C *16/00*

U.S. Cl. 118—715 **5 Claims**



1. An apparatus for feeding a gas for epitaxial growth, comprising:

a vaporizer for heating a liquid raw material to vaporize the liquid raw material by water having a temperature of the liquid raw material's boiling point or higher,

a first mass flow controller for controlling a vaporized ingredient gas at the vaporizer to have a first predetermined mass flow,

a second mass flow controller for controlling a carrier gas to have a second predetermined mass flow,

a mixer for mixing the ingredient gas and the carrier gas controlled into the respective first and second predetermined mass flows,

a first flow adjusting valve for adjusting the flowing amount of the mixed gas composed of the ingredient gas and the carrier gas,

a tube for feeding the flow-adjusted mixed gas into a reactor for epitaxial growth,

a means for heating the ingredient gas and the mixed gas to over the respective condensing points for the ingredient gas and the mixed gas and maintaining the ingredient gas and the mixed gas at a temperature above the respective condensing points between the ingredient gas feeding tube of the vaporizer and the flow-adjusted mixed gas feeding tube for the reactor,

a pressure sensor for measuring a pressure of the ingredient gas inside the vaporizer,

a second flow adjusting valve for adjusting the feeding amount of the liquid raw material into the vaporizer, and

a controller for controlling the second flow adjusting valve on the basis of pressure measured by the pressure sensor.

6,039,810

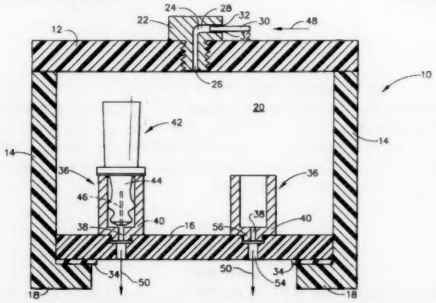
HIGH TEMPERATURE VAPOR COATING CONTAINER

Thomas E. Mantkowski, Madeira; Nripendra N. Das, West Chester; Raymond W. Heidorn, Fairfield, and Jackie L. King, Franklin, all of Ohio, assignors to General Electric Company, Cincinnati, Ohio

Filed Nov. 13, 1998, Appl. No. 191,660

Int. Cl.[7] C23C *16/00*; **F16L** *25/00*

U.S. Cl. 118—715 **7 Claims**



1. A high temperature vapor coating container including a container hollow interior, means to provide a coating vapor within the hollow interior, and means to hold at least one workpiece within the hollow interior; wherein:

the container is made of a nonmetallic material which:

a) has a coefficient of thermal expansion of less than about 4.5×10^{-6} at a vapor coating temperature of at least about 1700° F. to enable the container to resist distortion and cracking at the vapor coating temperature; and,

b) is nonreactive with the coating vapor at the coating temperature.

6,039,811

APPARATUS FOR FABRICATING POLYSILICON FILM FOR SEMICONDUCTOR DEVICE

Young-wook Park, Suwon; Cha-young Yoo; Young-sun Kim, both of Yongin, and Seung-hee Nam, Seoul, all of Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Suwon, Rep. of Korea

Filed Jun. 9, 1997, Appl. No. 871,452

Claims priority, application Rep. of Korea, Jun. 8, 1996, 96-20441

Int. Cl.[7] C23C *16/00*

U.S. Cl. 118—719 **6 Claims**

1. A semiconductor device fabricating apparatus, comprising:

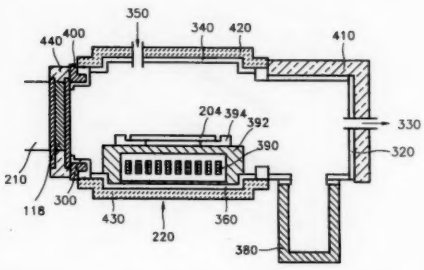
a cassette chamber for loading a semiconductor wafer;

a wafer transfer chamber having a front portion connected to the cassette chamber;

a reaction chamber connected to a rear portion of the wafer transfer chamber;

a gate valve disposed between the reaction chamber and the wafer transfer chamber to separate the reaction chamber from the wafer transfer chamber; and

first, second, third, fourth and fifth cooling units respectively mounted on a first wall of the reaction chamber adjacent to the wafer transfer chamber, a second side wall of the reaction



chamber opposite to the first side wall, an upper wall of the reaction chamber, a bottom wall of the reaction chamber; and on said gate valve.

6,039,812

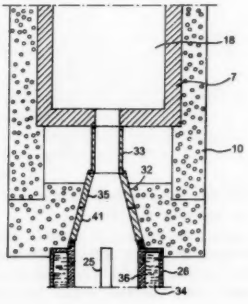
DEVICE FOR EPITAXIALLY GROWING OBJECTS AND METHOD FOR SUCH A GROWTH

Alex Ellison, Linkoping; Olle Kordina, Sturefors; Chun-Yuan Gu, Vasteras; Christer Hallin, Linkoping; Erik Janzen, Borensberg, and Marko Tuominen, Linkoping, all of Sweden, assignors to ABB Research Ltd., Zurich, Switzerland, and Okmetic Ltd., Espo, Finland

Continuation-in-part of application No. 08/735,402, Oct. 21, 1996, abandoned. This application Oct. 28, 1997, Appl. No. 959,191.

Int. Cl.[7] C23C *16/00;* **C30B** *29/36*

U.S. Cl. 118—725 **17 Claims**



1. A device for epitaxially growing objects on a substrate by chemical vapor deposition, the device comprising:

a susceptor having circumferential walls surrounding a room which receives said substrate;

a feeder for providing a flow of at least a carrier gas and a reactive gas into said susceptor and including:

a first conduit emerging into said room; and

a second conduit received in said first conduit, said second conduit having a smaller cross-section than said first conduit and extending in a longitudinal direction of said first conduit with a circumferential space separating said second conduit from inner walls of said first conduit, said first conduit conducting substantially only a carrier gas and said second conduit conducting only substantially reactive gases, said second conduit ending in said first conduit at a distance from said room, said first conduit having an enlarged cross-section in a region where said second conduit ends which decreases in the direction of said room;

a heater for heating said circumferential walls and thereby heating said substrate and said reactive gasses above a temperature level from which said reactive gases decompose on said substrate.

6,039,813

FRUCTOSE-BASED GRANULATED PRODUCT AND A PROCESS FOR THE PRODUCTION THEREOF

Tammy Pepper, Twickenham, United Kingdom; Christof Krüger, Hamburg, Germany, and Matti Mäkelä, Kirkkonummi, Finland, assignors to Xyrofin OY, Kotka, Finland

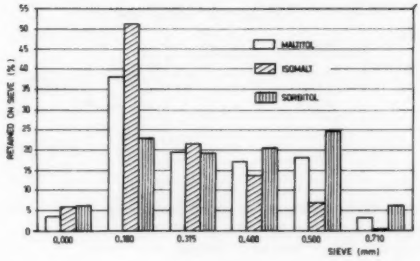
PCT No. PCT/FI90/00152, § 371 Date Jan. 15, 1992, § 102(e) Date Jan. 15, 1992, PCT Pub. No. WO90/14821, PCT Pub. Date Dec. 13, 1990

PCT Filed Jun. 5, 1990, Appl. No. 777,347

Claims priority, application Finland, Jun. 7, 1997, 89/2797

Int. Cl.[7] B29C *1/04*

U.S. Cl. 127—42 **35 Claims**



1. A predominantly fructose-based granulated product suitable for use in the manufacture of tablets by direct compression means, comprising free-flowing granules comprising about 92% to about 98% by weight of fiuctose, about 1% to about 7% by weight of at least one of a physiologically acceptable polyol selected from the group consisting of sorbitol, maltitol, lactitol, xylitol, mannitol and isomalt and less than about 1% by weight of water, wherein the granulated product is produced while bringing fructose particles to a rapid movement in air.

6,039,814

CLEANING METHOD UTILIZING DEGASSED CLEANING LIQUID WITH APPLIED ULTRASONICS

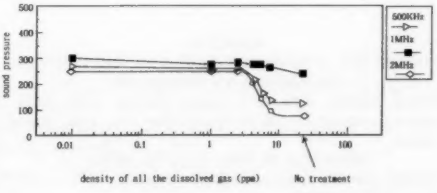
Tadahiro Ohmi, Miyagi-ken, and Takahisa Nitta, Tokyo, both of Japan, assignors to Tadahiro Ohmi, Miyagi, and Kabushiki Kaiha Ultraclean Technology Research Institute, Tokyo, both of Japan

Filed Jul. 3, 1997, Appl. No. 887,883

Claims priority, application Japan, Jul. 4, 1996, 8-175297

Int. Cl.[7] B08B *3/12*

U.S. Cl. 134—1 **4 Claims**



1. A method of cleaning semiconductors, comprising the steps of:

degassing gas dissolved in a cleaning liquid therefrom to a value not more than 5 ppm;

loading ultrasonics with a frequency of 1 MHz or more to said cleaning liquid; and

cleaning the semiconductors with said cleaning liquid.

6,039,815

CLEANING METHOD AND APPARATUS FOR THE SAME

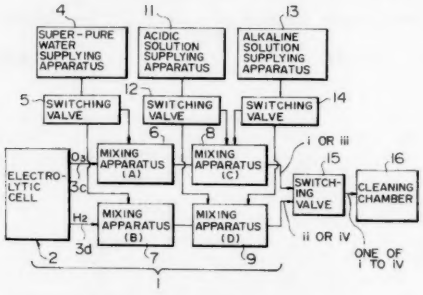
Oh Eui Yeol; Kenichi Mitsumori, and Satoshi Miyazawa, all of Miyagi-ken, Japan, assignors to Alps Electric Co., Ltd., Japan

Filed Mar. 26, 1997, Appl. No. 829,701

Claims priority, application Japan, Mar. 27, 1996, 8-072175

Int. Cl.[7] **C03C** *23/00;* **B08B** *3/00*

U.S. Cl. 134—2 **7 Claims**



1. A method for cleaning an object comprising:

providing a cleaning apparatus comprising:

a device for forming an ozone gas;

a device for forming a hydrogen gas;

a mixing device for dissolving said ozone gas into pure water to produce ozone water;

a mixing device for dissolving said hydrogen gas into pure water to produce hydrogen water;

a mixing device for mixing one of a group consisting of an acidic solution and an alkaline solution with said ozone water to obtain an oxidizing cleaning solution;

a mixing device for mixing one of a group consisting of an acidic solution and an alkaline solution with said hydrogen water to obtain a reducing cleaning solution;

means for supplying at least one of said cleaning solutions to a subject to be cleaned;

producing said ozone gas and said hydrogen gas;

dissolving at least one of said ozone gas and said hydrogen gas into pure water to produce at least one of ozone water and hydrogen water;

selectively mixing at least one of said ozone water and said hydrogen water with at least one of the acidic solution and alkaline solution to produce at least one cleaning solution selected from the group consisting of an oxidizing acidic cleaning solution, an oxidizing alkaline cleaning solution, a reducing acidic cleaning solution, and a reducing alkaline cleaning solution; and

cleaning the subject by supplying said at least one of said cleaning solutions to the subject.

6,039,816

OZONIZER, WATER PURIFIER AND METHOD OF CLEANING AN OZONIZER

Naotoshi Morita, Gifu, and Sachio Wakita, Aichi, both of Japan, assignors to NGK Spark Plug Co., Ltd., Nagoya, Japan

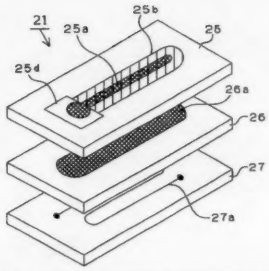
Filed May 28, 1998, Appl. No. 85,102

Claims priority, application Japan, Jun. 12, 1997, 9-171137; Nov. 4, 1997, 9-318987

Int. Cl.[7] **B08B** *7/02;* **B01J** *19/08*

U.S. Cl. 134—19 **13 Claims**

12. A method of cleaning an ozonizer having a discharge element for generating ozone by discharge in air containing ammonia, wherein said discharge produces nitrogen oxides which react with ammonia present in the air to produce ammonium nitrate adhering to said discharge element, which comprises heating said discharge element to a predetermined temperature within a range of from



200° C. to 500° C. so as to evaporate ammonium nitrate adhering to said discharge element.

6,039,817

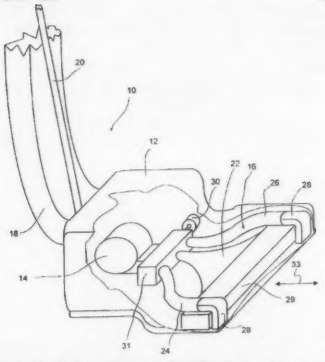
EDGE AND SPOT CLEANING SYSTEM FOR VACUUM CLEANERS

Thomas S. Payne, 32205 Allison Dr., Union City, Calif. 94587

Filed Jun. 30, 1998, Appl. No. 107,247

Int. Cl.[7] **A47L** *9/02;* **B08B** *5/04*

U.S. Cl. 134—21 **24 Claims**



18. A method of cleaning a surface having a corner area with a vacuum cleaner, comprising the steps of:

(1) directing suction by means of a valve assembly from a suction generating device of the vacuum cleaner to a main suction inlet area that spans a portion of the underside of a cleaning head of the vacuum cleaner, to clean the surface away from the corner area,

(2) directing suction by means of the valve assembly to a side suction inlet area that is adjacent a side edge of the cleaning head, to clean the surface along the corner area and

(3) providing an indicator to signal that there is suction in the side suction inlet area.

6,039,818

GRAIN-ORIENTED ELECTROMAGNETIC STEEL SHEET AND PROCESS FOR PRODUCING THE SAME

Tetsuo Toge; Michiro Komatsubara; Atsuhito Honda; Kenichi Sadahiro, and Kunihiro Senda, all of Okayama, Japan, assignors to Kawasaki Steel Corporation, Japan

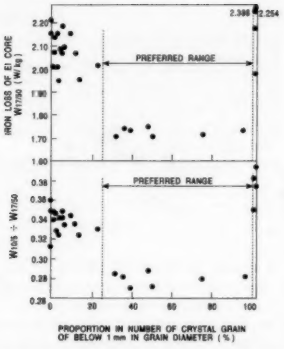
Filed Oct. 20, 1997, Appl. No. 954,504

Claims priority, application Japan, Oct. 21, 1996, 8-278136; Oct. 29, 1996, 8-286720; Nov. 8, 1996, 8-313098

Int. Cl.[7] **H01F** *1/18*

U.S. Cl. 148—307 **2 Claims**

1. A grain-oriented electromagnetic steel sheet having a low ratio of iron loss in a weaker magnetic field to iron loss in a stronger magnetic field, which steel sheet comprises:



IRON LOSS OF EI CORE W17/50 (W/kg)
PREFERRED RANGE
PREFERRED RANGE
W10/5 ÷ W17/50
PROPORTION IN NUMBER OF CRYSTAL GRAIN OF BELOW 1 mm IN GRAIN DIAMETER (%)

Si in a content of about 1.5 to 7.0% by weight, Mn in a content of about 0.03 to 2.5% by weight, C in a content of less than about 0.003% by weight, S in a content of less than about 0.002% by weight and N in a content of less than about 0.002% by weight;

the proportion of the number of crystal grains having a grain diameter smaller than 1 mm being 25 to 98%, the proportion of the number of the crystal grains having a grain diameter of 4 to 7 mm being less than 45%, and the proportion of number of crystal grains having a grain diameter larger than 7 mm being less than 10%, each of said grains being embedded along the direction of the thickness of the steel sheet; and

a film disposed over the surface of the steel sheet, said film being composed of forsterite, said film comprising Al in an amount of about 0.5 to 15% by weight, Ti in an amount of from about 0.1 to 10% by weight and B in an amount of from about 0.01 to 0.8% by weight.

6,039,819

SOLID PROPELLANT CONTAINING FERROCENYL PHOSPHINE DERIVATIVES

Charles E. Harrod, Manassas, and William D. Stephens, Vienna, both of Va., assignors to Atlantic Research Corporation, Gainesville, Va.

Filed Mar. 4, 1982, Appl. No. 354,709

Int. Cl.[7] C06B *45/10*

U.S. Cl. 149—19.2 **10 Claims**

1. A solid propellant composition, comprising an organic polymer fuel binder, an inorganic perchlorate oxidizer salt, and a minor proportion of solid ferrocenyl phosphine or phosphine oxide burning rate accelerator of the formula.

$$R_{3-n}PR'_n \text{ or } R_{3-n}P(O)R'_n$$

where

R is alkyl, cycloalkyl, aryl or substituted aryl,

R' is ferrocenyl or substituted ferrocenyl and n is 1 to 3.

6,039,820

METAL COMPLEXES FOR USE AS GAS GENERANTS

Jerald C. Hinshaw, Pleasant View; Daniel W. Doll, North Ogden; Reed J. Blau, Richmond, all of Utah, and Gary K. Lund, Malad, Id., assignors to Cordant Technologies Inc., Salt Lake City, Utah

Filed Jul. 24, 1997, Appl. No. 899,599

Int. Cl.[7] C06B *31/00*

U.S. Cl. 149—45 **49 Claims**

1. A gas generating composition comprising:

a complex of a metal cation, at least one neutral ligand containing hydrogen and nitrogen, and sufficient oxidizing anion to balance the charge of the metal cation such that when the complex combusts, a mixture of gases containing nitrogen gas and water vapor is produced; and

at least one cool burning organic nitrogen-containing compound.

6,039,821

BONDING FIBROUS BATTS WITH THERMOSETTING FIBER-BINDERS OF CERTAIN EPOXY RESINS

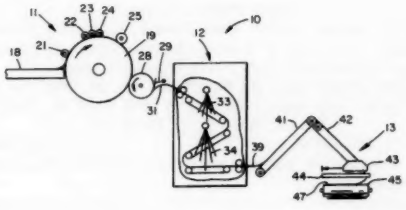
George S. Buck, 6707 Fletcher Creek Cove, Memphis, Tenn. 38133

Continuation of application No. 08/647,409, May 9, 1996, Pat. No. 5,804,005. This application Nov. 19, 1997, Appl. No. 974,100.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] D04H *5/04;* **B05D** *1/12*

U.S. Cl. 156—62.2 **35 Claims**



1. A dry process for producing a bonded, non-woven, batt of fibers comprising the steps of:

I. providing a dry, solid, particulate, B-stage, fiber-binder comprising:

A. a solid epoxy resin having:

(a) an epoxide equivalent weight of above about 500;

(b) a glass transition temperature above about 40° C.

(c) a melting point above about 70° C.; and

B. a coreactive effective amount of at least one cross-linking agent which reacts with the epoxide groups of the epoxy resin; and then

II. contacting fiber-binding amounts of the fiber-binder with the fibers to form a raw batt with the fiber-binder loosely adhering to the fibers of the batt; and then

III. heating the raw batt to a cross-linking temperature above the melting point of the fiber-binder but below the scorching or melting point of the fibers thereby melting the fiber-binder whereupon the fiber-binder flows to intersections of the fibers and subsequently the cross-linking agent reacts with the epoxide groups of the epoxy resin thereby converting the raw batt into a hot cross-linked batt; and then

IV. cooling the hot cross-linked batt.

6,039,822

DECAL APPLYING PROCESS USNG DIRECT SCREEN PRINTING

Diane S. Heyworth, and Robert C. Heyworth, both of W8324 Tower Dr., Adell, Wis. 53001

Filed Dec. 30, 1998, Appl. No. 223,573

Int. Cl.[7] B32B *31/12*

U.S. Cl. 156—82 **21 Claims**

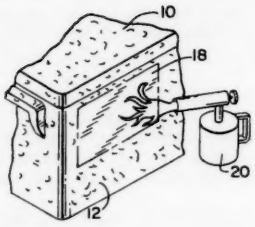
1. A method of applying a decal to a substrate comprising the steps of:

flame treating the substrate in an area where the decal is to be applied;

applying a first ink layer on the flame treated substrate;

applying a decal to the inked substrate;

heating the decaled substrate;



applying pressure to the decaled substrate; and

applying a second ink layer directly over the decaled substrate.

6,039,823

COMPOSITE ARTICLE

Albert P. Grasso, Vernon, Conn.; Ronald G. Martin, Monson, Mass., and Robert P. Roche, Cheshire, Conn., assignors to International Fuel Cells, South Windsor, Conn.

Division of application No. 08/425,282, Apr. 20, 1995, Pat. No. 5,726,105. This application Mar. 9, 1998, Appl. No. 36,950.

Int. Cl.[7] B32B *31/26;* **D04H** *1/08*

U.S. Cl. 156—89.26 **2 Claims**

1. A method for making a graphitized composite article, comprising the steps of:

forming an uncured composite article of carbon fiber felt embedded within a matrix of a carbon filler, a thermosetting resin and a solvent;

removing substantially all of the solvent from said uncured composite article;

applying pressure and heat to said uncured composite article to produce an uncured, compressed composite article;

applying pressure and heat to said uncured compressed composite article to produce a cured compressed composite article;

heating said cured compressed composite article to a first temperature thereby producing a carbonized composite article, wherein the carbon fibers, the carbon filler and the resin are substantially carbonized; and

heating the carbonized composite article to a second temperature higher than the first temperature, thereby producing said graphitized composite article; whereby said graphitized composite article is substantially impermeable to gases and liquids.

6,039,824

METHOD FOR REPAIRING A LOCALLY DAMAGED, DENTED SURFACE OF A WALL AS WELL AS A WALL COMPRISING SUCH A LOCALLY REPAIRED SURFACE

Johannes Henricus Maria Van Haandel, Boekel, Netherlands, assignor to Coöperatieve Vereniging Profile Repair, U.A.

Continuation of application No. PCT/NL96/00036, Jan. 19, 1996. This application Jul. 18, 1997, Appl. No. 896,594.

Claims priority, application Netherlands, Jan. 25, 1995, 9500133

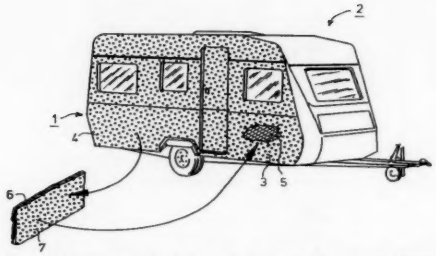
Int. Cl.[7] B32B *35/00*

U.S. Cl. 156—94 **7 Claims**

1. A method for repairing a locally damaged, dented surface of a wall, which wall is provided with a three dimensional recurring relief pattern with a portion of said recurring relief pattern being destroyed in the dented portion of said wall, comprising the steps:

(1) filling said dented portion of said wall with a single layer of filler to the initial level adequate to allow formation therein of a relief pattern which exactly matches the relief pattern which formerly existed in said dented portion;

(2) finding an undamaged part of the surface of said wall having a relief pattern which exactly matches the former relief pattern in the damaged surface of said wall;



(3) making a mould of the relief pattern in the undamaged portion of said wall located in step (2) such that said mould has therein an impression of the relief pattern that formerly existed in the damaged portion of said wall to be repaired said mould being large enough to completely cover said damaged area and having circumferential portions that contain an impression which can be matched to undamaged portions of said wall surrounding said damaged area of said wall

(4) placing said mould over said filler such that when said mould is pressed into said filler, said relief patter which originally existed in the damaged area being repaired will be formed; and

(5) forming a relief in said filler which exactly matches said original relief by pressing said mould into said filler to form an impression of the original relief pattern in said filler and removing any excess filler before the filler has completely cured.

6,039,825

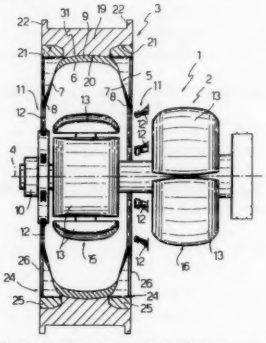
METHOD OF FORMING A COMPLETE TIRE CARCASS

Karl J. Siegenthaler, Pratteln, Switzerland, assignor to Bridgestone Corporation, Tokyo, Japan

Filed Jun. 9, 1998, Appl. No. 94,000

Int. Cl.[7] B29D *30/08*

U.S. Cl. 156—111 **6 Claims**



1. A method of forming a complete tire carcass; the complete carcass comprising an inner carcass and an outer carcass; the inner carcass comprising an annular intermediate portion, two flexible lateral walls, and two annular beads located on either side of said intermediate portion and each connected to a respective said lateral wall; the inner carcass being formed on a forming device comprising collapsible supporting means for supporting said beads and said intermediate portion; the outer carcass being formed in a central toroidal body of a forming mold; and the method comprising the steps of inserting the inner carcass inside said toroidal body by means of said forming device; causing said intermediate portion to adhere to said outer carcass to form said complete carcass; detaching the complete carcass from the forming device by collapsing said collapsible supporting means; and extracting said forming device from said toroidal body; and being characterized by also comprising the further step of clamping said beads in a

fixed position with respect to said toroidal body prior to extracting said forming device from the toroidal body.

6,039,826

METHOD OF FORMING GREEN TIRE WITH STRIP WINDING

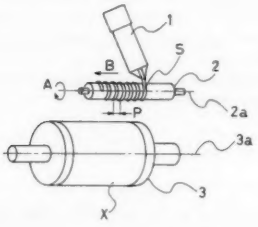
Noboru Okada, Hiratsuka, Japan, assignor to The Yokohama Rubber Co., Ltd., Tokyo, Japan

Filed Apr. 16, 1998, Appl. No. 61,073

Claims priority, application Japan, Apr. 22, 1997, 9-104836; Apr. 23, 1997, 9-106206

Int. Cl.[7] B29D *30/60*

U.S. Cl. 156—117 **9 Claims**



1. A method of forming a green tire comprising the steps of:

directly winding a rubber strip formed by simultaneously extruding unvulcanized rubber in a shape of the rubber strip from an extruder onto an adjusting drum in a length corresponding to the rubber quantity of a tire constituent portion, said adjusting drum comprising a straight cylinder having a same diameter in an axial direction thereof, and said rubber strip being spirally wound in a single layer at a predetermined pitch on an outer circumference of said adjusting drum in such a manner as to have adjacent portions of said rubber strip spaced apart from one another so that there is no strip overlap; and

forming said tire constituent portion by winding said rubber strip a plurality of times on an outer peripheral side of a rotary support member while unwinding said rubber strip from said adjusting drum.

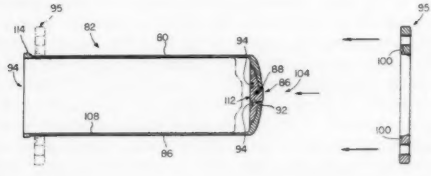
METHOD OF MAKING COMPOSITE BARRIER CAN FOR A MAGNETIC COUPLING BY FILAMENT WINDING

Margaret D. Cramer, Indian Trail, N.C., assignor to IMO Industries, Inc.

Division of application No. 08/739,803, Oct. 30, 1996, Pat. No. 5,763,973. This application Dec. 4, 1997, Appl. No. 984,942.

Int. Cl.[7] B65H *81/00*

U.S. Cl. 156—173 **26 Claims**



1. A method of making a magnetic coupling driven pump comprising the steps of:

providing a housing having an inlet and an outlet;

operatively positioning a pumping mechanism inside the housing;

operatively positioning a magnetic drive coupling proximal the pumping mechanism;

operatively connecting the pumping mechanism to a drive mechanism; and

making a magnetic barrier can having an open end and a closed end comprising the steps of:

providing at least one mandrel;

providing at least one spool piece;

operatively connecting the at least one spool piece to the at least one mandrel;

providing a winding machine having an axis;

operatively connecting the at least one spool piece to the winding machine;

providing a fiber coated with at least one resin;

winding the resin coated fiber over the at least one mandrel and about the at least one spool piece to form the closed end of the can;

operatively positioning a resistant temperature detector relative to the can such that the sensing area of the detector is located proximate the closed end of the magnetic barrier can;

heat curing the resin coated fiber on the at least one mandrel; and

removing the heat cured resin coated fiber from the at least one mandrel such that the resulting finished can has about the inner dimensions and about the outer dimensions of the at least one mandrel and is resistant to deformation; and

operatively positioning the finished can within the magnetic drive coupling.

6,039,828

METHOD OF FORMING A TAMPON HAVING A RESILIENT MEMBER

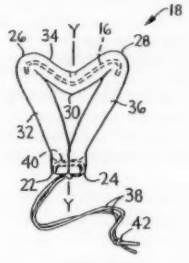
Amy Michele Achter, Neenah; Tammy Jo Balzar, Menasha, and Donald George Fox, Neenah, all of Wis., assignors to Kimberly-Clark Worldwide, Inc., Neenah, Wis.

Division of application No. 08/693,686, Aug. 12, 1996, Pat. No. 5,755,906. This application Mar. 5, 1998, Appl. No. 35,723.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] B29C *53/00*

U.S. Cl. 156—217 **11 Claims**



1. A method of forming a tampon, said method comprising the steps of:

a) placing a resilient member on an absorbent to form a structure having a central longitudinal axis, said resilient member being aligned along said central longitudinal axis;

b) forming said absorbent and resilient member into an elongated softwind having a first end and a second end;

c) folding said softwind on itself such that said first and second ends are aligned adjacent to one another and said softwind contains at least two folds therebetween;

d) compressing said softwind into a pledget having an insertion end and a trailing end; and

e) securing a withdrawal string to said pledget to form a tampon, said withdrawal string facilitating removal of said tampon from a woman's vagina.

6,039,829

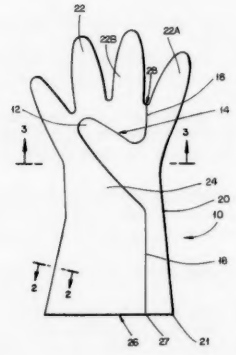
METHOD FOR MAKING THERMOBONDED GLOVES

Robert C. French, 2901 Deer Trail Pl., Solvang, Calif. 93463

Filed Jun. 6, 1997, Appl. No. 870,837

Int. Cl.[7] B32B *31/18*

U.S. Cl. 156—251 **11 Claims**



1. A method of making thermobonded gloves, comprising the steps of:

a) providing a process line having a longitudinal axis;

b) feeding a first sheet of thermoplastic material into said process line;

c) forming a loop in said first sheet of thermoplastic material, said loop being substantially perpendicular to said process line;

d) thermobonding a thumb seam between two layers of thermoplastic material forming said loop, thereby forming a thumb portion for insertion of a user's thumb therein;

e) feeding a second sheet of thermoplastic material into said process line;

f) translocating said thumb portion along said process line such that said thumb portion is in adjacent facing relation with said second sheet of thermoplastic material; and

g) thermobonding a peripheral seam between said two sheets of thermoplastic material wherein said thermobonding step comprises forming an aperture in said glove for inserting a user's hand therein, wherein the completed glove is formed with its longitudinal axis essentially perpendicular to the longitudinal axis of the process line, wherein the thumb seam has a curvilinear portion and a linear portion, the curvilinear portion defining a peripheral edge of the thumb portion and the linear portion defining a seam formed in the hand portion, wherein the linear portion is essentially parallel to the longitudinal axis of the glove.

6,039,830

METHOD OF AND APPARATUS FOR LAMINATING A SEMICONDUCTOR WAFER WITH PROTECTIVE TAPE

Bae-seung Park; Jin-heung Kim, both of Kyungki-do, and Jung-hyun Cho, Seoul, all of Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Suwon, Rep. of Korea

Filed Jul. 13, 1998, Appl. No. 114,521

Claims priority, application Rep. of Korea, Jul. 25, 1997, 97-35183

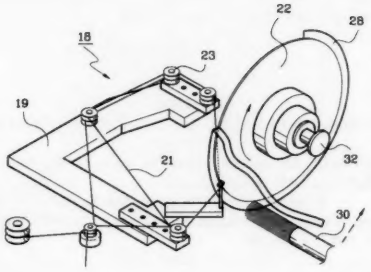
Int. Cl.[7] B32B *31/28;31/18*

U.S. Cl. 156—267 **33 Claims**

1. A semiconductor wafer tape laminating system comprising:

laminating means for attaching UV tape to the front surface of a wafer;

precutting means for cutting the UV tape around the wafer as spaced therefrom to leave an edge of the tape protruding beyond the peripheral edge of the wafer;



wire cutting means for cutting the edge of the UV tape left around the wafer by the precutting device to sever it from a portion of the tape attached to the front surface of the wafer; and

ultra-violet illuminator means for irradiating the edge of the UV tape with ultra-violet rays.

6,039,831

ELECTRICALLY CONDUCTIVE SILICONE ELASTOMER COMPOSITIONS, METHODS FOR MANUFACTURING SEMICONDUCTOR DEVICES, AND SEMICONDUCTOR DEVICES

Katsutoshi Mine; Osamu Mitani; Kazumi Nakayoshi, and Rikako Tazawa, all of Chiba Prefecture, Japan, assignors to Dow Corning Toray Silicone Co., Ltd., Tokyo, Japan

Division of application No. 08/840,475, Apr. 21, 1997, Pat. No. 5,872,170. This application Jan. 15, 1999, Appl. No. 231,949.

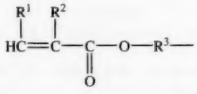
Claims priority, application Japan, Apr. 26, 1996, 8-131435

Int. Cl.[7] B32B *31/28*

U.S. Cl. 156—272.6 **8 Claims**

1. A method for manufacturing a semiconductor device, comprising the steps of:

mounting a semiconductor chip on a substrate using an electrically conductive silicone elastomer composition comprising (A) 100 parts by weight of an organopolysiloxane consisting essentially of (a) 5–95% by weight of an acrylic functional group-containing organopolysiloxane having an average of at least two silicon-bonded acrylic groups per molecule having the formula:



wherein R^1 is a hydrogen atom or a monovalent hydrocarbon group. R^2 is a hydrogen atom or a monovalent hydrocarbon group, and R^3 is a divalent hydrocarbon group having 1–10 carbon atoms; and (b) 95–5% by weight of an alkenyl group-containing organopolysiloxane having an average of at least two silicon-bonded alkenyl groups per molecule: (B) a silicon-bonded hydrogen atom-containing organopolysiloxane having an average of at least two silicon-bonded hydrogen atoms per molecule, in a quantity sufficient to provide 0.5 to 20 moles of silicon-bonded hydrogen atoms in component (B) per mole of silicon-bonded alkenyl group in component (b); (C) 50–2,000 parts by weight of an electrically conductive filler: (D) 0.1–20 parts by weight of a photosensitizer: and (E) a platinum catalyst, in a sufficient quantity to cure the electrically conductive silicone elastomer composition;

irradiating said composition with a high-energy beam to induce an acrylic functional group free radical reaction; and then

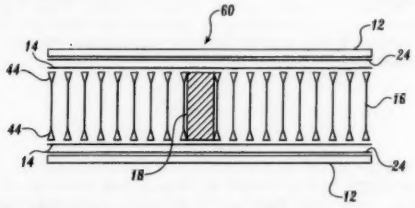
allowing the composition to cure via a hydrosilylation reaction.

6,039,832

THERMOPLASTIC TITANIUM HONEYCOMB PANEL

Douglas A. McCarville, Auburn, Wash., assignor to The Boeing Company, Seattle, Wash.

Filed Feb. 27, 1998, Appl. No. 32,227
Int. Cl.[7] B32B *31/04;31/12*
U.S. Cl. 156—292 **29 Claims**



1. A structural panel sequentially comprising:

(a) a first face sheet having an outward facing surface and an inward facing bonding surface, wherein the outward facing surface comprises a first resinous material and the inward facing bonding surface comprises a second resinous material, wherein the melt temperature of the first resinous material is greater than the melt temperature of the second resinous material;

(b) a first bonding layer, comprising a third resinous material having a melt temperature comparable to the melt temperature of the second resinous material;

(c) a titanium honeycomb core, comprising resin fillets;

(d) a second bonding layers comprising a third resinous material having a melt temperature comparable to the melt temperature of the second resinous material; and

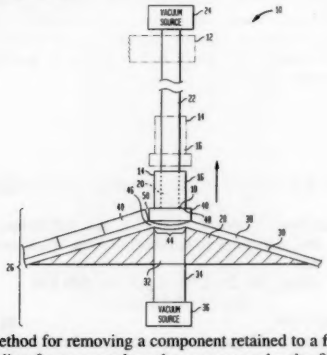
(e) a second face sheet having an outward facing surface and an inward facing bonding surface, wherein the outward facing surface comprises a first resinous material and the inward facing bonding surface comprises a second resinous material, wherein the melt temperature of the first resinous material is greater than the melt temperature of the second resinous material.

6,039,833

METHOD AND APPARATUS FOR COMPONENT PICKUP

Joseph Michael Freund, Fogelsville; George John Przybylek, Douglasville, and Dennis Mark Romero, Allentown, all of Pa., assignors to Lucent Technologies Inc., Murray Hill, N.J.

Filed Mar. 4, 1998, Appl. No. 34,844
Int. Cl.[7] B32B *35/00*
U.S. Cl. 156—344 **10 Claims**



1. A method for removing a component retained to a film carrier by a bonding force exerted on the component by the film carrier, the method comprising the steps of:

supporting a section of the film carrier lying beneath the component on a base member having a convex-shaped surface and a vacuum slot adjacent the apex of the convex-shape; whereby the component is aligned over the vacuum slot and the slot is sized smaller than the length of the component so that the component is supported over the slot by the base member;

pulling a portion of the supported film carrier section into the slot with a force consisting essentially of vacuum force so that the film is pulled away from the component to substantially reduce the bonding force exerted on the component by the film carrier; and

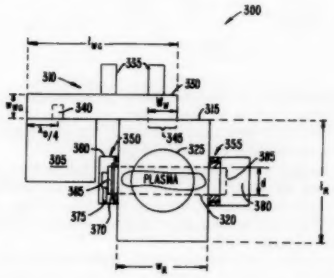
vacuum lifting the component off the film carrier.

6,039,834

APPARATUS AND METHODS FOR UPGRADED SUBSTRATE PROCESSING SYSTEM WITH MICROWAVE PLASMA SOURCE

Tsutomu Tanaka, Santa Clara; Mukul Kelkar, San Jose; Kevin Fairbairn, Saratoga; Hari Ponnekanti, Santa Clara, and David Cheung, Foster City, all of Calif., assignors to Applied Materials, Inc., Santa Clara, Calif.

Filed Mar. 5, 1997, Appl. No. 811,627
Int. Cl.[7] H05H *1/00*
U.S. Cl. 156—345 **25 Claims**



1. A remote microwave plasma source module for use with a substrate processing apparatus, said remote microwave plasma source module comprising:

a magnetron system, said magnetron system including a first magnetron operating on a first pulsed, low wattage power source, said magnetron system providing microwaves at low microwave power;

a resonator cavity, said resonator cavity having a first surface having a first window, said resonator cavity resonating said microwaves;

a waveguide system, said waveguide system including a first waveguide coupled to said first magnetron, said waveguide system coupled to said resonator cavity through said first window, said first waveguide directing microwaves from said first magnetron into said resonator cavity via said first window;

a first plasma discharge tube having a tube length and a tube diameter, said first plasma discharge tube disposed within said resonator cavity wherein a field maximum of said microwaves overlaps with said tube diameter along said tube length which is substantially parallel to said first surface, said first plasma discharge tube receiving a reactive gas and discharging radicals from said reactive gas energized by said microwaves in said resonator cavity; and

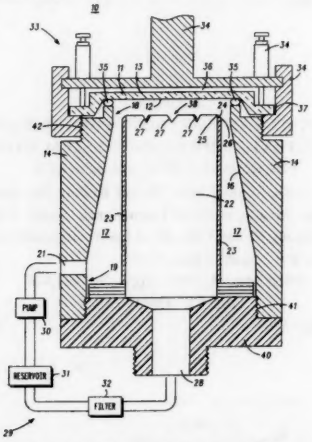
wherein said remote microwave plasma source module is configured as a modular unit that may be easily attachable to said substrate processing apparatus, said modular unit having a footprint comparable to a top dimension of said substrate processing apparatus.

6,039,835

ETCHING APPARATUS AND METHOD OF ETCHING A SUBSTRATE

Pawitter Jit Singh Mangat, Chandler; Philip Armin Seese, Phoenix, and William Joseph Dauksher, Mesa, all of Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Sep. 15, 1997, Appl. No. 929,686
Int. Cl.[7] C23F *1/08*
U.S. Cl. 156—345 **24 Claims**



1. An apparatus for etching a substrate comprising:

a first chamber having an output port;

a second chamber contained within the first chamber, wherein the second chamber has an input port;

a cover having a first portion and a second portion, the first portion of the cover being suspended over the first chamber and the second chamber, wherein the cover isolates the first chamber and the second chamber from an ambient surrounding the apparatus; and

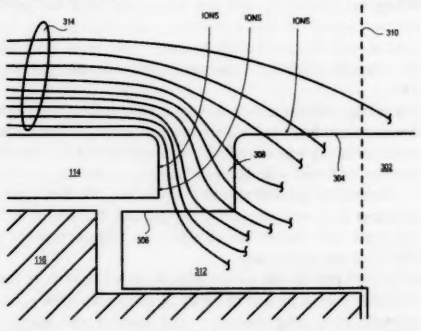
a recirculating system coupled to the input port and the output port so that an etchant can flow into the second chamber from the input port and out the first chamber through the output port.

6,039,836

FOCUS RINGS

Rajinder Dhindsa, Milpitas; Vikram Singh, Santa Clara, and Ken Tokunaga, Fremont, all of Calif., assignors to LAM Research Corporation, Fremont, Calif.

Filed Dec. 19, 1997, Appl. No. 993,791
Int. Cl.[7] C23C *16/50*; H05H *1/00*
U.S. Cl. 156—345 **9 Claims**



1. A focus ring configured for use in a plasma processing chamber, said focus ring also being configured to overlap at least a portion of a substrate-holding chuck that is powered by radio frequency (RF) power during plasma operation to act as an electrode, comprising:

an upper surface, said upper surface being exposed to a plasma region within said plasma processing chamber during said plasma operation; and

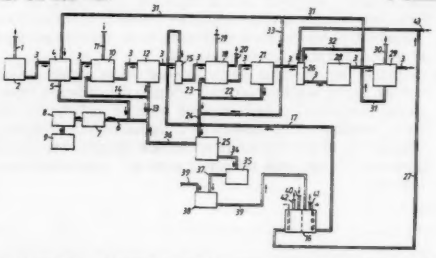
a chuck overlapping portion, said chuck overlapping portion overlaps said portion of said substrate-holding chuck, a portion of said chuck-overlapping portion being formed of a first material having a lower dielectric constant than the rest of said chuck-overlapping portion.

6,039,837

METHOD OF BLEACHING PULP WITH OZONE WHEREIN THE ACIDITY IS MAINTAINED WITH AN ACID SOLUTION PREPARED BY ELECTROLYSIS OR ELECTRODIALYSIS

Rolf C. A. Brännland, Bromma, and Sture E. O. Noréus, Husum, both of Sweden, assignors to Mo Och Domsjö Aktiebolag, Örnsköldsvik, Sweden

Continuation of application No. 08/774,674, Dec. 26, 1996, abandoned, which is a continuation of application No. 08/204,368, Sep. 2, 1994, abandoned. This application Jul. 9, 1998, Appl. No. 112,325.
Claims priority, application Sweden, Sep. 17, 1991, 9102693
Int. Cl.[7] D21C *9/153*; *11/00*
U.S. Cl. 162—29 **5 Claims**



1. A method of bleaching with ozone lignocellulosic pulp which has been at least partially manufactured chemically, in the presence of water at a degree of acidity, expressed as pH, of 2–5,

wherein the acidity is maintained during the ozone bleaching process by adding a sulfuric acid solution or an acid sulphate solution, wherein the solution is prepared by electrolysis or electrodialysis of a neutral sodium sulfate solution obtained by mixing waste liquor from the ozone bleaching process with waste liquor from an alkaline treatment stage so as to obtain a neutral solution, and cooling the resultant solution so as to precipitate sodium sulphate therefrom; and removing the sodium sulphate precipitate and dissolving it in essentially clean water.

6,039,838

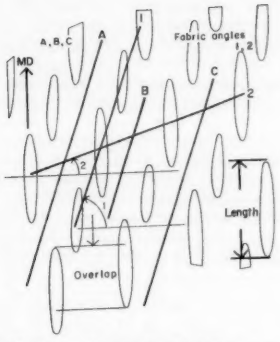
SYSTEM FOR MAKING ABSORBENT PAPER PRODUCTS

Kenneth Kaufman, Mount Laurel, N.J., and Jeff Herman, Bala Cynwyd, Pa., assignors to Kimberly-Clark Worldwide, Inc., Neenah, Wis.

Filed Dec. 29, 1995, Appl. No. 580,830
Int. Cl.[7] D21F *11/00*
U.S. Cl. 162—109 **28 Claims**

1. An improved method of making an absorbent paper product such as toilet tissue, comprising steps of:

(a) transferring a fibrous web onto a drying fabric that is characterized by a plurality of shute threads extending substantially parallel to each other in a cross-direction of the drying fabric and a plurality of warp threads extending substantially parallel to each other in a machine direction of the drying



fabric, said shute and warp threads being woven together so as to define a top surface plane on the web side of the fabric having only a number of relatively long warp knuckles having a length longer than 0.060 inch at locations where one of said warp threads crosses over at least four of said shute threads, said long warp knuckles being positioned in a shed pattern so as to form (a) a first axis of bulky ridges that are defined by long warp knuckles which are positioned next to each other on adjacent warp threads, said first axis being disposed at a first angle with respect to the cross-direction of the drying fabric, said first angle being substantially within the range of greater than 68 degrees but less than 90 degrees; and (b) a second axis formed by each of said long warp knuckles with other, overlapping long warp knuckles on nearby, but not immediately adjacent, warp threads, said second axis forming a second angle with respect to the cross-direction of the drying fabric, said second angle being less than about 28 degrees;

(b) drying the fibrous web while it is on the drying fabric; and

(c) removing the web from the drying fabric.

6,039,839

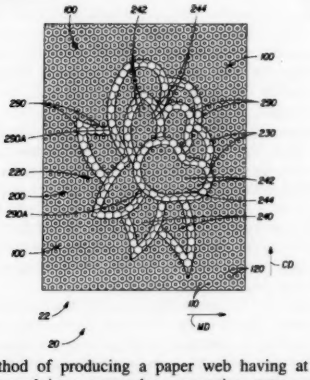
METHOD FOR MAKING PAPER STRUCTURES HAVING A DECORATIVE PATTERN

Paul Dennis Trokhan, Hamilton; Dean Van Phan, West Chester; Howard Thomas Deason, Hamilton, and Jörg Kleinwächter, Cincinnati, all of Ohio, assignors to The Procter & Gamble Company, Cincinnati, Ohio

Filed Feb. 3, 1998, Appl. No. 17,831

Int. Cl.[7] D21F *11/00*

U.S. Cl. 162—116 **21 Claims**



1. A method of producing a paper web having at least two regions disposed in a nonrandom, repeating pattern and being distinguishable from each other by at least one property selected from the group consisting of basis weight, density, thickness, and fiber composition; the method comprising the steps of:

providing a plurality of fibers suspended in a liquid carrier;

providing a fiber retentive forming element having liquid pervious zones;

depositing the fibers and the liquid carrier onto the forming element;

draining the liquid carrier through the forming element in simultaneous stages to form a web having a background portion and a decorative pattern, wherein the decorative pattern comprises at least one high basis weight region having a basis weight which is greater than the basis weight of the surrounding background portion; said high basis weight region forming at least a portion of a border defining the shape of decorative indicia.

6,039,840

ROLL FOR A SUPERCALENDER AND METHOD FOR CALENDERING A WEB

Pauli Kytönen, Tuusula; Juha Koriseva, and Erkki Leinonen, both of Järvenpää , all of Finland, assignors to Valmet Corporation, Helsinki, Finland

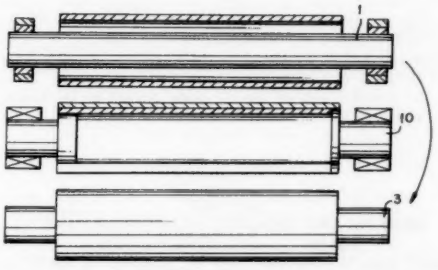
Continuation of application No. 08/828,274, Mar. 21, 1997. This application Dec. 16, 1998, Appl. No. 213,030.

Claims priority, application Finland, Apr. 11, 1996, 961585

This patent is subject to a terminal disclaimer.

Int. Cl.[7] D21G *1/02*

U.S. Cl. 162—205 **18 Claims**



1. In a multi-nip calender including at least first, second and third calender rolls stacked in a substantially vertical column, said first calender roll being arranged between said second calender roll and said third calender roll such that said first calender roll defines a first calendering nip with said second calender roll and a second calendering nip with said third calender roll and is operatively loaded by said second and third calender rolls, the improvement comprising:

said first calender roll comprising an elongate, tubular frame having a hollow interior and extending in an axial direction of said first calender roll, said frame having a middle area and lateral areas having an axial length extending between an end of said middle area and a respective end of said frame, said frame having a non-uniform rigidity such that said frame deforms in a radial direction less in said lateral areas than in said middle area during loading of said first calender roll,

a polymer coating arranged on said frame of said first calender roll for compensating for the lesser deformation of said lateral areas of said frame during loading of said first calender roll, said polymer coating having a first portion arranged on said middle area of said frame and a second portion arranged on each of said lateral areas of said frame,

said polymer coating including a layer of polymer material, said layer of polymer material and said frame being arranged such that the thickness of said layer of polymer material increases in said lateral areas over the axial length from the end of said middle area to the respective end of said frame and such that an outer diameter of the roll is substantially constant over the entire length of the roll in the axial direction.

6,039,841

SCREEN HAVING INCLINED SLOTS FOR USE IN A CONTINUOUS DIGESTER

Lasse Hernesniemi, Pietarsaari, Finland, assignor to Ahlstrom Machinery Inc., Glen Falls, N.Y.

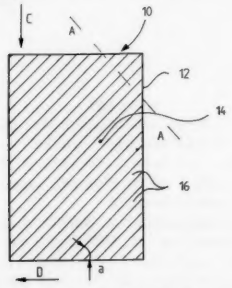
PCT No. PCT/FI96/00104, § 371 Date Dec. 2, 1997, § 102(e) Date Dec. 2, 1997, PCT Pub. No. WO96/26315, PCT Pub. Date Aug. 29, 1996

PCT Filed Feb. 22, 1996, Appl. No. 894,528

Claims priority, application Finland, Feb. 23, 1995, 950826

Int. Cl.[7] **D21C** *7/00;* **B07B** *1/49;* **B01D** *29/07*

U.S. Cl. 162—251 **20 Claims**



1. A screen used in the production of cellulose pulp mounted in a digester:

said digester having an internal surface,

said screen comprising a screen plate secured to said digester internal surface, said screen plate having a plurality of slots formed therein with an inclination angle; and

said screen plate positioned in and secured to said digester so that said inclination angle α of said slots relative to the horizontal x axis of the x-y plane defined by the internal surface of the digester is between 30–60 degrees.

6,039,842

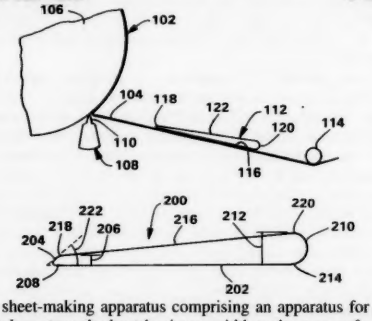
METHOD AND APPARATUS FOR STABILIZING A MOVING LOW-STRENGTH SHEET

Jark C. Lau, 2525 Powder Ridge Dr., Roswell, Ga. 30076, and Philip Sim Lin, 2543 Village La., Oshkosh, Wis. 54904

Continuation of application No. 08/655,332, May 24, 1996, Pat. No. 5,759,352. This application Mar. 23, 1998, Appl. No. 46,803.

Int. Cl.[7] **D21G** *9/00;1/02*

U.S. Cl. 162—272 **3 Claims**



1. A sheet-making apparatus comprising an apparatus for stabilizing a low-strength sheet having a width and a top surface and moving in a first direction at a rate sufficient to induce a layer of entrained air adjacent to a surface of the sheet, which stabilizing apparatus comprises:

an airfoil extending along the top surface of the sheet, the airfoil comprising:

a bottom surface extending along a portion of the top surface of the sheet;

a first surface extending a first distance from the bottom surface at a first juncture;

a second surface extending a second distance from the bottom surface at a second juncture; and

a top surface extending from the first surface at a third juncture to the second surface at a fourth juncture;

in which:

the first distance is less than the second distance;

the apparatus is oriented in a manner such that the portion of the apparatus which first encounters the entrained air is the first surface of the airfoil; and

the first and bottom surfaces of the airfoil form an acute angle such that the first surface directs a substantial portion of the entrained air away from the sheet.

6,039,843

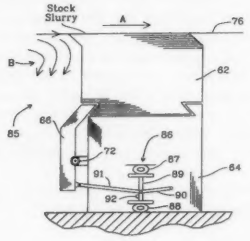
LOADED CLAMPED FOIL BLADE FOR USE IN A WEB-FORMING SECTION OF A PAPERMAKING MACHINE

E. William Wight, Roscoe, Ill., assignor to Beloit Technologies, Inc., Wilmington, Del.

Filed May 19, 1998, Appl. No. 81,622

Int. Cl.[7] **D21F** *1/54*

U.S. Cl. 162—352 **13 Claims**



9. An apparatus for dewatering stock on a forming fabric to form a paper web, comprising:

a dewatering device;

a foil blade mounting pad, having portions defining one dove-tail protrusion, the mounting pad being mounted to the dewatering device;

a foil blade having a first dove-tail slot and a second opposed dove-tail slot, the foil blade being mounted to the mounting pad, the first dove-tail slot cooperating with the dove-tail protrusion on the foil blade mounting pad to position and hold the foil blade in position with respect to the mounting pad;

a clamping piece pivotally mounted at a pivot to the foil blade mounting pad, the clamping piece having an upper end having a top surface shaped to cooperate with the second dove-tail slot to position and hold the foil blade in position with respect to the mounting pad, and the clamping piece having a lower end, opposite the upper end, the pivot being between the upper end and the lower end;

a first means for clamping the foil blade to the dewatering device such that the foil blade is rigidly mounted to the dewatering device so that the foil blade is substantially immovable during a papermaking process as a wire or fabric having a stock mixture thereon travels over the foil blade, the means being mounted between the pivot and the lower end, and between the clamping piece and the mounting pad, the first means biasing the top surface into locking engagement with the second dove-tail slot; and

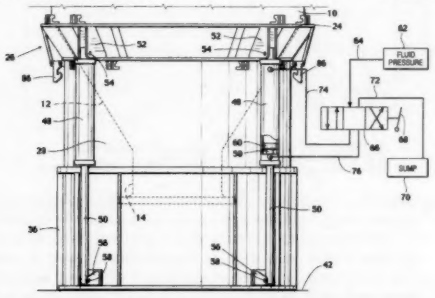
an inflatable tube for unclamping the foil blade from the dewatering device allowing the foil blade to be easily installed or removed from the dewatering device during a blade changing operation, the inflatable tube being positioned between the clamping piece and the mounting pad and between the pivot and the upper end of the clamping piece, the tube when inflated biasing the top surface out of locking engagement with the second dove-tail slot.

6,039,844

CONTAINMENT SYSTEM FOR COKE DRUMS

Tariq Malik, Corpus Christi, Tex., assignor to Citgo Petroleum Corporation, Tulsa, Okla.

Filed Oct. 9, 1998, Appl. No. 169,127
Int. Cl.[7] C10B *39/04;41/00;25/10*
U.S. Cl. 202—227 **17 Claims**



1. An apparatus for confining the discharge of coke, liquids and/or gases from a bottom outlet of a coke drum, the coke drum being supported above a switch deck floor, comprising:

a shield of dimensions in a horizontal plane greater than that of a horizontal plane of the coke drum bottom outlet and of vertical height at least about as great as the height of the bottom outlet above the switch deck floor;

a system to move said shield into position to cover an area from the drum bottom outlet to the switch deck floor.

6,039,845

PROCESS FOR THE PURIFICATION OF PENTAFLUOROETHANE BY EXTRACTIVE DISTILLATION

Rene Bertocchio; Eric Lacroix, and Sylvain Perdrieux, all of Puteaux, France, assignors to Elf Atochem S.A., France

Filed Jan. 2, 1998, Appl. No. 2,344
Claims priority, application France, Jan. 6, 1997, 97 00053
This patent is subject to a terminal disclaimer.
Int. Cl.[7] B01D *3/34*
U.S. Cl. 203—57 **3 Claims**

1. Process for the purification of a pentafluoroethane (F125) containing chloropentafluoroethane (F115) by extractive distillation, comprising purifying said pentafluoroethane where the extractant employed is a perfluoroalkyl halide RfX in which Rf denotes a linear or branched radical C_nF_{2n+1} containing 5 to 8 carbon atoms and X is chloride, bromide, or iodide.

6,039,846

SEPARATION OF 3-METHYL-2-PENTENAL FROM N-BUTANOL BY AZEOTROPIC DISTILLATION

Lloyd Berg, 1314 S. 3rd Ave., Bozeman, Mont. 59715

Filed Jul. 22, 1999, Appl. No. 359,614
Int. Cl.[7] B01D *3/36;* **C07C** *29/82;45/84*
U.S. Cl. 203—57 **1 Claim**

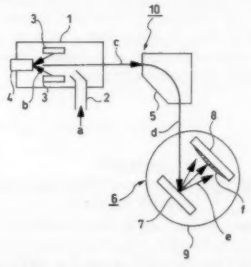
1. A method for recovering 3-methyl-2-pentenal from a mixture of 3-methyl-2-pentenal and n-butanol which consists essentially of distilling a mixture of 3-methyl-2-pentenal and n-butanol in the ptesence of an azeotrope forming agent, recovering the 3-methyl-2-pentenal and the azeotrope forming agent as overhead product and obtaining the n-butanol as bottoms product, wherein said azeotrope forming agent consists essentially of one material selected from the group consisting of 2,3-dimethylbutane, decahydronapthalene, t-butyl methyl-ether, triethanol amine, trimethylene sulfone, sulfolane, 2-nitrotoluene, dimethoxymethane, petroleum ether, tetramethylortho-silicate, 2,5-diethyl aniline and cyclopentane.

6,039,847

METHOD OF FORMING A HIGHLY PURE THIN FILM AND APPARATUS THEREFOR

Akiyoshi Chayahara; Yuji Horino; Atsushi Kinomura; Nobuteru Tsubouchi, and Kanenaga Fujii, all of Ikeda, Japan, assignors to Agency of Industrial Science & Technology, Tokyo, Japan

Filed Mar. 12, 1998, Appl. No. 41,099
Claims priority, application Japan, Jun. 23, 1997, 9-183109
Int. Cl.[7] C23C *14/34*
U.S. Cl. 204—192.11 **8 Claims**



1. A method of forming a thin film by ion beam sputtering, comprising the following steps:

(a) sputtering a material of ions with cesium ions to generate negative ions, wherein the cesium ions are generated by thermally ionizing a cesium vapor at a temperature of from 1000° C. to 1100° C.,

(b) accelerating and mass-separating the negative ions to obtain a negative ion beam, and

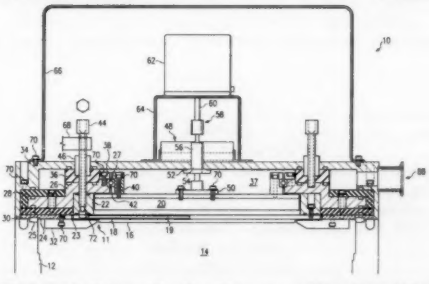
(c) sputtering a starting material of thin film with said negative ion beam thereby to form a thin film on a base material.

6,039,848

ULTRA-HIGH VACUUM APPARATUS AND METHOD FOR HIGH PRODUCTIVITY PHYSICAL VAPOR DEPOSITION.

Mehrdad M. Moslehi, Los Altos, Calif.; Cecil J. Davis, Greenville, Tex., and Dorian Heimanson, Rochester, N.Y., assignors to CVC Products, Inc., Rochester, N.Y.

Continuation of application No. 08/677,893, Jul. 10, 1996, abandoned, Provisional application No. 60/000,980, Jul. 10, 1995. This application Oct. 27, 1997, Appl. No. 958,877.
Int. Cl.[7] C23C *14/34;14/35*
U.S. Cl. 204—192.12 **33 Claims**



22. A method for enhancing the vacuum integrity within a vacuum chamber in a magnetron sputtering system for sputtering a material from a target onto a substrate contained within the vacuum chamber, comprising;

forming a portion of the vacuum chamber with a backing plate assembly comprising a backing plate, an extender ring, and an insulated spacer ring;

coupling the extender ring to the vacuum chamber walls at the periphery of the extender ring;

positioning the insulated spacer ring between the backing plate and the extender ring to electrically isolate the backing plate from walls of the vacuum chamber;

forming a first hermetically sealed junction between said insulated spacer ring and said backing plate, wherein said first sealed junction is operable to maintain a vacuum in the vacuum chamber;

forming a second hermetically sealed junction between said insulated spacer ring and said extender ring, wherein said second sealed junction is operable to maintain a vacuum in the vacuum chamber; and

coupling the backing plate assembly to the walls of the vacuum chamber at the junction between the extender ring and the walls of the vacuum chamber with a vacuum seal capable of sealing the vacuum chamber to maintain a low-base-pressure vacuum state in the vacuum chamber.

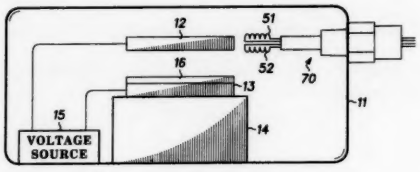
METHOD FOR THE MANUFACTURE OF ELECTRONIC COMPONENTS

Jeffrey R. Paulson, Mesa, and Arturo Fonda, Scottsdale, both of Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Oct. 28, 1997, Appl. No. 959,310

Int. Cl.[7] **C23C** *14/34*

U.S. Cl. 204—192.12 **6 Claims**



1. A method of manufacturing an electronic component comprising the steps of:

providing an apparatus having a target and also having a plasma ignitor, wherein the plasma ignitor includes at least a first filament and a second filament; placing a semiconductor substrate in a reaction chamber of the apparatus;

activating the first filament while the second filament is inactive wherein the activating results in formation of a plasma in the reaction chamber and depositing a portion of the target onto at least a portion of the semiconductor substrate in the reaction chamber; and

activating the second filament while the first filament is inactive.

6,039,850

SPUTTERING OF LITHIUM

Stephen C. Schulz, Princeton, N.J., assignor to Minnesota Mining and Manufacturing Company, St. Paul, Minn.

Continuation-in-part of application No. 08/567,781, Dec. 5, 1995, Pat. No. 5,830,336. This application May 29, 1997, Appl. No. 865,544.

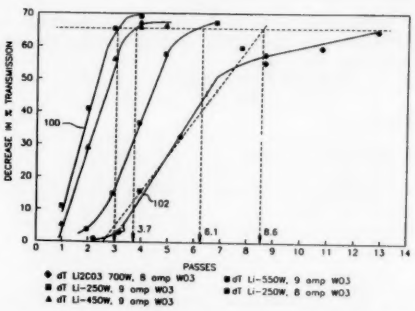
Int. Cl.[7] **C23C** *14/34*

U.S. Cl. 204—192.15 **38 Claims**

30. A method of sputtering lithium comprising the steps of:

(a) providing a target including a top layer of metallic lithium defining an exposed surface and a metallic supporting layer, a counterelectrode and a substrate;

(b) maintaining the target, counterelectrode and substrate in a substantially inert atmosphere at subatmospheric pressure; and, while maintaining the target in said substantially inert atmosphere:



(c) applying a sputtering potential between said counterelectrode and said target, said sputtering potential including being either an alternating potential or a direct potential in a forward direction so that said target is negative with respect to said counterelectrode, said step of applying a sputtering potential being performed so as to maintain a plasma adjacent to said target and sputter metallic lithium from said target under the influence of said sputtering potential; and

(d) during one or more intervals prior to termination of said first potential, applying a clearing potential between said counterelectrode and said target, said clearing potential being different from said sputtering potential and including a reverse potential in a reverse direction opposite to said forward direction,

the method further comprising the step of continuously moving said substrate in a direction of motion during said step of imposing a potential to thereby expose new regions of the substrate to said expelled lithium.

6,039,851

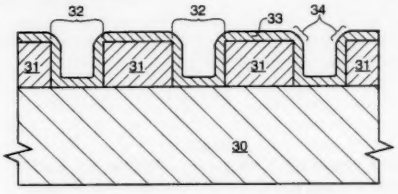
REACTIVE SPUTTER FACETING OF SILICON DIOXIDE TO ENHANCE GAP FILL OF SPACES BETWEEN METAL LINES

Ravi Iyer, Boise, Id., assignor to Micron Technology, Inc., Boise, Id.

Continuation of application No. 08/409,372, Mar. 22, 1995. This application Jan. 14, 1998, Appl. No. 6,729.

Int. Cl.[7] **C23C** *14/34*; **H01L** *21/465*

U.S. Cl. 204—192.32 **12 Claims**



1. A process for fabrication of a semiconductor device, comprising the steps of:

providing a semiconductor wafer having a topology formed thereon, said topology having a plurality of recesses;

forming an insulating layer over said topology, said insulting layer extending into said recesses and forming bread-loafed openings in said insulating layer formed by converging surfaces of said insulting layer;

removing a portion of said converging surfaces to remove at least a portion of a bread-loaf buildup of insulating material about said bread-loafed openings, said step of removing comprises an etch step using a gas combination of an inert gas and a chemically reactive gas that prevents dislodged insulating layer particles from re-sputtering into said gaps; and

after said step of removing, forming a fill layer over said insulating layer to at least partially planarize said semiconductor wafer.

6,039,852

BIPOLAR PLATE FOR FILTER PRESS ELECTROLYZERS

Fulvio Federico, Piacenza, Italy, assignor to DE NORA S.p.A., Italy

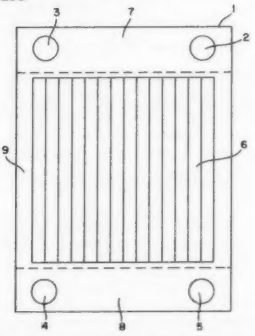
PCT No. PCT/EP97/02288, § 371 Date Oct. 27, 1998, § 102(e) Date Oct. 27, 1998, PCT Pub. No. WO97/42359, PCT Pub. Date Nov. 13, 1997

PCT Filed May 6, 1997, Appl. No. 180,056

Claims priority, application Italy, May 6, 1996, MI96A0911

Int. Cl.[7] **C25B** *9/00*

U.S. Cl. 204—255 **5 Claims**



1. Bipolar plate for use in bipolar electrolyzer of the filter-press type, said plate (**1**) comprising a central portion (**9**) made of a conductive composite obtained from a mixture of graphite or conductive carbon powder or fibers and powder of a corrosion resistant thermoplastic polymer, and two terminal portions (**7**,**8**) made of a composite obtained from a mixture of said graphite or conductive carbon powder or fibers and said powder of the corrosion resistant thermoplastic polymer, said terminal portions having a higher electrical resistively than the central portion and containing holes (**2**,**3**,**4**,**5**) for distribution of fresh electrolytes and the withdrawal of exhausted electrolytes and electrolysis products, said central portion (**9**) and terminal portions (**7**,**8**) forming an integral element, characterized in that

said central portion (**9**) contains more than 60% by weight of said graphite or conductive carbon powder or fibers,

said terminal portions (**7**,**8**) have a low content of said graphite or conductive carbon powder or fibers such that the electrical resistively of said terminal portions (**7**,**8**) is at least ten times higher than that of the central portion (**9**), and

said terminal portions (**7**,**8**) further comprise an additional non-conductive corrosion resistant material to reduce the difference in the thermal expansion coefficient between said central portion (**9**) and said terminal portions (**7**,**8**).

6,039,853

ELECTROCHEMICAL HALF-CELL

Fritz Gestermann, Leverkusen; Hans-Dieter Pinter, Wermelskirchen; Karl-Ludwig Metzger, Bergisch Gladbach, and Heiko Herold, Neuss, all of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Germany

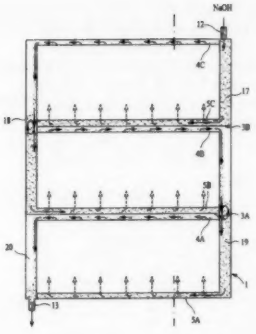
Filed Apr. 8, 1998, Appl. No. 57,227

Claims priority, application Germany, Apr. 14, 1997, 197 15 429

Int. Cl.[7] **C25B** *9/00*

U.S. Cl. 204—258 **8 Claims**

1. An electrochemical half-cell (**1**) comprising an electrode chamber (**2**) for the accommodation of an electrolyte (**23**), a gas



chamber (**6**), and at least one gas diffusion electrode (**7**) which separates the gas chamber (**6**) and the electrode chamber (**2**) and serves as cathode or anode, characterized in that the electrode chamber (**2**) is divided into compartments (**2***a*, **2***b*, **2***c*) which, for the passage of the electrolyte (**23**), are connected to one another in cascade fashion via chutes (**17**), (**18**), (**19**).

6,039,854

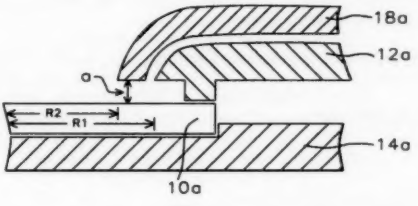
SUBSTRATE CLAMP DESIGN FOR MINIMIZING SUBSTRATE TO CLAMP STICKING DURING THERMAL PROCESSING OF THERMALLY FLOWABLE LAYERS

David Liu, Taipei, Taiwan, assignor to Vanguad International Semiconductor Corporation, Hsin-Chu, Taiwan

Division of application No. 08/782,707, Jan. 13, 1997, Pat. No. 5,843,520. This application Sep. 21, 1998, Appl. No. 157,514.

Int. Cl.[7] **C23C** *14/50*

U.S. Cl. 204—298.11 **10 Claims**



1. A clamp for fixturing a substrate when forming and thermally processing upon the substrate a thermally flowable layer comprising:

a backing member;

a top member connected through a first mechanical means to the backing member, the backing member and the top member being sized such that a substrate may be clamped between the backing member and the top member, a portion of the top member overlapping the substrate and leaving exposed a first portion of the substrate when the substrate is clamped between the backing member and the top member; and

a shroud connected through a second mechanical means to the backing member, a portion of the shroud overlapping the top member, the shroud leaving exposed a second portion of the substrate which is smaller than and contained within the first portion of the substrate, the shroud being removable from the backing member while the substrate remains clamped between the backing member and the top member.

6,039,855

TARGET FOR THE SPUTTERING CATHODE OF A VACUUM COATING APPARATUS AND METHOD FOR ITS MANUFACTURE

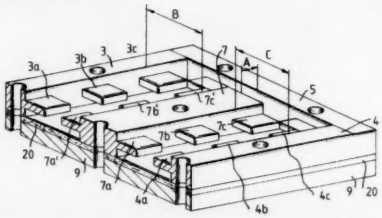
Norbert Wollenberg, Grosskrotzenburg, Germany, assignor to Leybold Materials GmbH, Hanau, Germany

Filed Sep. 25, 1996, Appl. No. 719,614

Claims priority, application Germany, Sep. 27, 1995, 195 35 894

Int. Cl.[7] **C23C** *14/34*

U.S. Cl. 204—298.12 **5 Claims**



1. Sputter cathode arrangement with a back plate and a frame surrounding a target material to be sputtered having a target plane and a separating layer laid between the frame and the back plate, characterized by a plurality of tongues extending from the frame in a plane parallel to the target plane, extending a distance into the target material and affixed to the frame for mounting the target material cast into an interstitial space surrounded by the frame, the frame having an elongated, approximately rectangular configuration having two long frame side parts parallel to one another, with each having aq length and between the two long frame side parts parallel to one another there is provided a central bridge having a length extending alongside the two long frame side parts parallel to one another, the length of the bridge being shorter than the length of the two long frame side parts parallel to one another.

6,039,856

MEASURING DEVICE

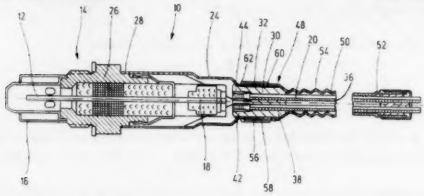
Helmut Weyl, Schwieberdingen, and Bernhard Wild, Markgroeningen, both of Germany, assignors to Robert Bosch GmbH, Stuttgart, Germany

Filed Apr. 22, 1998, Appl. No. 64,437

Claims priority, application Germany, Apr. 23, 1997, 197 17 036

Int. Cl.[7] **G01N** *27/28*

U.S. Cl. 204—400 **14 Claims**



1. A measuring device comprising:

a housing, the housing being a protective sleeve;

a sensor element arranged in the housing at a measuring point, the sensor element being connected via electrical connecting lines to an evaluation circuit spaced from the measuring points;

a second sleeve arranged within a section of the protective sleeve, the second sleeve having feed-through openings which receive the electrical connecting lines; and

a protective device through which the electrical connecting lines extend to the protective sleeve, the protective device protecting the electrical connecting lines, the protective device including a connecting section which extends over the section of the protective sleeve, the protective sleeve having a coating formed thereon at least in an area of the connecting section, the coating not contacting the second sleeve, the coating forming a sealing seat between the protective sleeve and the protective device.

6,039,857

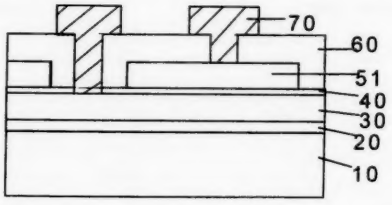
METHOD FOR FORMING A POLYOXIDE FILM ON DOPED POLYSILICON BY ANODIZATION

Ching-Fa Yeh, and Jeng-Shu Liu, both of Department of Electronics Engineering, National Chiao-Tung University, Hsinchu, Taiwan

Filed Nov. 9, 1998, Appl. No. 188,062

Int. Cl.[7] **C25D** *5/18*

U.S. Cl. 205—106 **14 Claims**



8. A method to improve the data retention characteristics for a nonvolatile memory device, which comprises forming an anodic polyoxide film between a doped polysilicon floating gate and a doped polysilicon control gate of said nonvolatile memory device, wherein said anodic polyoxide film is formed by conducting an electrolytic reaction such that said inter-polysilicon polyoxide film is formed on the doped polysilicon floating gate acting as an anode, and subjecting said anodic polyoxide film to an annealing treatment or a plasma passivation treatment.

13. The method according to claim **8**, wherein said electrolytic reaction is carried out with a constant or variable current ranging from 9 0.001–2 A, or with a constant or variable electrolyzing voltage ranging from 1–150 V.

6,039,858

PLATING PROCESS FOR X-RAY MASK FABRICATION

Robin J. Ackel, Swanton; Douglas E. Benoit; Michael H. Charland, both of Essex Junction, and Thomas B. Faure, Milton, all of Vt., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jul. 22, 1998, Appl. No. 120,774

Int. Cl.[7] **C25D** *5/02*

U.S. Cl. 205—136 **4 Claims**

1. A method for the electroplating on one side of a substrate which is immersed in an electroplating bath, the method comprising the steps of:

providing a plating system comprising:

a tank containing an electrolyte;

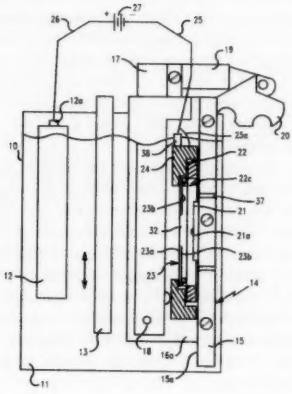
an anode in the electrolyte;

a cathode device comprising:

a planar dielectric plate having an inner and outer surface;

an inhibitor electrode attached to the inner surface of the plate;

a dielectric clamp ring having a front surface and a back surface and a through opening and on which front surface a substrate is secured, the substrate having a front surface to be plated and a back surface which is secured to the front surface of the clamp and which through opening of the clamp ring is positioned overlying the inhibitor electrode with the clamp having a thickness sufficient to form a space between the back surface of the substrate to be plated and the unattached surface of the inhibitor electrode;



a cathode structure having a through opening and a lip onto which the ring and substrate are positioned; and

means to force the cathode structure, clamp and secured substrate against the inner surface of the plate;

positioning the clamp through opening and cathode structure through opening over the inhibitor electrode;

forcing and securing the cathode structure, substrate and clamp against the plate;

supplying energy to the plating system to provide a positive charge to the anode and a negative charge to the cathode structure and inhibitor electrode;

plating the substrate; and removing the plated substrate from the cathode device.

6,039,859

METHOD FOR ELECTROPLATING USING STABILIZED DISPERSIONS OF CONDUCTIVE PARTICLES

Wade Sonnenberg, Upton; Patrick J. Houle, Framingham; Thong B. Luong, Springfield; James G. Shelnut, Northboro, and Gordon Fisher, Sudbury, all of Mass., assignors to Shipley Company, L.L.C., Marlborough, Mass.

Division of application No. 08/626,636, Apr. 11, 1996, Pat. No. 5,800,739. This application May 20, 1998, Appl. No. 82,437.

Int. Cl.[7] **C25D** *5/02;5/54*

U.S. Cl. 205—159 **9 Claims**

1. A method for plating a metal over a substrate, said method comprising the steps of forming a conductive coating over said substrate by contacting said substrate with a stable aqueous dispersion of discrete graphite particles, said dispersion comprising said graphite particles dispersed in an aqueous medium and stabilized with a stabilizing quantity of a polymeric stabilizer having repeating alkylene oxide groups and a hydrophilic—lipophilic balance (HLB) in excess of 10 and thereafter, electroplating over said so formed conductive coating.

6,039,860

METHOD FOR CHROMIUM PLATING TITANIUM ALLOY

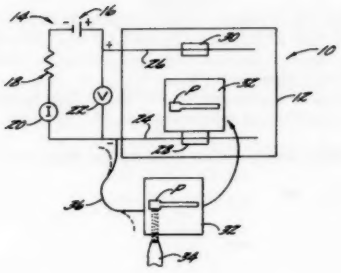
Austin M. Cooper, Aliso Viejo; Robert M. Hazencomb, Lake Forest; Albert W. Silva, Temecula, and Robert William Wright, Garden Grove, all of Calif., assignors to McDonnell Douglas Corporation, Seal Beach, Calif.

Filed Nov. 9, 1998, Appl. No. 188,731

Int. Cl.[7] **C25D** *5/34;5/52;* **C23C** *22/24*

U.S. Cl. 205—208 **16 Claims**

1. A method for chromium plating a surface of a part made of titanium or an alloy thereof, comprising:



mechanically cleaning the surface of the part to remove impurities therefrom;

electrically connecting the part to a negative terminal of a direct current power supply; and

while the part is connected to the negative terminal of the power supply, immersing the part in a bath of a chromium plating solution which contains an anode element connected to a positive terminal of the direct current power supply, and maintaining the part immersed for a period of time such that a plating of chromium is deposited on the surface of the part.

13. A method for chromium plating a surface of a part made predominantly of titanium, comprising the steps of:

degreasing the surface of the part;

after the degreasing step, grit-blasting the surface of the part;

within three minutes of completion of the grit-blasting step, electrically connecting the part to a negative terminal of a direct current power supply and thereafter immersing the part in a bath of chromic acid solution which contains an anode element connected to a positive terminal of the direct current power supply; and

maintaining the part immersed for a period of time such that a plating of chromium is deposited on the surface of the part.

6,039,861

ELECTROCHEMICAL REACTIONS

Brian Jeffrey Birch, Northants, and Nicholas Andrew Morris, Bedford, both of United Kingdom, assignors to Unilever Patent Holdings BV, Vlaardingen, Netherlands

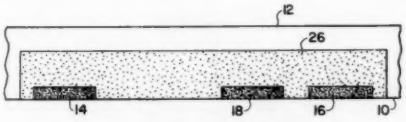
Continuation of application No. 08/464,715, filed as application No. PCT/GB93/02615, Dec. 21, 1993, Pat. No. 5,840,171. This application Nov. 16, 1998, Appl. No. 192,189.

Claims priority, application United Kingdom, Dec. 23, 1992, 9226840

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **C25B** *15/02;1/24*

U.S. Cl. 205—335 **16 Claims**



1. An electrochemical reaction, wherein a controlled amount of a first reagent is generated electrochemically at an electrode in electrical contact with a solution of an electrochemically inert salt, comprising applying a suitable electrical potential to the electrode for a suitable time to generate a controlled amount of the first reagent by electrochemical reaction between the electrode and a species in solution producing a localised thin layer environment comprising the first reagent in the vicinity of the electrode; and monitoring the amount or presence of the first reagent or a further species produced in solution in response to production of the first reagent.

6,039,862

METHOD FEATURING A NON-CONSUMABLE ANODE FOR THE ELECTROWINNING OF ALUMINUM

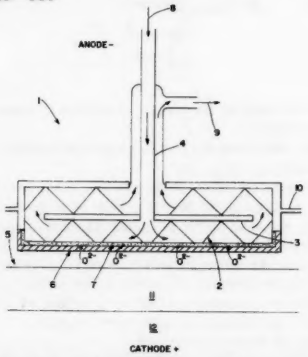
Robert A. Rapp, Columbus, Ohio, assignor to The Ohio State University, Columbus, Ohio

Continuation of application No. 08/985,787, Dec. 5, 1997, Pat. No. 5,942,097. This application Jun. 24, 1999, Appl. No. 339,129.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] C25C *3/06*

U.S. Cl. 205—386 **2 Claims**



1. A method of producing aluminum metal into a molten aluminum bath from alumina through the use of an electrochemically combustible fuel and an electric current, said method comprising electrochemically combusting said electrochemically combustible fuel with oxygen ions from said alumina so as to produce a flow of oxygen ions from said alumina while causing said electric current to flow from said molten aluminum bath, so as to produce aluminum from said alumina.

6,039,863

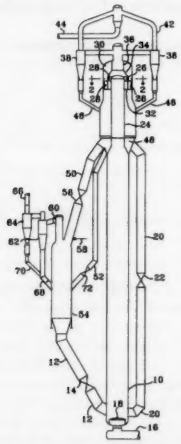
FLUIDIZED PARTICLE CONTACTING PROCESS WITH ELONGATED COMBUSTOR

Paolo Palmas, Des Plaines, Ill., assignor to UOP LLC, Des Plaines, Ill.

Provisional application No. 60/019,596, Jun. 17, 1996. This application May 9, 1997, Appl. No. 854,219.

Int. Cl.[7] C10G *11/00*

U.S. Cl. 208—113 **2 Claims**



1. A process for the fluidized catalyst cracking of hydrocarbons, said process comprising:

passing spent catalyst having coke contained thereon to a regeneration zone, contacting the coke-containing catalyst with an oxygen-containing gas at coke oxidation conditions and transporting the coke-containing catalyst upwardly in a combustor riser at a catalyst density of from 3 to 20 lb/ft^3 and a superficial gas velocity of at least 7 ft/sec while combusting essentially all coke from said catalyst to produce combustion gases and regenerated catalyst;

discharging regenerated catalyst and combustion gases tangentially from said combustor riser through discharge openings defined by at least two discharge arms into an outer portion of a separation vessel that surrounds said combustion riser and separating at least 98% of said regenerated catalyst from said combustion gases in said separation vessel by withdrawing separated combustion gases from an annular opening located between the discharge openings and the combustion riser and maintaining a diameter of the separation vessel in the location of the arms of 1.5 to 3 times the diameter of the adjacent combustion riser;

recovering combustion gases from said annular opening, passing said combustion gases directly from the annular opening to a cyclone separator to separate additional regenerated catalyst from said combustion gases and collecting separated regenerated catalyst from said combustion riser in a lower portion of said separation vessel;

passing regenerated catalyst downwardly from said separation vessel to the top of a reaction zone, contacting said regenerated catalyst therein with a hydrocarbon feedstock at catalytic cracking conditions while maintaining a contact time of 0.5 seconds or less and producing cracked product vapors and spent catalyst having coke deposited thereon; and

separating said cracked hydrocarbon vapors from said spent catalyst, recovering a cracked hydrocarbon product stream and returning spent catalyst to said regeneration zone by passing spent catalyst downwardly from the bottom of said reaction zone to the bottom of said combustion riser.

6,039,864

HYDROCARBON CONVERSION PROCESS USING A ZEOLITE BOUND ZEOLITE CATALYST

Gary David Mohr, League City, Tex., and Johannes Petrus Verduijn, Bertem, Belgium, assignors to Exxon Chemical Patents Inc., Houston, Tex.

Division of application No. 08/561,674, Nov. 22, 1995, Pat. No. 5,993,642, which is a continuation-in-part of application No. 08/344,034, Nov. 23, 1994, abandoned. This application May 19, 1998, Appl. No. 81,340.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] C10C *5/52*

U.S. Cl. 208—134 **28 Claims**

1. A process of isomerizing a hydrocarbon feed containing an aromatic C_8 stream comprising ethylbenzene, xylene isomers, or mixtures thereof comprising contacting said feed under isomerization conversion conditions with a zeolite bound zeolite catalyst that does not contain significant amounts of non-zeolitic binder, said catalyst comprising:

(a) first crystals of a first zeolite selected from the group consisting of large pore zeolite and medium pore zeolite having an average particle size greater than about 0.1 micron average particle size; and,

(b) a binder comprising second crystals of a second zeolite selected from the group consisting of large pore zeolite and medium pore zeolite having an average particle size less than said first crystals; wherein said second crystals are intergrown and form a coating or partial coating in said first crystals.

FLUIDIZED BED FILTERING APPARATUS

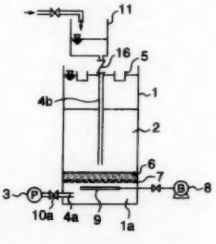
Tetsuya Tanaka, Ibaraki-ken; Koichi Tsuzuki, Tsuchiura; Noriyo Nishijima; Fumitaka Handa, both of Ibaraki-ken, and Shiro Nakadaira, Tsuchiura, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Mar. 26, 1998, Appl. No. 48,074

Claims priority, application Japan, Mar. 26, 1997, 9-073058

Int. Cl.[7] C02F *3/08*

U.S. Cl. 210—136 15 Claims



1. A fluidized bed filtering apparatus in which original water to be treated is passed upwardly through a filtering chamber filled with granular filtering material so that the granular filtering material is fluidized by the flow of the water and the water is purified, comprising

a supporting layer disposed in said filtering chamber for supporting a filtering material layer made of said granular filtering material and providing a space in the lower portion of said filtering chamber,

a first feed pipe having an outlet within said space for feeding the original water to be treated,

a second feed pipe having an outlet in said filtering material layer for feeding the original water to be treated,

a pump connected to said first feed pipe for forcedly feeding pressurized water into said space under said supporting layer, and

a head tank connected to said second feed pipe for feeding the original water to be purified from said head tank into said filtering material by free fall with gravity.

6,039,867

DEVICE FOR CONTINUOUS DISINTEGRATION OF ACTIVATED SLUDGE

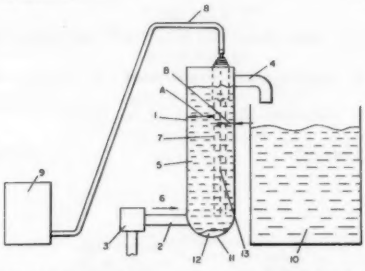
Karl Frei, Wil, Switzerland, and Klaus Luger, Reichlung Ludenhausen, Germany, assignors to Telesonic AG, Bronschhofen, Switzerland

Division of application No. 08/861,171, May 21, 1997, Pat. No. 5,895,577. This application Apr. 19, 1999, Appl. No. 293,871.

Claims priority, application Switzerland, May 23, 1996, 1300/96

Int. Cl.[7] C02F *11/12*

U.S. Cl. 210—173 8 Claims



1. A device for continuous treatment of microbial sludge said device comprising a treatment vessel and a sonic source for generating ultrasonic emissions arranged within said treatment vessel, wherein

the sonic source is arranged eccentrically within the treatment vessel,

the treatment vessel is formed as a pipe having inner walls

the ultrasonic emission of the sonic source is directed towards the walls of the pipe, and

the walls of the pipe are formed as reflectors for the ultrasonic emissions impacting from the sonic source, wherein the treatment vessel possesses a microbial sludge feed pipe, and a outlet pipe for treated microbial sludge, and wherein the sonic source is eccentrically located with respect to the vessel to avoid mutual nullification of sonic waves reflected from the walls and radiated from the source.

6,039,868

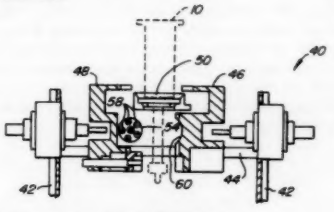
BLOOD SEPARATOR SYSTEM

Michael P. Allen, Los Altos; Stoughton L. Ellsworth, Palo Alto; Lawrence M. Ensler, Los Altos, and Kumar Subramanian, Pleasanton, all of Calif., assignors to First Medical, Inc., Mountain View, Calif.

Continuation of application No. 08/386,242, Feb. 9, 1995, abandoned. This application Apr. 16, 1997, Appl. No. 839,879.

Int. Cl.[7] B01D *36/00*

U.S. Cl. 210—232 2 Claims



1. A blood separator system comprising:

a blood separation device including a flexible tube, a needle structure at an inlet end of the flexible tube, and a filter member at an outlet end of the flexible tube; and

a blood separation driver including a frame, wherein the frame comprises a collar for supporting the inlet end of the flexible tube and one or more rods which extend laterally from the collar, a clamp for removably securing the blood separation

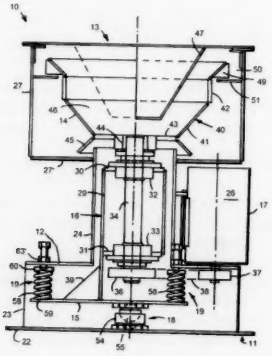
device, wherein said clamp comprises first and second opposed clamping elements at least one of which is translatably mounted on the rods, a peristaltic drive wheel which is mounted on at least one of the clamping elements and engages an exterior surface of the flexible tube to pass blood through a lumen thereof when the tube is secured in the clamp, and at least one motor for translating one or both of the clamping elements to selectively secure and release the flexible tube when in place in the collar.

6,039,869

SUPPORT ARRANGEMENT FOR CENTRIFUGAL CHIP SEPARATOR

Russell D. Dudley, 10215 Cricklewood Ct., Portage, Mich. 49024

Filed Sep. 28, 1998, Appl. No. 161,901
Int. Cl.[7] B04B *1/00*
U.S. Cl. 210—232 **21 Claims**



1. A centrifugal chip separator comprising:

a base having a bottom and a raised platform;

a centrifuge device adapted to separate liquid from liquid-laden metal scrap by centrifugal force, the centrifuge device including a centrifuge support plate located below the raised platform, but above the bottom;

a mount operably supporting the centrifuge support plate on the bottom for limited non-axial movement as the centrifuge device is operated; and

a plurality of biasing devices extending between the centrifuge support plate and the raised platform that press against the raised platform to bias the centrifuge support plate downwardly away from the raised platform and against the mount, the biasing devices being spaced apart at locations around the mount and being adjustable so that the biasing devices can be adjusted to an optimal pressure for counteracting non-axial forces and vibrations generated as the centrifuge device is operated, the biasing devices including springs constructed to bias the centrifuge support plate downwardly from the raised platform and against the mount.

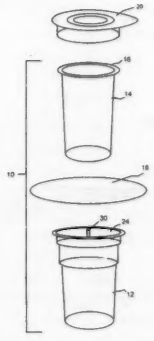
SMALL DIALYSIS DEVICE

Laura L. Sykaluk, Rockford, Ill., assignor to Pierce Chemical Company, Rockford, Ill.

Filed Sep. 25, 1998, Appl. No. 161,328
Int. Cl.[7] B01D *63/00*
U.S. Cl. 210—321.71 **6 Claims**



1. A device useful for the dialysis of small samples of fluids comprising:

a cylindrical outer sleeve having an open top end and an open bottom end, the sidewall portion of the sleeve near the top end containing a channel in and around the inner surface with said sidewall extending upwardly from said channel toward said open top end;

a cylindrical inner sleeve having an open, flanged top end and an open bottom end, said inner sleeve being positioned within and in axial alignment with said outer sleeve with the flange being inserted in the channel of the outer sleeve and the sidewall adjacent to the bottom end of the inner sleeve extending below the bottom end of the outer sleeve, there being a space between the sidewalls of the sleeves in the region adjacent to the bottom end of the outer sleeve; and

a dialysis membrane covering the open, bottom end of the inner sleeve and extending upwardly and around the sidewall of the said sleeve so as to fill said space between the sidewalls of the two sleeves and secure the sleeves in an air tight relationship in said region.

6,039,872

HYDROPHILIC MEMBRANE

Xiaosong Wu, Pensacola; Joel Shertok, Pace, and Peter Konstantin, Gulf Breeze, all of Fla., assignors to Pall Corporation, East Hills, N.Y.

Continuation-in-part of application No. 08/958,654, Oct. 27, 1997. This application Apr. 10, 1998, Appl. No. 58,631.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **B01D** *39/00*

U.S. Cl. 210—500.35 **40 Claims**

1. A hydrophilic membrane having a pore rating from about 0.02 μm to about 10 μm, said membrane comprising a network of a non-crystalline hydrophobic polymer selected from the group consisting of polyethersulfone and polysulfone, and a hydrophilic acrylate polymer derived from a polyalkylene glycol diacrylate defined by two acrylate groups attached by ester linkages at opposite ends of a hydrophilic polyalkylene glycol chain having a molecular weight of at least about 200 and, optionally, a hydrophilic monoacrylate.

6,039,873

PROCESS FOR THE THOROUGHGOING AEROBIC BIOLOGICAL PURIFICATION OF WASTE WATER

Theo Stähler, Niederzeuzheim - Mühlenhof, D-65589 Hadamar 2, Germany

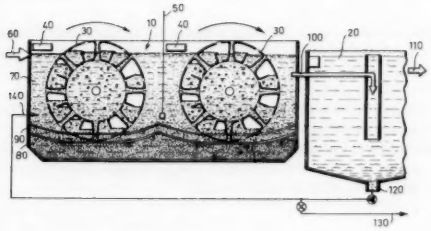
PCT No. PCT/EP97/00411, § 371 Date Sep. 11, 1998, § 102(e) Date Sep. 11, 1998, PCT Pub. No. WO97/28094, PCT Pub. Date Aug. 7, 1997

PCT Filed Jan. 30, 1997, Appl. No. 117,614

Claims priority, application Germany, Feb. 2, 1996, 196 03 690

Int. Cl.[7] **C02F** *3/00;3/30*

U.S. Cl. 210—605 **17 Claims**



1. A method for biological purification of wastewater as well as mechanical presettled wastewater, comprising the steps: degrading biologically nitrogen and phosphorous compounds in a biotank; operating said biotank with suspended activated sludge and with fixed film biomass for producing purified water directly removable from said biotank; controlling and regulating oxygen input to said biotank for operating said biotank under different oxygen environmental conditions; forming an aerobic zone near a water surface in said biotank; forming an anoxic zone near a bottom of said biotank, said aerobic zone and said anoxic zone being connectable with one another by at least one transition zone; and producing a total concentration exceeding 3 kilograms of dry solids per cubic meter of suspended activated sludge and fixed film biomass in used tank volume.

6,039,874

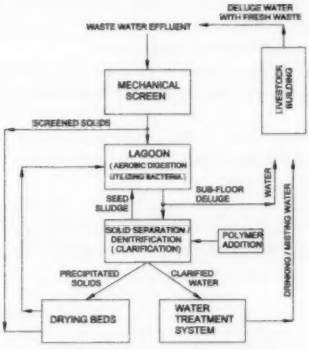
APPARATUS AND METHOD FOR PURIFICATION OF AGRICULTURAL ANIMAL WASTE

Alfredo J. Teran, Cape Canaveral; John R. Derrick, Jr., Rockledge; Nidal A. Samad, Merritt Island; W. Todd Willoughby, Cape Canaveral, and Richard G. Wood, Merrit Island, all of Fla., assignors to AJT & Associates, Inc., Cape Canaveral, Fla.

Provisional application No. 60/061,397, Oct. 7, 1997, Provisional application No. 60/070,410, Jan. 5, 1998, Provisional application No. 60/070,709, Jan. 7, 1998, Provisional application No. 60/079,360, Mar. 25, 1998. This application Oct. 6, 1998, Appl. No. 167,275.

Int. Cl.[7] **C02F** *3/30*

U.S. Cl. 210—605 **8 Claims**



4. A method for treatment of agricultural animal wastewater, which comprises the following sequential steps:

screening wastewater influent to remove bulk solids;

pressing said bulk solids to remove excess moisture and directing the removed moisture to an aerobic lagoon for treatment;

aerobically treating said wastewater in an aerobic lagoon said aerobic lagoon further comprises propagated aerobic bacteria selected to aerobically digest animal wastewater;

diverting a portion of said aerobically treated wastewater to deluge tanks for use in flushing livestock buildings;

injecting said aerobically treated wastewater with a polymer blend prior to its entering a plurality of above-ground clarifying means;

clarifying and denitrifying said wastewater in the plurality of above-ground tanks whereby suspended solids are precipitated and a portion thereof diverted to a plurality of drying beds for drying;

returning a portion of clarified supernatant to the aerobic lagoon;

filtering water flowing from the clarifying means prior to disinfecting with ozone;

treatment of said clarified water with ozone to provide drinking water suitable for agricultural animals.

6,039,875

COMPOSITION AND METHOD FOR REMOVING SUSPENDED SOLIDS FROM WASTEWATER

John A. Christiansen, and Erik Rumbaugh, both of Baton Rouge, La., assignors to Interbio, Inc., Baton Rouge, La.

Filed Nov. 17, 1997, Appl. No. 971,348

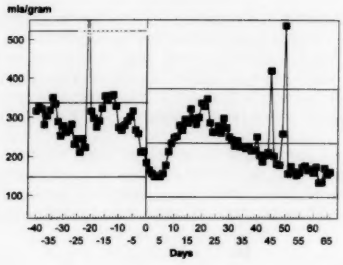
Int. Cl.[7] **C02F** *1/56;3/12*

U.S. Cl. 210—606 **85 Claims**

1. A method of removing suspended solids from an aqueous solution comprising:

establishing turbulent conditions in said aqueous solution;

adding to said solution cultures of exo-polymer producing bacteria capable of incorporating phosphate in Poly-β-Hydroxybutyrate storage polymers to said solution and capable of producing at least about 0.4 grams of exo-polymer



for each gram of exo-polymer producing bacteria wherein said exo-polymers are capable of capturing said suspended solids in said turbulent conditions;

establishing sufficient levels of dissolved oxygen in said solution to support the production of said exo-polymers by said bacteria;

establishing sufficiently low BOD_5 levels in said solution to stimulate the production of said exo-polymers by said bacteria; and

establishing non-turbulent conditions in said aqueous solution whereby said exo-polymer producing bacteria and their captured suspended solids may flocculate and settle.

6,039,876

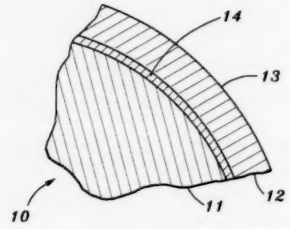
HYDROPHILIC POLYSTRENE DIVINYLBENZENE BASED MATRIXES FOR CHROMATOGRAPHY

Yan-Bo Yang, 12839 San Juan St., Victorville, Calif. 92392

Continuation of application No. 07/919,518, Jul. 24, 1992, abandoned. This application Sep. 22, 1994, Appl. No. 310,813.

Int. Cl.[7] B01D *15/08*

U.S. Cl. 210—635 **4 Claims**



1. The process for making a matrix for use in chromatography, said process comprising the following steps:

1. providing a substrate body comprising a polystyrene divinylbenzene copolymer with reactive groups, some of which are hydrophobic, and having a surface;

2. applying to said surface oligomer or polymer molecules, each said molecule including a plurality of hydroxy groups, whereby at least a plurality of said hydroxy groups of each said molecule form with a respective reactive group on said surface, a covalent bond, thereby chemically bonding each of said molecules to said surface at a plurality of respective locations on said surface, thereby to form a layer around said matrix, others of said hydroxy groups which did not react with said reactive groups causing the surface of said layer to be hydrophilic.

6,039,877

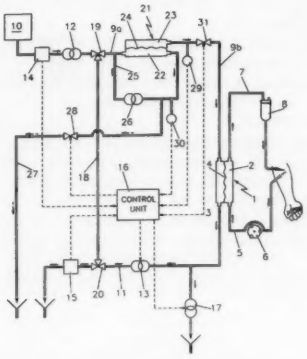
DEVICE AND METHOD FOR PREPARING A TREATMENT LIQUID BY FILTRATION

Jacques Chevallet, Serezin Du Rhone, and Jean-Claude Riquier, Rillieux, both of France, assignors to Hospal Industrie, Meyzieu, France

Division of application No. 08/462,435, Jun. 5, 1995, Pat. No. 5,702,597. This application Sep. 22, 1997, Appl. No. 934,903. Claims priority, application France, Jul. 26, 1994, 94-09499

Int. Cl.[7] B01D *61/00*

U.S. Cl. 210—636 **8 Claims**



1. A method for cleaning a filter having a first chamber and a second chamber separated by a filtering membrane, the first chamber having an outlet and having an inlet connected to a treatment liquid source, and the second chamber having an outlet for the filtered treatment liquid, the method comprising the steps of:

conveying treatment liquid from the source through the first chamber;

recirculating during a recirculation mode, all treatment liquid from the outlet of the first chamber to the inlet of the first chamber so that all treatment liquid exiting the first chamber is fed-back through a feedback line into the first chamber;

adding to the recirculating treatment liquid additional treatment liquid from the source;

measuring a clogging level of the filter;

comparing the measured clogging level with a predetermined clogging threshold;

intermittently purging during a purge mode, the first chamber when the measured clogging level reaches the predetermined clogging threshold;

measuring a frequency of purges of the first chamber;

comparing the measured purge frequency with a purge frequency reference value; and

increasing flow speed of treatment liquid through the first compartment when the measured purge frequency exceeds the purge frequency reference value.

6,039,878

RECOVERY OF VOLATILE ORGANIC COMPOUNDS FROM EMULSION OF VOLATILE ORGANIC COMPOUNDS IN WATER BY PERVAPORATION

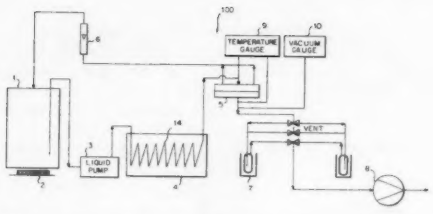
Subhas Sikdar, and Leland Vane, both of Cincinnati, Ohio, assignors to The United States of America as represented by the United States Environmental Protection Agency, Washington, D.C.

Provisional application No. 60/018,193, May 23, 1996. This application May 23, 1997, Appl. No. 862,308.

Int. Cl.[7] B01D *15/00*

U.S. Cl. 210—640 **13 Claims**

1. A method for removing volatile organic compounds from an emulsion comprising volatile organic compounds, water, and a



surfactant, wherein the continuous phase of said emulsion is water, comprising passing said emulsion through a hydrophobic pervaporation membrane.

6,039,879

METHOD FOR SEPARATING AND RECOVERING OBJECTIVE COMPONENT

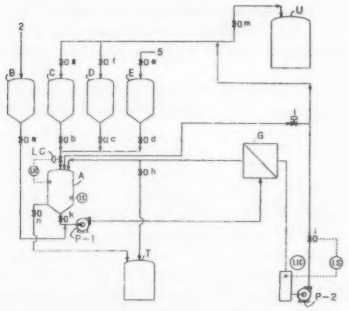
Yoichi Shimoi; Hideo Tamura; Masaomi Okazaki, and Takao Suganuma, all of Kanagawa, Japan, assignors to Nittetu Chemical Engineering Ltd., and Ajinomoto Co., Inc., both of Tokyo, Japan

Filed Oct. 20, 1997, Appl. No. 954,058

Claims priority, application Japan, Oct. 18, 1996, 8-311147; Sep. 4, 1997, 9-277881

Int. Cl.[7] B01D *61/00*

U.S. Cl. 210—641 **10 Claims**



1. A method for separating and recovering an objective component from a crude liquid by a membrane in time-lagged multi-stage washing operation, comprising:

at least two stages which comprise steps as follows:

a mixing step of mixing a washing liquid continuously or intermittently into a crude liquid stored in a container to form a mixture of said crude liquid and said washing liquid in each stage;

a separating step of separating said mixture in each stage into a permeated liquid and a residual liquid by passing said mixture through a membrane; and

a returning step of returning said residual liquid to said container in each stage;

wherein said separating step, and returning step are performed simultaneously;

wherein successive ones of said at least two stages are separated by a time lag; and

wherein successive ones of said at least two stages use washing liquids at different concentrations, in descending order, of the objective component concentration;

obtaining a first permeated liquid by the separating step in a first stage of said at least two stages of a cycle of the time-lagged multi-stage washing operation;

obtaining a final residual liquid by the separating step in a final stage of said at least two stages using a final washing liquid which has an objective component concentration of essentially zero; and

using a permeated liquid obtained by a membrane treatment other than the first permeated liquid, as a washing liquid in a later cycle performed on another crude liquid;

wherein said later cycle has the same number of stages as in said cycle, and

wherein said step of using a permeated liquid is carried out in a last stage of said later cycle.

6,039,880

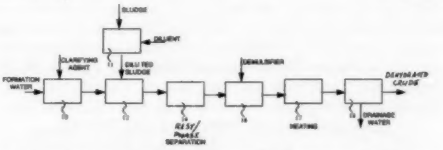
METHOD FOR DEHYDRATING A WASTE HYDROCARBON SLUDGE

Carmen Morataya, Caracas, Venezuela, assignor to Intevep, S.A., Caracus, Venezuela

Filed Feb. 24, 1998, Appl. No. 28,533

Int. Cl.[7] C02F *1/52*

U.S. Cl. 210—708 **15 Claims**



1. A method for dehydrating a waste hydrocarbon sludge, comprising the steps of:

(a) providing a waste hydrocarbon sludge comprising oil, water and sediment wherein the content of water and sediment is greater than or equal to about 10% vol;

(b) providing a formation water;

(c) adding to the formation water a clarifying agent in an amount of less than or equal to 250 ppm based on the volume of the formation water so as to provide a solution;

(d) washing the waste water hydrocarbon sludge by mixing the waste hydrocarbon sludge with the solution so as to provide a sludge-water mixture having a ratio of water to hydrocarbon of at least about 1:1;

(e) holding the sludge-water mixture at rest for at least two hours so as to obtain partial separation of water from oil to provide a partially dewatered sludge-water mixture;

(f) adding a demulsifier to the partially dewatered sludge-water mixture to provide a sludge-water-demulsifier mixture;

(g) heating the sludge-water-demulsifier mixture to a sufficient temperature and holding for a time sufficient to provide a hydrocarbon phase having a water content of less than or equal to about 1% vol.

6,039,881

SPRAY DRYING OF POLYMER-CONTAINING DISPERSIONS, WATER-IN-OIL AND WATER-IN-OIL MICROEMULSIONS AND DRY POLYMER PRODUCTS FORMED THEREBY

William Bloor Davies, Darien; John Edward Healy, Fairfield, both of Conn.; Gary Kaui Lani Miller, Port Chester, N.Y.; Joseph J. Kozakiewicz, Trumbull, and Roderick G. Ryles, Milford, both of Conn., assignors to CYTEC Technology Corp., Wilmington, Del.

Division of application No. 08/670,194, Jun. 21, 1996, and a continuation-in-part of application No. 08/479,057, Jun. 7, 1995. This application May 29, 1998, Appl. No. 87,089.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] C02F *1/56*

U.S. Cl. 210—732 **9 Claims**

1. A method of treating suspended solids, comprising (a) intermixing substantially water-soluble or water-swellable polymer agglomerates with water to form an aqueous admixture, (b) intermixing said aqueous admixture with suspended solids, and (c) separating resultant concentrated solids from resultant aqueous liquid, wherein said agglomerates are comprised of polymer par-

ticles comprised of a spray-dried polymer having pendant groups selected from the group consisting of amide, tertiary aminomethyl, quaternized tertiary aminomethyl, hydroxyl, glyoxal, sulfonate, sulfonate salt, carboxylic acid, carboxylic acid salt, hydroxamic acid, hydroxamic acid salt, or a polymer having recurring units selected from the group consisting of dialkylaminoalkyl(alk)acrylate, dialkylaminoalkyl(alk)acrylate salts, and quaternized dialkylaminoalkyl(alk)acrylate, wherein about 90% of said agglomerates have an agglomerate size of about 160 microns or greater and wherein about 90% of said agglomerates have an agglomerate size of about 1500 microns or less.

6,039,882

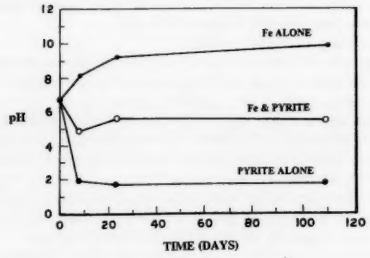
REMEDIATION OF ENVIRONMENTAL CONTAMINANTS USING A METAL AND A SULFUR-CONTAINING COMPOUND

N. Lee Wolfe, and Mark G. Cipollone, both of Athens, Ga., assignors to The United States of America as represented by the United States Environmental Protection Agency, Washington, D.C., and Dyncorp, Inc., Reston, Va.

Provisional application No. 60/007,124, Oct. 31, 1995. This application Oct. 30, 1996, Appl. No. 739,842.

Int. Cl.[7] **C02F** *1/70*

U.S. Cl. 210—747 **9 Claims**



1. A method for the remediation of an environmental contaminant comprising reacting the contaminant with an alcohol, wherein the alcohol solubilizes the contaminants, and a reaction mixture comprising elemental iron and a sulfide-containing compound for a sufficient amount of time to cause chemical reduction of the contaminant, wherein the amount of the sulfide-containing compound is between 0.1% and 25% by weight of the mixture, and wherein the environmental contaminant is an organic compound.

6,039,883

COMPOUND METHOD FOR DISINFECTION OF LIQUIDS

Helmut I Milde, Boxford, and Sanborn F Philp, Pittsfield, both of Mass., assignors to Ion Physics Corporation, Atkinson, N.H.

PCT No. PCT/US96/12174, § 371 Date Jan. 7, 1998, § 102(e) Date Jan. 7, 1998, PCT Pub. No. WO97/05067, PCT Pub. Date Feb. 13, 1997

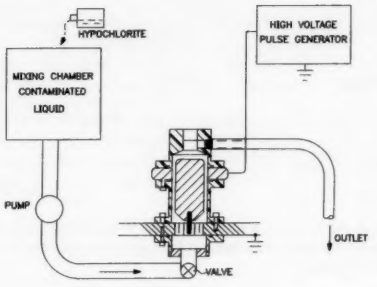
Provisional application No. 60/001,552, Jul. 27, 1995. This PCT application Jul. 25, 1996, Appl. No. 983,533.

Int. Cl.[7] **C02F** *1/461;* **A61L** *2/02*

U.S. Cl. 210—748 **14 Claims**

1. A process for disinfection of liquids comprising the following steps:

placing the contaminated liquid to be disinfected in an E-field processing chamber containing electrodes,



applying at least one voltage pulse across said electrodes of sufficient magnitude and number to have a disinfecting action on said liquid, and

adding to said liquid a disinfectant capable of increasing said disinfecting action produced by said voltage.

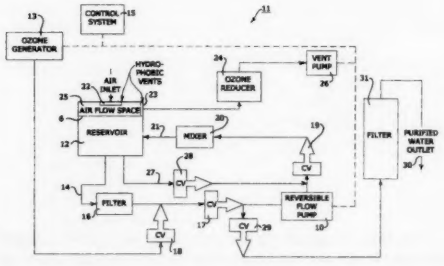
REVERSIBLE FLOW CIRCUIT FOR BATCH LIQUID PURIFIER

William Alan Burris, Pittsford, and Philip M. Prinsen, Ontario, both of N.Y., assignors to Alab, LLC, Pittsford, N.Y.

Filed Mar. 4, 1998, Appl. No. 34,710

Int. Cl.[7] **B01D** *11/04;* **C02F** *1/78*

U.S. Cl. 210—760 **27 Claims**



1. A purifier treating a batch of liquid with ozone, the purifier combining an ozone generator producing an ozone-containing gas, a controller, a pump, and a purification course, and the purifier comprising:

a. the pump being reversed in response to the controller after the pump has caused mixing of the ozone-containing gas into contact with the liquid and has directed ozonized liquid through the purification course; and

b. the pump withdrawing ozonized liquid from the purification course during reverse operation and redirecting the withdrawn ozonized liquid to a reverse destination.

9. A method of operating an ozone purifier that purifies a batch of liquid, the method using a purifier having an ozone generator producing an ozone-containing gas and a pumping system for contacting the liquid with the ozone-containing gas and directing ozonized liquid through a purification course, the method comprising:

after operating the purifier and the pumping system in a forward mode to direct ozonized liquid through the purification course, then reversing a pump in the pumping system to withdraw ozonized liquid from the purification course and redirect the withdrawn ozonized liquid to a reverse destination.

6,039,885

PROCESS AND DEVICE INTENDED FOR ULTRAFILTRATION OF PARTICLES IN FLUIDS

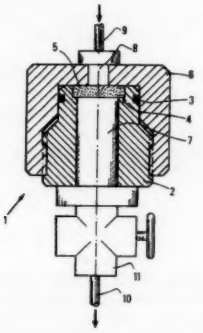
Emmanuel Behar, Jouy le Moutier, and Alexander Werner, Paris, both of France, assignors to Institut Francais Du Petrole, Rueil-Malmaison, France

Filed Sep. 29, 1997, Appl. No. 940,012

Claims priority, application France, Sep. 27, 1996, 96 11922

Int. Cl.[7] B01D *29/03*

U.S. Cl. 210—767 **13 Claims**



1. An ultrafiltration process for ultrafiltration of particles from fluids, comprising the steps of:

providing at least a first filtering element made from a source rock, said source rock having micropores having an average diameter of between 10–200 Angstroms;

passing fluids containing particles through said first filtering element; and

retaining particles having a diameter larger than said average diameter within said micropores.

6,039,886

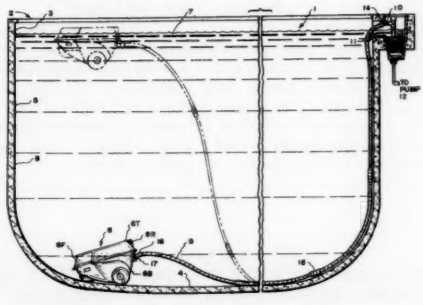
WATER SUCTION POWERED AUTOMATIC SWIMMING POOL CLEANING SYSTEM

Melvyn L. Henkin, 1001 Sharon La., and Jordan M. Laby, 1389 Beachmont, both of Ventura, Calif. 93001

Continuation-in-part of application No. PCT/US97/11302, Jun. 25, 1997. This application Dec. 26, 1997, Appl. No. 998,529.

Int. Cl.[7] C02F *1/40;* **E04H** *4/16*

U.S. Cl. 210—776 **43 Claims**



36. A method of cleaning both the interior wall surface of an open container and the water surface of a water pool contained therein, said method comprising:

placing a unitary body in said water pool;

utilizing a negative pressure to create a water flow in said body for producing a vertical force thereon to selectively move said body to either (1) proximate to said water surface or (2) proximate to said wall surface below said water surface;

urging said body against said wall surface when said body is proximate to said wall surface;

supporting said body proximate to said water surface when said body is proximate to said water surface; and

collecting pool water from (1) adjacent to said water surface when said body is proximate to said water surface and (2) adjacent to said wall surface when said body is proximate to said wall surface.

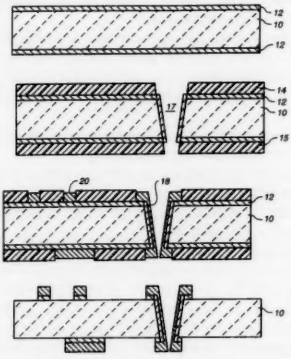
PROCESS FLOWS FOR FORMATION OF FINE STRUCTURE LAYER PAIRS ON FLEXIBLE FILMS

Lei Zhang, San Jose; William Chou, Cupertino; Michael G. Peters, Santa Clara, and Solomon I. Beilin, San Carlos, all of Calif., assignors to Fujitsu Limited, Japan

Filed Jan. 12, 1999, Appl. No. 229,502

Int. Cl.[7] H05K *3/02*

U.S. Cl. 216—17 **20 Claims**



1. A method of manufacturing a flexible circuit board from a dielectric substrate having conductive layers disposed on both sides of the substrate, the method comprising the steps of:

(a) forming a layer of photoresist on one of the conductive layers, wherein the conductive layer upon which the layer of photoresist is deposited is an underlying conductive layer;

(b) forming an aperture passing through the layer of photoresist, the underlying conductive layer, and the dielectric substrate;

(c) exposing the layer of photoresist to a pattern of actinic radiation;

(d) forming conductive material within the aperture;

(e) once steps (b), (c), and (d) have been performed, developing the exposed photoresist layer to expose portions of the underlying conductive layer;

(f) once step (e) has been performed, defining at least one conductive trace using the underlying conductive layer, and using the developed photoresist layer as a mask, the conductive trace being electrically connected to the conductive material within the aperture; and

(g) once step (f) has been performed, removing said developed photoresist layer.

6,039,890

QUICK ACTING ICE MELTER COMPOSITION

Kenneth C. Ossian, Bettendorf, and Norbert J. Steinhauser, Dubuque, both of Iowa, assignors to Ossian, Inc., Davenport, Iowa

Filed Jun. 16, 1999, Appl. No. 334,095

Int. Cl.[7] C09K *3/18*

U.S. Cl. 252—70 **8 Claims**

1. A quick melting ice melter composition comprising:

an effective amount of an ice melter; and

a small but melt speed enhancing effective amount of an ice melter compatible surface agent;

whereby the ice melter compatible surface active agent is coated upon the ice melter.

6,039,891

MULTI-OXIDIZER PRECURSOR FOR CHEMICAL MECHANICAL POLISHING

Vlasta Brusic Kaufman, Geneva, and Shumin Wang, Naperville, both of Ill., assignors to Cabot Corporation, Boston, Mass.

Continuation-in-part of application No. 08/800,562, Feb. 18, 1997, which is a continuation-in-part of application No. 08/718,937, Sep. 24, 1996, Pat. No. 5,783,489. This application Jul. 11, 1997, Appl. No. 890,778.

1. A chemical mechanical polishing composition precursor comprising urea; from about 1.0 to about 9.0 wt % alumina, from about 0.2 to about 10.0 wt % ammonium persulfate and from about 0.5 to about 5.0 wt % succinic acid.

6,039,892

OXYGEN ABSORBENT COMPOSITION

Tomoharu Himeshima, Chiba-ken; Kazumoto Nakagawa; Tatsuo Iwai, both of Tokyo, and Takayuki Watanabe, Chiba-ken, all of Japan, assignors to Mitsubishi Gas Chemical Company, Inc., Tokyo, Japan

Filed Feb. 9, 1999, Appl. No. 246,844

Claims priority, application Japan, Feb. 18, 1998, 10-035988

Int. Cl.[7] C09K *15/04;15/26;* **B01J** *19/00*

U.S. Cl. 252—188.28 **8 Claims**

1. An oxygen absorbent composition comprising an organic oxygen absorbent (A) which neither absorbs nor releases moisture and in which an oxidizable main component is supported on a porous silicate having an average pore diameter of 200 to 5,000 Å, and a formaldehyde absorbent (B) which neither absorbs nor releases moisture and is at least one of an amine, a thiol and a sulfonic acid that is supported on a porous carrier.

6,039,893

GUEST-HOST LIQUID CRYSTAL DISPLAY DEVICE AND GUEST-HOST LIQUID CRYSTAL COMPOSITION

Seiichi Arakawa; Masataka Matsute, both of Kanagawa, and Yasutoshi Kawate, Tokyo, all of Japan, assignors to Sony Corporation, Tokyo, Japan

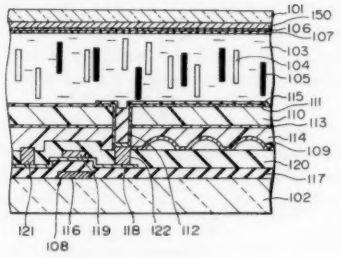
Filed Jan. 22, 1998, Appl. No. 12,014

Claims priority, application Japan, Jan. 24, 1997, 9-026183

Int. Cl.[7] C09K *19/60;19/52*

U.S. Cl. 252—299.01 **22 Claims**

1. A guest-host liquid crystal display device comprising:

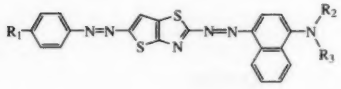


a pair of substrates opposing each other with a space therebetween;

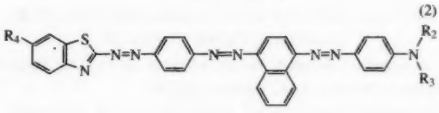
a guest-host liquid crystal held in said space, said guest-host liquid crystal containing a mixture of dichroic dyes exhibiting a black color as a whole, said mixture of dichroic dyes is present in an amount less than or equal to 5 percent by weight; and

electrodes provided on said substrates for applying a voltage to said guest host liquid crystal;

said mixture of dichroic dyes comprising a bis-azo blue dye having a thienothiazole ring represented by the following chemical formula (1) and a tris-azo bluish purple dye having a benzothiazole ring represented by the following chemical formula (2):

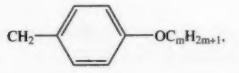


(1)

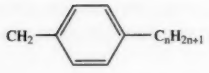


(2)

wherein R_1 is a hydrogen or halogen atom, C_nH_{2n+1}, COC_nH_{2n+1}, $OCOC_nH_{2n+1}$, $COOC_nH_{2n+1}$, or $CH_2COOC_nH_{2n+1}$, wherein n is an integer from 1 to 8; each of R_2 and R_3 is a hydrogen atom or C_nH_{2n+1}; R_3 may be



or



and a combination of R_2 and R_3 may form

wherein n is an integer from 1 to 8, and m is an integer from 1 to 5; and R_4 is a hydrogen or halogen atom, or C_nH_{2n+1}, wherein n is an integer from 1 to 8.

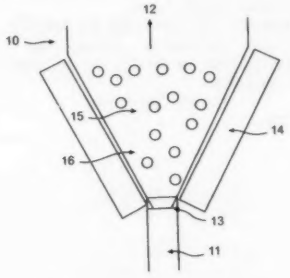
PRODUCTION OF SUBSTANTIALLY MONODISPERSE PHOSPHOR PARTICLES

Angel Sanjurjo, San Jose; Kai-Hung Lau, Cupertino; David Lowe, Hayward; Anastasia Canizales, San Francisco; Naixiong Jiang, Palo Alto; Victor Wong, Daly City; Liqiang Jiang, San Jose; Luke V. Schneider, Half Moon Bay; Naheed Mufti, Castro Valley; Robert T. Rewick, Mountain View, all of Calif.; Marie Johansson, Watchung, N.J., and Keith Kardos, Bethlehem, Pa., assignors to SRI International, Mento Park, Calif., and STC Technologies, Bethlehem, Pa.

Filed Dec. 5, 1997, Appl. No. 986,196

Int. Cl.[7] C09K *11/00*

U.S. Cl. 252—301.4 R **41 Claims**



1. A method for producing activated, substantially monodisperse, phosphorescent particles comprising the steps of:

suspending substantially monodisperse, phosphor-precursor particles in a fluidizing gas;

introducing a reactive gas to contact the suspended phosphor-precursor particles;

heating the suspended phosphor-precursor particles to a reaction temperature sufficient to form unactivated phosphorescent particles;

discontinuing the introduction of the reactive gas; and

activating the unactivated phosphorescent particles suspended within the fluidizing gas by heating the unactivated phosphorescent particles to an activation temperature to form activated, substantially monodisperse, phosphorescent particles, wherein the activation temperature is greater than or equal to the reaction temperature and wherein the reaction temperature ranges from about 500 to about 900° C.

ANISOTROPIC CONDUCTIVE ADHESIVE AND METHOD FOR PREPARATION THEREOF AND AN ELECTRONIC APPARATUS USING SAID ADHESIVE

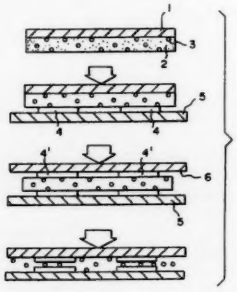
Tetsuya Miyamoto, Higashimine-machi, and Masakazu Kawata, Utsunomiya, both of Japan, assignors to Sumitomo Bakelite Co., Ltd., Tokyo, Japan

Filed Mar. 16, 1999, Appl. No. 268,312

Claims priority, application Japan, Mar. 18, 1998, 10-068530; May 22, 1998, 10-141471; Oct. 13, 1998, 10-291101; Dec. 14, 1998, 10-354953

Int. Cl.[7] H01B *1/06*

U.S. Cl. 252—511 **14 Claims**



1. An anisotropic conductive adhesive comprising conductive particles dispersed in a resin composition, wherein said resin composition comprises a radical polymerization resin (A), an organic peroxide (B), a thermoplastic elastomer (C) and a phosphoric ester (D) represented by formula (1)

(1)

wherein R^1 is $CH_2{=}CR_1CO(OR_2)_n$ where R_1 is —H or —CH_3, R_2 is —C_2H_4—, —C_3H_6—, —$CH_2CH(CH_3)$—, —C_4H_8—, —C_5H_{10}—, —C_6H_{12}— or —C_2H_4—O—CO—C_5H_{10}— and n is an integer of 1–10; l is 1 or 2 and m is 1 or 2.

6,039,897

MULTIPLE PATTERNED STRUCTURES ON A SINGLE SUBSTRATE FABRICATED BY ELASTOMERIC MICRO-MOLDING TECHNIQUES

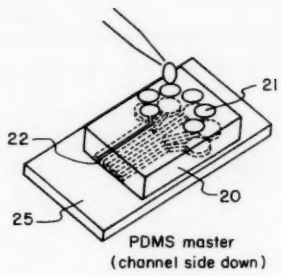
Michael J. Lochhead, and Paul Yager, both of Seattle, Wash., assignors to University of Washington, Seattle, Wash.

Provisional application No. 60/024,771, Aug. 28, 1996. This application Aug. 28, 1997, Appl. No. 919,464.

Int. Cl.[7] B29D *11/00*

U.S. Cl. 264—1.24 **40 Claims**

1. A method for patterning a material onto a substrate which comprises the steps of:



a. providing a micro-mold having a plurality of non-communicating, independent channels and having a plurality of reservoirs for receiving a micro-molding fluid each of which reservoirs communicates with a channel, said mold comprising an elastomeric master having a surface with a plurality of recesses therein and a substrate, said mold formed by contacting the surface of said elastomeric master with said substrate such that the recesses in said surface form said plurality of reservoirs and channels;

b. introducing a micro-molding fluid into said mold reservoirs filling said communicating channels; and

c. solidifying said fluid in said mold and removing said elastomeric master thereby generating a pattern of material on said substrate.

ENZYMATICALLY PROTEIN ENCAPSULATING OIL PARTICLES BY COMPLEX COACERVATION

Jon C. Soper, Lebanon, and M. Teresa Thomas, Centerville, both of Ohio, assignors to Givaudan Roure Flavors Corporation, Cincinnati, Ohio

Filed Jan. 31, 1997, Appl. No. 791,953

Int. Cl.[7] **B01J** *13/10*

U.S. Cl. 264—4.3 **21 Claims**

1. A method of protein-encapsulating oil particles by complex coacervation comprising:

forming a dispersion in water of at least one positively charged protein colloid and at least one negatively charged colloid;

adding an oil to said dispersion and agitating to form a coarse emulsion of oil particles;

first forming a complex coacervate at ambient temperature;

cooling said complex coacervate to a gel temperature in the range of about 20° C. to about 27° C. to deposit a stabilized protein shell around said oil particles and further cooling to a temperature in the range of about 5° C. to 10° C. to stabilize said protein-encapsulated oil particles over a pH range of about pH 2 to about pH 10; and

enzymatically cross-linking said stabilized protein shell to form said protein-encapsulated oil particles.

METHODS OF RECYCLING CATALYST IN OXIDATIONS OF HYDROCARBONS

Ader M. Rostami, Bainbridge Island; David C. DeCoster, Buckley, both of Wash.; Eustathios Vassiliou, Newark, Del., and Mark W. Dassel, Indianola, Wash., assignors to RPC Inc., Atlanta, Ga.

Continuation-in-part of application No. 08/931,035, Sep. 16, 1997, which is a continuation-in-part of application No. 08/876,692, Jun. 16, 1997, which is a continuation-in-part of application No. 08/812,847, Mar. 6, 1997, and application No. 08/824,992, Mar. 27, 1997, Pat. No. 5,922,908, Provisional application No. 60/020,798, Jun. 24, 1996. This application Sep. 18, 1997, Appl. No. 932,875.

Int. Cl.[7] **C07C** *51/42;* **D01D** *1/02;5/08;* **D01F** *13/00*

U.S. Cl. 264—37.18 **38 Claims**

1. A method of maintaining catalyst in solution after water removal, outside a reaction zone, in a process comprising oxidation of a hydrocarbon by a gaseous oxidant to a respective intermediate oxidation product at an operation temperature in the reaction zone containing a mixture comprising the hydrocarbon, the catalyst, the water, a solvent, and an optional initiator, the method comprising sequential steps of:

(a) changing, outside the reaction zone, the operation temperature of the mixture to a second temperature below a precipitation temperature, at which and over which precipitation temperature, the catalyst in the first mixture precipitates, at least partially, if the water level in the first mixture is reduced to or under a precipitation water level, while the catalyst in the first mixture remains in solution if the water level in the first mixture is maintained above the precipitation water level;

(b) removing an amount of water from the first mixture, but maintaining the water level in the mixture over the precipitation water level at the second temperature;

(c) removing at least part of the intermediate oxidation product; and

(d) re-circulating the remaining mixture to the reaction zone.

6,039,903

PROCESS OF MAKING A BICOMPONENT FIBER

Diane R. Kent; Matthew B. Hoyt, both of Arden; Otto M. Ilg, Asheville, and Morris K. Queen, Clyde, all of N.C., assignors to BASF Corporation, Mt. Olive, N.J.

Division of application No. 08/998,830, Dec. 29, 1997, Pat. No. 5,885,705, Provisional application No. 60/034,745, Jan. 10, 1997. This application Dec. 18, 1998, Appl. No. 216,682.

Int. Cl.[7] **D01D** *5/12;5/34;* **D01F** *8/06;8/12*

U.S. Cl. 264—40.1 **18 Claims**

1. A method of making a bicomponent fiber comprising directing respective melt flows of a polyamide and a contaminant-containing polymer to a spinneret, forming a bicomponent fiber by extruding the melt flows of the polyamide and the contaminant-containing polymer through orifices of the spinneret such that the contaminant-containing polymer is present as one domain of the fiber cross-section and the polyamide is present as another domain in the fiber cross-section, and thereafter quenching the bicomponent fiber, wherein the contaminant-containing polymer is polyamide and the contaminant in the contaminant-containing polymer is the cyclic dimer of caprolactam.

6,039,904

METHOD OF ADJUSTING A HEAT-DISPLACING T-DIE

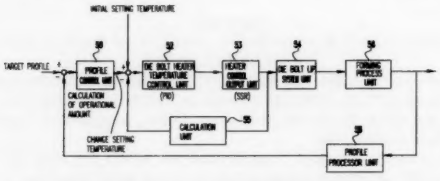
Satoru Nitta, and Koji Mizunuma, both of Shizuoka, Japan, assignors to Toshiba Machine Co., Ltd., Tokyo, Japan

Filed Feb. 17, 1998, Appl. No. 25,444

Claims priority, application Japan, Feb. 14, 1997, 9-030911

Int. Cl.[7] **B29C** *47/00*

U.S. Cl. 264—40.5 **6 Claims**



1. A method of adjusting a heat-displacing T-die, wherein a T-die slit gap is adjusted by thermal expansion and contraction of die bolts individually provided with heaters so that a sheet or film material has a target profile in thickness, the method comprising the steps of:

providing a thickness feed back control loop, wherein the thickness feed back control loop calculates a target profile adjustment for the die bolts so as to define a spacing of the T-die slit gap based on a deviation between the target profile in thickness and a measured thickness profile of the sheet or film material;

providing a virtual temperature control loop, wherein the virtual temperature control loop predicts a temperature of the die bolts based on a control output value of the heaters and a radiation temperature to the circumference of the die bolts so as to calculate a power to be supplied to the heaters; and

controlling the die bolt temperature by supplying the power to the heaters thereby adjusting the T-die slit gap based on the steps of calculating a target profile adjustment and predicting the die bolt temperature.

6,039,905

APPARATUS AND METHOD FOR GRANULATING PLASTIC STRANDS

Ludwig Zollitsch, Korntal, and Ulrich Kreuz, Erdmannhausen, both of Germany, assignors to C.F.Scheer & Cie GmbH & Co., Stuttgart, Germany

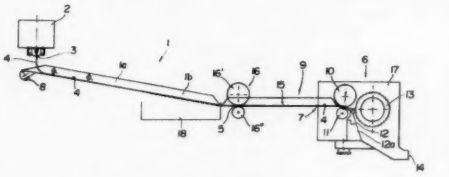
PCT No. PCT/EP95/04382, § 371 Date Jul. 23, 1997, § 102(e) Date Jul. 23, 1997, PCT Pub. No. WO96/14195, PCT Pub. Date May 17, 1996

PCT Filed Nov. 7, 1995, Appl. No. 817,824

Claims priority, application Germany, Nov. 7, 1994, 44 39 774

Int. Cl.[7] **B29C** *47/00;47/34*

U.S. Cl. 264—143 **24 Claims**



1. An apparatus for granulating plastic strands (**4**) which emerge from nozzles (**3**) in molten form and are supplied to a following, downward inclined runoff channel (**1**) in which the plastic strands are transported by a water stream, the apparatus further having a dewatering zone (**1***b*) for the plastic strands (**4**) and a granulator disposed after the dewatering-zone (**6**) for granulating the solidified plastic strands (**4**),

wherein between the dewatering zone (**1***b*) and the granulator (**6**) there is provided at least one temperature equalizing zone (**9**) comprising a temperature equalizing channel (**15**) arranged to cool the strands without adding external heat, the temperature equalizing zone having a minimum length such that the temperature differences of each of the plastic strands (**4**) across their respective cross section are largely equalized during their holding time in the temperature equalizing zone (**9**) in the absence of external heat to such an extent that they have a homogeneous degree of solidification across their cross section when entering into the granulator (**6**), and wherein a transport roll system (**16**) having a gap (**5**) is provided, said transport roll system engaging and further transporting the plastic strands (**4**) coming from the runoff channel (**1**) toward the granulator (**6**).

18. A method for granulating plastic strands which emerge from nozzles (**3**) in molten form, comprising the steps of:

supplying the molten strands (**4**) to a downwardly inclined runoff channel (**1**);

cooling and transporting the plastic strands (**4**) within the runoff channel (**1**) by a water stream;

dewatering the plastic strands (**4**) in a dewatering zone (**1***b*) of the runoff channel (**1**);

transporting the plastic strands (**4**) coming from the runoff channel (**1**) through a temperature equalization zone (**9**) comprising a temperature equalizing channel (**15**) toward a granulator (**6**) disposed after the temperature equalization zone (**9**) by means of a transport roll system (**16**) having a gap (**5**) for engaging and advancing the plastic strands (**4**);

equalizing temperature differences across the cross-section of the plastic strands (**4**) by moving the dewatered plastic strands (**4**) along a minimum length of the temperature equalizing channel (**15**) without adding external heat sufficient to cause

the plastic strands to each reach an equalized temperature across their respective cross-section to be in condition for granulation; and

granulating the plastic strands (**4**) with the granulator (**6**) disposed after the temperature equalization zone (**9**).

6,039,906

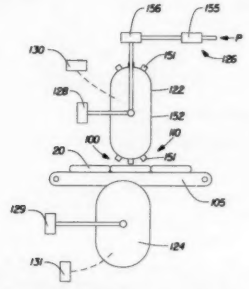
METHOD FOR APERTURING A LAMINATE

David Mark Sageser, Cincinnati, Ohio; Takuya Shirakawa, Akashi, and Koichi Morimoto, Hyogo, both of Japan, assignors to The Procter & Gamble Company, Cincinnati, Ohio

Filed Aug. 29, 1997, Appl. No. 920,958

Int. Cl.[7] **B29C** *55/00;61/02;59/04*

U.S. Cl. 264—156 **6 Claims**



1. A method for aperturing a laminate, said laminate comprising at least one nonwoven web comprised of thermoplastic fibers, a thermoplastic film, and at least one elastic member, said method comprising the steps of:

a) forwarding said laminate through a pressure biased nip comprising a relief patterned nip defining member having a plurality of pattern elements and a nip defining anvil member;

b) biasing said nip defining members towards each other with a predetermined patterned-element pressure;

c) heating each nip defining member to a temperature that is sufficiently above the melt temperature of said thermoplastic fibers of said nonwoven web and above the melt temperature of said thermoplastic film and said elastic member to form an aperture in said laminate and to form an annular ring about the periphery of said aperture wherein said pressure between said nip members pushes said annular ring away from its center to stretch said annular ring; and

d) cooling and solidifying said annular ring to gather or pucker said annular ring so as to preserve the integrity of said aperture during subsequent stretching of the said laminate thereby yielding a higher total stretch capability of the said laminate before said annular ring tears.

6,039,907

METHOD FOR FINISHING AN EXTRUDED SEAL IN SITU ON A SHEET

Helmut Krumm, Aachen; Florenz Kittel, Wuerselen; Rolf Koette, Alsdorf, and Ralf Motzheim, Stolberg, all of Germany, assignors to Saint Gobain Vitrage, Courbevoie, France

PCT No. PCT/FR95/01685, § 371 Date Sep. 11, 1997, § 102(e) Date Sep. 11, 1997, PCT Pub. No. WO96/19339, PCT Pub. Date Jun. 27, 1996

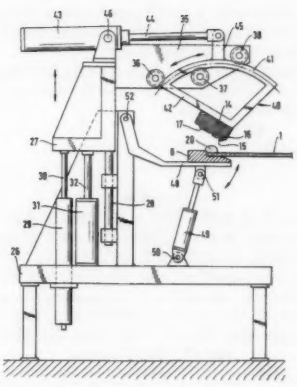
PCT Filed Dec. 18, 1995, Appl. No. 849,459

Claims priority, application Germany, Dec. 19, 1994, 44 45 258

Int. Cl.[7] **B29C** *37/00*

U.S. Cl. 264—161 **18 Claims**

1. Method for postforming a region of a section piece of material extruded on the surface of an object having an outer edge which



defines a periphery of the object, to form a profiled strip, the material of said section piece being malleable in said region, comprising the following steps:

placing over said region of said section piece a mould having a cavity corresponding to a desired shape of the post formed-profiled strip;

forming the malleable material in said region by closing the mould with a rotational movement wherein the axis of rotation is situated inside the periphery of the object and is adjoined closely to the surface of the object, so that the malleable material is urged towards the outer edge of the object.

6,039,908

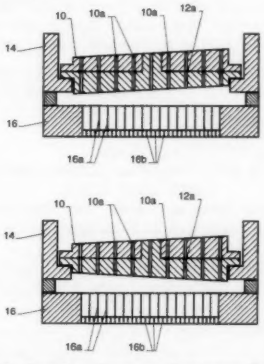
METHOD FOR HONEYCOMB EXTRUSION USING A CORRECTED FLOW GRADIENT

Thomas W. Brew, and Harry A. Kragle, both of Corning, N.Y., assignors to Corning Incorporated, Corning, N.Y.

Provisional application No. 60/032,094, Dec. 4, 1996. This application Nov. 24, 1997, Appl. No. 977,452.

Int. Cl.[7] **B29C** *47/08*

U.S. Cl. 264—177.12 **3 Claims**



1. A method for forming a honeycomb structure from an extrudable material which comprises:

directing a feed stream of the material along an extrusion path through a first plurality of apertures in a first aperture plate disposed across the feed stream, the first apertures having varying flow resistance across the first aperture plate to impart a first flow velocity or pressure drop gradient across the width of the feed stream;

thereafter directing the feed stream through a second plurality of apertures in a second aperture plate, the second apertures having varying flow resistance across the second aperture

plate to superimpose a second pressure drop or flow velocity gradient on the first pressure drop or flow velocity gradient across the width of the flow stream; and

thereafter directing the feed stream with superimposed first and second pressure drop or flow velocity gradients through a honeycomb extrusion die.

6,039,909

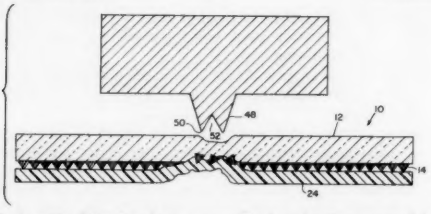
METHOD FOR FORMING A RETROREFLECTIVE SHEETING HAVING A PLURALITY OF CELLS WITH MULTI-COURSE, HATCHED PATTERNED PERIMETERS

Gus Bernard, West Hartford, and Jay Soaft, New Britain, both of Conn., assignors to Reflexite Corporation, Avon, Conn.

Continuation of application No. 08/443,836, May 18, 1995. This application Nov. 21, 1997, Appl. No. 976,095.

Int. Cl.[7] B29C *33/40*

U.S. Cl. 264—220 **18 Claims**



1. A method for forming a retroreflective sheeting, comprising the steps of:

a) providing a first light transparent thermoplastic polymer layer having a thickness in the range of about 0.003 to 0.022 inches;

b) forming light transparent prism elements in a prism array on the first thermoplastic polymer layer, said prism elements being formed of a polymer material which is transparent and substantially inflexible at room temperature;

c) applying a second thermoplastic layer to the prism array on a side of the array opposite the first layer; and

d) welding the first thermoplastic layer to said second thermoplastic layer, while applying a die having a plurality of cells with multi-course, hatched patterned perimeters to said layers to dislocate a portion of the prism elements of the prism array, whereby the first thermoplastic layer bonds to the second thermoplastic layer at said portion, thereby forming the retroreflective sheeting.

6,039,910

GOLF BALL AND MANUFACTURING METHOD OF GOLF BALL CORE

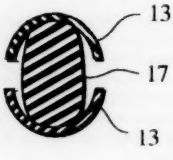
Hiroaki Tanaka; Yoshiyuki Okido, and Hideki Sano, all of Kobe, Japan, assignors to Sumitomo Rubber Industries, Ltd., Kobe, Japan

Filed Jul. 30, 1998, Appl. No. 126,418

Claims priority, application Japan, Aug. 28, 1997, 9-249448

Int. Cl.[7] B29C *65/00*

U.S. Cl. 264—248 **7 Claims**



1. A manufacturing method of a golf ball core, comprising the steps of:

semi-vulcanizing an unvulcanized material to form outer layer half shells whose shapes are generally hemispherical shells;

putting an unvulcanized material for forming an inner layer between said pair of outer half shells to be vulcanizing pressed to form the golf ball core consisting of the outer and the inner layer.

6,039,911

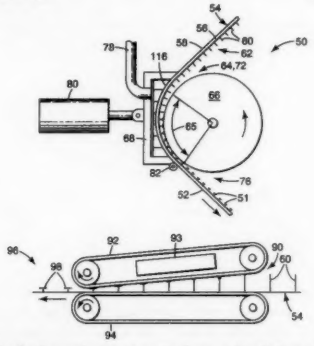
METHOD FOR CAPPING STEM FASTENERS

Philip Miller, and Thomas R. LaLiberte, both of Eagan, Minn., assignors to 3M Innovative Properties Company, St. Paul, Minn.

Filed Jan. 9, 1997, Appl. No. 781,783

Int. Cl.[7] B29C *43/22*

U.S. Cl. 264—280 **28 Claims**



1. A method of capping a stem to form a headed stem fastener comprising the steps of:

providing a precursor web comprising a backing with a rear surface, a front surface, and a multiplicity of polymeric stems projecting distally from the front surface of the backing;

positioning a heated member opposite a support surface to form a variable nip having a variable nip length, the support surface having a shape generally conforming to a contour of the heated member; and

feeding the precursor web through the variable nip to compressively engage the polymeric stems between the heated member and the support surface along a portion of the variable nip length so that distal ends of the polymeric stems are compressed axially downward into a hook head shape having an axial diameter to thickness ratio of from 1.5:1 to 12:1.

6,039,912

FABRICATION METHOD FOR HOUSING STRUCTURE FOR PROJECTION TYPE TELEVISION RECEIVERS

Tadashi Ohira, Kobe; Yoshiaki Sato, Takatsuki, and Kazuhiko Kodama, Kyoto, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Division of application No. 08/898,534, Jul. 22, 1997. This application Sep. 8, 1998, Appl. No. 149,580.

Claims priority, application Japan, Jul. 22, 1996, 8-191891

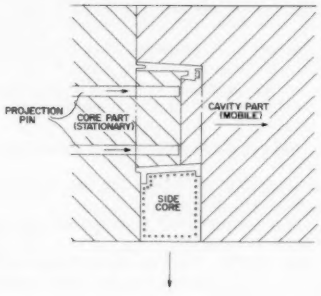
Int. Cl.[7] B29C *45/37*

U.S. Cl. 264—328.1 **5 Claims**

1. A method of fabricating a housing structure for a projection television receiver comprising the steps of:

i) forming a casing with a first opening formed on a front side thereof and a second opening formed on the back side thereof by:

a) providing a resin molding die for forming said casing, said resin molding die having a core part, a side core part, and a cavity part, in which said first opening is located on the core part of said molding die, said second opening is located on the cavity part of said molding die and a bottom



side of said casing is located on the side core part of said molding die, said bottom side including a third opening sufficiently sized to accommodate an image projected therethrough; and

b) introducing resin into said die and allowing said resin to cool; and

ii) installing a square-shaped framework on the front side of said casing, said square-shaped framework provided with a fourth opening, said casing and said square-shaped framework adapted for retaining a screen therebetween, said screen being detachable from said casing through said first opening, said screen covering said fourth opening.

6,039,913

PROCESS FOR THE MANUFACTURE OF AN OPHTHALMIC MOLDING

Thomas Hirt, Atlanta; Richard Carlton Baron, Alpharetta, both of Ga.; Dieter Lohmann, Münchenstein, and Wolfgang Peter Meier, Basel, both of Switzerland, assignors to Novartis AG, Basle, Switzerland

Filed Aug. 27, 1998, Appl. No. 141,252

Int. Cl.[7] **C08J** *5/00*

U.S. Cl. 264—331.11 **24 Claims**

1. A process for the manufacture of a molding, which comprises the following steps:

a) providing at least one prepolymer comprising one or more crosslinkable groups, wherein the prepolymer is an amphiphilic segmented copolymer comprising at least one hydrophobic segment and one hydrophilic segment;

b) preparing an at least partly bicontinuous mesophase of the prepolymer by combining the prepolymer with an aqueous solution at a ratio that will give a microstructure which is at least partly bicontinuous and causing or allowing the bicontinuous microstructure to form;

c) introducing the mesophase obtained into an ophthalmic mold;

d) crosslinking the prepolymer to form the molding; and

e) opening the mold such that the molding can be removed.

METHOD OF CONVERTING ASPHALT COMPOSITION ROOFING SHINGLES INTO DIMENSIONAL CONSTRUCTION PRODUCTS

Larry M Gehrke, Springfield; Russel J. Gehrke, Ozark; Michael S. Gehrke, and Gabriel P. Gehrke, both of Seymour, all of Mo., assignors to Future Tek, Inc., Springfield, Mo.

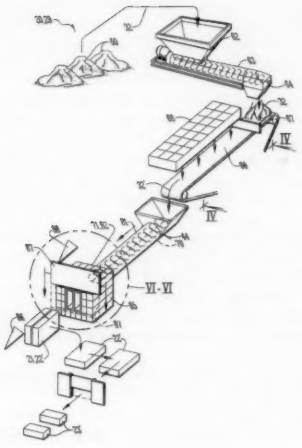
Provisional application No. 60/043,022, Apr. 15, 1997. This application Apr. 14, 1998, Appl. No. 60,040.

Int. Cl.[7] **B02C** *19/12*

U.S. Cl. 264—460 **14 Claims**

1. A process of converting asphalt composition roofing shingles into dimensional construction products comprising the steps of:

providing an infeed of asphalt composition roofing shingles having an asphalt component;



de-consolidating the infeed of asphalt composition roofing shingles into a crumble;

warming the crumble to a bulk or mean temperature of between about 130° F. and 150° F.;

compacting and shaping the warmed crumble to obtain a given dimensional construction product; and

allowing cooling of the dimensional construction product, whereby portions of the asphalt component reconsolidate.

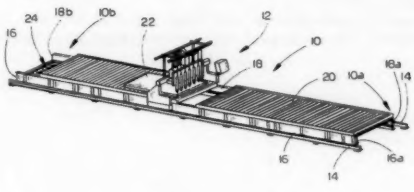
BURN TABLE

Larry L. Minter, Jefferson, S. Dak., and Greg L. Parham, Sioux City, Iowa, assignors to Missouri Valley Steel Company, Sioux City, Iowa

Filed Apr. 23, 1998, Appl. No. 64,968

Int. Cl.[7] **B23K** *7/08*

U.S. Cl. 266—49 **26 Claims**



1. Apparatus for removing slag from beneath a flame cutting table, the table having a pair of parallel, spaced apart vertical panels extending horizontally from a forward end to a rearward end, with a plurality of spaced apart slats mounted transversely along upper edges of the panels, comprising:

a generally vertically oriented blade having upper and lower edges, opposing vertical side edges, a forward pushing surface, and a rearward surface, said blade positioned beneath the table slats and between the panels;

drive means connected to the blade for driving the blade between the rearward and forward ends of the table;

a first elongated push arm connected at a forward end to the rearward surface of the blade, and said drive means being connected to a rearward end of the push arm;

said drive means being mounted on a support frame, and the rearward end of the push arm being pivotally connected to the support frame for pivotal movement about a pivot axis parallel to the blade and orthogonal to the panels;

a second push arm connected at a forward end to the blade and pivotally connected at a rearward end to the support frame, said second push arm parallel and spaced apart from the first push arm and having a pivot axis coaxial with the first push arm pivot axis;

said first and second push arms being rigidly affixed to the blade such that the blade will pivot only about the pivot axes of the push arms;

a removable wear plate attached along the lower edge of the blade and forming a scraping edge, the wear plate and a lower portion of the blade extending forwardly and downwardly relative to vertical;

said support frame including an elongated base member extending orthogonally between the panels with said push arms pivotally connected thereto;

means on the base member for maintaining the orthogonal orientation of the base member relative to the panels as the drive means drives the blade a length of the table from end to end;

said means for maintaining the orthogonal orientation of the base member including:

a first leg mounted on a first end of the base member and projecting forwardly therefrom orthogonal to the base member;

a second leg mounted on a second end of the base member and projecting forwardly therefrom parallel to the first leg;

a first guide rail mounted on one of said panels and extending the length of the panel;

a second guide rail mounted on the other of said panels and extending the length of the panel;

first follower means on the first leg for following the first guide rail; and

second follower means on the second leg for following the second guide rail.

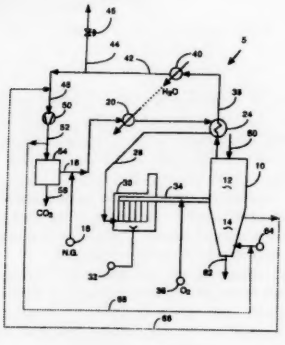
APPARATUS FOR PRODUCING DIRECT REDUCED IRON WITH A CONTROLLED AMOUNT OF CARBON

Juan Celada-Gonzalez; Raul Gerardo Quintero-Flores; Ricardo Viramontes-Brown, all of San Pedro Garza Garcia, and Roberto Octaviano Flores-Serrano, Monterrey, all of Mexico, assignors to Hylsa S.A. de C.V., San Nicolas de los Garza, Mexico

Division of application No. 08/719,930, Sep. 25, 1996, Pat. No. 5,858,057. This application Oct. 19, 1998, Appl. No. 175,396.

Int. Cl.[7] C21B *13/02*

U.S. Cl. 266—82 **6 Claims**



1. An apparatus for reducing particulate iron-oxide-containing particles to produce DRI with a controlled amount of carburization without an external reformer, which comprises:

a vertical shaft moving bed reduction reactor having a reducing zone,

a reducing gas loop for circulating at least a major portion of the top effluent gas from the reducing zone of said reactor for conditioning and upgrading and return as improved recycle reducing gas to the reducing zone of said reactor,

said loop including:

a cooling and scrubbing unit for cooling and cleaning said top effluent gas,

pump for circulating recycle reducing gas through said loop and said reactor,

a carbon dioxide removal unit for removal of carbon dioxide from the recycle reducing gas,

a gas heater capable of raising the temperature of the gas stream circulating through said loop to the range between 850° C. and 1000° C.,

means for adjusting the water content of the recycle reducing gas,

means for mixing natural gas with said recycle reducing gas, and

means for mixing and controlling an amount of an oxygen-containing gas with said recycle reducing gas before said gas enters said reactor.

6,039,917

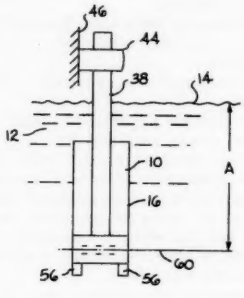
JET COLUMN REACTOR PUMP WITH COAXIAL AND/OR LATERAL INTAKE OPENING

Jorge A. Morando, 526 Riverview Trail, Cadiz, Ky. 42211

Continuation-in-part of application No. 08/733,078, Oct. 16, 1996, Pat. No. 5,863,314, which is a continuation-in-part of application No. 08/489,322, Jun. 12, 1995, Pat. No. 5,683,650, Provisional application No. 60/041,146, Mar. 17, 1997. This application Jan. 12, 1998, Appl. No. 5,497.

Int. Cl.[7] C21D *1/62*

U.S. Cl. 266—217 **33 Claims**



1. In a metal treating apparatus having a pot for holding a bath of molten metal, transfer means for moving the molten metal in the pot, including a molten metal-lifting passage having inlet opening means disposed in the molten metal for receiving molten metal into the metal-lifting passage, the metal-lifting passage having an outlet opening in the molten metal for discharging molten metal received in the inlet opening means, the metal-lifting passage having gas-injection openings upstream of the molten metal outlet opening; gas passage means for connecting a source of gas to the gas-injection openings in the form of a gas jet into the metal-lifting passage such that the gas induces a flow of molten metal from the molten metal inlet opening means toward the molten metal outlet opening along an axis of motion, the improvement comprising:

the molten metal inlet opening means comprising a window in the metal-lifting passage disposed coaxially and/or laterally with respect to the path of motion of the gas flowing through the metal-lifting passage;

the gas-injection openings are disposed to introduce a gas jet into the metal-lifting passage along said axis of motion; and

the gas injection openings discharge the gas into the metal lifting passage in the direction of metal flow as the gas mixes with the metal.

HIGH CORROSION RESISTING ALLOY FOR DIESEL ENGINE VALVE

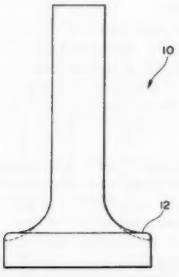
Tomotaka Nagashima, Tokai; Michio Okabe, Chita; Toshiharu Noda, Tajimi, and Kiyoshi Okawachi, Tokyo, all of Japan, assignors to Daido Tokushuko Kabushiki Kaisha, Nagoya, and Nittan Valve Co., Ltd., Tokyo, both of Japan

Filed Feb. 3, 1998, Appl. No. 17,877

Claims priority, application Japan, Feb. 7, 1997, 9-039937

Int. Cl.[7] C22C *19/05*

U.S. Cl. 420—446 **8 Claims**



1. A high corrosion resisting alloy for a diesel engine valve consisting essentially by weight percentage of not more than 0.1% of C, not more than 1.0% of Si, an effective amount of Mn to prevent embrittlement caused by S to not more than 1.0% more than 25% and not more than 32% of Cr, more than 2.0% and not more than 3.0% of Ti, 1.0 to 2.0% of Al, and the balance being Ni plus incidental impurities.

6,039,920

PROCESS FOR MAKING RHENIUM-CONTAINING ALLOYS

Michael Koch, Bruchköbel; Wulf Kock, Alzenau; David Francis Lupton, Gelnhausen, and Friedhold Scholz, Rodenbach, all of Germany, assignors to W. C. Heraeus GmbH & Co. KG, Hanau, Germany

Filed May 4, 1998, Appl. No. 72,381

Claims priority, application Germany, May 12, 1997, 197 19 407; Mar. 18, 1998, 198 11 765

Int. Cl.[7] C22C *1/03*

U.S. Cl. 420—590 **15 Claims**

1. A process for making an alloy containing rhenium comprising

(a) melting together the components that form the alloy, at least one of the components being a rhenium master alloy produced by melting, the rhenium master alloy comprising rhenium in an amount of 30 to 70 wt % and 30 to 70 wt % of at least one metal selected from the group consisting of iron, cobalt and nickel;

(b) casting the resultant melt from step (a); and

(c) allowing the melt to solidify.

6,039,921

LIQUID PHASE DISINFECTION/STERILIZATION WITH MICROWAVE ENERGY

Raymond M. G. Boucher, 5602 N. Scottsdale Rd., Scottsdale, Ariz. 85253

Filed Nov. 25, 1997, Appl. No. 978,396

Int. Cl.[7] A61L *2/12;2/16*

U.S. Cl. 422—21 **33 Claims**

1. A method for disinfecting or sterilizing a surface of a dental, medical or laboratory instrument which comprises exposing the instrument to a biocidal solution consisting essentially of hydrogen peroxide and a weak organic acid selected from acetic acid, citric acid, lactic acid and white distilled vinegar or a mixture thereof while simultaneously subjecting the instrument to microwave irradiation, the temperature of the biocidal solution being less than or equal to 65° C.

6,039,922

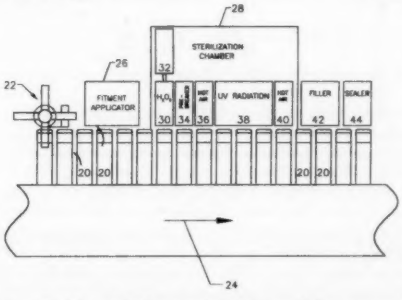
UV RADIATION AND VAPOR-PHASE HYDROGEN PEROXIDE STERILIZATION PACKAGING

Ronald Swank, Crystal Lake, and Sevugan Palaniappan, Grayslake, both of Ill., assignors to Tetra Laval Holdings & Finance, SA, Pully, Switzerland

Filed Aug. 15, 1997, Appl. No. 911,967

Int. Cl.[7] A61L *2/10;2/20;* **B65B** *55/18;55/10*

U.S. Cl. 422—24 **14 Claims**



1. A method for sterilizing a series of cartons being processed on a multiple station form, fill and seal packaging machine, each of the cartons erected and having sidewalls defining a hollow interior, the method comprising:

forming the bottom of each of the erected cartons on a mandrel to create a series of partially formed cartons;

placing each of the partially formed cartons on a conveyor assembly;

moving each of the partially formed cartons along the conveyor assembly at a predetermined interval to a vapor nozzle disposed above a partially formed carton on the conveyor assembly;

transforming a 35% concentration of hydrogen peroxide into a vapor phase hydrogen peroxide at a vaporizer, the vaporizer disposed above and in flow communication with the vapor nozzle;

applying a predetermined quantity of vapor-phase hydrogen peroxide for the predetermined interval to the interior and the exposed exterior of each of the partially formed cartons positioned at the vapor nozzle, the vapor-phase hydrogen peroxide applied through the vapor nozzle disposed approximately above the center of each of the partially formed cartons;

condensing the vapor-phase hydrogen peroxide onto each of the partially-formed cartons;

flowing hot air into each of the partially-formed cartons for the predetermined interval to remove hydrogen peroxide at a first hot air distribution station;

irradiating each of the partially formed cartons with ultraviolet radiation from a ultraviolet radiation source for a multiple of the predetermined interval, the ultraviolet radiation source disposed above the conveyor assembly and having a reflector to widely disperse the ultraviolet radiation to provide irradiation of the interior and the exposed exterior of each of the partially formed cartons; and

flowing hot air into each of the partially formed cartons for the predetermined interval at a second hot air distribution station to remove substantially all of the hydrogen peroxide;

whereby each of the partially formed cartons are sterilized and have a residue less than 0.5 parts per million of hydrogen peroxide while having a 4.5 log reduction of microogranisms.

6,039,923

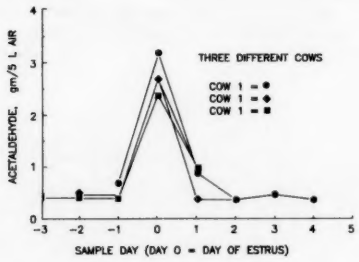
METHOD AND KIT FOR MONITORING MAMMALIAN REPRODUCTIVE CYCLES

William Robert Klemm, Bryan, Tex., and Germain Francois Rivard, Philadelphia, Pa., assignors to Texas A & M University System, College Station, Tex.

Division of application No. 08/293,666, Aug. 22, 1994, Pat. No. 5,721,142. This application Mar. 22, 1996, Appl. No. 621,068.

Int. Cl.[7] G01N *1/22;33/50*

U.S. Cl. 422—61 **8 Claims**



1. A kit for predicting the occurrence of ovulation in a mammal comprising:

sample collection means for non-invasively collecting a body constituent sample containing acetaldehyde;

a detector for measuring the quantity of the acetaldehyde in the sample; and

means for monitoring variations in the amount of the acetaldehyde in the sample over said mammal's reproductive cycle and comparing those variations with variations that are known to occur over that cycle.

6,039,924

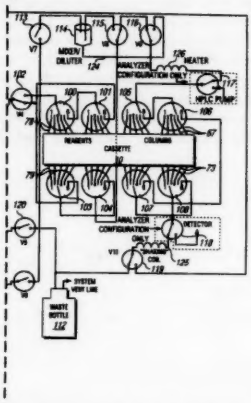
CHEMICAL SAMPLE TREATMENT SYSTEM AND CASSETTE, AND METHODS FOR EFFECTING MULTISTEP TREATMENT PROCESS

Marcus J. Horn, Redwood Shores, Calif., assignor to Amersham Pharmacia Biotech AB, Uppsala, Sweden

Continuation of application No. 08/802,511, Feb. 20, 1997, Pat. No. 5,918,273, which is a division of application No. 08/679,355, Jul. 9, 1996, Pat. No. 5,800,784. This application Sep. 3, 1998, Appl. No. 146,160.

Int. Cl.[7] G01N *35/10*

U.S. Cl. 422—67 **10 Claims**



10. A chemical treatment system for treatment of less than milligram quantities of a chemical sample, comprising in operative combination:

a) a chemical sample retainer for holding a plurality of chemical samples for chemical treatment, said chemical sample retainer further comprising:

i) a sample funnel for receiving a plurality of chemical sample solutions, said sample funnel permitting individual addressing of each of said plurality of chemical sampling solutions for chemical treatment;

ii) a retainer for an individual preselected chemical sample, said retainer being in flow-through, physical connection with said funnel, and providing near-zero dead volume compression fit;

iii) at least one reagent retainer for preselected reagents, said reagent retainer permitting flow-through communication therethrough;

iv) a machine readable code disposed on said chemical sample retainer for identifying the chemistry protocols to be performed on the retained samples in said individual sample retainer;

b) a sample loading mechanism for loading sample solutions in said sample funnel, and including an X-Y positioner for aligning said chemical sample retainer to a predetermined X-Y position, a sealing gasket, and a pressure cap for introduction of pressurized gas into said sample funnel and for forcing a sample solution through said individual sample retainer;

c) a chemical treatment station for performing predetermined chemistries on a plurality of preselected retained chemical samples located in said chemical sample retainer, said chemical treatment station further including;

i) a code reader for reading said machine readable code disposed on said chemical treatment cassette to identify the specific chemistry protocols to be performed on said retained chemical samples;

ii) a scanner to identify populated mini-column addresses;

iii) a micro-controller interface for communicating from said code reader to a micro-controller said identified specific chemistry protocols, said micro-controller accessing specific process algorithms pursuant to the specific identified chemistry protocols, said process algorithms defining and

communicating to said micro-controller interface step-wise micro-controller control instructions to enable execution of said identified specific chemistries on said pre-selected chemical samples at said populated mini-column addresses;

iv) a chemical cassette/treatment interface for enabling flow-through localized communication of said chemical sample retainer with said chemical treatment station, said interface including a docking mechanism for precision alignment of said chemical sample retainer, and a flow-through localized interface between said chemical treatment station and slid chemical sample retainer;

v) a chemical delivery subsystem for providing automatic flow through chemistries on said preselected chemical samples, the chemical delivery subsystem including solvent storage for a plurality of reagents and solvents to said reagent retainer for solubilizing said reagents retained therein and to said chemical sample retainer for treatment of said chemical samples in said individual sample retainer pursuant to said identified specific chemistry protocols, a valve for individual addressing of said individual sample retainer and for individual addressing of said reagent retainer, a plurality of accumulators for temporary storage of solvents and reagents, and temporary storage of detached chemical sample to enable chemistries to be performed on said detached samples, and to enable chemistries not including said detached samples as a reactant to be performed in said individual sample retainer, a mixer/diluter reservoir in communication with said solvent bank, reagent wells, and mini-columns for temporary retention of at least one of a solvent, reagent, sample, and mixtures thereof, a pneumatic pressurizing system for bi-directional transfer of solvents, reagents, and chemical samples to and from said reagent wells, said mini-columns, said accumulators, and said mixer/diluter, and for supplying inert gas to said chemical treatment delivery subsystem, and a valve integrating of an analyzer subsystem into said chemical delivery subsystem to permit automatic analysis of the sample retained in said mini-columns without removal of said mini-columns from said chemical treatment cassette and without disengaging said cassette/treatment station interface.

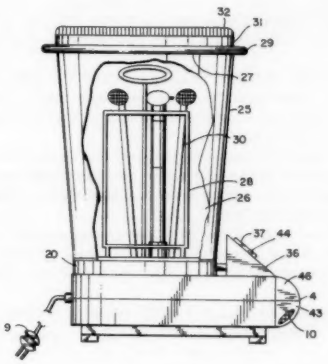
FORCED HOT AIR STERILIZING METHOD AND APPARATUS

Richard B. Goldman, New York, N.Y., assignor to Laurence M. Steel, New York, N.Y., a part interest

Continuation-in-part of application No. 08/663,598, Jun. 14, 1996, abandoned, which is a continuation of application No. 08/391,630, Feb. 21, 1995, abandoned, which is a continuation of application No. 08/151,545, Nov. 12, 1993, abandoned. This application Apr. 16, 1997, Appl. No. 839,240.

Int. Cl.[7] G05B *17/00*

U.S. Cl. 422—116 **16 Claims**



1. A table-top apparatus for sterilizing medical or dental instruments or other small professional or domestic instruments that may require occasional or periodic sterilization, comprising:

a. a housing defining a chamber therein and constructed and arranged to receive air heated to at least a predetermined sterilizing temperature, said housing having a greater height than width so as to occupy a minimal amount of space on said table-top;

b. support means for supporting instruments to be sterilized within said chamber;

c. an air inlet to permit air from outside the housing to be drawn into said chamber;

d. heater means for heating said air to the sterilizing temperature;

e. blower means for forcing heated air and outside air into said chamber at different times, whereby heated air and outside air sequentially are forced into contact with said instruments, said heated air sterilizing said instruments located in said chamber;

f. means for exhausting said heated air and said outside air sequentially from said chamber and from said housing; and

g. timer means connected to said heater means and said blower means for receiving data input by a user defining a characteristic heating interval and a characteristic cooling interval, for switching the heater means from an on state to an off state after the heater means has been in the on state for a period of time substantially equal to the characteristic heating interval, and for switching the blower means from an on state to an off state after the blower means has been in the on state for a period of time substantially equal to the characteristic heating interval plus the characteristic cooling interval.

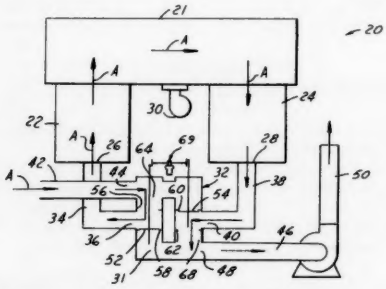
VALVE SYSTEM FOR REGENERATIVE THERMAL OXIDIZERS

Richard Greco, 89 Onyx Pl., Matawan, N.J. 07747

Filed Nov. 4, 1997, Appl. No. 964,440
Int. Cl.[7] F01N *3/10;* **F16K** *11/00*
U.S. Cl. 422—175 **19 Claims**



1. A regenerative thermal oxidizer, comprising:

a first heat exchanger defining a first flow path;

a first inlet/outlet in association with said first heat exchanger, said first inlet/outlet providing flow access to said first flow path;

a second heat exchanger defining a second flow path;

a second inlet/outlet in association with said second heat exchanger, said second inlet/outlet providing flow access to said second flow path;

a valve assembly having at least two poppet discs, said valve assembly defining multiple flow passages therethrough;

said valve assembly being in flow communication with said first and second inlet/outlets;

each of said poppet discs being mounted on a separate rod;

an eccentric mechanical drive, said eccentric mechanical drive having a drive shaft and a drive disc at each end of said drive shaft;

linkage attached to said drive shaft at said drive discs; and

said rods being attached to said linkage.

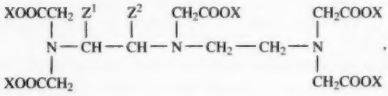
1. A method of enhancing an NMR image comprising administering to a patient a compound of the formula

(I)



wherein

one of Z^1 and Z^2 is H and the other is

$$—(CH_2)_m—(C_6H_4)_q—(O)_k—(CH_2)_n—(C_6H_4)_l—(O)_r—R,$$

wherein

m and n, independently, are each 0–20,

k, l, q and r are each, independently, 0 or 1,

R is H, C_1–C_6-alkyl, OR^1-substituted C_1–C_6-alkyl or CH_2COOR^1,

R^1 is H, C_1–C_6-alkyl or benzyl; and

X is, in each case, a hydrogen atom or a metal ion equivalent of an element of atomic number 21–29, 42, 44 or 58–70;

with the provisos that:

at least two X groups represent a metal ion equivalent of atomic number 21–29, 42, 44 or 58–70;

when n and l are each 0, then k and r are not each simultaneously 1;

$—(O)_r—R$ is not —OH;

Z^1 and Z^2 are not $—C_6H_5$, $—CH_2—C_6H_5$, $—CH_2—C_6H_4—O—CH_2—COOCH_2C_6H_5$ or $—CH_2—C_6H_4—O—(CH_2)_5—COOCH_2C_6H_5$; and

at least one of q and l is 1;

or a physiologically acceptable salt thereof with an inorganic and/or organic base, an amino acid or an amino acid amide.

MEDICINAL INHALATION AEROSOL FORMULATIONS CONTAINING BUDESONIDE

Nayna Govind, West Bridgford; Philip A. Jinks, Mountsorrel, both of United Kingdom; Danna L. Ross, Pine Springs, Minn., and Gary H. Ward, San Diego, Calif., assignors to 3M Innovative Properties Company, St. Paul, Minn.

Provisional application No. 60/032,092, Dec. 3, 1996. This application Sep. 25, 1997, Appl. No. 937,520.

Claims priority, application United Kingdom, Sep. 27, 1996, 9620187

Int. Cl.[7] **A61K** *9/12*

U.S. Cl. 424—45 **15 Claims**

1. A pharmaceutical aerosol formulation suitable for administration to a patient by oral or nasal inhalation consisting of a suspension of particulate budesonide, a hydrofluoroalkane propellant and optionally one or more of:

(i) one or more additional hydrofluoroalkane propellants

(ii) surfactant selected from oleic acid, sorbitan oleates and lecithin, and

(iii) adjuvant having a Kauri-butanol value of at least 10.

6,039,933

COSMETIC COMPOSITION PRESSURIZED IN AN AEROSOL DEVICE AND THE RESULTING FOAM

Henri Samain, Bièvres, and Isabelle Cretois, Clichy, both of France, assignors to L'Oreal, Paris, France

PCT No. PCT/FR97/01163, § 371 Date Jun. 9, 1998, § 102(e) Date Jun. 9, 1998, PCT Pub. No. WO98/03148, PCT Pub. Date Jan. 29, 1998

PCT Filed Jun. 30, 1997, Appl. No. 43,220

Claims priority, application France, Jul. 17, 1996, 96 08958

Int. Cl.[7] **A61K** *7/06;7/11;9/12*

U.S. Cl. 424—47 **48 Claims**

1. A cosmetic composition pressurized in an aerosol device in the presence of at least one foam-forming propellant, comprising, in a cosmetically acceptable medium, at least one fixing polymer, at least one oxyalkylenated silicone and at least 30% by weight, relative to the total weight of said composition, said propellant not included, of at least one water-soluble solvent with a boiling point of less than 85° C.

6,039,934

USE OF XANTHAN GUM FOR GELLING ClO_2 AND RELATED SPECIES

Howard Alliger, 10 Ponderosa Ave., Melville, N.Y. 11747

Filed Aug. 4, 1998, Appl. No. 128,898

Int. Cl.[7] **A61K** *7/20;33/20*

U.S. Cl. 424—53 **20 Claims**

1. A storage stable chlorine dioxide generating composition in two parts to be mixed together to generate chlorine dioxide comprising a chlorite-containing part (A) and an acid-containing part (B), said chlorite-containing part (A) consisting essentially of an aqueous solution of about 0.1% to about 5% by weight of a water-soluble chlorite salt and an amount of xanthan gum as a gelling agent effective to gel said solution, said solution having a pH ranging from about 11.0 to about 13.0. said acid-containing part (B) comprising an amount of a protic acid in solution effective to produce an initial pH upon combining and mixing said parts A and B of less than about 5.5 and an amount of an acid stable gelling agent effective to gel said part B, said parts A and B being storage stable for a period of at least about 6 months.

6,039,935

SUNSCREEN COMPOSITIONS

Fatemeh Mohammadi, Hebron, Conn., assignor to Elizabeth Arden Company, Division of Conopco, Inc., New York, N.Y.

Provisional application No. 60/114,199, Dec. 30, 1998. This application Feb. 17, 1999, Appl. No. 251,666.

Int. Cl.[7] A61K *7/42;31/74;7/00*

U.S. Cl. 424—59 **9 Claims**

1. A cosmetic sunscreen composition comprising:

(i) from about 0.1 to about 40% by weight of an organic sunscreen agent with a chromophoric group active within the ultraviolet radiation range from 290 to 400 nm;

(ii) from about 1 to about 90% by weight of water;

(iii) from about 0.05 to about 10% of a crosslinked non-emulsifying siloxane elastomer;

(iv) from about 10 to about 80% of a volatile siloxane; and wherein the composition is an oil-in-water emulsion.

6,039,936

NANOEMULSION BASED ON NON-IONIC AND CATIONIC AMPHIPHILIC LIPIDS AND USES THEREOF

Serge Restle, Saint-Prix, and Daniéle Cauwet-Martin, Paris, both of France, assignors to L'Oreal, France

Filed Nov. 13, 1997, Appl. No. 969,796

Claims priority, application France, Nov. 15, 1996, 9613978; Mar. 18, 1997, 9703281

Int. Cl.[7] A61K *7/06*

U.S. Cl. 424—70.1 **16 Claims**

1. An oil-in-water emulsion, said emulsion comprising oil globules whose mean size is less than 150 nm and an amphiphilic lipid phase, said amphiphilic lipid phase comprising at least one non-ionic amphiphilic lipid which is liquid at an ambient temperature of less than 45° C. and at least one cationic amphiphilic lipid, the ratio by weight of the amount of oil to the amount of said amphiphilic lipid phase in said emulsion ranging from 2:1 to 10:1.

N-ACYL-HYDROXYAMINO ACID ESTERS AND THEIR USE

Jakob Ley, Holzminden, and Roland Langner, Bevern, both of Germany, assignors to Haarmann & Reimer GmbH, Germany

Filed Mar. 13, 1998, Appl. No. 39,055

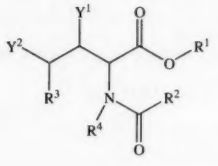
Claims priority, application Germany, Mar. 14, 1997, 197 10 612

Int. Cl.[7] A61V *31/74*

U.S. Cl. 424—78.03 **3 Claims**

1. N-Acyl-hydroxyamino acid esters of the formula

(I)



where

R^1 is a linear, branched or cyclic alkyl or alkenyl group having 5 to 50 carbon atoms and optionally one or more hydroxyl radicals,

R^2 is a linear or branched alkyl or alkenyl group having 1 to 49 carbon atoms and optionally one or more hydroxyl radicals,

Y^1 and Y^2 are, independently of one another, hydrogen or hydroxyl, and

R^3 and R^4 together are a —CH^2—or a —CH(OH)-group, and together with the chain between R^3 and R^4 form a 5-membered heterocyclic ring.

6,039,940

INHERENTLY ANTIMICROBIAL QUATERNARY AMINE HYDROGEL WOUND DRESSINGS

James J. Perrault, Vista, Calif., and Cameron G. Rouns, Pocatello, Id., assignors to Ballard Medical Products, Draper, Utah

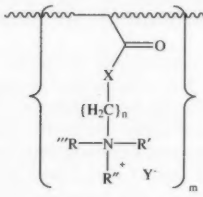
Continuation-in-part of application No. 08/738,651, Oct. 28, 1996, Pat. No. 5,800,685. This application Sep. 1, 1998, Appl. No. 144,727.

Int. Cl.[7] A61K *31/785;* **A61F** *13/00*

U.S. Cl. 424—78.06 **15 Claims**

1. A method for treating a wound with an inherently antimicrobial dressing comprising the steps of:

(a) providing a hydrogel containing from about 15 to 95 percent by weight of an inherently :ntimicrobial cationic quaternary amine acrylate polymer of the formula:



wherein n is an integer of 2 to 3; R', R" and R'" are independently selected from the group consisting of H, C_1 to C_{16} alkyl, aryl, arylamine, alkylamine, alkaryl and aralkyl; X is selected from the group consisting of O and NH; Y^- is an acceptable anionic counterion to the N^+ of the quaternary amine and m is an integer greater than 50,000 in a form suitable to cover the wound;

(b) applying said wound dressing to said wound whereby said dressing enhances the serility of the wound environment, absorbs exudate from said wound and retains said wound in a moist condition.

METHOD OF PREPARATION AND COMPOSITION OF A WATER SOLUBLE EXTRACT OF THE PLANT SPECIES UNCARIA

Ronald W. Pero, Lund, Sweden, assignor to CampaMed, Inc., New York, N.Y.

Filed Feb. 27, 1997, Appl. No. 807,373

Int. Cl.[7] A61K *35/78*

U.S. Cl. 424—195.1 **18 Claims**

1. A method for preparing a water soluble extract of an Uncaria species comprising:

(a) heating a mixture of water and a substance selected from the group consisting of dried roots, bark and bark powder of said Uncaria species at a temperature of approximately 90–100° C. for such a time and at such a ratio of said substance to said water to yield a first brown extract of said mixture due to evaporation of said water;

(b) filtering said first brown extract from said mixture;

(c) centrifuging said filtered brown extract;

(d) dialyzing said centrifuged brown extract against distilled water in a dialysis tubing having an exclusion limit of up to approximately 12,000 molecular weight at approximately 4–15° C. for 20–48 hours to separate a water soluble extract of said Uncaria species; and

(e) recovering said separated water soluble extract of an Uncaria species.

PHARMACEUTICAL GRADE SAW PALMETTO

Tasneem A. Khwaja, Corona Del Mar, and Elliot P. Friedman, Montecito, both of Calif., assignors to University of Southern California, Los Angeles, and Pharmaprint Inc., Irvine, both of Calif.

Continuation-in-part of application No. 08/838,198, Apr. 15, 1997, abandoned, which is a continuation-in-part of application No. 08/632,273, Apr. 15, 1996, which is a continuation-in-part of application No. 08/421,993, Apr. 14, 1995, abandoned, which is a continuation-in-part of application No. 08/774,550, Feb. 4, 1997. This application Oct. 23, 1997, Appl. No. 956,601.

Int. Cl.[7] A61K *35/78*

U.S. Cl. 424—195.1 **1 Claim**

1. A method for determining a standard bioactivity for a saw palmetto extract comprising:

obtaining a sample of alcoholic saw palmetto extract;

measuring a total bioactivity for the sample by determining an IC50 in an androgen receptor binding inhibition assay;

measuring the total fatty acid content of an aliquot of the whole sample;

fractionating the sample and collecting the individual fractions;

measuring the fatty acid content of each fraction;

identifying the fractions containing linoleic acid ethyl ester and lauric acid ethyl ester;

measuring a bioactivity for each of the fractions identified in the step above with an androgen receptor binding inhibition assay;

calculating the percent activity of each of the fractions for which androgen receptor binding inhibition has been assayed compared to the total bioactivity of the sample, wherein the molecular weight and amount of the individual fatty acids identified are incorporated into the calculating; and

determining that if the total bioactivity of the sample is above a selected minimum standard amount, and if the total percent activity of the linoleic and lauric acid ethyl ester fractions is at least 25% of the total bioactivity, then the saw palmetto extract has a standard bioactivity.

METHOD FOR ATTAINING ERECTION OF THE HUMAN SEXUAL ORGANS

Gitte Bjeldbak, Nysumvej 15, Rold, DK-9510 Arden, Denmark

Continuation-in-part of application No. PCT/DK97/00085, Feb. 27, 1997. This application Sep. 8, 1998, Appl. No. 149,515.

Claims priority, application Denmark, Mar. 11, 1996, 0279/96

Int. Cl.[7] A61K *35/78*

U.S. Cl. 424—195.1 **4 Claims**

1. A method for attaining an erection of a human sexual organ comprising applying a composition comprising an effective amount of a chili pepper extract and a carrier selected from the group consisting of lubricants, oils and creams and mixtures thereof topically to the sexual organ.

6,039,952

COMPOSITION AND METHOD FOR IMPROVING CLINICAL SIGNS IN ANIMALS WITH RENAL DISEASE

Gregory D. Sunvold, Eaton; Mark A. Tetrick, and Gregory A. Reinhart, both of Dayton, all of Ohio, assignors to The Iams Company, Dayton, Ohio

Provisional application No. 60/063,490, Oct. 22, 1997. This application Oct. 21, 1998, Appl. No. 176,440.

Int. Cl.[7] A61K *35/78*

U.S. Cl. 424—195.1 **14 Claims**

1. A low-phosphorus pet food composition comprising from about 10 to about 32% crude protein, from about 8 to about 20% fat, and from about 3 to about 25% total dietary fiber, and wherein said composition has less than about 0.25% phosphorus, all percentages by weight (dry matter basis).

6,039,953

HIGHLY CONCENTRATED MINERALISED NATURAL COMPLEX FOR THE INTEGRATION OF MINERAL OLIGOELEMENTS AND METHOD FOR ITS PRODUCTION

Valentino Mercati, Città di Castello, Italy, assignor to Aboca di Mercati Valentino & C. Societa Semplice, Sansepolcro Arezzo, Italy

Filed Nov. 18, 1998, Appl. No. 195,249

Claims priority, application European Pat. Off., Dec. 23, 1997, 97830706

Int. Cl.[7] A61K *35/78;33/24*

U.S. Cl. 424—195.1 **7 Claims**

1. A method for production of an inorganic mineral concentrate product, comprising obtaining a plurality of organic starting materials of vegetable origin having a mineral content, determining the mineral content of the plurality of organic starting materials, mixing said starting materials together to obtain a mixture having a mineral content corresponding to the product, and removing organic material from the mixture by heating the mixture at a temperature of 200° to 400° C. for 1 to 3 hours to obtain a light colored inorganic product, followed by heating the mixture to a temperature of 500° to 900° C. for 3 to 5 hours, to obtain the inorganic mineral concentrate product.

6,039,954

HERBAL COMPOSITIONS FOR TREATMENT OF GASTROINTESTINAL DISORDERS

Yu Long Yu, Edensor Park, and Alan Bensoussan, Lane Cove, both of Australia, assignors to Chinese Medicines Scientific Consultants Pty Ltd., Chatswood, Australia

Filed Mar. 24, 1999, Appl. No. 275,653

Int. Cl.[7] A61K *35/78*

U.S. Cl. 424—195.1 27 Claims

1. A composition comprising the herbs *Ledebouriellae Sesloidis, Bupleurum Chinense, Artemesiae Capillaris, Fraxini, Plantaginis, Paeoniae Lactiflorae* and *Schizandrae.*

6,039,955

NONTOXIC EXTRACT OF *LARREA TRIDENTATA* AND METHOD OF MAKING THE SAME

Robert A. Sinnott, Chandler; W. Dennis Clark, Phoenix, both of Ariz., and Kenneth Frank DeBoer, Belgrade, Mont., assignors to Larreacorp, Ltd., Chandler, Ariz.

Division of application No. 09/152,055, Sep. 11, 1998, which is a division of application No. 08/726,686, Oct. 7, 1996, Pat. No. 5,837,252, Provisional application No. 60/020,946, Jul. 1, 1996. This application Jun. 10, 1999, Appl. No. 329,359.

Int. Cl.[7] A61K *35/78*

U.S. Cl. 424—195.1 10 Claims

1. An agent for treatment of inflammation, comprising a concentrated extract of reduced NDGA-containing *Larrea tridentata* plant material and ascorbic acid, wherein the NDGA is reduced as a result of a chemical reaction between said extract and said ascorbic acid such that said ascorbic acid is provided at a concentration sufficient to saturate said extract prior to the concentration of said extract.

6,039,956

CORTICOTROPIN RELEASE INHIBITING FACTOR AND METHODS OF USING SAME FOR TREATING BEHAVIORAL SYMPTOMS IN AN ANXIETY DISORDER

Eva Redei, Chicago; Fraser Aird, Oak Park, both of Ill.; Peter A. Rittenhouse, Philadelphia, Pa., and Robert F. McGivern, San Diego, Calif., assignors to Pennsylvania, Trustees of the University of, The, Philadelphia, Pa.

Continuation-in-part of application No. 08/523,125, Sep. 8, 1995, Pat. No. 5,830,866, which is a continuation-in-part of application No. 08/304,383, Sep. 12, 1994, abandoned. This application Jun. 7, 1996, Appl. No. 660,561.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] A61K *38/06*

U.S. Cl. 424—198.1 7 Claims

1. A method of treating behavioral symptoms in an anxiety disorder in a human comprising administering corticotropin release inhibiting factor to said human in an amount sufficient to alleviate said behavioral symptoms, wherein said corticotropin release inhibiting factor comprises at least three contiguous amino acids contained within the amino acid sequence positioned between the fourth and fifth thyrotropin releasing hormone sequence on a prepro-thyrotropin releasing hormone protein.

6,039,957

OLIGOMERIC HIV-1 ENVELOPE GLYCOPROTEINS

Patricia L. Earl, ChevyChase; Christopher C. Broder, Rockville, both of Md.; Robert W. Doms, Berwyn, Pa., and Bernard Moss, Bethesda, Md., assignors to United States of America, as represented by the Department of Health and Human Services, Washington, D.C.

Division of application No. 08/165,314, Dec. 10, 1993, abandoned. This application Mar. 3, 1997, Appl. No. 805,889.

Int. Cl.[7] A61K *39/21*

U.S. Cl. 424—208.1 5 Claims

1. A method of producing neutralizing antibodies against conformational epitopes of HIV-1 envelope proteins in a human, comprising:

administering to a human a recombinant uncleaved gp140 protein retaining its oligomeric structure so that said human produces neutralizing antibodes against conformational epitopes of HIV-1 envelope proteins found on the oligomeric structure of said gp 140, said gp140 protein being defined as a C-terminally truncated form of HIV-1 gp160 protein that is missing the gp41 transmembrane domain.

6,039,958

STABILIZED LIVE VACCINE

Kuniaki Koyama, and Juichiro Osame, both of Mitoyo-gun, Japan, assignors to The Research Foundation for Microbial Diseases of Osaka University, Osaka, Japan

Division of application No. 08/322,036, Oct. 12, 1994, Pat. No. 5,948,411, which is a continuation of application No. 07/929,374, Aug. 14, 1992, abandoned. This application Oct. 28, 1998, Appl. No. 179,970.

Claims priority, application Japan, May 5, 1992, 4-157236; May 15, 1992, 4-148476

This patent is subject to a terminal disclaimer.

Int. Cl.[7] A01N *63/00;* A61K *39/12;39/25*

U.S. Cl. 424—230.1 10 Claims

1. A stabilized live vaccine comprising a virus component comprising: (i) at least one varicella virus selected from the group consisting of an attenuated live varicella virus and an attenuated recombinant varicella virus and (ii) a stabilizer comprising

(a) from 0.5 to 10%(w/v) of sucrose or a mixture of from 0.5 to 10%(w/v) of lactose, from 0.2to 6.0%(w/v) of sorbitol and from 0.02to 1.0%(w/v) of cysteine;

(b) from 0.01 to 5.0%(w/v) of sodium glutamate;

(c) from 0.02 to 1.0%(w/v) of gelatin;

(d) from 0.5 to 10%(w/v) of hydrolyzed gelatin; and

(e) from 0.001 to 0.1%(w/v) of a chelating reagent; in terms of the concentration in the stabilized live vaccine; so that said vaccine is substantially free of Ca^{2+} ions and Mg^{2+} ions to the extent that Ca^{2+} ions and Mg^{2+} ions are substantially not detected by a colorimetric titration method using a chelating reagent.

6,039,959

TREATMENT AND DIAGNOSIS OF INFECTIONS DUE TO HELICOBACTER PYLORI

James Peter Burnie, Alderley Edge, United Kingdom, assignor to NeuTec Pharma plc, United Kingdom

PCT No. PCT/GB96/02907, § 371 Date Jun. 8, 1998, § 102(e) Date Jun. 8, 1998, PCT Pub. No. WO97/21103, PCT Pub. Date Jun. 12, 1997

PCT Filed Nov. 27, 1996, Appl. No. 91,001

Claims priority, application United Kingdom, Dec. 6, 1995, 9524934

Int. Cl.[7] A61K *39/02*

U.S. Cl. 424—234.1 7 Claims

1. A method of treating *Helicobacter pylori* infection comprising providing epitope EVGKVA (SEQ ID NO:11), selecting an antibody to said epitope, and administering said antibody or a fragment thereof to an individual at risk from *H. pylori* infection.

6,039,960

WATER CONTAINING WAX-BASED PRODUCT

Kenny Chung, Dix Hills; Tracy N. Keeler, East Northport, and Manuel L. Tan, Westbury, all of N.Y., assignors to E-L Management Corp., New York, N.Y.

Filed May 28, 1997, Appl. No. 864,162

Int. Cl.[7] A61K *7/135*

U.S. Cl. 424—401 16 Claims

1. A wax-based composition for application to the skin, comprising a water-in-oil emulsion, the emulsion comprising (a) about 70–99.5% of an oil phase, the oil phase comprising about 10 to about 40% of one or more waxes, and (b) about 0.5–30% of an aqueous phase comprising water and water solubles actives, wherein water is encapsulated in a lamellar lipid vesicle capable of withstanding wax melting point temperatures, wherein the vesicle comprises at least one polyoxyethylene fatty ether having a melting point greater than that of the melting point of the wax in the composition.

6,039,961

LIPOPHILIC HYDROXYLATED ACID, ITS USE IN COSMETICS AND PHARMACY, AND ITS PROCESS OF PREPARATION

Eric Perrier, Vienne; Daniele Antoni, Vernaison, and Alain Huc, Sainte fdy les Lyon, all of France, assignors to Coletica, Lyons, France

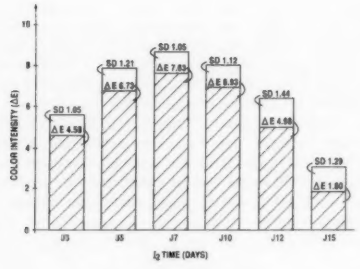
Division of application No. 08/557,154, Feb. 16, 1996, Pat. No. 5,869,069, which is a continuation-in-part of application No. 08/354,228, filed as application No. PCT/FR95/00984, Jul. 21, 1995, abandoned. This application Apr. 27, 1998, Appl. No. 66,587.

Claims priority, application France, Jul. 22, 1994, 94 09091

This patent is subject to a terminal disclaimer.

Int. Cl.[7] A61K *7/00*

U.S. Cl. 424—401 23 Claims



1. A lipophilic salicylic acid compound which is the reaction product of salicylic acid with at least one hydrophobic hydrocarbon compound selected from the group consisting of a halide or anhydride of stearic acid, a halide or anhydride of palmitic acid, a halide or anhydride of myristic acid, a halide or anhydride of lauric acid, a halide or anhydride of undecylenic acid, a halide or anhydride of oleic acid, a halide or anhydride of linoleic acid, and a halide or anhydride of linolenic acid, wherein said lipophilic salicylic acid compound is in a final reaction mixture of the lipophilic salicylic acid compound with the unreacted salicylic acid and the unreacted hydrophobic hydrocarbon compound, and the ratio by weight of the salicylic acid to the hydrophobic hydrocarbon compound ranges between 0.05 and 10.

6,039,962

COSMETIC COMPOSITIONS CONTAINING A LIPID CERAMIDE COMPOUND AND A PEPTIDE HAVING A FATTY CHAIN, AND THEIR USES

Daniele Cauwet-Martin, Paris, and Claude Dubief, Le Chesnay, both of France, assignors to L'Oréal, Paris, France

Continuation of application No. 08/535,671, Sep. 28, 1995, Pat. No. 5,830,481. This application Jun. 5, 1998, Appl. No. 92,074.

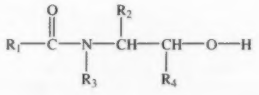
Claims priority, application France, Sep. 29, 1994, 94 11666

This patent is subject to a terminal disclaimer.

Int. Cl.[7] A61K *7/48*

U.S. Cl. 424—401 25 Claims

1. A cosmetic composition comprising, in a cosmetically acceptable aqueous medium, from 0.0001 to 10% by weight relative to the total weight of the composition of at least one lipid ceramide compound and from 0.01 to 30% by weight relative to the total weight of the composition of at least one peptide having at least one fatty chain, wherein said at least one peptide is a protein hydrolysate and wherein said at least one lipid ceramide compound has the formula (I):



in which:

R_1 denotes either a saturated or unsaturated, linear or branched C_9–C_{30} hydrocarbon radical, it being possible for R_1 to be substituted with one or more hydroxyl groups or with one or more hydroxyl groups esterified with a saturated or unsaturated C_{16}–C_{30} fatty acid; or a radical R"—NR—CO—R'—, wherein R denotes hydrogen or a mono- or polyhydroxylated C_1–C_{10} hydrocarbon radical, R' and R" are hydrocarbon radicals in which the sum of the carbon atoms is from 9 to 30, R' being a bivalent radical,

R_2 denotes a hydrogen atom or a saturated or unsaturated C_{16}–C_{27} hydrocarbon radical, it being possible for R_2 to be substituted with one or more C_1–C_{14} alkyl radicals; a C_{15}–C_{26} α-hydroxyalkyl radical; or a C_{15}–C_{26} α-hydroxyalkyl radical where the hydroxyl group is esterified with a C_{16}–C_{30} α-hydroxy acid,

R_3 denotes a hydrogen atom, a saturated or unsaturated C_{16}–C_{27} hydrocarbon radical or a radical —CH_2—CHOH—CH_2—O—R_6 in which R_6 denotes a C_{10}–C_{26} hydrocarbon radical,

R_4 denotes a hydrogen atom or a mono- or polyhydroxylated C_1–C_4 hydrocarbon radical and wherein said composition does not contain a glycoceramide compound.

6,039,963

CERAMIDE COMPOUNDS, PROCESS FOR THEIR PREPARATION AND USE

Michel Philippe, Wissous; Bernadette Luppi, Sevran, and Didier Semeria, Courtry, all of France, assignors to L'Oreal, Paris, France

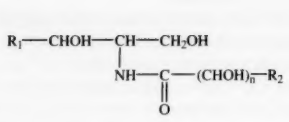
Division of application No. 08/628,169, Apr. 5, 1996, Pat. No. 5,869,711. This application Nov. 12, 1998, Appl. No. 189,837.

Claims priority, application France, Apr. 5, 1995, 95 04050

Int. Cl.[7] A61K *6/00;* C07C *233/00*

U.S. Cl. 424—401 18 Claims

1. A cosmetic or dermatological composition comprising from 0.005 to 20% by weight of at least two compounds corresponding to the formula (I):



(I)

in which:

R_1 denotes a saturated or unsaturated C_{10} to C_{25} hydroxylated hydrocarbon radical;

n is equal to 0 or 1;

R_2, when n is equal to 1, denotes a linear or branched, saturated or unsaturated C_1 to C_{31} hydrocarbon radical; and R_2, when n is equal to 0, denotes a linear or branched, saturated or unsaturated C_2 to C_{31} hydrocarbon radical;

said at least two compounds being in the form of a mixture of at least two isomers at least on the amino alcohol part of the formula (I);

said at least two compounds further being in the presence of an adjuvant selected from fatty substances, solvents, water, thickening agents, emulsifying agents, moisturizing products, softeners, sunscreens, germicides, dyes, preserving agents, fragrances, propellants and surfactants.

6,039,964

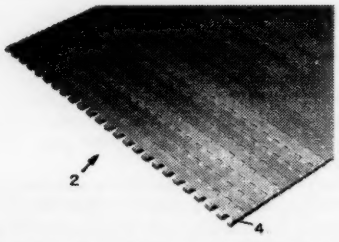
GERMICIDALLY PROTECTED CONVEYOR COMPONENTS

Mohan L. Sanduja, Flushing; Carl Horowitz, Brooklyn; Mohammed Kamruzzaman, Bronx; Paul Thottathil, New Hyde Park, all of N.Y., and Earl A. Ramsey, Sinking Springs, Pa., assignors to Omni Manufacturing, Inc., Sinking Spring, Pa.

Filed Apr. 11, 1997, Appl. No. 835,931

Int. Cl.[7] **A01N** *25/34;* **B65G** *15/30*

U.S. Cl. 424—404 **11 Claims**



1. A conveyor component have germicidal properties comprising a solid unitary polymeric material and a polymerized salt of a polymerizable monomer and a germicidal agent grafted to said polymeric material and distributed uniformly throughout said polymeric material.

6,039,965

SURFANCTANTS FOR REDUCING BACTERIAL ADHESION ONTO SURFACES

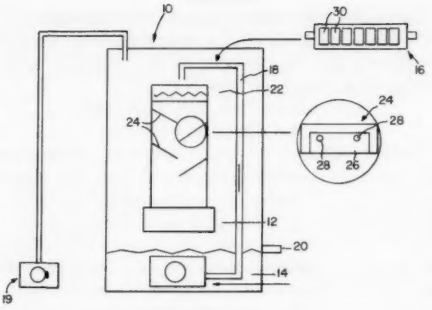
Rodney M. Donlan, Bridgeville; David L. Elliot, Imperial; Nancy J. Kapp, Glenshaw; Christopher L. Wiatr, McMurray, and Paul A. Rey, Moon Township, all of Pa., assignors to Calgon Corporation, Pittsburgh, Pa.

Provisional application No. 60/026,909, Sep. 27, 1996, Provisional application No. 60/026,844, Sep. 27, 1996. This application Sep. 15, 1997, Appl. No. 929,909.

Int. Cl.[7] **A01N** *25/04*

U.S. Cl. 424—405 **21 Claims**

1. A method for inhibiting adhesion of microorganisms to a hydrophobic surface in contact with a freshwater recirculating



aqueous system, the method comprising adding at least 0.25 ppm of at least one compound comprising an ethoxylated nonionic surfactant which is block copolymer of repeating ethylene oxide and repeating propylene oxide units to the aqueous system.

6,039,966

AGROCHEMICAL EMULSION CONCENTRATES

Stanley J. Kostka, Cherry Hill, and Rennan Pan, Plainsboro, both of N.J., assignors to Aquatrols Corporation of America, Inc., Cherry Hill, N.J.

Provisional application No. 60/070,101, Dec. 30, 1997. This application Dec. 16, 1998, Appl. No. 212,995.

Int. Cl.[7] **A01N** *25/00;57/00;43/40;43/36*

U.S. Cl. 424—405 **11 Claims**

1. An agrochemical emulsion concentrate comprising

a) from about 10 to about 60 percent by weight of a water-insoluble pesticide having a melting point of less than about 110° C.;

b) from about 20 to about 60 percent by weight of a water-soluble alkoxylated acid composition wherein said acid composition comprises:

i) from greater than about 25 to about 60 percent by weight alkoxylated rosin acids; and

ii) from about 40 to less than about 75 percent by weight alkoxylated fatty acids wherein the rosin acids and fatty acids have an average molar addition of from about 6 to about 20 alkoxy moieties per molecule of acid, the weight percents of the rosin and fatty acids being based on the total weight of said alkoxylated acids; and

c) from about 15 to about 45 percent by weight of nonionic surfactant; wherein the emulsion concentrate having 20 weight percent of said pesticide, is stable at room temperature for at least three weeks and the weight percents are based on the total weight of the emulsion concentrate except where indicated.

6,039,967

INTRAVESICAL DRUG DELIVERY SYSTEM

Thomas B. Ottoboni, Belmont; Ronald K. Yamamoto, San Francisco, and Stanley R. Conston, San Carlos, all of Calif., assignors to Point Biomedical Corporation, San Carlos, Calif.

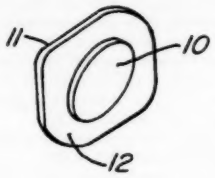
Continuation-in-part of application No. 08/833,247, Apr. 3, 1997. This application Apr. 2, 1998, Appl. No. 54,154.

Int. Cl.[7] **A61F** *2/02;6/06;* **A61K** *47/30*

U.S. Cl. 424—426 **29 Claims**

1. A bioerodible, sustained-release preparation for placement into the bladder through the urethra,

comprising a pharmaceutically active ingredient and a bioerodible pharmaceutically acceptable carrier;



said carrier being capable of sustained delivery within the bladder of said active ingredient and said carrier being excretable through the urinary tract after bioerosion.

6,039,968

INTRAVAGINAL DRUG DELIVERY DEVICE

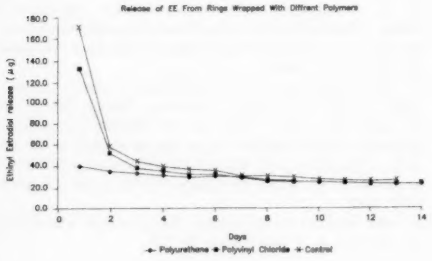
Shohre Nabahi, Watchfield, United Kingdom, assignor to Hoechst Marion Roussel, France

Filed Jun. 22, 1998, Appl. No. 102,302

Claims priority, application United Kingdom, Jun. 24, 1997, 9713360; Nov. 24, 1997, 9724777

Int. Cl.[7] A61F *13/02*

U.S. Cl. 424—433 **22 Claims**



1. An intravaginal drug delivery system having a first intravaginal part comprising at least one active agent in a polymer matrix, said first part being provided in association with a second part comprising a polymer membrane to be removed before use which absorbs active agent.

6,039,969

IMMUNE RESPONSE MODIFIER COMPOUNDS FOR TREATMENT OF TH2 MEDIATED AND RELATED DISEASES

Mark A. Tomai, Oakdale, Minn.; David M. Hammerbeck, Houlton, Wis., and Karl F. Swingle, Oakdale, Minn., assignors to 3M Innovative Properties Company, St. Paul, Minn.

Provisional application No. 60/029,301, Oct. 25, 1996, Provisional application No. 60/045,331, May 1, 1997. This application Oct. 24, 1997, Appl. No. 957,192.

Int. Cl.[7] A61F *13/02*

U.S. Cl. 424—434 **12 Claims**

1. A method of treating a non-viral and non-tumor, TH2 cell mediated disease comprising administering an immune response modifier compound selected from the group consisting of imidazoquinoline amines, imidazopyridine amines, 6,7-fused cycloalkylimidazopyridine amines, and 1,2-bridged imidazoquinoline amines in an amount effective to inhibit TH2 cell mediated immune response, with the proviso that said disease is other than eczema.

6,039,970

PROCESS FOR THE PREPARATION OF MICROSPHERES CONTAINING BIOLOGICALLY ACTIVE COMPONENTS

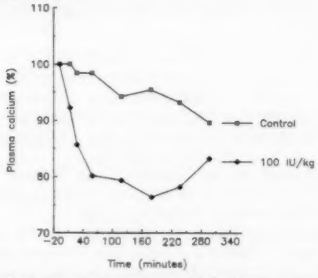
Lanfranco Callegaro, Padua; Aurelio Romeo, Rome, and Luca Benedetti, Vicenza, all of Italy, assignors to Fidia S.p.A., Abano Terme, Italy

Division of application No. 08/169,558, Dec. 20, 1993, which is a continuation of application No. 07/890,108, May 29, 1992, abandoned. This application Jan. 13, 1999, Appl. No. 231,353.

Claims priority, application Italy, May 31, 1991, PD91A0102

Int. Cl.[7] A61K *9/16*

U.S. Cl. 424—434 **6 Claims**



1. A method for administering a biologically active molecule across the nasal mucosal membrane which comprises administering an effective amount of a smooth surface microsphere which comprises a biologically active molecule and an ester of hyaluronic acid,

wherein said biologically active molecule is adhered to said ester of hyaluronic acid,

wherein said smooth surface microsphere has a diameter of between 1 µm to 100 µm, and

wherein said smooth surface microsphere is formed by a process comprising:

dissolving said ester of hyaluronic acid and said biologically active molecule in dimethylsulfoxide to produce a mixture;

adding said mixture to mineral oil with stirring to produce an emulsion;

adding ethyl acetate to said emulsion to produce a suspension;

filtering said suspension; and

recovering smooth surface microspheres thus formed, to said nasal mucosal membrane.

6,039,971

COMPOSITION FOR SKIN PATCH PREPARATION AND PROCESS FOR PREPARING THE SAME

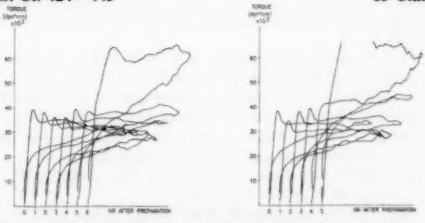
Akihiko Kusunoki; Naohisa Kawamura; Yoshiki Sugizaki, all of Saitama-ken, and Akio Kuwahara, Fukuoka-ken, all of Japan, assignors to Saitama Daiichi Pharmaceutical Co., Ltd., Kasukabe, Japan

Filed Feb. 18, 1998, Appl. No. 25,191

Claims priority, application Japan, Mar. 24, 1997, 9-088735

Int. Cl.[7] A61K *9/70;* **A61L** *5/60*

U.S. Cl. 424—443 **15 Claims**



1. A composition for a skin patch preparation comprising a synthetic water holding polymer gel prepared by reacting, in the presence of water and at a pH of 4.0 to 6.1, a water-aoluble

polymer of an aliphatic carboxylic acid or a salt thereof in an amount of 1 to 30% by weight based on the total weight of the composition, with a sparingly soluble aluminum compound in an amount of 0.2 to 15% by weight in terms of aluminum based on the weight of said water-soluble polymer, a reaction accelerator consisting essentially of an organic acid containing a hydroxyl group in its molecule, said organic acid being selected from the group consisting of glycolic acid, lactic acid, malic acid, tartaric acid, gluconic acid and salicylic acid, said organic acid being present in an amount effective to increase the reaction rate of said water-soluble polymer and said aluminum compound, and a reaction inhibitor consisting essentially of an ethylenediamine compound, said ethylenediamine compound being present in an amount effective for control of the rate of initiation of gelation.

6,039,972

WOUND DRESSING CONTAINING MAMMALIAN CELLS ANCHORED ON HYDROPHOBIC SYNTHETIC POLYMER FILM

Yvonne Margaret Barlow, Sawston, and Stephen Michael Lang, Saffron Walden, both of United Kingdom, assignors to Smith & Nephew PLC, United Kingdom

Continuation of application No. 08/436,839, May 8, 1995, Pat. No. 5,712,137, which is a continuation of application No. 08/191,057, Feb. 2, 1994, abandoned, which is a continuation of application No. 07/752,659, Aug. 21, 1991, abandoned. This application Jan. 20, 1998, Appl. No. 9,673.

Claims priority, application United Kingdom, Mar. 5, 1990, 90049115; WIPO, Mar. 4, 1991, PCT/GB91/00329

U.S. Cl. 424—472 **13 Claims**

1. A pharmaceutical composition in the form of a bilayer tablet comprising,

(a) a first discrete zone made with Formulation (A) which comprises, a therapeutically effective decongestant amount of a sympathomimetic drug, or a pharmaceutically acceptable salt thereof, in an amount of about 18% to about 39% by weight of Formulation (A), and a first carrier base material, the first carrier base material comprising a mixture of;

(I) carnauba wax in an amount of about 59% to about 81% by weight of Formulation (A); and

(ii) a suitable antiadherent in an amount of about 0.25% to about 2.00% by weight of Formulation (A);

wherein said first carrier base material provides a sustained release of the sympathomimetic drug; and

(b) a second discrete zone made with Formulation (B) which comprises a therapeutically effective antihistaminic amount of a piperidinoalkanol, or a pharmaceutically acceptable salt thereof, in an amount of about 15% to about 30% by weight of Formulation (B) and a second carrier base material, the second carrier base comprising a mixture of;

(I) a cellulose diluent in an amount of about 27% to about 73% by weight of Formulation (B);

(ii) pregelatinized starch in an amount of about 15% to about 30% by weight of Formulation (B);

(iii) a suitable disintegrant in an amount of about 0.25% to about 6.00% by weight of Formulation (B); and

(iv) a suitable lubricant in an amount of about 0.25% to about 2.00% by weight of Formulation (B);

wherein said second carrier base material provides an immediate release of the piperidinoalkanol or the pharmaceutically acceptable salt thereof.

COLON TARGETED DELIVERY SYSTEM

Navnit Hargovindas Shah; Aruna M. Railkar, both of Clifton, and Wantanee Phuapradit, Jersey City, all of N.J., assignors to Hoffman-La Roche Inc., Nutley, N.J.

Provisional application No. 60/005,704, Oct. 17, 1995. This application Sep. 20, 1996, Appl. No. 717,032.

Int. Cl.[7] **A61K** *9/24*

U.S. Cl. 424—473 **14 Claims**

1. A drug delivery system comprising:

a) a core containing a therapeutically effective amount of a biologically-active compound and a swelling agent said swelling agent being present in an amount of from about 5 to about 50% w/w of the core;

b) a semi-permeable polymer membrane encasing the core which allows water influx but prevents outward diffusion of the biologically active compound, said membrane including a plasticizer, which plasticizer is present in an amount of from about 10 to about 30% w/w of the membrane, wherein the membrane has a percent elongation of from about 2 to about 3.5%; and

c) an outer enteric coating encasing the membrane which coating dissolves at or above about pH 5.5.

6,039,976

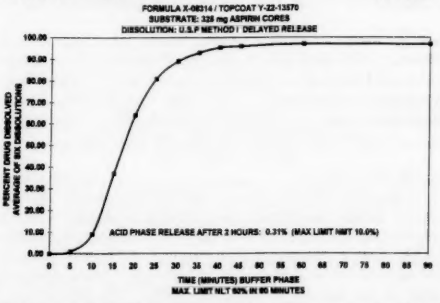
ENTERIC FILM COATING COMPOSITIONS, METHOD OF COATING THEREWITH, AND COATED FORMS

Dev K. Mehra, Furlong; Chittamuru Ramireddy, Lansdale; Li-Juan Tang, Norristown, and Stuart C. Porter, Hatfield, all of Pa., assignors to BPSI Holdings, Inc., Wilmington, Del.

Division of application No. 08/319,987, Oct. 7, 1994, Pat. No. 5,733,575. This application Nov. 26, 1997, Appl. No. 979,537.

Int. Cl.[7] **A61K** *9/32;* **C08K** *5/09*

U.S. Cl. 424—480 **35 Claims**



1. A non-toxic edible aqueous enteric coating suspension for use in coating pharmaceutical tablets, comprising

an enteric film forming polymer,
a detackifier,
a viscosity modifier,
an alkalizing agent,
a plasticizer,
an antifoaming agent,
and water.

6,039,977

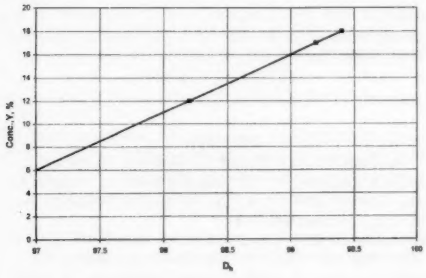
PHARMACEUTICAL HYDROGEL FORMULATIONS, AND ASSOCIATED DRUG DELIVERY DEVICES AND METHODS

Subramanian S. Venkatraman, Palo Alto, Calif.; Thomas O. Murdock, Vadnais Heights, Minn., and Stephanus Pudjijanto, San Jose, Calif., assignors to Alza Corporation, Palo Alto, Calif.

Filed Dec. 9, 1997, Appl. No. 987,372

Int. Cl.[7] **A61K** *9/10;47/32;* **A61M** *37/00*

U.S. Cl. 424—486 **7 Claims**



1. A method for eliminating or reducing syneresis in a pharmaceutical hydrogel formulation comprised of (a) a therapeutically effective amount of a drug in (b) a hydrogel comprised of water and polyvinyl alcohol having an average viscosity molecular weight between approximately 10,000 and 400,000, wherein the polyvinyl alcohol has a predetermined degree of hydrolysis D_h between approximately 95% and 99% and represents Y percent by weight in a range of approximately 10 wt. % to 30 wt % of the hydrogel, the method comprising

a. selecting Y and D_h to correspond to each other such that if D_h is greater than approximately 97.5% then Y is greater than or equal to approximately $5D_h$–479 or if D_h is less than approximately 97.5% then Y is greater than or equal to approximately $4.16D_h$–385;

b. preparing a solution of polyvinyl alcohol having the parameters selected from step a

c. subjecting said solution to at least a single-cycle freeze-thaw procedure if Dh is greater than approximately 97.5% or subjecting said solution to a multi-cycle freeze-thaw procedure if Dh is less than approximately 97.5%

which provides for a stable hydrogel and reduces or eliminates syneresis upon storage of the formulation for at least six months at a storage temperature in the range of approximately 5° C. to 40° C.

6,039,978

DIETARY FOOD ENHANCEMENT AGENT

William E. Bangs, Philadelphia, Pa.; Chor San Heng Khoo, Mt. Laurel, N.J., and Sandy Ko, Abington, Pa., assignors to Campbell Soup Company, Camden, N.J.

PCT No. PCT/US96/10225, § 371 Date Sep. 20, 1996, § 102(e) Date Sep. 20, 1996, PCT Pub. No. WO96/39053, PCT Pub. Date Dec. 12, 1996

Continuation-in-part of application No. 08/471,202, Jun. 6, 1995, abandoned. This PCT application Jun. 6, 1996, Appl. No. 716,421.

Int. Cl.[7] **A61K** *9/14;* **A23L** *1/303;1/304*

U.S. Cl. 424—489 **12 Claims**

1. A homogenous, powdered, freeflowing, and stable dietary food enhancement agent for fortifying food products comprising a premixed combination including a source of calcium, a source of magnesium, and a source of phosphorus, wherein said source of calcium is calcium citrate and dicalcium phosphate, said source of phosphorus is dicalcium phosphate and magnesium phosphate, and said source of magnesium is magnesium phosphate; wherein said source of magnesium, said source of phosphorus and said source of calcium comprise in a range of about 73% to about 92% of said agent by weight.

3. A homogenous, powdered, freeflowing, and stable dietary food enhancement agent for fortifying food products comprising a premixed combination including sources of phosphorous and magnesium, wherein said source of phosphorous is magnesium phosphate and said source of magnesium is magnesium phosphate and magnesium oxide and wherein said premixed combination further comprises a source of calcium, and said source of calcium is calcium carbonate; wherein said source of magnesium, said source of phosphorus and said source of calcium comprise in a range of about 38% to about 71% of said agent by weight.

6,039,979

MULTIPARTICULATE PHARMACEUTICAL FORM WITH PROGRAMMED AND PULSED RELEASE AND PROCESS FOR ITS PREPARATION

Edouard Gendrot, Garnay; Gérard Cousin, Le Mesnil Ponceau; Françoise Ragot, Leves, and Marie-Christine Clee-Bouvet, Treon, all of France, assignors to Laboratoires Prographarm, France

Filed Jan. 13, 1999, Appl. No. 229,864

Int. Cl.[7] **A61K** *9/14*

U.S. Cl. 424—497 **15 Claims**

1. Multiparticulate pharmaceutical form with delayed and pulsed release of the active ingredient, enabling to obtain the onset of the availability of the active ingredient within 4 to 8 hours after the ingestion of the pharmaceutical form, and then to progressive release of the totality of the active ingredient within the 8 to 20 following hours, the said multiparticulate pharmaceutical form which is free of organic acid, comprising medicinal spheroids including each a neutral spherical core enveloped by a first coating based on a mixture of at least one hydrosoluble polymer and of at least one non hydrosoluble polymer throughout which are uniformly distributed the constitutive particles of an active ingredient, the cores coated with the first coating comprising a second coating based on at least two pH independent polymers presenting rates of permeability different from one another with respect to the gastric and intestinal mediums.

6,039,980

SUSTAINED RELEASE EXCIPIENT

Anand R. Baichwal, Wappinger Falls, N.Y., assignor to Edward Mendell Co., Inc., Patterson, N.Y.

Continuation of application No. PCT/US97/03455, Jan. 29, 1997, Provisional application No. 60/010,722, Jan. 29, 1996. This application Jul. 29, 1998, Appl. No. 124,576.

Int. Cl.[7] **A61K** *9/20*

U.S. Cl. 424—500 **20 Claims**

1. An oral solid dosage form comprising:

a therapeutically effective amount of a medicament; and

a sustained release excipient comprising from about 10 to about 40 percent of a gelling agent by weight of said sustained release excipient said gelling agent consisting of a galactomannan, from about 1 to about 20 by weight percent of an ionizable gel strength enhancing agent by weight of said excipient, such that the ratio of said galactomannan to said ionizable gel strength enhancing agents from about 1:1 to about 3.5:1

and from about 60 to about 85 percent by weight of an inert pharmaceutical diluent by weight of the sustained release excipient.

6,039,981

ANTIFUNGAL ORAL COMPOSITION CONTAINING ITRACONAZOLE AND PROCESS FOR PREPARING SAME

Jong-Soo Woo, Suwon, and Hong-Gi Yi, Kyungki-do, both of Rep. of Korea, assignors to Hanmi Pharm. Co. Ltd., Kyungki-do, Rep. of Korea

Filed Oct. 4, 1999, Appl. No. 411,510

Claims priority, application Rep. of Korea, Jun. 16, 1999, 99-22472

Int. Cl.[7] **A61K** *33/42;31/495*

U.S. Cl. 424—601 **5 Claims**

1. An antifungal composition for oral administration comprising a fused mixture of itraconazole and phosphoric acid, a pharmaceutically acceptable carrier and a surfactant.

6,039,982

USE OF A DEAMINATING OXIDASE IN BAKING

Peter Wagner, Holte, Denmark, and Joan Qi Si, Laufen, Switzerland, assignors to Novo Nordisk A/S, Bagsvaerd, Denmark

Continuation of application No. PCT/DK96/00500, Dec. 2, 1996. This application Apr. 23, 1998, Appl. No. 65,398.

Claims priority, application Denmark, Dec. 8, 1995, 1402/95; Dec. 11, 1995, 1405/95

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **A21D** *2/00*

U.S. Cl. 426—18 **17 Claims**

1. A method for preparing a dough or a baked product produced from the dough, comprising adding to dough or dough ingredients an L-amino acid oxidase or a benzylamine oxidase in an amount effective to improve gluten strength, stickiness, or rheological properties of dough, or specific volume of the baked product.

6,039,983

USE OF A PYRANOSE OXIDASE IN BAKING

Peter Wagner, Holte, and Joan Qi Si, Laufen, both of Denmark, assignors to Novo Nordisk A/S, Bagsvaerd, Germany

Continuation of application No. PCT/DK96/00550, Dec. 20, 1996. This application Apr. 28, 1998, Appl. No. 67,556.

Claims priority, application Denmark, Dec. 20, 1995, 1447/95

Int. Cl.[7] **A21D** *2/00*

U.S. Cl. 426—18 **12 Claims**

1. A method of preparing a dough or a baked product prepared from the dough, comprising adding a pyranose oxidase enzyme to the dough ingredient or any mixture of the dough ingredients.

6,039,984

METHOD FOR TREATING A FOOD PROCESSING FACILITY

Rod A. Bowling, Rogers, Ark., and Robert Paul Clayton, Ft. Collins, Colo., assignors to Monfort, Inc., Greeley, Colo.

Continuation of application No. 08/751,912, Nov. 18, 1996, Pat. No. 5,869,113, which is a continuation-in-part of application No. 08/315,231, Sep. 29, 1994, Pat. No. 5,576,035, which is a continuation-in-part of application No. 07/796,052, Nov. 20, 1991, Pat. No. 5,374,433. This application Nov. 13, 1998, Appl. No. 191,333.

Int. Cl.[7] **A23C** *9/12;* **A61L** *2/00*

U.S. Cl. 426—61 **21 Claims**

1. A method for treating a food processing facility, comprising inoculating a food processing facility with an amount of non-spoilage and non-pathogenic bacteria to competitively inhibit the growth of pathogenic and spoilage bacteria.

6,039,985

REFRIGERATION-SHELF-STABLE ULTRA-PASTEURIZED OR PASTEURIZED INFANT FORMULA

A. Reza Kamarei, Princeton, N.J., assignor to Princeton Nutrition, L.L.C., Princeton, N.Y.

Continuation-in-part of application No. 08/975,692, Nov. 21, 1997, Pat. No. 5,985,339, Provisional application No. 60/031,637, Nov. 22, 1996. This application May 4, 1999, Appl. No. 305,071.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **A23L** *1/304;* **A23C** *9/00*

U.S. Cl. 426—72 **34 Claims**

1. A refrigeration-shelf-stable infant formula being thermally treated under conditions of pasteurization or ultra-pasteurization having a nutritional composition comprising per five fluid ounces:

a. from about 1.8 to about 6.3 grams of protein;

b. from about 3.3 to about 15.9 grams of fat;

c. from about 300 mg to about 3000 mg of linoleic acid;

d. from about 250 to about 900 IU of Vitamin A;

e. from about 40 to about 180 IU of Vitamin D;

f. from about 0.7 to about 9 IU of Vitamin E;

g. from about 4 to about 24 mcg of Vitamin K;

h. from about 40 to about 300 mcg of Thiamine or Vitamin B 1;

i. from about 60 to about 450 mcg of Riboflavin or Vitamin B2;

j. from about 35 to about 180 mcg of Vitamin B6;

k. from about 0.15 to about 0.9 mcg of Vitamin B12;

l. from about 250 to about 3150 mcg of Niacin;

m. from about 4 to about 48 mcg of Folic Acid or Folacin;

n. from about 300 to about 1500 mcg of Pantothenic Acid;

o. from about 1.5 to about 13.2 mcg of Biotin;

p. from about 8 to about 36 mg of Vitamin C or Ascorbic Acid;

q. from about 7 to about 48 mg of Choline;

r. from about 4 to about 18 mg of Inositol;

S. from about 60 to about 234 mg of Calcium;

t. from about 30 to about 159 mg of Phosphorus;

u. from about 6 to about 24 mg of Magnesium;

v. from about 0.15 to about 5.4 mg of Iron;

w. from about 0.5 to about 3 mg of Zinc;

x. from about 5 to about 45 mcg of Manganese;
y. from about 60 to about 270 mcg of Copper;
z. from about 5 to about 75 mcg of Iodine;
aa. from about 20 to about 81 mg of Sodium;
bb. from about 80 to about 324 mg of Potassium; and
cc. from about 55 to about 195 mg of Chloride;
wherein the total caloric content is from about 80 kilocalories to about 300 kilocalories per five fluid ounces.

6,039,986

FORTIFICATION OF FOODSTUFF

Chandrasekhar R Mallangi, New Milford, Conn.; Alexander A. Sher, Rockville, Md.; Eileen Carol Fuchs, Gaylordsville, Conn.; Dharam Vir Vadehra, New Milford, Conn., and Elaine Regina Wedral, Sherman, Conn., assignors to Nestec S.A., Vevey, Switzerland

Filed Jul. 10, 1998, Appl. No. 113,401
Int. Cl.[7] A23L *1/304*
U.S. Cl. 426—74 **17 Claims**

1. A fortified foodstuff containing a fortifying amount of a calcium complex consisting essentially of a balanced blend of calcium lactate and calcium carbonate which blend is stabilized with a source of glucuronic acid, wherein the foodstuff does not exhibit sedimentation of the complex for at least 10 weeks.

6,039,987

PHYSICAL ENDURANCE DRINK AND METHOD OF PREVENTING CRAMPING CAUSED BY STRENUOUS BODILY ACTIVITY

Robert Charles Strahl, 11170 Wood Elves Way, Columbia, Md. 21044

Continuation-in-part of application No. 09/007,095, Jan. 14, 1998, Pat. No. 5,891,888. This application Mar. 29, 1999, Appl. No. 281,129.
This patent is subject to a terminal disclaimer.
Int. Cl.[7] A23L *1/304*
U.S. Cl. 426—74 **6 Claims**

1. The beverage drink comprising the following ingredients and in substantially in the following ranges:
Glucose: 3–7%
Fructose: 3–7% (Total glucose plus fructose: 6–14%)
Sodium chloride 0.06–0.2%
Potassium chloride: 0.03–0.04%
Citric acid: 0.13–2.5% (sufficient to obtain a pH of 2.5–4.5)
Sodium or potassium monophosphate: 0.01–0.4%
Fruit flavor 0.04–1.0%
Sodium or potassium benzoate: 0.025–0.05 ppm
Quinine hydrochloride dihydrate: quinine 5 to 20 mgm/8 ounces
Sodium citrate: 0.01–0.4%
Water to make 100%
Carbon dioxide: 1–5 volumes.

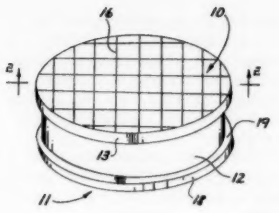
6,039,988

LAMINATED BAKED PRODUCT AND METHOD OF MAKING THE SAME

Woodrow C. Monte, 7634 W. Overfield Dr., Casa Grande, Ariz. 85222

Continuation-in-part of application No. 08/595,035, Jan. 31, 1996, Pat. No. 5,789,008. This application Aug. 4, 1998, Appl. No. 129,476.
This patent is subject to a terminal disclaimer.
Int. Cl.[7] A21D *13/00*
U.S. Cl. 426—94 **18 Claims**

1. A food product comprising
(a) at least one baked member having at least one outer surface;
(b) a layer of edible oil on said outer surface;



(c) a protein-containing layer covering said layer of edible oil, comprising an edible food, said layer of edible oil being partially adsorbed by said protein-containing layer.

6,039,989

PREPACKAGED THERAPEUTIC MEAL FOR TREATMENT OF DIET-RESPONSIVE CONDITIONS

William E. Bangs, Philadelphia, Pa.; Joseph D. Dibenedetto, Roebling, N.J.; Joyce L. Friedberg, Robbinsville, N.J.; Denise A. Giordano, Jackson, N.J.; Judy M. Glover, Marlton, N.J.; Chor San Heng Khoo, Mt. Laurel, N.J.; Sandy Ko, Abington; R. David C. MacNair, King of Prussia, both of Pa.; Scott R. Noar, Cherry Hill; John J. Randazzi, Jr., Sicklerville, both of N.J.; Harro Stoever, Greenwich, Conn., and Paula J. Ziegler, Cherry Hill, N.J., assignors to Campbell Soup Company, Camden, N.J.

Filed Jun. 6, 1995, Appl. No. 470,361
Int. Cl.[7] B65D *85/00;* **A23L** *1/30;* **G01N** *33/02*
U.S. Cl. 426—106 **51 Claims**

1. A prepackaged therapeutic meal of a daily diet for consumption by a patient having at least one diet-responsive condition, said meal comprising;
at least one meal component, wherein said at least one meal component is nutritionally enhanced to contain a predetermined level of nutritional enhancement to facilitate management of said at least one diet-responsive condition, such that said meal comprises:
(a) dietary fiber in a range of about 5 grams to about 11 grams;
(b) vitamins and minerals in a range of about 30 to about 35 percent of USRDA, including potassium in a range of about 630 mg to about 1430 mg and sodium in a range of about 370 mg to about 950 mg,
(c) protein and fat, and protein supplies a range of about 14% to about 31% of a calorie content of said meal and fat supplies a range of about 10% to about 24% of said calorie content of said meal; and
(d) simple sugars in a range of about 6 grams to about 35 grams;
wherein a daily diet comprising at least one of said prepackaged thereutic meal, and said diet includes dietary fiber in a range of about 20 to 30 grams and at least about 50 percent of USRDA of vitamins and mineral, including potassium in a range of about 3000 mg to about 3500 mg, and sodium in an amount less than about 2400 mg;
wherein said daily diet supplies the patient with a desired total daily calorie content and in which protein provides about 15% to about 20% of said desired total daily calorie content and fat provides about 20% to about 30% of said desired total daily calorie content; and
wherein said daily diet comprises simple sugars in an amount leas than about 96 grams.

6,039,990

VACUUM PROCESSED FISH PRODUCT IN A TOMATO BASE COOKING SAUCE

Saloman Friedman, and Chava Friedman, both of 12 Israel Zupnick Dr. Unit 201, Monroe, N.Y. 10950

Filed Jul. 21, 1998, Appl. No. 119,903

Int. Cl.[7] A21D *10/02;* **B65D** *85/08*

U.S. Cl. 426—129 **16 Claims**

1. A vacuum-packed fish product provided in a tomato base cooking sauce processed at high temperature and comprising, by weight percent:

fish 43% to 53%;
egg 11% to 13%;
onion 8.5% to 10.5%;
oil 5.5% to 6.5%;
matzo meal 4.5% to 6.5%;
sugar 7.0 to 8.0%;
water 8.0% to 10.0%;
salt 1.0% to 2.0%;
potato starch 0.30% to 0.50%; and
white pepper 0.10% to 0.15%.

6,039,991

METHOD AND APPARATUS FOR SANITIZING MINCED MEAT

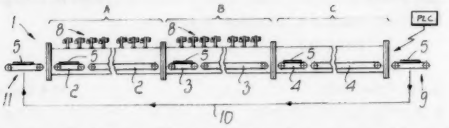
Giuseppe Ruozi, 42100 Reggio Emilia, Viale Timavo, 17, Italy

Filed Dec. 3, 1998, Appl. No. 205,117

Claims priority, application Italy, Jul. 1, 1998, MO98A0144

Int. Cl.[7] A21D *6/00;* **H05B** *6/80*

U.S. Cl. 426—241 **20 Claims**



1. A method for sanitizing raw minced meat, comprising the steps of:

quickly heating the minced meat by microwave heating and hot air under a pressure increasing from atmospheric pressure to an overpressure which prevents liquid evaporation;

further heating the minced meat by microwave heating up to a sterilization temperature and under constant overpressure for preventing liquid evaporation; and

cooling the minced meat under a gradually decreasing pressure;

wherein the sterilization temperature is below a threshold temperature at which the meat changes organoleptic characteristics with respect to the raw meat state thereof.

6,039,992

METHOD FOR THE BROAD SPECTRUM PREVENTION AND REMOVAL OF MICROBIAL CONTAMINATION OF FOOD PRODUCTS BY QUATERNARY AMMONIUM COMPOUNDS

Cesar Compadre; Philip Breen; Hamid Salari; E. Kim Fifer, all of Little Rock, Ark.; Danny L. Lattin, Brookings, S. Dak.; Michael Slavik, Springdale, Ark.; Yanbin Li, Fatettville, Ark., and Timothy O'Brien, Little Rock, Ark., assignors to University of Arkansas, Little Rock, Ark.

Continuation-in-part of application No. 08/631,578, Apr. 12, 1996, Pat. No. 5,855,940. This application Apr. 14, 1997, Appl. No. 840,288.

This patent is subject to a terminal disclaimer.

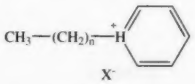
Int. Cl.[7] A01N *43/40*

U.S. Cl. 426—332 **26 Claims**

1. A method for preventing the growth of microorganisms other than Salmonella on meat products other than poultry comprising:

contacting said meat product other than poultry with a microbial growth inhibiting effective amount of a quaternary ammonium compound for about 20 seconds to about less than 10 minutes to prevent the growth of microorganisms other than Salmonella on said meat product, wherein said quaternary ammonium compound is selected from the group consisting of an alkylpyridinium salt represented by the structural formula (I):

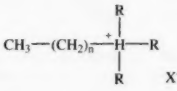
(I)



wherein n is 9–21, and X is a halide;

a tetra-alkylammonium salt represented by the structural formula (II):

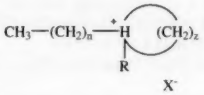
(II)



wherein n is 9–21, and R is selected from the group consisting of CH_3 and C_2H_5, and X is a halide; and

an alkylalicyclic ammonium salt represent by the structural formula (III):

(III)



wherein n is 9–21, Z is 4–5, R is selected from the group consisting of CH_3 and C_2H_5, and X is a halide.

READY-TO-BAKE SHELF-STABLE CAKE DOUGH AND PROCESS FOR ITS MANUFACTURE

René LeFlécher, Versailles, France, and Peter Robson, North Yorkshire, United Kingdom, assignors to Bestfoods, Englewood Cliffs, N.J.

Filed Mar. 19, 1998, Appl. No. 44,449

Claims priority, application European Pat. Off., Apr. 4, 1997, 97105619

Int. Cl.[7] **A21D** *8/00*

U.S. Cl. 426—498 **12 Claims**

1. A process for manufacturing a ready-to-bake, shelf-stable cake dough consisting essentially of flour, sugar, fat, eggs and water comprising the steps of

a) making a premix powder by homogeneously mixing an enzyme-inactivated flour, and sugar;

b) making an emulsion by placing into a mixer the fat and pressurizing with an inert gas, whereafter a vacuum is applied and a liquid mix of pasteurized whole eggs and water is sucked into the mixer in which the fat and the liquid mix are intensively mixed under vacuum to create the emulsion and remove the oxygen, whereafter the vacuum is broken with inert gas;

c) adding the premix powder to the emulsion and mixing under vacuum to make a dough;

d) reducing the oxygen content of the dough by injection of inert gas followed by vacuum during mixing;

e) breaking the vacuum with an inert gas which is at least partly soluble in the dough and pressurizing the dough with said gas up to 1–2 bar (0.1–0.2 MPa) and mixing under this atmosphere for another 20–30 minutes; and

f) packing the dough in an essentially gas-impermeable pouch which is flushed with inert gas before it is sealed.

6,039,995

METHOD OF MAKING PARTIALLY SPLIT SLICES OF BACON

Merle Zamzow, Loganville, Ga., assignor to Hormel Foods, LLC, Austin, Minn.

Filed May 29, 1998, Appl. No. 87,316

Int. Cl.[7] **A23P** *1/00*

U.S. Cl. 426—518 **13 Claims**

1. A method of making a partially split slice of bacon, comprising:

a) partially splitting a belly by making a cut, which extends from the belly's flank end to the belly's shoulder end, on the belly's first side, the cut extending from the first side to proximate the belly's second side, wherein the belly is partially split; and

b) slicing the belly to form a slice of bacon that is partially split, wherein the slice of bacon may be later easily split into two pieces.

6,039,996

ACID-NEUTRALIZING ADDITIVE FOR ROASTING COFFEE

Richard S. Hornack, Overland Park, Kans., assignor to Chemcraft, Inc., Overland, Kans.

Provisional application No. 60/044,389, Apr. 18, 1997. This application Apr. 17, 1998, Appl. No. 62,270.

Int. Cl.[7] **A23L** *1/22;* **A23B** *6/00;4/03;* **A23F** *5/00*

U.S. Cl. 426—534 **2 Claims**

1. A process for reducing acidity in beans comprising contacting the beans with a solution comprising from about 1 to 2 percent Phosphorus Pentoxide, from about 0.25 to about 2 percent non-anionic surfactant, about five to about 40 percent of a solution of about 45 percent potassium hydroxide, and from about 55 to about 80 percent deionized water.

6,039,997

BREAD AND BREAD'S DOUGH

Naoyuki Mizoguchi, Nagoya; Katsuyuki Yamamoto, Itami, and Kimihito Wada, Nishinomiya, all of Japan, assignors to Matsutani Chemical Industries Co., Ltd., Hyogo-ken, Japan

Filed Apr. 8, 1997, Appl. No. 835,481

Claims priority, application Japan, Apr. 9, 1996, 8-112024

Int. Cl.[7] **A21D** *10/00*

U.S. Cl. 426—549 **4 Claims**

1. A dough for a bread which is obtainable by adding 65 to 90 parts by weight of water per 100 parts by weight of a raw powder, and kneading the mixture, wherein said raw powder comprises 50 to 90 parts by weight of wheat flour and 50 to 10 parts by weight of starches including at least 4 parts by weight of a cold water swelling starch having a hot water solubility of not more than 8% by weight, a ratio of a cold water swelling power (Sc) to a hot water swelling power (Sh), Sc/Sh, ranging from 1.2 to 0.8 and a cold water swelling power ranging from 4 to 15; said raw powder additionally comprises a cross-linked starch that is different from the cold water swelling starch, said cross-linked starch having a hot water swelling power ranging from 3 to 15 and a hot water solubility of 15% or less by weight and comprises 6.5 to 9.0% by weight of protein derived from wheat flour.

6,039,998

FREEZABLE LOW-CALORIE SPOONABLE DRESSING AND METHOD FOR THEIR PRODUCTION

Bernard Charles Sekula, Lebanon Township, N.J., and Rosemary Antoinette Golden, New York City, N.Y., assignors to Bestfoods, Englewood Cliffs, N.J.

Filed Mar. 4, 1999, Appl. No. 262,221

Int. Cl.[7] **A23D** *9/007*

U.S. Cl. 426—605 **17 Claims**

1. A spoonable dressing composition having a fat component comprising at least about 25 weight percent fatty acid-esterified propoxylated glycerin having an average of about 3 to about 16 oxypropylene units per unit of glycerin and the fatty acid of the fatty acid esterified propoxylated glycerine is at least about 75% by weight stearic acid with the balance of the fat component comprising blended salad oil which composition exhibits freeze-thaw stability.

6,039,999

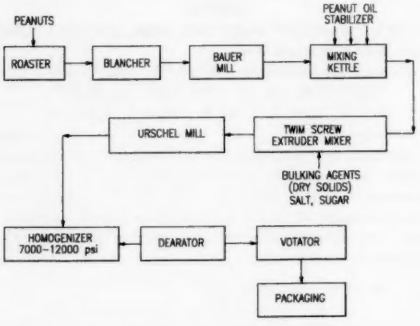
REDUCED FAT NUT BUTTER PRODUCT AND PROCESS FOR MAKING THE SAME

Amarjit S. Bakshi, Yorba Linda, and Lakho L. Khatri, Walnut, both of Calif., assignors to Hunt Wesson, Inc., Fullerton, Calif.

Continuation of application No. 08/105,005, Aug. 11, 1993, abandoned. This application Jan. 30, 1995, Appl. No. 380,255.

Int. Cl.[7] **A23L** *1/38*

U.S. Cl. 426—633 **28 Claims**



1. A method for making a reduced fat nut butter product comprising the steps of:

(a) combining

from about 30% to about 75% of a nut paste,

from about 15% to about 45% of one or more water-soluble, non-fat dry solid,

from about 0% to about 10% of an added edible oil,

from about 0% to about 30% of at least one water-insoluble non-fat dry solid, from about 0% to about 3% stabilizer; and

from about 0% to about 3% emulsifier, where the percentages are weight percentages based on the total weight of the nut butter product;

(b) intimately mixing the combination by passing it through an extruder mixer simultaneously with the generation of free nut oil; and then

(c) homogenizing the mixture under a pressure of at least about 4,000 psig.

6,040,000

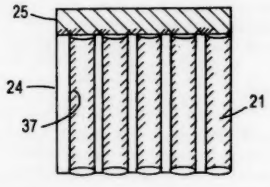
METHOD AND APPARATUS FOR A MICROCHANNEL PLATE HAVING A FISSURED COATING

Richard F. Floryan, Roanoke, and George Hambro, Blue Ridge, both of Va., assignors to ITT Manufacturing Enterprises, Inc., Wilmington, Del.

Filed Mar. 24, 1998, Appl. No. 47,167

Int. Cl.[7] **C23C** *14/24*

U.S. Cl. 427—78 **10 Claims**



1. A method for making an improved microchannel plate, comprising:

providing a microchannel plate being of a type formed from a substrate having an input surface, and output surface, and a plurality of channels extending therebetween for providing secondary emmission of electrons incident to said channels;

forming an insulative film over the input surface and the channels of the microchannel plate;

after forming the insulative film, depositing a fissured material onto the input surface of the microchannel plate, said fissured material having random fissures and being capable of secondary electron emission on the input surface of the microchannel plate and of causing a cascade of electrons for entry into said channels of the microchannel plate in response to an electron entering one of said fissures; and

after depositing the fissured material, removing the insulative film, whereby said fissured material does not penetrate into the channels.

6,040,001

METHOD OF MANUFACTURING A DIAMOND VACUUM DEVICE

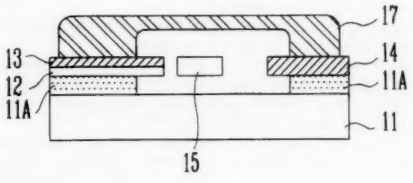
Mun Cheol Paek; Sung Woo Choi, and Kee Soo Nam, all of Daejon-Shi, Rep. of Korea, assignors to Electronics and Telecommunications Research Institute, Daejeon, Rep. of Korea

Filed Aug. 20, 1998, Appl. No. 136,614

Claims priority, application Rep. of Korea, Sep. 18, 1997, 97-47535

Int. Cl.[7] **B05D** *5/12*; **C23C** *16/00*

U.S. Cl. 427—78 **3 Claims**



1. A method of manufacturing a diamond vacuum device, comprising the steps of:

after forming a silicon oxide film on a silicon substrate through an oxidation process, depositing a polysilicon wiring layer thereon and patterning said polysilicon wiring layer into an anode shape;

depositing a diamond thin film on said polysilicon wiring layer through a selective deposition method to form a diamond cathode;

depositing a refractory metal thin film on said silicon oxide film and then patterning said refractory metal thin film to form gates and anode, wherein said gates are formed at right and left sides of the electron emission direction of said diamond cathode, and said anode is formed at the electron emission direction of said diamond cathode;

forming a photosensitive pattern on the outside of the entire structure after forming said gates and anode and etching the exposed silicon oxide film therein, wherein said etching is performed up to a silicon oxide film below said diamond cathode, said gate and said anode, thus floating said diamond cathode, said gate and the anode in a space;

removing said photosensitive pattern, and filling a photosensitive film within said space by an inverse mask pattern;

depositing a silicon oxide film on the entire structure including said photosensitive film filled within said space to package in vacuum, wherein an outlet is formed at a portion of said anode; and

removing said photosensitive film filled within said space through said outlet and sealing in vacuum said outlet using a silicon oxide film.

6,040,002

ETCHING RESIST COMPOSITION, PATTERN FORMING METHOD MAKING USE OF THE SAME, PRINTED-WIRING BOARD AND ITS PRODUCTION

Hiromichi Noguchi, Atsugi; Hiroshi Sugitani, Machida; Yutaka Koizumi, Yokohama; Tadayoshi Inamoto, Hachioji; Kiyomi Aono, Kokubunjii, and Yoshie Nakata, Kawasaki, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Division of application No. 08/353,694, Dec. 12, 1994, abandoned. This application Feb. 18, 1997, Appl. No. 801,419.

Claims priority, application Japan, Dec. 14, 1993, 5-313612

Int. Cl.[7] **B05D** *5/12;* **H05K** *3/06*

U.S. Cl. 427—96 **34 Claims**

1. A process for producing a printed-wiring board, comprising steps:

i) patternwise imparting an etching resist aqueous composition to a surface of a copper-foil laminated substrate by ink-jet printing, said etching resist aqueous composition having a viscosity of 10 cP or below and comprising a base, water, and a polymeric compound which is neutralized by said base to form a compound soluble in water and said aqueous composition;

ii) drying the etching resist aqueous composition imparted to the surface of the copper-foil laminated substrate; and

iii) etching the copper-foil which is not covered with the dried etching resist aqueous composition.

6,040,003

METHOD AND APPARATUS FOR LUBRICATING CONTINUOUS FIBER STRAND WINDING APPARATUS

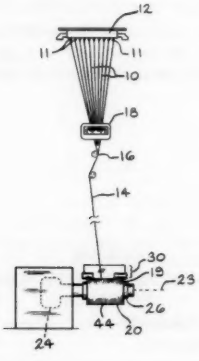
Roy E. Smith, Columbus, Ohio, assignor to Owens Corning Fiberglas Technology, Inc., Summit, Ill.

Continuation of application No. 08/683,014, Jul. 16, 1996, Pat. No. 5,756,149. This application Mar. 5, 1998, Appl. No. 35,714.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **B05D** *3/12*

U.S. Cl. 427—177 **5 Claims**



1. A method for winding a mineral fiber strand to build a package comprising the steps of:

providing a moving strand;

applying a size to the strand;

attaching the strand to a collet;

rotating the collet to wind the strand and build a package of the strand;

reciprocating the strand with a strand reciprocator to lay the strand in a pattern on a package surface as the package rotates during building;

generating a fog of airborne lubrication particles from a lubricant; and

lubricating the strand reciprocator by transferring a portion of the fog of airborne lubrication particles to the strand reciprocator, wherein the lubricant is one of a self-emulsifying lubricant, an organic, agriculturally based lubricant, a bisimid, and a reaction product of polyethyleneimine polyamide salt and water.

6,040,004

METHOD AND APPARATUS FOR FABRICATING A PARTICLE-COATED SUBSTRATE, AND SUCH SUBSTRATE

Kenji Matsumoto, Kawasaki; Kazuo Suzuki, and Muneo Haga, both of Sagamihara, all of Japan, assignors to 3M Innovative Properties Company, St. Paul, Minn.

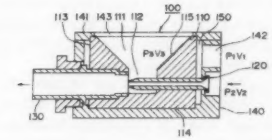
PCT No. PCT/US96/03091, § 371 Date Aug. 1, 1997, § 102(e) Date Aug. 1, 1997, PCT Pub. No. WO96/28256, PCT Pub. Date Sep. 19, 1996

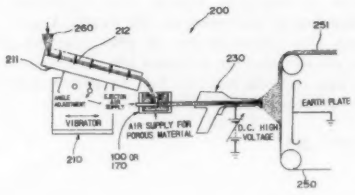
PCT Filed Mar. 8, 1996, Appl. No. 875,713

Claims priority, application Japan, Mar. 9, 1995, 7-049603

Int. Cl.[7] **B05D** *7/00*

U.S. Cl. 427—185 **3 Claims**





1. An ejector for ejecting particles to be coated onto a substrate, comprising:

a storage container made of a porous material, the container including an interior adapted for storing particles in the container and an outer surface;

an ejection as nozzle extending from outside the container to the interior and provided at a bottom portion of the storage container, in a portion thereof where the particles are stored, adapted for feeding to the interior of the storage container an ejection gas to be ejected to outside of the storage container;

a discharge tube arranged generally coaxially of the ejection gas nozzle at the bottom portion of the storage container and extending from the interior of the container to outside the container, and adapted for sending the ejection gas and the particles from the interior to outside of the storage container;

an agitation gas inlet in fluid communication with the outer surface of the porous storage container adapted for feeding an agitation gas from the outside of the storage container through the porous container to the interior of the storage container to perform agitation for imparting a fluidized state to the particles present at least at the bottom portion of the storage container interior where the ejection gas nozzle and the discharge tube are disposed; and

an outer container forming a gas-pressure buffer portion defined by a clearance between the outer container and the outer surface of the storage container where the ejection gas nozzle and the discharge tube are disposed, wherein the agitation as inlet is in fluid communication with the buffer portion and wherein the gas-pressure buffer portion is formed so as to surround the storage container.

COLORED POLYMERS

Kathyrn Carr, Preston, and Ian Ferguson, Lancashire, both of United Kingdom, assignors to Zeneca Limited, London, United Kingdom

PCT No. PCT/GB96/01776, § 371 Date Feb. 12, 1998, § 102(e) Date Feb. 12, 1998, PCT Pub. No. WO97/07169, PCT Pub. Date Feb. 27, 1997

PCT Filed Jul. 24, 1996, Appl. No. 11,611

Claims priority, application United Kingdom, Aug. 12, 1995, 9516575

Int. Cl.[7] B05D *1/00*

U.S. Cl. 427—197 **13 Claims**

1. A colour filter or reprographic toner which comprises a coloured polymer corresponding to the polymer obtained by polymerisation of a mixture comprising a dye and a triazine compound having at least two groups selected from the class consisting of alkoxymethylamino and hydroxymethylamino.

6,040,006

APPARATUS AND METHOD FOR APPLYING COATING MATERIALS TO INDIVIDUAL SHEET MEMBERS

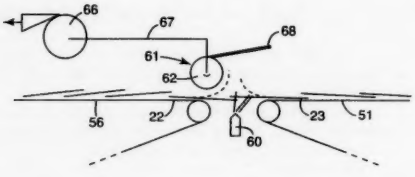
Frédéric Pierre Alain Le Riche, Osny, and Bernard Raymond Pierre, Monneville, both of France, assignors to 3M Innovative Properties Company, St. Paul, Minn.

Division of application No. 08/949,994, Oct. 14, 1997, Pat. No. 5,868,838, which is a division of application No. 08/675,857, Jul. 5, 1996, abandoned, which is a continuation-in-part of application No. 08/291,610, Aug. 17, 1994, abandoned, and application No. 08/615,587, Mar. 12, 1996, abandoned, which is a continuation of application No. 08/291,628, Aug. 17, 1994, abandoned. This application Jan. 14, 1999, Appl. No. 231,031.

Claims priority, application United Kingdom, Feb. 16, 1996, 9603281; Feb. 16, 1996, 9603345; Feb. 16, 1996, 9603355; Feb. 16, 1996, 9603365; Feb. 16, 1996, 9603366

Int. Cl.[7] B05D *1/28*

U.S. Cl. 427—209 **1 Claim**



1. A method of coating sheets comprising the steps of:

(a) sequentially conveying a plurality of sheets, each having first and second major surfaces, along a sheet path;

(b) applying an aqueous coating material to the first and second major surfaces of each individual sheet as the sheets are conveyed along the sheet path so as to form coated sheets;

(c) arranging the coated sheets with a trailing edge portion of each sheet underneath a leading edge portion of a succeeding sheet; and

(d) changing the relative overlapping positions of the sheets by (i) lifting the overlapped edge portions of each sheet away from the sheet path, (ii) retarding return of the lifted trailing edge portion of each sheet for a time period sufficient to allow the lifted leading edge portion of the succeeding sheet to return to the sheet path before the trailing edge portion, and then (iii) allowing the lifted trailing edge portion of the sheet to return to the paper path and rest on top of the leading edge portion of the succeeding sheet.

NICKEL HYDROXIDE PARTICLES HAVING AN α- OR β-COBALT HYDROXIDE COATING LAYER FOR USE IN ALKALI BATTERIES AND A PROCESS FOR PRODUCING THE NICKEL HYDROXIDE

Imaizumi Junichi; Kawasaki Yuri; Makino Tetsushi, and Iida Toyoshi, all of Fukui-ken, Japan, assignors to Tanaka Chemical Corporation, Fukui, Japan

Filed May 19, 1997, Appl. No. 858,599

Claims priority, application Japan, Jun. 19, 1996, 8-178522; Jun. 19, 1996, 8-178523

Int. Cl.[7] B05D *7/00*

U.S. Cl. 427—215 **2 Claims**

1. A process for producing an active material for positive electrodes of alkali batteries, comprising the following steps:

(1) supplying an aqueous solution of a nickel salt, an ammonium ion source and a solution of an alkali metal hydroxide into a reaction vessel;

(2) causing a continuous crystal growth of high-density nickel hydroxide;

(3) recovering the resultant nickel hydroxide particles and supplying them into another reaction vessel;

(4) adding an ammonium ion source and a solution of an alkali metal hydroxide and adjusting the pH to 8–11; and

(5) adding an aqueous solution of a cobalt salt and a solution of an alkali metal hydroxide while maintaining the pH value, thereby forming an α-cobalt hydroxide coating layer on the surface and within pores of said nickel hydroxide particles.

LOW SOLVENT CONTENT TYPE-RESIN COMPOSITION, COATING COMPOSITION CONTAINING SUCH RESIN COMPOSITION AND PROCESS FOR COATING SUCH COATING COMPOSITION

Yoshiaki Marutani; Takashi Tomita; Tadamitsu Nakahama; Hiroyuki Uemura; Kazuhi Koga, and Mika Ohsawa, all of Hiroshima, Japan, assignors to Mazda Motor Corporation, Hiroshima, Japan

Filed Jun. 19, 1995, Appl. No. 491,736

Claims priority, application Japan, Jun. 23, 1994, 6-141918; Jul. 6, 1994, 6-154714

Int. Cl.[7] C09B *167/00;167/04*

U.S. Cl. 427—241 **18 Claims**

1. A low organic solvent content resin composition comprising:

(1) a polyester oligomer, which is a star oligomer or a star burst oligomer prepared by an addition reaction, having a hydroxy group in an amount of 2.0 to 10.0 moles/Kg-resin, a number average molecular weight (Mn) of 300 to 1500, a weight average molecular weight (Mw) of 300 to 3000, and a ratio of a weight average molecular weight/a number average molecular weight (Mw/Mn) of 1.0 to 2.0, an amount of a modifying lactone being 31 to 85%, and an aliphatic hydrocarbon group having 4–22 carbon atoms derived from the group consisting of a monoepoxy compound, a hydroxy acid and an aliphatic acid;

said addition reaction being carried out such that:

(i) one mole of a polyol having 3 to 6 hydroxyl groups is reacted with 0.3 to 1.5 mole of an acid anhydride, then with 2 to 10 moles of a lactone, and then with 0.3 to 1.5 mole of a monoepoxy compound: or

(ii) one mole of a polyol having 3 to 6 hydroxyl grouns is reacted with 0.3 to 1.5 mole of an acid anhydride, then with 0.3 to 1.5 mole of a monoepoxy compound, and then with 2 to 10 moles of a lactone: or

(iii) one mole of a polyol having 3 to 6 hydroxyl groups is reacted with 2 to 10 moles of a lactone, then with 0.3 to 1.5 mole of an acid anhydride, and then with 0.3 to 1.5 mole of a monoepoxy compound, or

said addition reaction being carried out such that:

one mole of a polyepoxy compound having 3 to 6 epoxy groups is reacted with 2 to 6 moles of a hydroxy acid or an aliphatic acid, and then with 2 to 10 moles of a lactone;

(2) a curing agent reactive with a hydroxyl group of said polyester oligomer;

and wherein the content of an organic solvent is 5 to 40%.

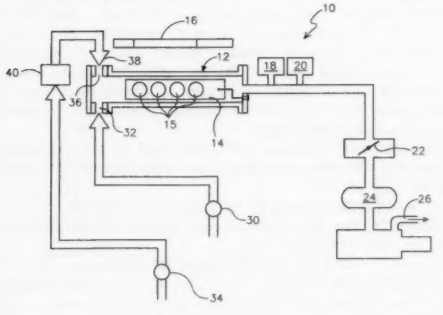
CATALYTIC BREAKDOWN OF REACTANT GASES IN CHEMICAL VAPOR DEPOSITION

Anand Srinivasan, and Gurtej S. Sandhu, both of Boise, Id., assignors to Micron Technology, Inc., Boise, Id.

Filed Sep. 10, 1996, Appl. No. 709,856

Int. Cl.[7] C23C *16/06;16/08*

U.S. Cl. 427—250 **16 Claims**



1. A method of depositing a film on a semiconductor wafer in a chemical vapor deposition process comprising the steps of:

a) providing a semiconductor wafer in a chamber;

b) providing a first gas to the chamber, the first gas passing through a first line, wherein the first gas comprises a refractory metal compound;

c) contacting an activated gas precursor with a catalyst to produce an activated gas;

d) delivering the activated gas into the chamber through a second line, wherein the second line is separate from the first line such that the first gas does not contact the catalyst; and

e) contacting the semiconductor wafer with the activated gas and the first gas, wherein a film comprising the refractory metal of the refractory metal compound is formed on the semiconductor.

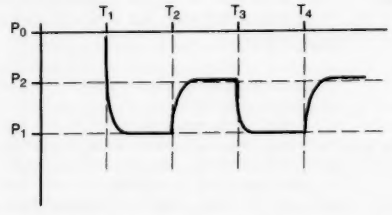
VACUUM TUMBLING OF MEATS AND OTHER FOODS

Stephen P. Karales, 2011 Riverside Dr., Suite 300, Columbus, Ohio 43221, assignor to Stephen P. Karales, Parma Heights, Ohio

Continuation of application No. 08/759,836, Dec. 2, 1996, abandoned, which is a continuation of application No. 08/605,683, Feb. 22, 1996, abandoned, which is a continuation of application No. 08/328,484, Oct. 25, 1994, abandoned. This application Nov. 21, 1997, Appl. No. 975,566.

Int. Cl.[7] **A23L** *1/31*

U.S. Cl. 427—281 **9 Claims**



1. A method for treating pieces of food by tumbling in a marinade, the method comprising:

(a) tumbling the pieces of food with a marinade in a gentle kneading action so the pieces simply roll over each other, said pieces being tumbled in a sealed tumbler having a smoothly continuous, surrounding interior longitudinal side wall having a central axis parallel to the longitudinal sidewall and having no protrusions contacting the pieces of food to avoid impacting the food against a solid surface, the tumbler being rotated about the axis of the side wall; and

(b) pumping gas from the tumbler to attain a reduced pressure at a first pressure value and then subsequently pumping gas from the tumbler during the tumbling to maintain a reduced, subatmospheric pressure during rotation until the pressure is returned to atmospheric pressure for removing the pieces of food from the tumbler;

wherein rotation is such as to avoid lifting the product higher than the axis of rotation and dropping the product while being rotated.

LIQUID APPLICATION NOZZLE, METHOD OF MANUFACTURING SAME, LIQUID APPLICATION METHOD, LIQUID APPLICATION DEVICE, AND METHOD OF MANUFACTURING CATHODE-RAY TUBE

Masato Mitani, Hirakata; Kazuto Nakajima, Yamatokoriyama; Hiroyuki Kotani, Izumi; Nobutaka Hokazono, Neyagawa; Hiroyuki Naka, Osaka; Akira Yamaguchi, Hirakata; Junji Ikeda, Ikoma, and Nobuyuki Aoki, Hirakata, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., and Matsushita Electronics Corporation, both of Osaka, Japan

PCT No. PCT/JP97/00462, § 371 Date Oct. 20, 1997, § 102(e) Date Oct. 20, 1997, PCT Pub. No. WO97/30793, PCT Pub. Date Aug. 28, 1997

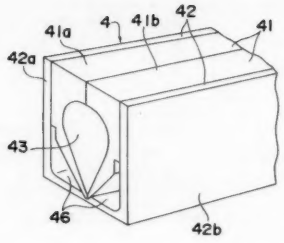
PCT Filed Feb. 20, 1997, Appl. No. 930,218

Claims priority, application Japan, Feb. 21, 1996, 8-033391; Oct. 14, 1996, 8-271104

Int. Cl.[7] **B05D** *1/02;* **B05B** *7/06*

U.S. Cl. 427—421 **21 Claims**

11. A method for coating an object, comprising:



discharging liquid in a linear or curtain-like shape and gas surrounding the liquid from a nozzle comprised of a first block having an inner liquid reserving section which extends in a longitudinal direction and an inner discharge section which is formed at a bottom portion of the inner liquid reserving section, which extends in the longitudinal direction, and which has formed therein a plurality of holes or a slit so as to form an outlet of the inner discharge section, and a second block having an inner gas reserving section which extends in the longitudinal direction and an outer discharge section which is formed at a bottom portion of the inner gas reserving section, which extends in the longitudinal direction, and which has formed therein a plurality of holes or a slit so as to form an outlet of the outer discharge section, wherein the first block is positioned in the second block such that the outlet of the inner discharge section is further from a position where the object is to be coated than a portion of the outlet of the outer discharge section nearest the inner discharge section; and

moving the object and the nozzle relative to each other while discharging the liquid and the gas.

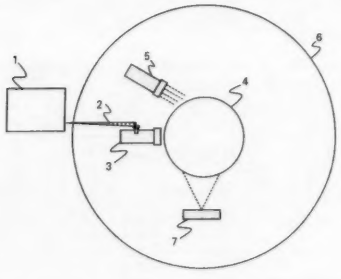
FORMATION OF MULTILAYERED PHOTONIC POLYMER COMPOSITES

Michael G. Mikhael; Ali Boufelfel, and Angelo Yializis, all of Tucson, Ariz., assignors to Sigma Laboratories, Inc., Tucson, Ariz.

Filed Oct. 2, 1998, Appl. No. 165,999
Int. Cl.[7] C23C *16/48*
U.S. Cl. 427—496 **6 Claims**



1. A method for forming a sequential multilayered film polymer composite via a binary evaporator system from either a homogeneous solution or a heterogeneous slurry according to the following steps:

(a) evaporating from a first evaporator an electron acceptor dopant at sufficient temperatures and pressures to allow the evaporation;

(b) condensing the vapor of the dopant onto a temperature controlled substrate which is attached to a rotating drum to form a layer;

(c) flash-evaporating from a second evaporator a mixture of an electron donor organic substance and a radiation curable acrylate monomer at sufficient pressures and temperatures which allow the evaporation of each constituent;

(d) condensing said mixture vapor (step c) onto the previously deposited dopant (step b);

(e) curing the layer with a radiation source; and

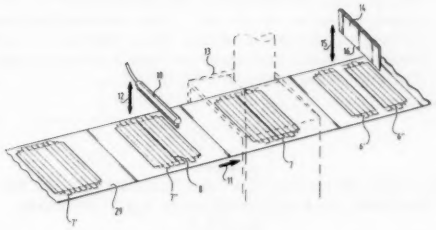
(f) repeating steps (a) through (e) until a desired number of layers is obtained.

6,040,018

METHOD FOR REINFORCING A BOARD, SHEET OR FOIL

Jacobus Stephanus Lamers, Bemmel, Netherlands, assignor to Lamers Beheer B.V., Gendt, Netherlands

Filed Dec. 4, 1997, Appl. No. 984,867
Int. Cl.[7] B05D *3/06;3/12*
U.S. Cl. 427—510 **18 Claims**



1. A method for reinforcing a board, sheet or foil of fibrous material, the method comprising the steps of:

(a) providing the board, the sheet or the foil of fibrous material as a preformed blank;

(b) providing a curable liquid;

(c) impregnating with the curable liquid a zone of the preformed blank, with the zone extending between opposite edges of the preformed blank;

(d) causing the curable liquid to cure such that a reinforced zone forms extending between the opposite edges of the preformed blank; and

(e) separating by a separating operation the reinforced zone into two complementary edges such that the preformed blank is divided into two substantially identical parts, and

wherein step (e) of the method occurs after step (c) of the method.

6,040,019

METHOD OF SELECTIVELY ANNEALING DAMAGED DOPED REGIONS

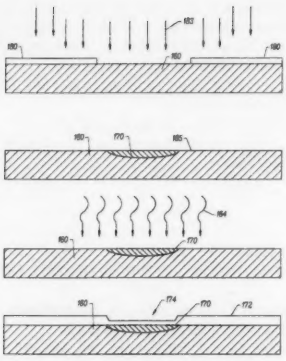
Emi Ishida, Sunnyvale; Xiao-Yu Li, and Sunil D. Mehta, both of San Jose, all of Calif., assignors to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Feb. 14, 1997, Appl. No. 799,230
This patent is subject to a terminal disclaimer.
Int. Cl.[7] C23C *14/00;* **H01L** *21/263;* **B05D** *3/06*
U.S. Cl. 427—526 **23 Claims**

1. A method of forming a region of impurity in a semiconductor wafer substrate having a surface, comprising sequential steps of:

(a) imparting a surface oxidation-inhibiting impurity into the semiconductor substrate to a depth below the surface of the semiconductor substrate to form a surface oxidation-inhibiting impurity region;

(b) applying a first laser energy to the semiconductor substrate at a sufficient magnitude to liquify the semiconductor substrate in the surface oxidation-inhibiting impurity regions to repair the surface of the semiconductor substrate damaged by the step (a); and



(c) growing an oxide region on the surface of the semiconductor substrate such that the oxide region grows at a first rate over the surface oxidation-inhibiting impurity region and a second rate on the surface not over the surface oxidation-inhibiting impurity region, wherein the first rate is different from the second rate and the oxide region produced by the first rate has a thickness measuring up to about 100 Å.

6,040,020

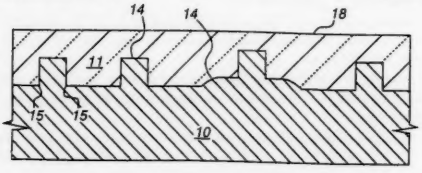
METHOD OF FORMING A FILM HAVING ENHANCED REFLOW CHARACTERISTICS AT LOW THERMAL BUDGET

Gurtej Sandhu, and Randhir P. S. Thakur, both of Boise, Id., assignors to Micron Technology, Inc., Boise, Id.

Filed Aug. 7, 1995, Appl. No. 512,234

Int. Cl.[7] B32B *17/00*

U.S. Cl. 427—557 **10 Claims**



1. A method of forming a film, comprising the steps of:

forming a surface layer of material lying above a base layer of material, the surface layer having a lower melting point than the base layer, wherein the step of forming the surface layer comprises the step implanting a top portion of the base layer with a dopant;

exposing said surface layer and said base layer to radiant energy so as to cause reflow of said surface layer and said base layer, removing said surface layer subsequent said reflow.

6,040,021

PLASMA CVD PROCESS FOR METAL FILMS AND METAL NITRIDE FILMS

Takaaki Miyamoto, Kanagawa, Japan, assignor to Sony Corporation, Tokyo, Japan

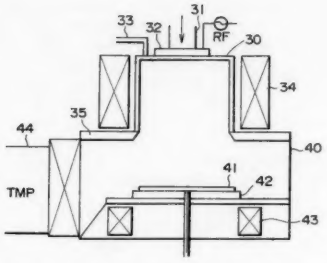
Filed Dec. 19, 1997, Appl. No. 994,993

Claims priority, application Japan, Dec. 24, 1996, P08-343678; Jun. 25, 1997, P09-169027

Int. Cl.[7] B05D *3/06;* **C23C** *16/00*

U.S. Cl. 427—576 **28 Claims**

1. A plasma CVD process for forming a metal film on a substrate to be processed using a source gas containing a metal halide gas, hydrogen gas, and a noble gas, said process comprising the steps of:



reducing the metal halide by activated hydrogen species in a plasma to generate neutral species of a metal;

making the neutral species of the metal collide with at least one kind of activated species of the noble gas and electrons in the plasma to generate metal ions;

making the metal halide collide with at least one kind of the activated species of the noble gas and the electrons in the plasma to generate metal ions and neutral species of a halogen;

reducing the neutral species of the halogen by the activated hydrogen species in the plasma to generate a hydrogen halide; and

making the metal ions thus generated incident on a principal surface of the substrate to be processed in the direction substantially perpendicular to the principal surface.

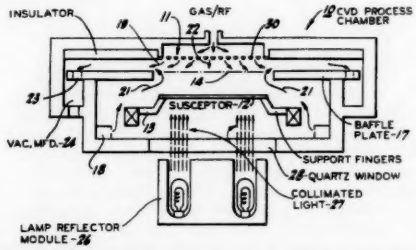
PECVD OF COMPOUNDS OF SILICON FROM SILANE AND NITROGEN

Mei Chang; David N. K. Wang, both of Cupertino; John M. White, Hayward, and Dan Maydan, Los Altos Hills, all of Calif., assignors to Applied Materials, Inc., Santa Clara, Calif.

Division of application No. 07/746,178, Nov. 6, 1996, Pat. No. 5,773,100, which is a continuation of application No. 08/453,135, May 24, 1995, abandoned, which is a continuation of application No. 08/272,959, Jul. 11, 1994, abandoned, which is a continuation of application No. 07/809,050, Dec. 17, 1991, abandoned, which is a continuation of application No. 07/345,977, Apr. 28, 1989, abandoned, which is a continuation of application No. 07/085,424, Aug. 14, 1987, Pat. No. 4,854,263. This application Apr. 14, 1998, Appl. No. 59,734. This patent is subject to a terminal disclaimer.

Int. Cl.[7] B05D *3/06;* **C23C** *16/30*

U.S. Cl. 427—579 **5 Claims**



1. A plasma enhanced chemical vapor deposition process for the deposition of compounds of silicon selected from the group consisting of silicon oxide and silicon oxynitride having a substantially uniform thickness on a substrate from a mixture of precursor gases including silane comprising

activating said precursor gases by passing them through a parallel plate electrode having a face plate including an array of tapered openings therein, wherein the openings for gas inlet are smaller than the openings for gas outlet and the taper is

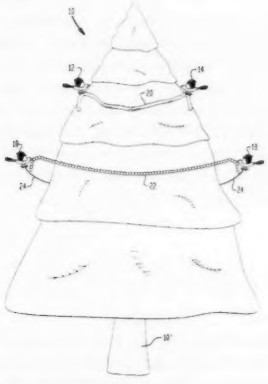
sufficient to increase the dissociation of one or more precursor gases as they pass through said faceplate, while applying radio frequency energy to the plate.

6,040,023

DECORATIVE TREE DEVICE

Anthony J. Salerno, 3252 Banta Rd., South Plainfield, N.J. 07080

Filed May 14, 1998, Appl. No. 78,782
Int. Cl.[7] A01N *1/00*
U.S. Cl. 428—16 **22 Claims**



13. A tree decoration comprising:

a. a figurine;

b. an elongate decorative member attached to said figurine, said elongate decorative member being so constructed and decorative that it can be extended on or adjacent to a tree at a location remote from said figurine to provide a decorative arrangement together with said figurine; and

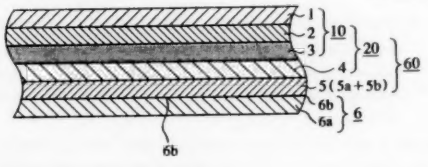
c. a fastener adapted to fasten said figurine to a tree.

6,040,024

LAMINATED FILM, METHOD FOR PRODUCTION THEREOF, AND BAG AND PACKAGE USING THE LAMINATED FILM

Yoshiaki Tokita, Urayasu, and Takahiro Takagi, Saitama-ken, both of Japan, assignors to Kyodo Shiko Co., Ltd., Tokyo, Japan

Filed Feb. 19, 1998, Appl. No. 25,868
Claims priority, application Japan, Mar. 26, 1997, 9-091480
Int. Cl.[7] B32B *7/06;27/00;27/08;27/32;* **B65D** *65/40*
U.S. Cl. 428—35.2 **13 Claims**



1. A laminated film comprising:

an outer-layer-film including one or more layers;

a water-soluble film; and

an intermediate layer interposed between said outer-layer-film and said water-soluble film, said intermediate layer containing high-pressure polyethylene oxidized at least on a surface thereof contiguous to said water-soluble film to such a degree that said intermediate layer and said water-soluble film adhere so weakly to each other as to be peelable;

wherein said outer-layer-film and said intermediate layer adhere fast to each other;

said intermediate layer and said water-soluble film directly contact each other and adhere so weakly to each other as to be peelable; and

said water-soluble film includes a water-soluble substrative film and a water-soluble anchor coating agent distributed on a surface of said water-soluble substrative film contiguous to said intermediate layer.

6,040,025

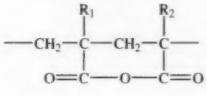
ADHESION BINDER CONTAINING GLUTARIMIDE MOIETIES

Serge Lorek, Pau, France, assignor to Elf Atochem S.A., Puteaux, France

Division of application No. 08/537,929, filed as application No. PCT/FR94/00488, Apr. 28, 1994. This application May 11, 1998, Appl. No. 75,771.
Int. Cl.[7] B29D *9/00;23/00;* **B29K** *85/00;105/26*
U.S. Cl. 428—35.9 **13 Claims**

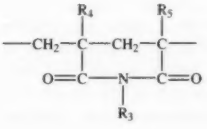
1. Multilayer material comprising in order a layer of fluorinated polymer, a layer of binder for a fluorinated polymer, which enables said binder to adhere to polymers with which it is incompatible, characterized in that said binder comprises a polymer A containing the following moieties:

(1)



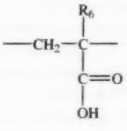
in which R_1 and R_2, which may be identical or different, represent H or a linear or branched alkyl having from 1 to 20 carbon atoms;

(2)



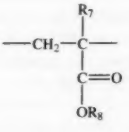
in which (i) R_4 and R_5, which may be identical or different, represent H or a linear or branched alkyl having 1 to 20 carbon atoms, and (ii) R_3 represents H, an alkyl, cycloalkyl, aryl, alkaryl, aralkyl or a heterocycle;

(3)



in which R_6 represents H or a linear or branched alkyl having from 1 to 20 carbon atoms; and

(4)



in which R_7 represents H or a linear or branched alkyl having from 1 to 20 carbons and R_8 represents a linear or branched alkyl having from 1 to 20 carbon atoms; and a layer of polymer which is incompatible with the fluorinated polymer.

REMOVABLE POLYURETHANE ADHESIVES WITH IMPROVED TEMPERATURE RESISTANCE PROPERTIES

Robert L. Cline, Paden City; James W. Rosthauser, Glendale, both of W. Va., and Peter H. Markusch, McMurray, Pa., assignors to Bayer Corporation, Pittsburgh, Pa.

Filed Jan. 13, 1998, Appl. No. 6,129

Int. Cl.[7] C09J *7/02*

U.S. Cl. 428—41.8 **4 Claims**

1. In a process for coating a substrate comprising applying a composition to a substrate, and allowing the composition to cure, the improvement wherein said composition comprises a highly elastic polyurethane contact adhesive which is the reaction product of a mixture consisting of

a) a polyisocyanate or polyisocyanate adduct having a functionality of less than about 4,

and

b) a polyol component consisting of:

1) about 90 to 100% by weight, based on 100% by weight of component b), of at least one polyether having a molecular weight of from about 1,800 to 12,000 and an average functionality of from about 1.5 to about 4,

and

2) up to about 10% by weight, based on 100% by weight of component b), of at least one chain extender containing hydroxyl groups and having a molecular weight of from about 60 to 400 and an average functionality of from about 1.5 to about 3,

wherein at least one of components a) and b) have an average functionality greater than 2.2 and the functionalities and quantities of components a) and b) are selected such that the molecular weight between crosslinks of the resultant polyurethane is from about 7,000 to about 16,000, the equivalent ratio of isocyanate groups to isocyanate-reactive groups present in the resultant polyurethane is from about 80:1000 to about 120:100 and the urethane group content of the resultant polyurethane is from about 1 to about 8%.

OPTICAL RECORDING MEDIUM

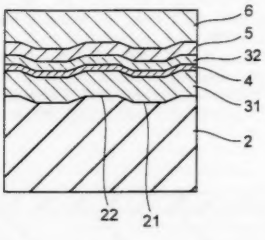
Hajime Utsunomiya; Tatsuya Kato, and Hiroyasu Inoue, all of Chou-ku, Japan, assignors to TDK Corporation, Tokyo, Japan

Filed Sep. 15, 1998, Appl. No. 153,294

Claims priority, application Japan, Sep. 19, 1997, 9-273937

Int. Cl.[7] B32B *3/00*

U.S. Cl. 428—64.1 **12 Claims**



1. A method for recording/reproducing an optical recording medium of phase change type comprising a substrate having a thickness of up to 0.8 mm wherein lands and grooves on opposite sides of the land are formed on the surface, and both the lands and the grooves are used as recording tracks, wherein

the medium is overwritten at a recording power Pw (mW) and an erasing power Pe (mW) which meet the relation:

$$(Pw/Pe)\times k^2 \leqq 8.5$$

when the medium has a recording track pitch P (μm), the recording/reproducing optical system has a numerical aperture NA, and the recording/reproducing light has a wavelength λ (μm) which meet the relation:

$$k=(\lambda/NA)/P \geqq 1.78.$$

6,040,031

CONTACT RECORDING MAGNETIC DISK DEVICE

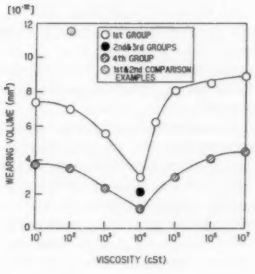
Masahiro Yanagisawa, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Mar. 13, 1997, Appl. No. 815,630

Claims priority, application Japan, Mar. 13, 1996, 8-055869; Nov. 17, 1996, 8-315986

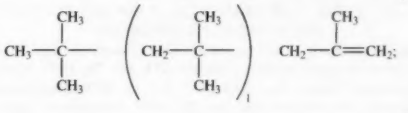
Int. Cl.[7] G11B *5/71*

U.S. Cl. 428—65.4 **16 Claims**

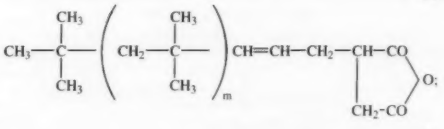


1. A magnetic recording disk comprising a body coated with a lubricant thin film made from one of polybutene, maleic-anhydride-modified polybutene or maleic-anhydride-modified poly-alpha-olefin selected from formula (1), (2) or (3):

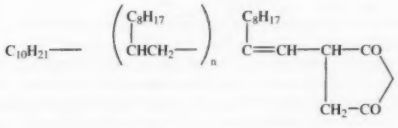
(1)



(2)



(3)



where l is an integer from 3 to 100, while m and n are integers from 1 to 10; and wherein said film has a viscosity in the range from 100 cSt to 100,000 cSt.

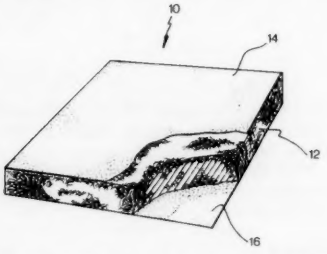
ABSORBENT ARTICLE FOR COLLECTING NON-AQUEOUS LIQUIDS AND A METHOD FOR MANUFACTURING THE ABSORBENT ARTICLE

Joseph Isräel, 111 Old Bay Rd., Belcheltown, Mass. 01007, and Yvon Levesque, 3103 St. Catherine, Montreal, Quebec, Canada, H1W 2E6

Filed Apr. 28, 1993, Appl. No. 54,448
Int. Cl.[7] B32B *5/00;9/04;* **B27N** *3/00*
U.S. Cl. 428—98 **20 Claims**



1. An absorbent article for collecting a non-aqueous liquid comprising a low density, hydrophobic, structurally integral board of peat moss material manifesting an affinity for the non-aqueous liquid, wherein said board of peat moss material is capable of absorbing the non-aqueous liquid under the effect of capillary pressure.

14. A method for manufacturing a low density, structurally integral article for collecting a non-aqueous liquid, said method comprising the steps of:

a) forming a liquid suspension of peat moss material;

b) sheeting said suspension on a layer of fibers;

c) extracting fluidizing medium from said suspension to form a low density board of peat moss material to cause said fibers to adhere to said peat moss material;

d) drying said board of peat moss material at a temperature above 100° C. to evaporate residual moisture;

said method being completed without conditioning said peat moss material with wetting agent to preserve a natural hydrophobicity of the peat moss material in order to impede water penetration in the article.

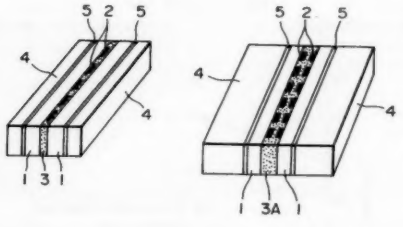
U.S. Cl. 428—209 **10 Claims**



1. A low-resistance interconnector which is an integral elongated strip of a sheet having flat surfaces consisting of three elongated sectional parts conjoined together side-by-side to form the flat surfaces of the sheet including two side sectional parts and one center sectional part sandwiched between the side sectional parts, the side sectional parts being made each from an electrically insulating rubbery elastomer and the center sectional part being a composite body consisting of an electrically insulating adhesive as a matrix and a plurality of electroconductive elements embedded in the matrix each in parallel to the others arranged in an array running in the direction substantially perpendicular to the flat surfaces of the strip of sheet at a regular pitch and made from an electroconductive polymeric composition comprising a polymeric matrix and silver particles dispersed therein and having a volume resistivity in the range from 2×10^{-4} to 5×10^{-4} ohm.cm at room temperature.

6,040,038

FILM CONDENSER AND METALIZED FILM

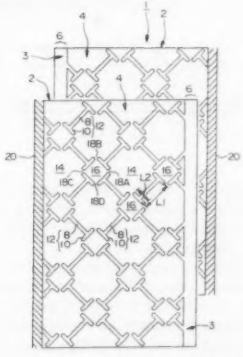
Mitsuru Momose, Aizuwakamatsu, Japan, assignor to Mitsubishi Shindoh Co., Ltd., Tokyo, Japan

Filed Nov. 19, 1997, Appl. No. 972,994

Claims priority, application Japan, Nov. 22, 1996, 8-312356; Nov. 22, 1996, 8-312357; Nov. 22, 1996, 8-312361

Int. Cl.[7] B32B *9/00;* **H01G** *4/06*

U.S. Cl. 428—209 **13 Claims**



1. A metalized film comprising a base film formed from an insulating material, and a metal coating layer formed on said base film, wherein a plurality of uncoated portions are formed as area partition margins in said metal coating layer so as to respectively form, in said metal coating layer, a plurality of electrode regions, a plurality of fuse connecting regions surrounded by two or more of said electrode regions, and a plurality of fuse portions electrically connecting each one of said fuse connecting regions with said electrode regions surrounding said one of said fuse connecting regions, and wherein each of said fuse connecting regions has an area which is smaller than that of each of said electrode regions.

6,040,039

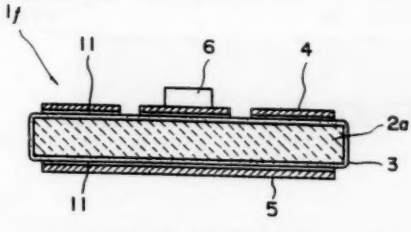
SILICON NITRIDE CIRCUIT BOARD

Kazuo Ikeda; Hiroshi Komorita; Yoshitoshi Sato; Michiyasu Komatsu, and Nobuyuki Mizunoya, all of Yokohama, Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Division of application No. 08/666,467, filed as application No. PCT/JP96/00723, Mar. 19, 1996. This application Nov. 14, 1997, Appl. No. 970,811.

Int. Cl.[7] B32B *3/27*

U.S. Cl. 428—210 **4 Claims**



1. A silicon nitride circuit board comprising:

a high thermal conductive silicon nitride substrate including a silicon nitride crystal phase and a grain boundary phase, having a ratio of a crystallized compound phase to an overall grain boundary phase which is at least 20%, and having a thermal conductivity of at least 60 W/m K;

a first oxide layer having a thickness of 0.5 to 10 μm, which is formed on a surface of said silicon nitride substrate; and

a metal circuit plate directly bonded to said silicon nitride substrate through said oxide layer.

6,040,040

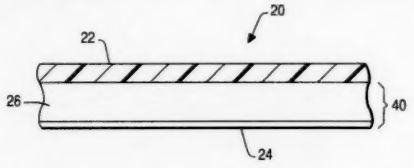
MULTI-LAYER THERMAL TRANSFER MEDIA FROM SELECTIVELY CURABLE FORMULATIONS

David J. Rainbow, Centerville, Ohio, assignor to NCR Corporation, Dayton, Ohio

Filed Jan. 28, 1998, Appl. No. 14,473

Int. Cl.[7] B23B *7/02*

U.S. Cl. 428—212 **27 Claims**



1. A thermal transfer medium which transfers images to a receiving substrate when exposed to an operating print head of a thermal transfer printer, said thermal transfer medium comprising:

a) a flexible supporting substrate and

b) a thermosensitive coating positioned on said substrate comprising a sensible material, uncured monomers and/or oligomers which are selectively curable and polymers of said selectively curable monomers and/or oligomers,

wherein the polymers of the selectively curable monomers and/or oligomers are concentrated at the top of said coating to provide a cured region at the top surface of said coating and the uncured monomers and/or oligomers which are selectively curable are concentrated at the bottom surface of said coating which contacts the flexible supporting substrate; to provide a uncured region at the bottom surface of said coating, and

wherein the total amount of uncured monomers and/or oligomers which are selectively curable, plus the amount of polymers of the selectively curable monomers and/or oligomers, falls within the range of from 10 to 70 wt. %, based on the dry components of said coating.

6,040,041

MAGNETIC RECORDING MEDIUM

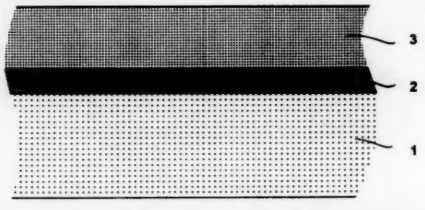
Klaus Götz, Neustadt; Helmut Jakusch, Frankenthal; Werner Loch, Neuried; Erich Hoffmann, Heidelberg; Hans-Georg Gottmann; Hans-Joachim Jenor, both of München, and Johann Voit, Gilching, all of Germany, assignors to EMTEC Magnetics GmbH, Germany

Filed Feb. 12, 1998, Appl. No. 22,673

Claims priority, application Germany, Apr. 5, 1997, 197 14 161

Int. Cl.[7] G11B *5/706*

U.S. Cl. 428—216 **6 Claims**



1. A magnetic recording medium consisting of a nonmagnetic substrate and at least two magnetic layers applied thereon, both layers containing magnetizable metal oxides as magnetic pigment, the magnetic pigment consisting of cobalt-containing FeOx ($1.33 \leqq x \leqq 1.5$) and present in the uppermost layer having a higher BET value than the magnetic pigment contained in the lowermost layer, and the layer thickness of the uppermost layer being greater than that of the lowermost layer, wherein the thickness of the uppermost layer is in the range of 3.1–5 μm and that of the lowermost layer is in the range of 1.1–3 μm, and wherein the magnetic pigment contained in the lowermost layer is Cr-O_2.

6,040,042

COMPOSITE PLASTICS FILM OR SHEET

David Thomson Dalgleish, Frinton-on-Sea, and Matthew Richard Sands, Colchester, both of United Kingdom, assignors to Arjobex Limited, Hertfordshire, United Kingdom

Filed Mar. 2, 1998, Appl. No. 33,024

Claims priority, application United Kingdom, Mar. 4, 1997, 9704470

Int. Cl.[7] B32B *5/14*

U.S. Cl. 428—308.4 **22 Claims**

4. A synthetic paper comprising at least one printable surface layer and at least a base layer, said paper comprising a formulation comprising a polyolefin, a filler and a voiding agent, wherein the voiding agent is a pentaerythritol ester of maleic rosin.

6,040,043

PARTICLES FOR LOWER LAYER OF COATING TYPE MAGNETIC RECORDING MEDIUM

Seiichi Hisano, Chiba; Kazuhisa Saito, Okayama; Kazushi Sano, Okayama; Shinichi Konno, Okayama; Yoshichika Horikawa, Okayama, and Yasuhiko Aihara, Okayama, all of Japan, assignors to Dowa Mining Co., Ltd., Tokyo, Japan

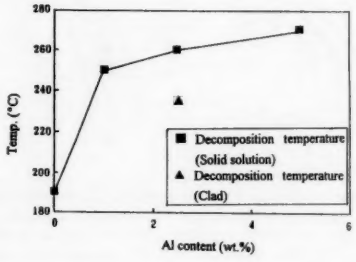
PCT No. PCT/JP97/00927, § 371 Date Nov. 20, 1997, § 102(e) Date Nov. 20, 1997, PCT Pub. No. WO97/34830, PCT Pub. Date Sep. 25, 1997

PCT Filed Mar. 21, 1997, Appl. No. 952,438

Claims priority, application Japan, Mar. 21, 1996, 8-89976; Aug. 5, 1996, 8-220746

Int. Cl.[7] G11B *5/68*

U.S. Cl. 428—323 **5 Claims**



1. A magnetic recording medium comprising a substrate, a non-magnetic layer comprising acicular iron oxyhydroxide particles and a resinous binder formed on said substrate, and a magnetic layer comprising magnetic particles and resinous binder formed on said non-magnetic layer, said acicular iron oxyhydroxide particles having an average major axis of 0.01 to 0.5 μm and containing not less than 0.1 wt. % and not more than 30 wt. % of Al wherein said acicular iron oxyhydroxide particles release not less than 0.1 wt. % and not more than 2 wt. % of water at 100° C.

6,040,044

DECORATIVE MATERIAL HAVING ABRASION RESISTANCE

Kazuhiro Takahashi; Toshitake Kobayashi; Masataka Takemoto; Takashi Matano, and Haruo Ono, all of Tokyo-To, Japan, assignors to Dai Nippon Printing Co., Ltd., Japan

Continuation of application No. 08/666,407, Aug. 29, 1996, Pat. No. 5,928,778. This application Dec. 17, 1998, Appl. No. 213,896.

Claims priority, application Japan, Oct. 31, 1994, 6-290706; Jun. 1, 1995, 7-158591

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **B32B** *5/16;27/00*

U.S. Cl. 428—323 **7 Claims**

1. A decorative material comprising:

a substrate; and

an abrasion-resistant coating layer formed on said substrate, said abrasion-resistant coating layer comprising spherical inorganic particles (A) having an average particle diameter of 3 to 50 micrometers and a Knoop hardness of 1,300 kg/mm^2 or more, and a binder (B) comprising a crosslinkable resin having an average molecular weight of crosslinked molecules of from 300 to 700, the amount of said spherical particles (A) being from 5% to 50% by weight of the total amount of the components (A) and (B), the hardness of said spherical particles (A) being higher than that of said binder (B), the average particle diameter d, in micrometers, of said spherical particles (A) fulfilling the following inequality (1):

$$0.3t \leqq d \leqq 3.0t \quad (1)$$

wherein t is an average thickness, in micrometers, of said coating layer.

6,040,045

PARTICLE FILLED RESINOUS PRODUCT OF IMPROVED APPEARANCE

Jorge Alfonso, Pasadena; Leonard R. Elbon, Glen Burnie; Eric A. Franzoi, and Donald Wayne Finnerty, both of Pasadena, all of Md., assignors to Formica Corporation, Warren, N.J.

Provisional application No. 60/038,544, Feb. 28, 1997. This application Feb. 27, 1998, Appl. No. 31,923.

Int. Cl.[7] **B32B** *5/16*

U.S. Cl. 428—327 **17 Claims**

1. A particulate "pearlescent" pigment for plastic products, comprising small hard resin particles of different sizes containing pearlescent reflective flakes which are aligned in each particle with their flat surfaces generally parallel.

6,040,046

MASKING FILM AND METHOD FOR PRODUCING SAME

Farid F. Ghiam, and James P. DiPoto, both of Terre Haute, Ind., assignors to Tredegar Corporation, Richmond, Va.

Filed Jun. 17, 1997, Appl. No. 877,073

Int. Cl.[7] **B32B** *7/12*

U.S. Cl. 428—343 **20 Claims**

1. A masking film, comprising:

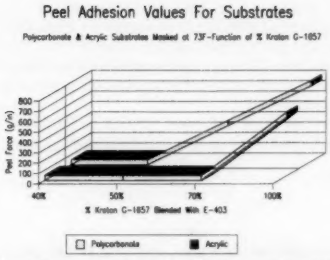
a first side having a smooth surface;

a second side having a rough surface;

said smooth surface of the first side capable of removably adhering to a relatively smooth surface of a substrate due to intimate contact therewith;

said first side further comprising one or more components preselected to affect the amount of adhesion produced between the smooth surface of the first side and the relatively smooth surface of the substrate at a given temperature; and

wherein the two or more components preselected to affect the amount of adhesion produced between the smooth surface of the first side and the relatively smooth surface of the substrate



at a given temperature include at least one primary component and at least one secondary component.

6,040,047

COVER TAPE

Rikiya Yamashita, Tokyo-To, Japan, assignor to Dai Nippon Printing Co., Ltd., Japan

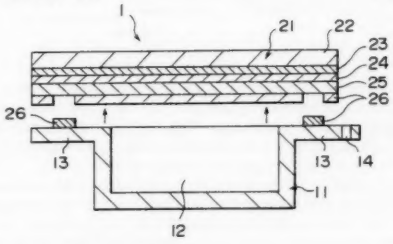
Division of application No. 08/594,888, Feb. 9, 1996, Pat. No. 5,846,652. This application Mar. 11, 1998, Appl. No. 38,414.

Claims priority, application Japan, Apr. 27, 1995, 7-127297

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **B32B** *7/12*

U.S. Cl. 428—343 **6 Claims**



1. A cover tape comprising:

a biaxially oriented resin layer,

a heat sealant layer, and

an intermediate layer located adjacent to said heat sealant layer and between said biaxially oriented resin layer and said heat sealant layer,

wherein said intermediate layer comprises a resin composition including 30 to 50% by weight of an ethylene-α-olefin copolymer having a density of from 0.915 to 0.940 g/cm^3, and 70 to 50% by weight of a styrene-butadiene block copolymer composed of 50 to 90% by weight of styrene and 50 to 10% by weight of butadiene.

6,040,048

ENERGY BEAM CURABLE HYDROPHILIC PRESSURE SENSITIVE ADHESIVE COMPOSITION AND USE THEREOF

Kiichiro Kato; Takeshi Kondoh, both of Urawa; Katsuhisa Taguchi, Koshigaya, and Kazuhiro Takahashi, Kawaguchi, all of Japan, assignors to Lintec Corporation, Japan

Filed Aug. 27, 1998, Appl. No. 141,385

Claims priority, application Japan, Aug. 28, 1997, 9-232238

Int. Cl.[7] **B32B** *7/12*

U.S. Cl. 428—345 **8 Claims**

1. An energy beam curable hydrophilic pressure sensitive adhesive composition comprising a hydrophilic pressure sensitive adhesive (A) and an energy beam polymerizable compound (B),

wherein the hydrophilic pressure sensitive adhesive (A) is composed of a pressure sensitive adhesive composition formed from:

a carboxyl group containing copolymer obtained by polymerizing a first polymerizable monomer (A1) containing a carboxyl group and a second monomer (A2) that is copolymerizable with the first polymerizable monomer (A1) containing the carboxyl group according to solution polymerization,

a neutralizer (A3), and

a crosslinking agent (A4).

6,040,049

COMPOSITE FILM AND METHOD OF MANUFACTURING SURFACE COATING MATERIAL

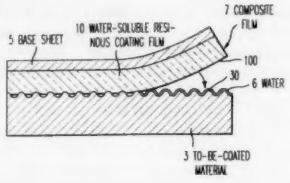
Youji Tominaga; Kazuo Toda, and Nobuo Yamamura, all of Tsushima, Japan, assignors to GEN Maintenance Technology Inc., Tsushima, Japan

Filed Oct. 20, 1997, Appl. No. 953,993

Claims priority, application Japan, Oct. 21, 1996, 8-298165; Jan. 16, 1997, 9-019710; Sep. 2, 1997, 9-254347

Int. Cl.[7] B32B *7/12*

U.S. Cl. 428—355 EN **24 Claims**



1. A composite film comprising a base sheet having a property of transmitting light therethrough, and at least one water-soluble resin coating film thereon, wherein one of said at least one water-soluble resinous coating films has an outer surface which coincides with an outer surface of said composite film, and wherein said composite film is adapted to adhere to a material upon both interposition of water between said outer surface and said material and hardening of the water-soluble resinous coating film having said outer surface to form a water-insoluble film, and wherein at least one of said water-soluble resinous coating films is hardened by irradiation.

6,040,050

POLYBENZAZOLE FIBER HAVING HIGH TENSILE MODULUS AND PROCESS OF MANUFACTURE THEREOF

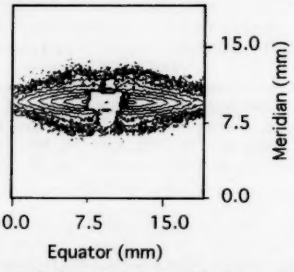
Tooru Kitagawa, and Michio Ishitobi, both of Ohtsu, Japan, assignors to Toyo Boseki Kabushiki Kaisha, Osaka-fu, Japan

Filed Jun. 16, 1998, Appl. No. 97,997

Claims priority, application Japan, Jun. 18, 1997, 9-161554; Oct. 14, 1997, 9-280789

Int. Cl.[7] B02G *3/00*

U.S. Cl. 428—364 **13 Claims**



1. A polybenzazole fiber obtained through a heat treatment, said fiber having a tensile modulus of not less than 300 GPa and a tensile strength of not less than 5.0 GPa, said fiber having at least one of the following properties are determined by an X-ray analysis of a fine structure of said fiber:

(1) a crystal orientation parameter $<\sin^2\Phi>$ of not more than 0.009 as determined by a wide-angle X-ray diffraction method, and

(2) absence of an equatorial streak, a two-point pattern or a four-point pattern in a small-angle X-ray scattering.

6,040,051

CARBON FIBERS AND PROCESS FOR THEIR PRODUCTION, AND FIBER-REINFORCED RESIN COMPOSITION EMPLOYING THEM

Iwao Yamamoto; Eisaku Kakikura; Masami Kinouchi; Yoshiaki Inoue, and Tamotsu Shiotsu, all of Sakaide, Japan, assignors to Mitsubishi Chemical Corporation, Tokyo, Japan

PCT No. PCT/JP97/01985, § 371 Date Feb. 10, 1998, § 102(e) Date Feb. 10, 1998, PCT Pub. No. WO97/47799, PCT Pub. Date Dec. 18, 1997

PCT Filed Jun. 10, 1997, Appl. No. 11,064

Claims priority, application Japan, Jun. 10, 1996, 8-147033; Sep. 19, 1996, 8-247947

Int. Cl.[7] B32B *9/00*

U.S. Cl. 428—367 **15 Claims**

1. Bundled and cut carbon fibers having a bulk density of from 450 g/l to 650 g/l, which are obtained by bundling carbon fibers having a yield of at least 0.9 g/m followed by cutting, and having a collapse initiating angle and funnel drop time of at most 65° and at most 20 seconds, respectively.

SLIPPERY, TENACIOUSLY ADHERING HYDROPHILIC POLYURETHANE HYDROGEL COATINGS, COATED METAL SUBSTRATE MATERIALS, AND COATED MEDICAL DEVICES

Fritz Hostettler, Lambertville, N.J.; David Rhum, New York, N.Y.; Michael R. Forman, St. Paul, Calif.; Michael N. Helmus, St. Louis Park, and Ni Ding, Plymouth, both of Minn., assignors to Schneider (USA) Inc., Plymouth, Minn.

Division of application No. 08/382,478, Feb. 1, 1995. This application Aug. 27, 1998, Appl. No. 126,374.

Int. Cl.[7] **B32B** *15/08*

U.S. Cl. 428—457 **60 Claims**

1. A material bearing thereon a coating of a lubricious, hydrated hydrophilic polyurethane-polyurea hydrogel, said material being produced by a process comprising the steps of:

a) making a surface of a metal substrate reactive by affixing reactive chemical functional groups thereto, at least a portion of which are amine-containing groups;

b) coating a reactive metal substrate surface which results from step (a) with a first coating comprising a hydrophilic polyurethane prepolymer intermediate, containing terminal isocyanate groups, such that at least a portion of said terminal isocyanate groups are reacted with and are covalently bonded to said reactive chemical functional groups on said substrate surface, forming covalent polyurea bonds therewith, resulting in the formation of a tie coat of a polyurethane-polyurea hydrogel-forming polymer, on said substrate surface, that adheres to said substrate surface, and wherein at least a portion of said terminal isocyanate groups of said polyurethane prepolymer intermediate are present in said polyurethane-polyurea hydrogel-forming polymer such that they remain free to react with other species; and

c) coating a tie coat of the first-coated substrate surface which results from step (b) with a second coating comprising a moisture-containing, hydrogel-forming compound or mixture, which contains isocyanate-reactive functional groups, such that a barrier coat of a lubricious, hydrated hydrogel is formed upon the application of said second coating to said tie coat;

wherein said moisture of said hydrogel-forming compound or mixture is bound with said polyurethane-polyurea hydrogel-forming polymer of said tie coat to form a hydrogel of said barrier coat, on said tie coat, such that said hydrogel is a polyurethane-polyurea polymer hydrogel; and

wherein said isocyanate-reactive functional groups of said hydrogel-forming compound or mixture are reacted with and are covalently bonded to at least a portion of said terminal isocyanate groups of said polyurethane-polyurea hydrogel-forming polymer that remain free to react with other species, thereby directly attaching said polyurethane-polyurea polymer hydrogel to said tie coat and thus also indirectly attaching to said substrate surface.

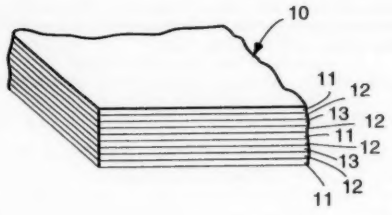
TEAR RESISTANT MULTILAYER FILMS BASED ON SEBACIC ACID COPOLYESTERS AND ARTICLES INCORPORATING SUCH FILMS

Ralph H. Bland, St. Paul, Minn.; James M. Jonza, Round Rock, Tex.; James D. Smith, St. Paul, Minn.; Jeffrey F. Bradley, Woodbury, Minn., and Kenneth B. Smith, Shoreview, Minn., assignors to 3M Innovative Properties Company, St. Paul, Minn.

Filed Oct. 1, 1992, Appl. No. 955,116

Int. Cl.[7] B32B *27/36*

U.S. Cl. 428—480 56 Claims



1. A tear resistant film comprising a total of at least three stiff and ductile layers situated one on the other in a parallel array, the layers occurring essentially randomly in the array wherein (a) at least one layer is a stiff polyester or copolyester that has a tensile modulus greater than 200 kpsi, (b) at least one other layer is a ductile sebacic acid based copolyester that (i) comprises at least 1 mole equivalent of sebacic acid, including ester derivatives thereof, based on 100 mole equivalents of acid components, including ester derivatives thereof, in the copolyester, (ii) has a tensile modulus less than 200 kpsi, (iii) has a tensile elongation greater than 50%, and (iv) provides from about 1 weight percent to 50 weight percent of the tear resistant film, and (c) the tear resistant film demonstrates a Graves area in one direction of the film which exceeds the Graves area, in the same direction, of a single layer film having a thickness substantially equal to the thickness of the tear resistant film, the single layer film including only the stiff polyester or copolyester of the tear resistant film.

AQUEOUS COATING COMPOSITIONS FOR ENVIRONMENTAL ETCH RESISTANT COATINGS

John D. McGee, Highland; Donald H. Campbell, Wixom, and John W. Rehfuss, West Bloomfield, all of Mich., assignors to BASF Corporation, Southfield, Mich.

Continuation of application No. 08/513,587, Aug. 10, 1995, Pat. No. 5,726,244. This application Jun. 2, 1997, Appl. No. 867,547.

Int. Cl.[7] B32B *27/00;* B05D *3/02;* C08L *33/02*

U.S. Cl. 428—500 12 Claims

1. A topcoat coating derived from an aqueous, curable coating composition comprising:

(a) a carbamate-functional grafted acrylic polymer that comprises the reaction product of:

(i) a first acrylic polymer having thereon a functionality (I). and

(ii) a second acrylic polymer having thereon a functionality (II) that is reactive toward the functionality (I) of the first acrylic polymer,

wherein at least one of the first and second acrylic polymers has thereon groups that impart water dispersibility to the grafted acrylic polymer, and further wherein at least one of the first and second acrylic polymers has thereon carbamate functionality; and

(b) a compound having a plurality of functional groups that are reactive with the carbamate functionality.

6,040,063

BIODEGRADABLE POLYESTER AND NATURAL POLYMER LAMINATES

William M. Doane, Morton; John W. Lawton, Jr., Chillicothe, and Randal Shogren, Peoria, all of Ill., assignors to The United States of America as represented by the Secretary of Agriculture, Washington, D.C., and Biotechnology Research & Development Corp., Peoria, Ill.

Division of application No. 08/673,273, Jun. 28, 1996, Pat. No. 5,861,216. This application Jan. 15, 1999, Appl. No. 231,729.

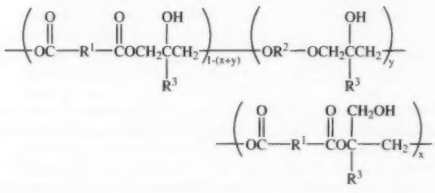
Int. Cl.[7] B32B *23/04*

U.S. Cl. 428—532 11 Claims

1. A moisture resistant, biodegradable, flexible film, comprising:

a self-supporting film including a natural polymer and defining a pair of opposed surfaces, a coating being adhered to at least one of the opposed surfaces and including an hydroxy-functional polyester having repeating units represented by Formula B:

FORMULA B



wherein each of R^1 and R^2 is individually a divalent organic moiety which is predominately hydrocarbon, each R^3 is individually hydrogen or lower alkyl, y is a fraction from 0 to 0.5 and x is a fraction from about 0.05 to about 0.4.

6,040,064

HONEYCOMB BODY WITH THERMAL INSULATION, PREFERABLY FOR AN EXHAUST GAS CATALYTIC CONVERTER

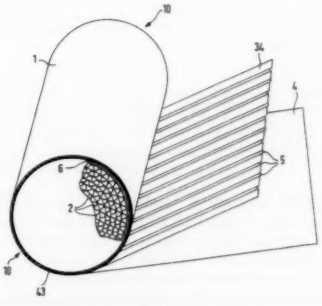
Rolf Brück, Bergisch Gladbach, and Peter Hirth, Lohmar, both of Germany, assignors to Emitec Gesellschaft fuer Emissionstechnologie mbH, Lohmar, Germany

Continuation of application No. PCT/EP97/05098, Sep. 17, 1997. This application Apr. 5, 1999, Appl. No. 286,689.

Claims priority, application Germany, Oct. 4, 1996, 196 41 049

Int. Cl.[7] B21D *39/00*

U.S. Cl. 428—593 34 Claims



1. A honeycomb body, comprising:

a multiplicity of honeycombs; and

a thermal insulation having a plurality of at least one of stacked and wound insulating sheet layers;

said insulating sheet layers having microstructures mutually supporting said insulating sheet layers and defining interme-

diate spaces between said insulating sheet layers, said microstructures having a height of from 15 μm to 250 μm.

6,040,065

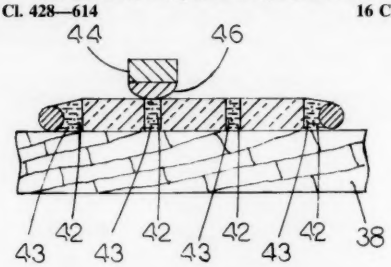
METHOD FOR PRODUCING A METAL MATRIX FOR MOSAIC STRUCTURES

Andrew Eisan, 1611 Ward St., Durham, N.C. 27707

Filed Dec. 21, 1998, Appl. No. 217,374

Int. Cl.[7] **B44C** *5/08;* **B44F** *1/06;* **B23K** *1/20*

U.S. Cl. 428—614 **16 Claims**



9. A method for building a structure comprising the steps of positioning a set of inclusions so that an interval separates adjacent inclusions, and

placing a substrate of metal fibers into said intervals, and

coating said substrate fibers and filling the spaces between said fibers with a metal infiltrate so that said substrate fibers and said infiltrate form a matrix which substantially fills said intervals, whereby said set of inclusions and said matrix are formed into a unified structure.

6,040,066

REWRITABLE OPTICAL INFORMATION MEDIUM

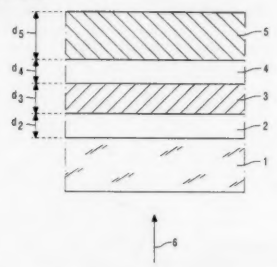
Guo-Fu Zhou; Bernardus A.J. Jacobs; Johannes C.N. Rijpers, and Hermanus J. Borg, all of Eindhoven, Netherlands, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Dec. 7, 1998, Appl. No. 206,430

Claims priority, application European Pat. Off., Dec. 11, 1997, 97203894

Int. Cl.[7] **B32B** *3/00*

U.S. Cl. 428—641 **8 Claims**



1. An optical information medium for erasable high-speed recording by means of a laser-light beam, said medium comprising a substrate carrying a stack of layers, which stack comprises, in this order, a first dielectric layer, a recording layer of a phase-change material comprising a compound consisting of Ge, Sb, Te and O, a second dielectric layer and a metal mirror layer, characterized in that

the compound has a composition $(Ge_aSb_bTe_c)_{1-d}O_d$, wherein:

$a+b+c=1$

$0.0001 \leqq d \leqq 0.035$

the first dielectric layer having a thickness of 70 to $(70+\lambda/2n)$ nm, wherein λ is the wavelength of the laser-light beam, and n is the refractive index of this layer;

the recording layer having a thickness of 10 to 35 nm;

the second dielectric layer having a thickness of 10 to 50 mn;

the metal mirror layer having a thickness of 60 to 160 nm.

6,040,067

HARD COATED COPPER ALLOYS

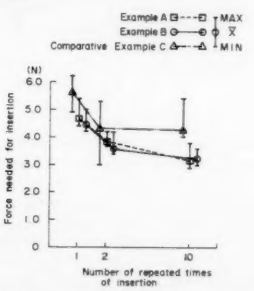
Akira Sugawara; Yoshitake Hana, both of Toyooka-mura; Takayoshi Endo, and Osamu Sugiyama, both of Shizuoka, all of Japan, assignors to Dowa Mining Co., Ltd., and Yazaki Corporation, both of Tokyo, Japan

Filed Jul. 9, 1997, Appl. No. 890,387

Claims priority, application Japan, Jul. 11, 1996, 8-201077

Int. Cl.[7] **B32B** *5/16;15/01;15/20*

U.S. Cl. 428—647 **6 Claims**



1. A coated copper alloy which comprises a copper alloy having a surface coating containing Sn, said Sn coating being formed by surface treating said copper alloy with Sn, followed by heat treating the resultant Sn coated copper alloy to cause heat diffusion so as to form a surface coating consisting essentially of Cu and Sn, said surface coating extending to a depth which includes at least the resultant interface between the Sn-containing layer and said copper alloy, said surface coating having a thickness of 1 to 5 μm, wherein the copper alloy has a composition selected from the group consisting of

(a) 4.2 wt % Zn, 0.14 wt % Fe, 1.03 wt % Sn, 0.05 wt % P, with the remainder being Cu,

(b) 4.1 wt % Zn, 0.18 wt % Fe, 1.94 wt % Sn, 0.04 wt % P, with the remainder being Cu,

(c) 4.2 wt % Zn, 7.9 wt % Sn, 0.186 wt % P, with the remainder being Cu,

(d) 4.3 wt % Zn, 0.2 wt % Mg, 0.09 wt % P, with the remainder being Cu, and

(e) 1.9 wt % Zn, 0.15 wt % Al, 0.18 wt % Cr, with the remainder being Cu.

6,040,068

CERAMIC WIRING BOARD AND METHOD OF PRODUCING THE SAME

Taka-aki Yasumoto, Kawasaki, and Hideki Yamaguchi, Yokohama, both of Japan, assignors to Kabushiki Kaisha Toshiba, Japan

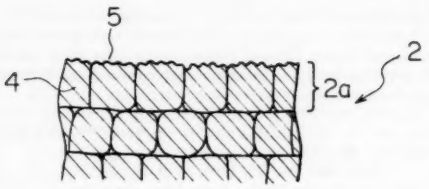
Filed Aug. 12, 1997, Appl. No. 909,740

Claims priority, application Japan, Aug. 14, 1996, 8-214628

Int. Cl.[7] **B32B** *9/00*

U.S. Cl. 428—688 **10 Claims**

1. A ceramic wiring board comprising a non-oxide based ceramic substrate, a metallized layer formed on the non-oxide based ceramic substrate, and a metal plated layer formed on the metallized layer, wherein the metallized layer has a large number of minute irregularities having a difference of elevation in a range



of about 0.5 to about 200 nm formed on a surface of metal particles forming the metallized layer, the minute irregularities consisting of peaks and valleys, the peaks being formed at intervals of about 0.5 to about 450 nm.

6,040,069

ELECTROLUMINESCENE DEVICE WITH EMISSION OF POLARIZED LIGHT

Donald Lupo, Frankfurt; Marcus Remmers, and Dieter Neher, both of Mainz, all of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt, Germany

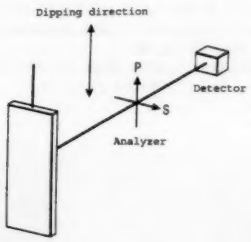
PCT No. PCT/EP96/01202, § 371 Date Sep. 18, 1997, § 102(e) Date Sep. 18, 1997, PCT Pub. No. WO96/29376, PCT Pub. Date Sep. 26, 1996

PCT Filed Mar. 20, 1996, Appl. No. 913,651

Claims priority, application Germany, Mar. 20, 1995, 195 09 450

Int. Cl.[7] H05B *33/14*

U.S. Cl. 428—690 **10 Claims**



1. An electroluminescence device comprising a light-emitting layer which comprises at least one polymer, wherein the emitted electroluminescence is polarized and the polarization ratio is at least three.

6,040,070

PEROVSKITE TYPE ABO_3 WITH SURFACE LAYER

Krzysztof Szot, Kattowicz, Poland; Wolfgang Speier, and Jörg Herion, both of Jülich, Germany, assignors to Forschungszentrum Jülich GmbH, Jülich, Germany

Continuation-in-part of application No. PCT/DE96/02501, Dec. 21, 1996. This application Jul. 2, 1998, Appl. No. 109,734.

Claims priority, application Germany, Jan. 5, 1996, 196 00 218

Int. Cl.[7] B32B *9/00;* **C23C** *8/10*

U.S. Cl. 428—700 **3 Claims**

1. A substrate comprising a perovskite of the type ABO_3 having a surface layer of $AO^*(ABO_3)_n$ formed in a growth pattern parallel to the (100) surface of the ABO_3 perovskite substrate.

6,040,071

LAUNDRY CONCENTRATES

Andrea Lee Motyka, Doylestown, Pa.; Guy Broaze, Grace-Hollogne, Belgium, and Alison Kugler, South River, N.J., assignors to Colgate-Palmolive Co, New York, N.Y.

Division of application No. 08/679,747, Jul. 15, 1996, Pat. No. 5,856,287, which is a continuation of application No. 08/396,858, Mar. 1, 1995, abandoned. This application Jan. 22, 1998, Appl. No. 153,808.

Int. Cl.[7] H01J *29/74*

U.S. Cl. 428—704 **9 Claims**

1. A method for preparing a diluted laundry concentrate comprising:

a) providing a laundry concentrate composition in the form of a water-in-oil emulsion containing at least about 2% by weight water and comprising a mixture of at least one non-ionic surfactant and at least one water insoluble oil containing a polar proton sharing group and having a melting point below about 30° C., said non-ionic surfactant being the condensation product of an aliphatic alcohol having from about 6 to 26 carbon atoms with ethylene oxide, said oil being selected from the group consisting of saturated aliphatic alcohols or acids containing from about 6 to 12 carbon atoms and unsaturated liquid fatty C_{16} to C_{18} acids or alcohols, said concentrate characterized by a viscosity of at least about 10 cps; and

b) diluting said concentrate with at least one volume of water per volume of concentrate such that said concentrate is at least partially converted into a liquid crystal phase dispersion, providing a diluted concentrate having a viscosity of at least about 50 cps.

6,040,072

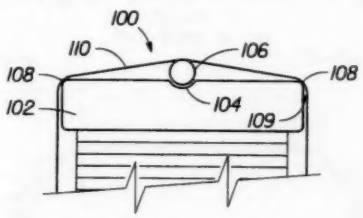
APPARATUS AND METHOD FOR COMPRESSING A STACK OF ELECTROCHEMICAL CELLS

Oliver J. Murphy; Carlos Salinas, both of Bryan, and Alan J. Cisar, Cypress, all of Tex., assignors to Lynntech, Inc., College Staton, Tex.

Filed Nov. 19, 1997, Appl. No. 974,384

Int. Cl.[7] H01M *8/24*

U.S. Cl. 429—12 **44 Claims**



1. An apparatus comprising:

an electrochemical cell stack having a plurality of components;

a banding member disposed about the cell components to secure the cell components in intimate contact; and

one or more load distributing elements disposed between the banding member and the stack.

6,040,073

FUEL CELL

Takafumi Okamoto, Koshigaya, Japan, assignor to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

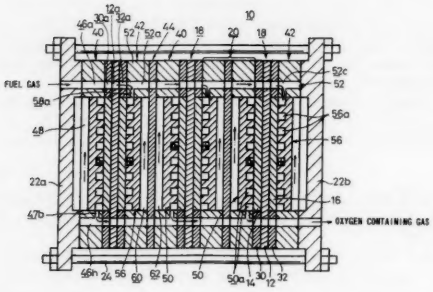
Filed Aug. 6, 1997, Appl. No. 908,154

Claims priority, application Japan, Aug. 7, 1996, 8-208512

Int. Cl.[7] H01M *8/04*

U.S. Cl. 429—26 **23 Claims**

1. A fuel cell comprising:



a plurality of fuel cell units with each fuel cell unit comprising an anode electrode and a cathode electrode facing each other with an electrolyte membrane interposed therebetween;

a separator interposed between adjacent fuel cell units; and

wherein said separator comprises, respectively disposed therein, a first cooling path through which a first cooling medium is passed for cooling said anode electrode side, and a second cooling path through which a second cooling medium is passed for cooling said cathode electrode side; and

wherein one of said first cooling medium and said second cooling medium has a lower melting point than the other cooling medium.

6,040,074

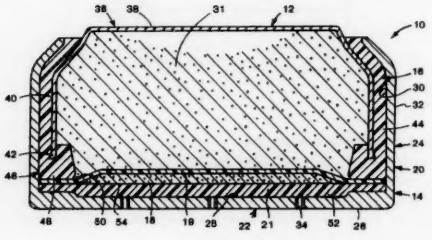
METAL-AIR CATHODE CAN, AND ELECTROCHEMICAL CELL MADE THEREWITH

Robert Adey, South Shields, United Kingdom; Robert Brian Dopp, Marietta, Ga., and John Edward Oltman, Mount Horeb, Wis., assignors to Rayovac Corporation, Madison, Wis.

Continuation-in-part of application No. 08/435,477, May 5, 1995, Pat. No. 5,733,676. This application Apr. 30, 1997, Appl. No. 846,327.

Int. Cl.[7] **H01M** *12/06*

U.S. Cl. 429—27 **46 Claims**



1. A cathode can, comprising:

(a) a bottom, having an inner surface and an outer surface;

(b) a side wall extending upwardly from said bottom; and

(c) at least two air ports extending through said bottom, between said inner surface and said outer surface,

said cathode can having an outside diameter, each said air port defining an open area thereacross corresponding to an effective diameter of the respective said air port, the ratio of the average of the effective diameters of the air ports to the outside diameter of said cathode can being no greater than 0.004/1.

6,040,075

ELECTROLYTIC AND FUEL CELL ARRANGEMENTS

Paul Leonard Adcock; Philip John Mitchell, both of Leicestershire, and Simon Edward Foster, Lancashire, all of United Kingdom, assignors to Loughborough University of Technology, Leicestershire, United Kingdom

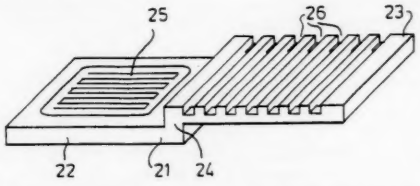
PCT No. PCT/GB95/02937, § 371 Date Jul. 31, 1997, § 102(e) Date Jul. 31, 1997, PCT Pub. No. WO96/19015, PCT Pub. Date Jun. 20, 1996

PCT Filed Dec. 15, 1995, Appl. No. 849,507

Claims priority, application United Kingdom, Dec. 17, 1994, 9425622; Dec. 17, 1994, 9425623

Int. Cl.[7] **H01M** *8/10;8/24;12/06*

U.S. Cl. 429—32 **56 Claims**



1. An arrangement suitable for redox flow cells comprising:

a stacking of bipolar elements, each element comprising:

an anode part; and

a cathode part;

the anode part of each element cooperating with the cathode part of the next adjacent element; and

an electrically insulating ion exchange material being confined between the elements.

6,040,076

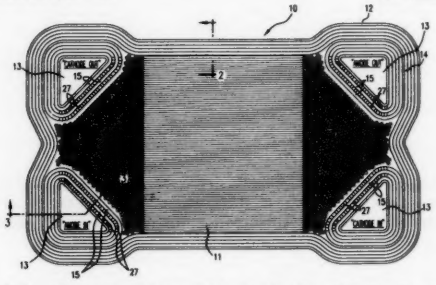
ONE PIECE FUEL CELL SEPARATOR PLATE

Kenneth W. Reeder, Hobart Lake, Ind., assignor to M-C Power Corporation, Burr Ridge, Ill.

Filed Mar. 3, 1998, Appl. No. 33,761

Int. Cl.[7] **H01M** *2/08;2/14*

U.S. Cl. 429—35 **21 Claims**



8. In a fuel cell stack comprising a plurality of fuel cell units, each said fuel cell unit comprising an anode and a cathode, an electrolyte in contact on one side with an electrolyte facing face of said anode and in contact on the opposite side with an electrolyte facing face of said cathode, and a separator plate separating said fuel cell units between an anode and cathode forming an anode chamber between an anode facing face of said separator plate and said anode and forming a cathode chamber between a cathode facing face of said separator plate and said cathode of an adjacent said fuel cell unit, said anode chamber in gas communication with a fuel gas supply and outlet and said cathode chamber in gas communication with an oxidant gas supply and outlet, said anodes, said cathodes, and said separator plates extending to the peripheral edge of said fuel cell stack, the improvement comprising:

said separator plate comprising one sheet of a material suitable for use as a separator plate, said separator plate having a centrally disposed active region and a peripheral seal struc-

ture, said peripheral seal structure sealing against an adjacent fuel cell component facing each face of said separator plate; and

said anode, said cathode, and said separator plate forming a plurality of aligned perforations, said perforations in said separator plate being surrounded by a manifold seal structure on each said face of said separator plate, said manifold seal structure sealing against said adjacent fuel cell components forming a plurality of gas manifolds extending through said fuel cell stack.

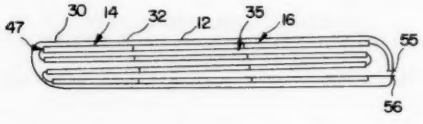
FREE FORM BATTERY APPARATUS

Denis G. Fauteux, Acton; Robert Rounds, III, Boston, and Michael Farina, Waltham, all of Mass., assignors to Mitsubishi Chemical Corporation, Tokyo, Japan

Continuation-in-part of application No. 08/812,021, Mar. 6, 1997, Pat. No. 5,853,917. This application Oct. 26, 1998, Appl. No. 179,116.

Int. Cl.[7] H01M *6/00*

U.S. Cl. 429—48 **15 Claims**



1. A battery apparatus comprising:

a casing;

at least one stacked lithium ion cell positioned within the casing; and

means operatively associated with each of the at least one lithium ion cell for substantially precluding inadvertent deformation of the casing by the at least one lithium ion cell, during cell cycling and storage.

6,040,079

BATTERY ELECTROLYTE LEVEL INDICATOR

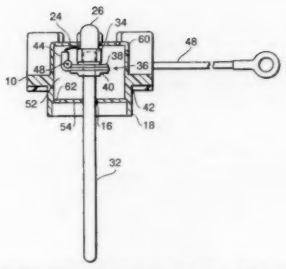
Irving B. Mcmurren, 821 Arguilla Rd., Palm Springs, Calif. 92262

Filed Aug. 28, 1997, Appl. No. 919,251

Int. Cl.[7] H01M *10/48*

U.S. Cl. 429—91 **22 Claims**

1. A self-contained battery electrolyte level indicator sized to be substituted for and mounted in place of a battery cap on a battery, said indicator comprising:



a) a cap housing having a size and shape similar to that of a battery cap so as to fit in a cell access port of the battery;

b) means for mounting the cap housing in the port of a battery cell from which a battery cap closing that cell is removed;

c) a probe extending from the cap housing into the electrolyte and being in electrically conductive relationship therewith, said probe having a length sufficient to determine if the electrolyte is at a proper level with respect to a cell of the battery;

d) an indicator light mounted on said cap adjacent to said probe and having a portion external to and extending outwardly of said cap so as to be readily observable when the battery is in use thereby avoiding the need for remotely located lights and a wiring harness; and

e) electrically conductive means in said cap connecting a terminal of said light in said cap to said probe to enable an electrical circuit to be completed to a terminal of the battery.

6,040,080

BATTERY TRAY

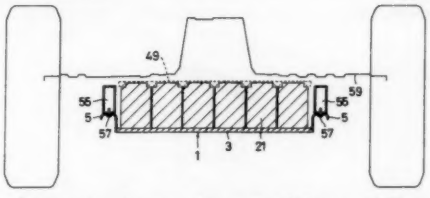
Hiromasa Minami; Masaru Igarashi, and Takahiro Chiku, all of Hamamatsu, Japan, assignors to Suzuki Motor Corporation, Hamamatsu, Japan

Filed Nov. 28, 1997, Appl. No. 980,228

Claims priority, application Japan, Nov. 27, 1996, 8-315827

Int. Cl.[7] H01M *2/02;2/10*

U.S. Cl. 429—96 **5 Claims**



1. A battery tray for supporting an electric battery, said battery tray comprising

a combined FRP member molded such that a balsa member, a metal net and fiber reinforced plastic are composite-molded with resin.

ALKALINE DRY CELL CONTAINING A CAN OF NICKEL-PLATED STEEL HAVING AN INNER SURFACE OF GRAPHITE

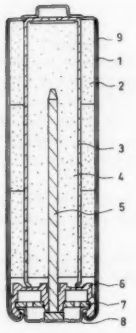
Seiichi Hikata, Annaka, and Natsuki Toyota, Takasaki, both of Japan, assignors to Toshiba Battery Co., Ltd., Tokyo, Japan

Filed Mar. 31, 1998, Appl. No. 50,804

Claims priority, application Japan, Apr. 4, 1997, 9-086677

Int. Cl.[7] H01M *2/02*

U.S. Cl. 429—169 **12 Claims**



1. An alkaline dry cell comprising

a steel can having an inner surface comprising nickel;

a positive electrode compound inside the can; and

a conductive film on the inner surface and in contact with the positive electrode compound, wherein

the conductive film consists essentially of graphite.

6,040,084

CLOSED SECONDARY BATTERY CONTAINER

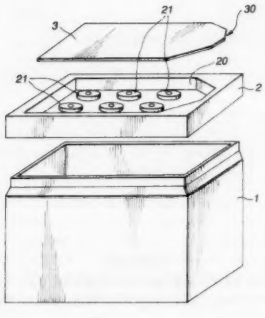
Yoshihiro Kurasawa, and Koji Nishida, both of Hiratsuka, Japan, assignors to Mitsubishi Engineering-Plastics Corporation, Japan

Filed Feb. 27, 1998, Appl. No. 31,769

Claims priority, application Japan, Mar. 7, 1997, 9-053021

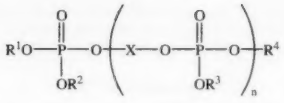
Int. Cl.[7] H01M *2/02;2/08*

U.S. Cl. 429—176 **9 Claims**



1. A closed secondary battery container comprising:

at least two container parts comprising a resin composition comprising (a) 100 parts by weight of a polyphenylene ether resin and (b) 1 to 30 parts by weight of a phosphoric ester compound represented by the following formula (1):



(1)

wherein R^1, R^2, R^3 and R^4 are independently any of C_1–C_{10} alkyl group, a C_5–C_{15} cycloakyl group, a C_6–C_{15} aryl group, a C_1–C_{10} alkyl-substituted C_6–C_{15} aryl group, a halogen-substituted C_6–C_{15} aryl group, a C_6–C_{15} aryl-substituted C_1–C_{10} alkyl group, a halogen atom or a hydrogen atom; X is an arylene group; and n is an integer not less than 1, and

an epoxy resin adhesive comprising a base resin and a curing agent, which curing agent comprises tris(dimethylaminomethyl)phenol, a salt of organic acid of tris(dimethylaminomethyl)phenol or a mixture thereof,

said parts being bonded together through said adhesive.

6,040,085

BATTERY PACKAGING

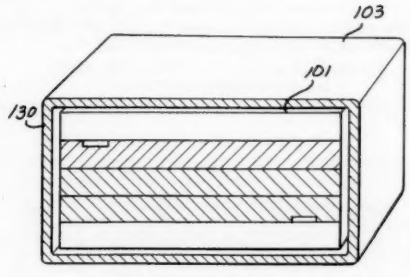
S. Scot Cheu, and Russell D. Moulton, both of San Jose, Calif., assignors to Valence Technology, Inc., Henderson, Nev.

Continuation-in-part of application No. 08/221,437, Mar. 31, 1994, Pat. No. 5,670,272. This application Mar. 4, 1997, Appl. No. 811,146.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **H01M** *6/12*

U.S. Cl. 429—185 **30 Claims**



1. A battery package comprising:

a laminar battery having an anode layer, a cathode layer, and a separator layer between the anode and cathode layers; and

a layer of heat shrink material surrounding and in contact with at least one of said layers of the laminar battery, the heat shrink material having been heated to apply compressive force to enhance physical contact between the anode layer, separator layer, and cathode layer.

6,040,086

NONAQUEOUS ELECTROLYTE SECONDARY BATTERY

Hiroaki Yoshida; Zenzo Hagiwara, and Masanao Terasaki, all of Kyoto, Japan, assignors to Japan Storage Battery Co., Ltd., Kyoto, Japan

Filed Mar. 27, 1998, Appl. No. 48,785

Int. Cl.[7] **H01M** *2/26;10/04*

U.S. Cl. 429—211 **7 Claims**

1. A nonaqueous electrolyte secondary battery comprising:

a power-generating element having a positive electrode, a negative electrode and a separation body, said power-generating element being provided with a portion where said negative electrode and said positive electrode are not opposed to each other, said positive and negative electrodes being wound or laminated through said separation body so that side edge portions of each of said electrode plates protrude from that of the other; and

a collector connected to the side edge portion, said collector having a plurality of grooves bonded to the side edge portions of said negative and positive electrode plates, wherein

said collector has a guide portion through which bundled groups of said side edge portions are introduced into said grooves, and further wherein

said bonding is made by at least one of a welding method and a mechanical joint.

POWDERY MATERIAL, ELECTRODE MEMBER, AND METHOD FOR MANUFACTURING SAME FOR A SECONDARY CELL

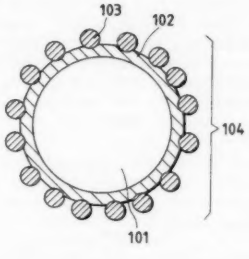
Soichiro Kawakami, Nara, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Dec. 29, 1997, Appl. No. 999,136

Claims priority, application Japan, Dec. 27, 1996, 8-349530; Jan. 29, 1997, 9-015331

Int. Cl.[7] **H01M** *4/58*

U.S. Cl. 429—218.1 **103 Claims**



1. A powdery material having a function of storing and releasing hydrogen, comprising a compound which electrochemically stores and releases hydrogen, said powdery material having a structure of at least three layers comprising:

a core of a hydrogen-storing alloy;

a metal oxide layer provided on the surface of said core and having a function of preventing the oxidation of the alloy and allowing atomic hydrogen or hydrogen ions to pass therethrough; and

a metal element dispersed on the surface of said metal oxide layer and having a function of activating hydrogen.

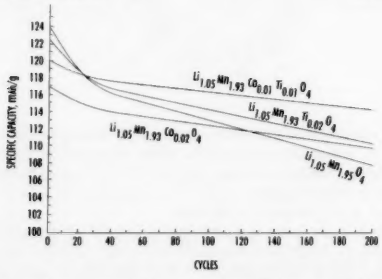
MULTIPLE-DOPED OXIDE CATHODE MATERIAL FOR SECONDARY LITHIUM AND LITHIUM-ION BATTERIES

Vesselin Manev; Titus Faulkner, both of Gastonia; Wayne Barnette, Bessemer City, all of N.C., and Yuan Gao, Ocean, N.J., assignors to FMC Corporation, Philadelphia, Pa.

Provisional application No. 60/039,666, Feb. 28, 1997. This application Feb. 27, 1998, Appl. No. 31,849.

Int. Cl.[7] H01M *4/50*

U.S. Cl. 429—231.1 **18 Claims**



1. A positive electrode for secondary lithium and lithium-ion batteries comprising a multiple-doped lithium manganese metal oxide with a spinel structure and described by the general formula:

$$Li_{1+X}Mn_{2-Y}M_{m_1}{}^{1}M_{m_2}{}^{2} \ldots M_{m_k}{}^{k}O_{4+Z}$$

wherein M^1, M^2, . . . M^k are at least two different cations other than lithium or manganese, selected from the group consisting of alkali metals, alkaline earth metals, transition metals, B, Al, Si, Ga and Ge;

X, Y, m_1, m_2, . . . m_k are between 0 and 0.2;

m_1, m_2 and Y are greater than 0;

Z is a number between −0.1 and 0.2; and

wherein m_1, m_2, . . . m_k satisfy the following equation and inequality:

$$Y = X + m_1 + m_2 + \cdots + m_k$$

and

$$3.3 < \frac{m_1V_1 + m_2V_2 + \cdots + m_kV_k}{m_1 + m_2 + m_3 + \cdots + m_k} < 3.7$$

wherein V_1, V_2, . . . V_k are the corresponding valence states of the cations M^1, M^2, . . . M^k.

6,040,090

POSITIVE ELECTRODE MATERIAL FOR USE IN NON-AQUEOUS ELECTROLYTE BATTERY, PROCESS FOR PREPARING THE SAME, AND NON-AQUEOUS ELECTROLYTE BATTERY

Takuya Sunagawa; Hiroshi Watanabe, both of Hirakata; Ryuji Ohshita, Neyagawa; Masahisa Fujimoto, Osaka; Toshiyuki Nohma, and Koji Nishio, both of Hirakata, all of Japan, assignors to Sanyo Electric Co., Ltd., Moriguchi, Japan

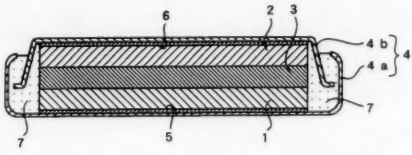
Filed Apr. 14, 1998, Appl. No. 59,701

Claims priority, application Japan, Apr. 15, 1997, 9-097239; May 8, 1997, 9-117341; Aug. 27, 1997, 9-230145

This patent is subject to a terminal disclaimer.

Int. Cl.[7] H01M *4/48;4/50;4/52*

U.S. Cl. 429—231.95 **18 Claims**



1. A positive electrode material for use in a non-aqueous electrolyte battery comprising a lithium-metal compound oxide containing at least Ni, Co and Mn and in addition, M, which denotes at least one element selected from the group consisting of B, Al, Si, Fe, V, Cr, Cu, Zn, Ga and W, the lithium-metal compound oxide having a peak with a full width at half maximum of not greater than 0.22° in a range of 2θ=18.71±0.25°, as measured by the powder X-ray diffraction analysis using a Cu-Kα X-ray source.

MASK FOR PILING PROCESS, MASK-PRODUCING METHOD, AND MASK-EMPLOYING METHOD

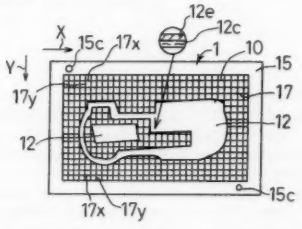
Yukio Otsuka, Aichi-ken, and Motoaki Ozaki, Okazaki, both of Japan, assignors to Toyota Jidosha Kabushiki Kaisha, Japan

Filed Apr. 24, 1998, Appl. No. 65,615

Claims priority, application Japan, Apr. 25, 1997, 9-109115; Feb. 27, 1998, 10-047649

Int. Cl.[7] G03F *9/00*

U.S. Cl. 430—5 **26 Claims**



1. A mask for use in a piling process for producing a three-dimensional laminated object by piling a plurality of solid layers each formed by receiving energy emitted from an emitting source, said mask comprising:

(a) a mask portion having

(i) a bed sheet layer having a designated pattern shape and having an irradiation side; and

(ii) an irradiation-resistant layer for interrupting said emitted energy and being coated on said irradiation side of said bed sheet layer and having a greater durability with respect to said emitted energy than that of said bed sheet layer; and

(b) a support for holding said mask portion, said support having one or more openings which allow emitted energy to pass through said one or more openings.

6,040,095

MEASUREMENT MARKS FOR E-BEAM PROJECTION MASK AND METHOD OF USING

William A. Enichen, Poughkeepsie, and Christophe F. Robinson, Hyde Park, both of N.Y., assignors to Nikon Corporation, Tokyo, Japan

Filed Sep. 30, 1998, Appl. No. 163,406

Int. Cl.[7] G03F *9/00*

U.S. Cl. 430—5 **17 Claims**

1. A charged particle beam projection mask including:

a plurality of patterned sub-field membrane mask areas,

a grillage of struts extending between and supporting said membrane mask areas, and

a plurality of measurement marks corresponding in number to said plurality of said sub-field membrane mask areas and located on said grillage of struts adjacent to said sub-field membrane mask areas and formed concurrently with patterning of said sub-field membrane mask areas in the same process.

6,040,096

MASK SUBSTRATE, PROJECTION EXPOSURE APPARATUS EQUIPPED WITH THE MASK SUBSTRATE, AND A PATTERN FORMATION METHOD UTILIZING THE PROJECTION EXPOSURE APPARATUS

Yukio Kakizaki, Kanagawa-ken; Toru Kiuchi, Higashi-kurume-si; Kesayoshi Amano, and Toshikazu Umatate, both of Tokyo, all of Japan, assignors to Nikon Corporation, Tokyo, Japan

Division of application No. 08/734,544, Oct. 21, 1996, Pat. No. 5,894,056. This application Dec. 31, 1998, Appl. No. 224,061.

Claims priority, application Japan, Dec. 19, 1995, 7-330542

This patent is subject to a terminal disclaimer.

CARRIER PARTICLES FOR USE IN ELECTROSTATIC IMAGE DEVELOPMENT AND ELECTROSTATIC IMAGE DEVELOPER

Akio Naka, Takatsuki; Tetsuya Yamamoto, Suita, and Yoshikuni Mori, Takatsuki, all of Japan, assignors to Nippon Shokubai Co., Ltd., Osaka, Japan

Filed Jun. 9, 1997, Appl. No. 871,578

Claims priority, application Japan, Jun. 10, 1996, 8-147386

Int. Cl.[7] G03G *9/113*

U.S. Cl. 430—108 **29 Claims**

1. A carrier particle for use in electrostatic image development including a core and a coating layer formed on the surface of the core, wherein the coating layer is made of a coating material comprising:

(A) an polyethyleneimine having two or more functional amino groups, with the proviso that the polyethyleneimine does not contain an $Si(OR^1)$ group, where R^1 is a hydrogen atom, a lower alkyl group containing 1 to 4 carbon atoms or an acyl group;

(B) a silane compound and/or a hydrolytic condensation product thereof, having a functional group selected from the group consisting of an epoxy group and a mercapto group, wherein said functional group is reactive with the functional amino groups of the polyethyleneimine (A), and an $Si(OR^1)$ group, where R^1 is a hydrogen atom, a lower alkyl group containing 1 to 4 carbon atoms or an acyl group;

(C) an organometallic compound of the formula (C) and/or a hydrolytic condensation product thereof:

$$R^2{}_mM(OR^3)_n \qquad (C)$$

wherein M is Si or a metal element; R^2 is the same or different hydrogen atom, a lower alkyl group containing 1 to 4 carbon atoms or an allyl group; R^3 is the same or different hydrogen atom, a lower allyl group containing 1 to 4 carbon atoms or an acyl group; m is 0 or a positive integer; n is an integer of 1 or more; and (m+n) is equal to the valency of element M; and

(D) a solvent.

5. An electrostatic image developer comprising the carrier particle of claim **1** and toner particles.

6,040,102

ELECTROSTATIC LATENT IMAGE DEVELOPER AND IMAGE FORMING METHOD

Sakon Takahashi; Shinpei Takagi; Noriyuki Mizutani; Yasuhiro Oya, and Haruhide Ishida, all of Minami-Ashigara, Japan, assignors to Fuji Xerox Co., Ltd., Tokyo, Japan

Filed Dec. 1, 1997, Appl. No. 982,301

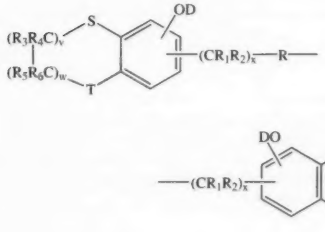
PHOTOSENSITIVE DIAZONAPHTHOQUINONE ESTERS BASED ON SELECTED CYCLIC ALKYL ETHER-CONTAINING PHENOLICS AND THEIR USE IN RADIATION SENSITIVE MIXTURES

Andrew J. Blakeney, Seekonk, Mass.; Arturo N. Medina, Scotch Plains, N.J.; Medhat A. Toukhy, Barrington, R.I.; Lawrence Ferreira, Fall River, Mass.; Alfred T. Jeffries, III, Providence, and Ahmad A. Naiini, Warwick, both of R.I., assignors to Olin Microelectronic Chemicals, Inc., Norwalk, Conn.

Filed Feb. 6, 1998, Appl. No. 19,958
Int. Cl.[7] **G03F** *7/023*
U.S. Cl. 430—165 **7 Claims**

1. A photosensitive compound comprising at least one o-quinonediazide sulfonic acid ester of a phenolic compound, said esters selected from the group consisting of formula II:

(II)



wherein R_1, R_2, R_3, R_4, R_5, and R_6 are each independently selected from the group consisting of H and a lower alkyl group having 1–4 carbon atoms;

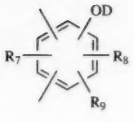
v and w are each an integer from 0 to 2 with the proviso that v and w cannot simultaneously be 0;

each S and T are independently selected from the group consisting of oxygen and —CH_2—, with the proviso that S and T cannot simultaneously be —CH_2—;

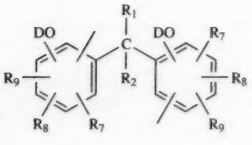
x is an integer from 1–4;

R is a bivalent alkali-soluble moiety selected from the formulae (A'), (B'), (C'), (D'), and (E'):

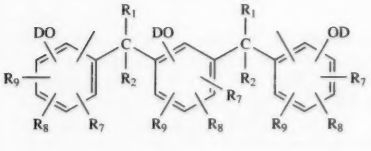
(A')



(B')

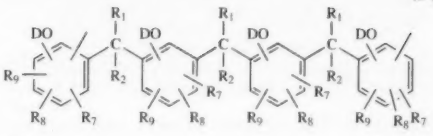


(C')



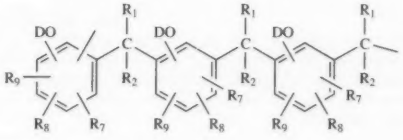
-continued

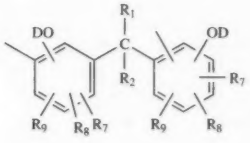
(D')



and

(E')





wherein R_7, R_8, and R_9 are each independently selected from the group consisting of hydrogen, lower alkyl groups having 1–4 carbon atoms, araalkyl and cycloalkyl; and

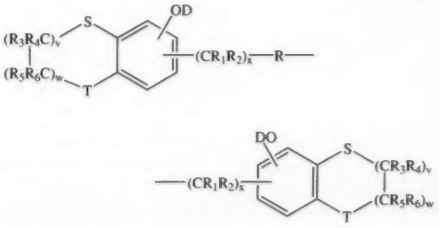
OD is hydrogen or an o-quinonediazide sulfonic acid ester group subject to the proviso that not all Ds are hydrogen and at least about 75% of the hydroxyl groups on said phenolic rings having the cyclic ether moieties are esterified with an o-quinonediazide sulfonic acid moiety, and less than about 25% of the hydroxyl groups on phenolic rings having no cyclic ether moieties are esterified.

4. A radiation sensitive mixture, said mixture comprising an admixture of:

(1) an alkali-soluble resin; and

(2) at least one photosensitive composition comprising at least one o-quinonediazide sulfonic acid ester of a phenolic compound, said ester selected from the group consisting of formula II:

(II)



wherein R_1, R_2, R_3, R_4, R_5, and R_6 are each independently selected from the group consisting of H and a lower alkyl group having 1–4 carbon atoms;

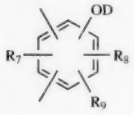
v and w are each an integer from 0 to 2 with the proviso that v and w cannot simultaneously be 0;

each S and T are independently selected from the group consisting of oxygen and —CH_2— with the proviso that S and T cannot simultaneously be —CH_2—;

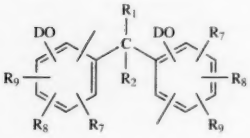
x is an integer from 1–4;

R is a bivalent alkali-soluble moiety selected from the formulae (A'), (B'), (C'), (D'), and (E'):

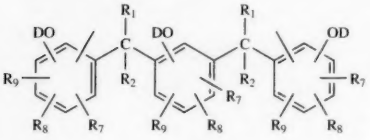
(A')



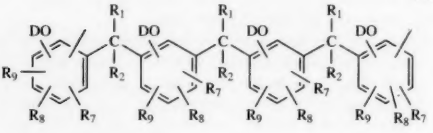
(B')



(C')

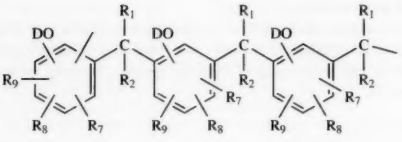


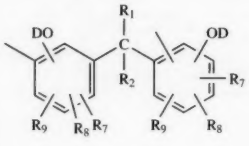
(D')



and

(E')





wherein R_7, R_8, and R_9 are independently selected from the group consisting of hydrogen, lower alkyl groups having 1–4 carbon atoms, araalkyl and cycloalkyl; and

OD is either hydrogen or an o-quinonediazide sulfonic acid ester group subject to the proviso that not all Ds hydrogen and at least about 75% of the hydroxyl groups on said phenolic rings having the cyclic ether moieties are esterified and an o-quinonediazide sulfonic acid moiety, and less than about 25% of the hydroxy groups on phenolic rings having no cyclic ether moieties are esterified.

Int. Cl.[7] **G03C** *8/02;5/16;* **B41J** *2/315;* **B05D** *3/06*

U.S. Cl. 430—200 **10 Claims**

1. A method for producing colored patterns or images including the steps of

(1) forming a polymer layer containing a dissolved pigment precursor component (a), a polymer or a natural or synthetic resin material (b') and optionally a catalyst for pigment formation (c), and

(2) locally regenerating the pigment from the above soluble precursor by chemical, photolytical or thermal means, or by laser or other sources of irradiation,

wherein said pigment precursor (a) is represented by formula

$$A(B)x \qquad (I),$$

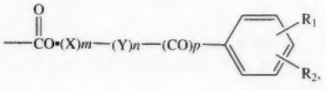
wherein

x is a number from 1 to 4,

A is the residue of a colorant of the quinacridone-, anthraquinone-, perylene-, quinophthalone-, isoindolinone-, isoindoline-, dioxazine-, or azo series, which is linked to x groups B via N atoms, which nitrogens are part of A,

B is represented by formulae

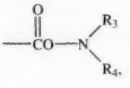
(II)



(III)

or

(IV)



and wherein in formulae II, III and IV

m, n and p are each independently of the other 0 or 1,

X is C_1–C_4-alkylene or C_2–C_8-alkenylene,

Y is a group —T—$(CH_2)_q$—,

Z is a group —T—$(CH_2)_r$—,

T is C_3–C_6-cycloalkylene,

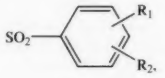
q is a number between 1 and 6,

r is a number between 0 and 6,

R_1 and R_2 are each independently of the other hydrogen, C_1–C_6-alkyl, C_1–C_4-alkoxy, halogen, CN, NO_2, phenyl or phenoxy which are unsubstituted or substituted by C_1–C_4-alkyl, C_1–C_4-alkoxy or halogen,

Q is hydrogen, CN, $Si(R_1)_3$, a group $C(R_5)(R_6)(R_7)$, wherein R_5, R_6 and R_7 are each independently of the other hydrogen or halogen and at least one of the residues R_5, R_6 and R_7 is halogen,

a group



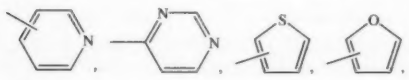
wherein

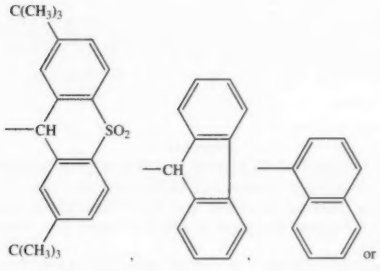
R_1 and R_2 have the same meaning as given above,

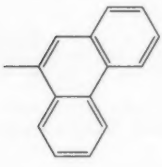
a group SO_2R_8 or SR_8, wherein R_8 is C_1–C_4-alkyl,

a group $CH(R_9)_2$, wherein R_9 is phenyl which is unsubstituted or substituted by C_1–C_4-alkyl, C_1–C_4 -alkoxy or halogen, or

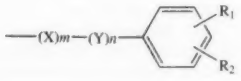
a group of formula







and R_3 and R_4 are each independently of the other hydrogen, C_1–C_{18}-alkyl or a group



wherein X, Y, R_1, R_2, m and n have the above given meaning, or R_3 and R_4 together with the nitrogen, on which they are bound, form a pyrrolidinyl-, piperidinyl- or morpholinyl residue, and wherein A(B)$_x$ may contain additional

=N—, —NH— or —NH_2 groups.

4. A method according to claim **1**, wherein said step (1) is carried out by

(1a) forming a polymer layer containing a polymer or a natural or synthetic resin material (b') and optionally a catalyst (c), then

(1b) superposing a donor layer comprising a pigment precursor (a) and a polymer or a natural or synthetic resin material (b') onto the polymer layer,

(1c) locally heating the donor layer to transfer the pigment precursor in selected target areas, and

(1d) removing the donor layer from the receiver layer.

PATTERN FORMING METHOD

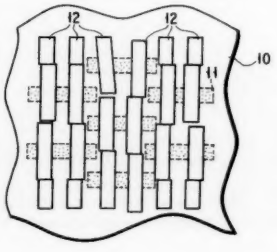
Soichi Inoue, Yokohama; Iwao Higashikawa, Tokyo; Yoji Ogawa, Yokohama; Shigehiro Hara, Kawasaki, and Kazuko Yamamoto, Tokyo, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Apr. 23, 1997, Appl. No. 838,944

Claims priority, application Japan, Apr. 26, 1996, 8-107439

Int. Cl.[7] **B03C** *5/00*

U.S. Cl. 430—296 **10 Claims**



1. A method for forming a gate pattern for a semiconductor device, comprising:

forming an active area pattern of the semiconductor device, said active area pattern including active portions surrounded by isolation region portions;

forming a photosensitive film on a conductive layer for the gate pattern above the active area pattern and the isolation region;

exposing the photosensitive film by sequentially radiating with respective single shots of a radiation beam a plurality of butting unit regions defining butting portions between said butting unit regions;

controlling said radiating of said butting unit regions so that said butting portions of said butting unit regions are formed only above the isolation region portions of the semiconductor device and not above the active portions of the active area pattern;

developing the exposed photosensitive film; and

etching the conductive layer to form the gate pattern such that the gate pattern extends over the active area pattern and the isolation region.

6,040,115

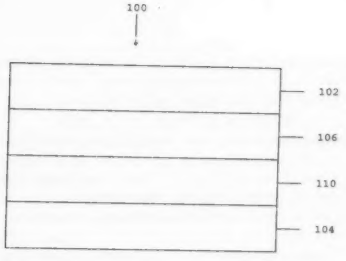
PROCESSLESS PLANOGRAPHIC PRINTING PLATE

David B. Bailey; Mitchell S. Burberry, both of Webster, and Mark A. Harris, Rocester, all of N.Y., assignors to Kodak Polychrome Graphics LLC, Norwalk, Conn.

Continuation-in-part of application No. 08/749,050, Nov. 14, 1996, abandoned. This application Dec. 9, 1998, Appl. No. 208,520.

Int. Cl.[7] **G03F** *7/26;* **B41N** *1/00*

U.S. Cl. 430—303 **31 Claims**



1. A process for producing a lithographic printing plate, the process comprising:

thermally imaging an imageable element, the element comprising:

(a) an ink receptive substrate; and

(b) an ink repellent, thermally sensitive surface layer overlying the substrate, the layer comprising an ink repellent, thermally sensitive co-polymer;

in which:

the thermally sensitive co-polymer comprises one or more silicone segments and one or more hard segments;

the silicone segments comprise 50 to 98 weight percent of the thermally sensitive co-polymer; the hard segments provide physical integrity and thermal sensitivity to the thermally sensitive co-polymer; and

either (1) no layer overlies the ink repellent, thermally sensitive surface layer or (2) a slipping layer removable by a printing operation overlies the ink repellent, thermally sensitive surface layer.

6,040,116

PHOTOSENSITIVE RECORDING ELEMENT HAVING A RECORDING LAYER AND A TOP LAYER POSSESSING DIFFERENT SOLUBILITY PROPERTIES, AND ITS DEVELOPMENT IN ONE OPERATION

Thomas Telser, Weinheim; Wolfgang Huemmer, Limburgerhof, and Karl-Rudolf Kurtz, Heidelberg, all of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Germany

Continuation of application No. 08/692,640, Aug. 5, 1996, abandoned, which is a continuation of application No. 07/752,488, filed as application No. PCT/EP90/00407, Mar. 14, 1990. This application Jul. 14, 1997, Appl. No. 892,350.

Claims priority, application Germany, Mar. 17, 1989, 39 08 763; WIPO, Mar. 14, 1990, PCT/EP90/00407

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **G03F** *7/32*

U.S. Cl. 430—306 **8 Claims**

1. A process for the production of a flexographic relief printing plate having a photopolymerized relief layer from a photosensitive recording element comprising (A) a dimensionally stable substrate, (B) a photopolymerizable relief-forming recording layer, which comprises a single layer or two or more individual layers, and (C) an optically transparent top layer,

wherein the optically transparent top layer (C) firmly adheres to the surface of the recording layer (B),

said process comprising:

(1) imagewise exposure of the photopolymerizable relief-forming recording layer (B) to actinic light, with the result that there is a difference between the solubilities of the exposed and unexposed parts of the recording layer (B),

(2) washout (development) of the optically transparent top layer (C) and of the unexposed and therefore nonphotopolymerized parts of the imagewise exposed relief-forming recording layer (B) with a developer with formation of the photopolymerized relief layer,

wherein

development (process step 2) is carried out in one operation using a water-in-oil emulsion as the sole developer,

the water-in-oil emulsion consists of an aqueous phase and an organic phase,

the organic phase consists of a solvent selected from the group consisting of n-hexane, n-heptane, octane, cyclohexane, hexylcyclohexane, petroleum ether, naphtha, mineral spirits, mineral spirits from which aromatic constituents have been removed, synthetic isoparaffins, n-paraffins, hydrogenated mineral oils, petroleum fractions, hydrogenated oil fractions, xylene, ethylbenzene, diethyl-substituted benzenes, n-butylbenzene, n-pentylbenzene, n-hexylbenzene, isopropylbenzene, ketones, halogenated aliphatic hydrocarbons, a mixture of two or more of these solvents, and a mixture of one or more of these solvents with alcohol and/or minor amounts of surfactant, and

the optically transparent top layer (C) is soluble in aqueous solvents but insoluble in the organic phase suitable and effective for developing the layer (B), and the unexposed parts of the recording layer (B) are insoluble in aqueous solvents.

NEGATIVE PHOTORESIST STRIPPING LIQUID COMPOSITION

Toshiyuki Ota; Kimiyasu Sano, both of Tsukuba; Hideaki Tashiro, Yokkaichi, and Hozumi Sato, Tsukuba, all of Japan, assignors to JSR Corporation, Tokyo, Japan

Filed Feb. 24, 1998, Appl. No. 28,290

Claims priority, application Japan, Feb. 24, 1997, 9-055549

Int. Cl.[7] **G03F** *7/42*

U.S. Cl. 430—311 **16 Claims**

1. A negative photoresist stripping liquid composition consisting essentially of from 30% by weight to 75% by weight of dimethyl sulfoxide, from 20% by weight to 65% by weight of 1,3-dimethyl-

2-imidazolidinone, from 0.1% by weight to 5% by weight of a tetraalkylammonium hydroxide and from 0.5% by weight to 15% by weight of water.

6,040,118

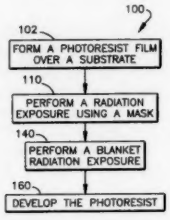
CRITICAL DIMENSION EQUALIZATION ACROSS THE FIELD BY SECOND BLANKET EXPOSURE AT LOW DOSE OVER BLEACHABLE RESIST

Luigi Capodieci, Sunnyvale, Calif., assignor to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Oct. 30, 1998, Appl. No. 183,356

Int. Cl.[7] **G03F** *7/20*

U.S. Cl. 430—328 **19 Claims**



1. A method of providing critical dimension uniformity in a radiation sensitive film, comprising the steps of:

forming a radiation sensitive film over a substrate, wherein the radiation sensitive film exhibits substantial bleaching upon an exposure thereof;

exposing the radiation sensitive film to radiation using a mask having a pattern thereon, wherein a first feature and a second feature on the mask are intended to provide the same critical dimension on the radiation sensitive film, wherein the exposing forms an exposure pattern on the radiation sensitive film corresponding to the mask pattern, and wherein a transferred first feature critical dimension on the radiation sensitive film corresponding to the first mask feature is larger than the second transferred feature critical dimension on the radiation sensitive film corresponding to the second mask feature due to radiation non-uniformities or imaging non-uniformities; and

exposing the radiation sensitive film to a blanket radiation exposure, wherein the blanket radiation exposure has a dose which is substantially less than the exposure using the mask, and wherein the blanket exposure provides effectively a greater dose to the first transferred feature than a radiation dose to the second transferred feature due to variations in a bleaching of the radiation sensitive film at the first and second transferred features, thus decreasing the critical dimension of the first transferred feature more than the critical dimension size of the second transferred feature, thereby reducing a difference in the critical dimension of the first and second transferred features which results in improved critical dimension uniformity.

6,040,119

ELIMINATION OF PROXIMITY EFFECT IN PHOTORESIST

Tsai-Sheng Gau, and Chang-Ming Dai, both of Hsinchu, Taiwan, assignors to Industrial Technology Research Institute, Hsin-Chu, Taiwan

Filed Mar. 27, 1998, Appl. No. 49,213

Int. Cl.[7] **G03F** *7/26*

U.S. Cl. 430—330 **5 Claims**

1. A process for photolithography, comprising:

providing an optical mask;

coating a substrate with a layer of photoresist, said photoresist having been supplied by a manufacturer together with recommended ranges for processing;

drying the layer of photoresist;

using actinic radiation having a partial coherence value between 0.6 and 0.9, and projecting an image of the mask on the layer of photoresist by means of an imaging system having a numerical aperture between 0.5 and 0.7, for a first time period;

and then baking the substrate and photoresist, at a temperature that is between 20 and 25° C. lower than the ranges recommended by the manufacturer, for a second time period; and

then developing said layer of photoresist whereby an image that is free of proximity effects, and having a critical dimension, is produced.

1. An aqueous rinsing solution for silver halide photographic products comprising an anionic surfactant and a non-ionic surfactant wherein said solution has a static surface tension less than or equal to 32 mN/m and a dynamic surface tension of less than 50 mN/m.

6,040,124

IMAGING ELEMENT WITH BIAXIALLY ORIENTED SHEET WITH FLUOROPOLYMER

Peter T. Aylward, Hilton; Robert P. Bourdelais, Pittsford; Thaddeus S. Gula, Rochester, and Pang-Chia Lu, Pittsford, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Nov. 20, 1998, Appl. No. 196,910

Int. Cl.^{7} G03C *1/79*

U.S. Cl. 430—496 **23 Claims**

1. An imaging element comprising a substrate having adhered to each side a biaxially oriented sheet of polyolefin polymer of at least one layer, wherein at least one of the biaxially oriented sheets has incorporated therein an amount of a fluoropolymer processing aid, and wherein said fluoropolymer is in the amount of about 0.01% to 3% by weight of said at least one sheet.

6,040,125

HIGH-SPEED COLOR PHOTOGRAPHIC RECORDING MATERIAL HAVING INCREASED SENSITIVITY IN THE BLUE SPECTRAL REGION

Jörg Siegel, Köln; Hans-Ulrich Borst, Elsdorf; Peter Bell, Köln; Ralf Büscher, Lohmar; Heinz Reif, Köln, and Jürgen Jung, Leverkusen, all of Germany, assignors to Agfa-Gevaert NV, Germany

Filed Mar. 13, 1998, Appl. No. 42,401

Claims priority, application Germany, Mar. 18, 1997, 197 11 142

Int. Cl.^{7} G03C *1/46*

U.S. Cl. 430—506 **4 Claims**

1. A high-speed color photographic recording material which comprises at least one red-sensitive silver halide emulsion layer unit with which a cyan coupler is associated, at least one green-sensitive silver halide emulsion layer unit with which a magenta coupler is associated, at least one blue-sensitive silver halide emulsion layer unit with which a yellow coupler is associated and optionally further light-insensitive layers, and said blue-sensitive silver halide emulsion layer unit comprises at least two blue-sensitive partial layers which are sensitized with sensitizing dyes in such a way that a sensitivity curve ensues which is characterized by the following parameters:

$$460\ \text{nm} \leqq \lambda(S_{max}) \leqq 480\ \text{nm}$$

$$b_{80} \geqq 24\ \text{nm}$$

$$b_{50} \geqq 91\ \text{nm}$$

$$b_{20} \geqq 106\ \text{nm},$$

wherein

$\lambda(S_{max})$	denotes the wavelength of the sentivity curve maximum (100% sensitivity);
b_{80}	denotes the width of the senitivity curse at 80% of the maximum sensitivity;
b_{50}	denotes the width of the sensitivity curve at 50% of the maximum sensitivity;
b_{20}	denotes the width of the sensitivity curve at 50% of the maximum sensitivity and the content of UV absorber compounds having an absorption maximum between 360 and 390 nm in layers disposed above the blue-sensitive silver halide emulsion layer unit amounts to not more than 100 mg/m^2 in total.

PHOTOGRAPHIC YELLOW DYE-FORMING COUPLERS

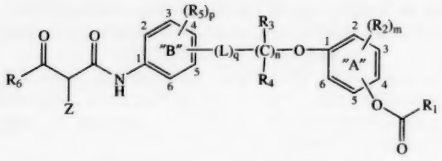
Ping-Wah Tang, Yorktown; Barbara B. Lussier, and Stanley W. Cowan, both of Rochester, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Dec. 22, 1998, Appl. No. 218,512

Int. Cl.^{7} G03C *1/08;7/26;7/32*

U.S. Cl. 430—557 **11 Claims**

1. A photographic element comprising a light sensitive silver halide emulsion layer having associated therewith an open chain a-carbonyl acetanilide yellow dye-forming coupler compound having the formula:



wherein

R_1 is selected from the group consisting of alkyl, aryl, heterocyclic, and amino groups, provided that R_1 may form a ring bonded to another carbon atom which is a member of Ring "A";

each R_2 is independently a substituent having a Hammett's sigma value of 0 or less, and m is from 0 to 4;

each R_3 and R_4 for each of the n carbon atoms is independently selected from the group consisting of hydrogen, alkoxy, aryl, heterocyclic, aryloxy, and alkyl groups, and n is 0 to 16;

each R_5 is independently selected from the group consisting of amino, alkyl groups, and groups linked to the "B" ring by oxygen or sulfur, and p is 1 to 3, provided that two R_5 groups may join to form a ring;

R_6 is a multicarbocyclic or multiheterocyclic group having a common vertex through which it is attached to the indicated carbonyl group;

each L is independently a divalent linking group and q is 0 to 3;

Ring "A" is bonded indirectly to the 3-, 4-, or 5-position of Ring "B", and

Z is hydrogen or a group capable of coupling-off when the coupler reacts with an oxidized color developer.

6,040,127

METHOD FOR PRODUCING SILVER HALIDE EMULSION AND PHOTOGRAPHIC MATERIAL CONTAINING THE SAME

Masayuki Kuramitsu; Mitsuo Saitou; Yutaka Maeno, and Takefumi Hara, all of Minami Ashigara, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Dec. 31, 1996, Appl. No. 777,624

Claims priority, application Japan, Jan. 10, 1996, 8-002080; Jan. 12, 1996, 8-003567

Int. Cl.[7] G03C *1/015;1/035;1/047*

U.S. Cl. 430—567 **18 Claims**

1. A method for producing a silver halide emulsion in which grains having an aspect ratio of from 1.5 to 100 occupy from 75 to 100% of the total projected area of all grains comprising at least nucleation, ripening and grain growth processes in a dispersion medium solution containing water and a dispersion medium, wherein the dispersion medium solution contains low molecular weight gelatin having a molecular weight of from 1,000 to 70,000 at least during a nucleation process and chemically modified gelatin having a chemical modification rate of an amino group of from 15% to 100% at least during a grain growth process, wherein silver halide grains have 10 or more dislocation lines per one grain in proportion of 50% or more of the number of all the grains in said emulsion.

6,040,128

PROCESSES OF PREPARING RADIATION-SENSITIVE SILVER HALIDE EMULSIONS

John W. Boettcher, Webster; Seshadri Jagannathan; Michael W. Orem, both of Rochester, and Philip J. Zola, Webster, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Sep. 24, 1998, Appl. No. 160,032

Int. Cl.[7] G03C *1/015;1/035;1/043*

U.S. Cl. 430—569 **11 Claims**

1. A process of preparing a radiation-sensitive silver halide emulsion comprising

reacting silver and halide ions in an aqueous dispersing medium to form radiation-sensitive silver halide grains in the presence of a polyalkylene oxide block copolymer surfactant,

WHEREIN dispersion of the polyalkylene oxide block copolymer surfactant in the aqueous dispersing medium is increased by the inclusion of an auxiliary surfactant that, in the form of an aqueous solution containing 10 percent by weight of the auxiliary surfactant based on total weight of the aqueous solution, is miscible in all proportions with at least one of water and the polyalkylene oxide block copolymer surfactant.

6,040,129

PHOTOGRAPHIC EMULSION HAVING AN IMPROVED SPEED, PHOTOGRAPHIC ELEMENT CONTAINING SAID EMULSION, AND METHOD

Stephen A. Godleski, Fairport; David A. Dickinson, Brockport, and Antony J. Williams, West Henrietta, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Apr. 9, 1999, Appl. No. 288,900

Int. Cl.[7] G03L *1/08*

U.S. Cl. 430—604 **13 Claims**

1. A photographic emulsion comprising dispersed in a binder sensitized silver halide grains wherein the emulsion is sensitized from an organometallic compound of formula:

$$(R)_n(X)_mM \qquad (I)$$

wherein M is a metal selected from the group consisting of lead, tin, boron, bismuth and thallium, each R is independently an alkyl group, a cycloalkyl group, an aryl group, a heterocyclic group, an alkenyl group or a alkynyl group, each X is independently halogen, hydroxy, or alkoxy, n is 1 to 4 and m is 0 to 3, with the proviso that when M is lead or tin, n is 1 to 4 and m+n is 4, when M is boron or bismuth, n is 1 to 3 and m+n is 3 and when M is thallium, either n is 1 and m is 0, or n is 1 to 3 and n+m is 3.

6,040,130

PHOTOTHERMOGRAPHIC AND THERMOGRAPHIC FILMS CONTAINING LOW LEVELS OF UNSATURATED FATTY ACID TO PREVENT FOG

Alfred J. Alton, Hilton; James P. Beese, Spencerport; Juris L. Ekmanis, Victor; Bruce J. Henne, Rochester, and William F. Smith, Brockport, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Feb. 10, 1997, Appl. No. 798,202

Int. Cl.[7] G03C *1/498*

U.S. Cl. 430—617 **15 Claims**

1. A method of preparing a photothermographic composition comprising:

A. preparing a dispersion of:

a. an oxidation-reduction image-forming combination comprising:

i. a silver salt of a fatty acid oxidizing agent and

ii. an organic reducing agent with:

b. a synthetic polymer-peptized photosensitive silver halide, and

c. a toner in

d. a non-gelatin polymeric binder and

B. the improvement wherein said composition contains less than about 800 micrograms of polyunsaturated and 3800 micrograms of monounsaturated fatty acid silver salts per gram of oxidizing agent.

6,040,131

COLOR PHOTOTHERMOGRAPHY

Lyn M. Eshelman, Penfield, and Timothy W. Stoebe, Victor, both of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Division of application No. 09/045,382, Mar. 20, 1998, Pat. No. 5,963,307. This application Apr. 13, 1999, Appl. No. 290,291.

Int. Cl.[7] G03C *1/498*

U.S. Cl. 430—619 **4 Claims**

1. A photothermographic film comprised of

a support and, coated on the support,

a photographically responsive, thermally developable panchromatically sensitized emulsion layer unit containing

radiation-sensitive silver halide grains, at least 50 percent of the projected area of the grains being accounted for by tabular grains,

a plurality of spectral sensitizing dyes adsorbed to the surface of the radiation-sensitive silver halide grains chosen to provide light sensitivity in the blue, green and red portions of the spectrum,

a light-insensitive, reducible source of silver,

a development component capable of providing a dye image, and

a hydrophilic colloid vehicle.

6,040,132

METHODS FOR THE LYOPHILIZATION OF LIVING BIOLOGICAL MATERIALS

Philippa M. Wiggins, Mairangi Bay, New Zealand, assignor to Biostore New Zealand, Ltd., Parnell, New Zealand

Continuation-in-part of application No. 09/060,770, Apr. 15, 1998, which is a continuation-in-part of application No. 08/989,470, Dec. 12, 1997, Pat. No. 5,962,213, which is a continuation-in-part of application No. 08/842,553, Apr. 15, 1997, which is a continuation-in-part of application No. 08/722,306, Sep. 30, 1996, Pat. No. 5,827,640, which is a continuation-in-part of application No. 08/662,244, Jun. 14, 1996, Pat. No. 5,879,875. This application May 26, 1998, Appl. No. 85,334.

Int. Cl.[7] A01N *1/02*

U.S. Cl. 435—2 **15 Claims**

1. A method for the preservation of a biological material selected from the group consisting of platelets, platelet membranes and red blood cells, comprising:

(a) contacting the biological material with a preservative solution, wherein the preservative solution consists essentially of betaine, sodium citrate and sodium chloride, the preservative solution being substantially isotonic with the biological material and substantially free of iodide, dihydrogen phosphate, bicarbonate, nitrate and bisulfate;

(b) cooling the biological material to a temperature of less than about −140° C.; and

(c) drying the biological material to provide a freeze-dried material.

6,040,133

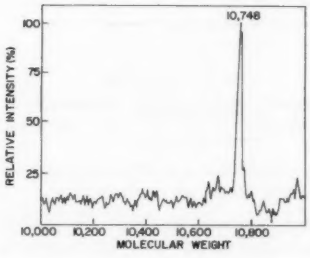
D-ENZYME COMPOSITIONS AND METHODS OF THEIR USE

Stephen Brian Henry Kent; Saskia Charlotte Florence Milton, and Raymond Cecil deLisle Milton, all of La Jolla, Calif., assignors to The Scripps Research Institute, La Jolla, Calif.

Division of application No. 08/343,585, Dec. 2, 1994, which is a continuation-in-part of application No. 07/894,817, Jun. 8, 1992, abandoned. This application May 22, 1996, Appl. No. 651,144.

Int. Cl.[7] C12Q *1/00;1/37;1/34;1/44*

U.S. Cl. 435—4 **2 Claims**



1. A method for screening a library for identifying an active enantiomer of a chiral drug candidate having activity with respect to an L-enzyme, the activity being selected from a group consisting of enzyme inhibition and enzyme binding, the chiral drug candidate having a first and a second enantiomer, the first enantiomer being active and the second enantiomer being inactive with respect to the L-enzyme, the library including the second enatiomer but excluding the first enatiomer, the method comprising the following steps:

Step A: providing a D-enzyme, the D-enzyme being an enantiomer of the L-enzyme, the second enantiomer of the chiral drug candidate being active with respect to the D-enzymne; then

Step B: contacting the library under reaction conditions with the D-enzyme of said Step A for identifying the second enatiomer by its activity with the D-enzyme; then

Step C: providing the first enatiomer using information obtained from the identification of the second enatiomer in said Step B; and then

Step D: contacting the L-enzyme under reaction conditions with the first enantiomer, provided in said Step C, for verifying the activity of the first enantiomer of the chiral drug candidate with rspect to the L-enzyme.

6,040,134

METHOD OF DIAGNOSING PRECLINICAL DIABETES

Ole Dragsbaek Madsen, Soborg; Birgitte Koch Michelsen, Lyngy; Jacob Steen Petersen, Copenhagen, all of Denmark; Bart O. Roep, Leiden, Netherlands, and Borge Teisner, Odense, Denmark, assignors to Novo Nordisk A/S, Bagsvaerd, Denmark

Continuation of application No. PCT/DK96/00050, Jan. 31, 1996. This application Jul. 15, 1997, Appl. No. 892,783.

Claims priority, application Denmark, Jan. 31, 1995, 0109/95

Int. Cl.[7] G01N *33/50;33/53;33/564;33/567*

U.S. Cl. 435—4 **8 Claims**

1. A method of diagnosing preclinical insulin-dependent diabetes mellitus (IDDM), comprising contacting fetal antigen 1 (FA1) with T cells of a subject to be diagnosed for preclinical IDDM and detecting any T cell response to the FA1, such a response being indicative of preclinical IDDM in the subject.

6,040,135

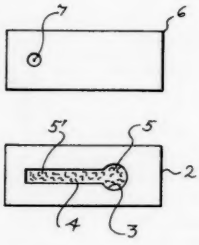
METHOD FOR CORRECTING FOR BLOOD VOLUME IN A SERUM ANALYTE DETERMINATION

Steven P. Tyrrell, Highland Park, Ill., assignor to Biosafe Laboratories, Inc., Chicago, Ill.

Provisional application No. 60/077,030, Mar. 6, 1998. This application Mar. 5, 1999, Appl. No. 264,169.

Int. Cl.[7] C12Q *1/00;1/60;1/37*

U.S. Cl. 435—4 8 Claims



1. A method for determining the concentration of a serum analyte from a solution formed from a dried blood sample in which the analyte and hematocrit determinations are made wherein the improvement comprises the steps of:

(a) measuring the hemoglobin level in the solution; and

(b) calculating the hematocrit from the hemoglobin level;

(c) calculating the concentration of the serum analyte from the analyte level and the hemocrit determined from the hemoglobin level.

6,040,136

ENRICHMENT METHOD FOR VARIANT PROTEINS WITH ALTERED BINDING PROPERTIES

Lisa J. Garrard, Burlingame; Dennis J. Henner, Pacifica; Steven Bass, Redwood City, all of Calif.; Ronald Greene, Durham, N.C.; Henry B. Lowman, Hercules, Calif.; James A. Wells, Burlingame, Calif., and David J. Matthews, San Francisco, Calif., assignors to Genentech, Inc., South San Francisco, Calif.

Division of application No. 08/463,587, Jun. 5, 1995, Pat. No. 5,821,047, which is a division of application No. 08/050,058, filed as application No. PCT/US91/09133, Dec. 3, 1991, Pat. No. 5,750,373, which is a continuation-in-part of application No. 07/743,614, Aug. 9, 1991, abandoned, which is a continuation-in-part of application No. 07/715,300, Jun. 14, 1991, abandoned, which is a continuation-in-part of application No. 07/683,400, Apr. 10, 1991, abandoned, which is a continuation-in-part of application No. 07/621,667, Dec. 3, 1990, abandoned. This application Sep. 3, 1997, Appl. No. 923,854.

This patent is subject to a terminal disclaimer.

1. A phagemid expression vector, comprising a transcription regulatory element operably linked to a gene fusion encoding a fusion protein, wherein the gene fusion comprises a first gene encoding a polypeptide and a second gene encoding at least a portion of a phage coat protein, the vector not containing a further gene encoding a mature phage coat protein.

6,040,137

ANTIGEN/ANTIBODY SPECIFICATION EXCHANGER

Matti Sällberg, Stockholm, Sweden, assignor to Tripep AB, Sweden

Continuation of application No. 08/737,085, filed as application No. PCT/SE95/00468, Apr. 27, 1995. This application Feb. 8, 1999, Appl. No. 246,258.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] C12Q *1/70*

U.S. Cl. 435—5 18 Claims

1. An antigen/antibody specificity exchanger, comprising a first specific binding sequence that specifically binds to an antigen, including a hapten, covalently linked to a second sequence comprising an epitope of a pathogen.

6,040,138

EXPRESSION MONITORING BY HYBRIDIZATION TO HIGH DENSITY OLIGONUCLEOTIDE ARRAYS

David J. Lockhart, Santa Clara, Calif.; Eugene L. Brown, Newton Highlands, Mass.; Gordon G. Wong, Brookland, N.Y.; Mark S. Chee, Palo Alto, and Thomas R. Gingeras, Encinitas, both of Calif., assignors to Affymetrix, Inc., Santa Clara, Calif.

Filed Sep. 15, 1995, Appl. No. 529,115

Int. Cl.[7] C12Q *1/68;* C07H *21/04;21/02*

U.S. Cl. 435—6 45 Claims

1. A method of analyzing the expression of one or more genes, said method comprising:

(a) providing a pool of target nucleic acids comprising RNA transcripts of one or more of said genes, or nucleic acids derived therefrom using said RNA transcripts as templates;

(b) hybridizing said pool of tarzet nucleic acids to an array of oligonucleotide probes immobilized on a surface, said array comprising more than 100 different oligonucleotides, at least some of which comprise control probes, wherein each different oligonucleotide is localized in a predetermined region of said surface, the density of said different oligonucleotides is greater than about 60 different oligonucleotides per 1 cm^2, and at least some of said oligonucleotide probes are complementary to said RNA transcripts or said nucleic acids derived therefrom using said RNA transcripts; and

(c) quantifying the hybridization of said nucleic acids to said array, wherein said quantification is proportional to the expression level of said genes.

6,040,139

LASER CELL PURIFICATION SYSTEM

G. Steven Bova, 331 Tuscany Rd., Baltimore, Md. 21210

Filed Sep. 19, 1995, Appl. No. 530,791

Int. Cl.[7] C12Q *1/68;* C12M *1/00*

U.S. Cl. 435—6 15 Claims

1. An apparatus for purifying a heterogenous cell population in a tissue section, said apparatus comprising:

(a) a microscope with an objective for viewing a tissue section having a heterogenous population of cells fixed on a tissue support;

(b) a stage for supporting said tissue support;

(c) a drive means for providing relative movement between said tissue support and said objective and for generating an address signal within an x-y coordinate plane for each incremental location;

(d) a video camera mounted on said microscope for generating a video image of said tissue section at each selected incremental location;

(e) selection means for analyzing each image of said tissue section and for identifying target cells in said heterogenous tissue section; and

(f) a radiant energy beam generating means for automatically and selectively ablating only those said target cells identified by said selection means.

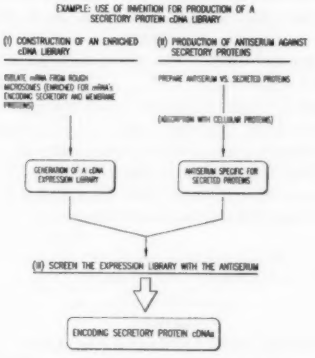
PROCEDURE FOR PREPARING GENE EXPRESSION LIBRARIES ENRICHED FOR SECRETORY PROTEIN GENES

Frank Carter Bancroft, Huntington, and Makiko Fliss, New York, both of N.Y., assignors to Mount Sinai School of Medicine, New York, N.Y.

Filed Jul. 25, 1997, Appl. No. 900,347

Int. Cl.[7] **C12Q** *1/68;* **C12N** *15/63*

U.S. Cl. 435—6 **8 Claims**



EXAMPLE: USE OF INVENTION FOR PRODUCTION OF A SECRETORY PROTEIN cDNA LIBRARY
(I) CONSTRUCTION OF AN ENRICHED cDNA LIBRARY
(II) PRODUCTION OF ANTISERUM AGAINST SECRETORY PROTEINS
ISOLATE mRNA FROM ROUGH MICROSOMES (ENRICHED FOR mRNA's ENCODING SECRETORY AND MEMBRANE PROTEINS)
PREPARE ANTISERUM VS. SECRETED PROTEINS
(ADSORPTION WITH CELLULAR PROTEINS)
GENERATION OF A cDNA EXPRESSION LIBRARY
ANTISERUM SPECIFIC FOR SECRETED PROTEINS
(III) SCREEN THE EXPRESSION LIBRARY WITH THE ANTISERUM
ENCODING SECRETORY PROTEIN cDNAs

1. A method of preparing a gene expression library enriched for genes encoding secretory proteins comprising the steps of (i) preparing a cDNA expression library consisting of cDNA clones produced from mRNA collected from rough microsomes of a secretory tissue; (ii) screening the cDNA expression library with a polyclonal antiserum directed toward proteins secreted by the tissue; and (iii) pooling cDNA clones reactive with the antiserum.

U.S. Cl. 435—7.32 **7 Claims**

5. A diagnostic test kit for bacterial infection comprising in a container a purified Corynebacterial stress protein having an apparent molecular weight of about 86 Kd, said stress protein having the following features:

(1) being an antigen;

(2) inducing in patients with *Corynebacterium jeikeium* septicemia on recovery antibody to a 52 Kd breakdown product of the stress protein;

(3) inducing in patients with *Corynebacterium jeikeium* endocarditis antibody to a 52 Kd breakdown product of the stress protein;

(4) being cross reactive with a mouse monoclonal antibody against a peptide antigen KVIRKNIVKKMIE (SEQ ID NO: 1); and

(5) cross-reaction of the stress protein with said mouse monoclonal antibody is neutralized by peptide KVIRKNIVKKMIE (SEQ ID NO: 1).

ASSAY FOR IDENTIFYING AGENTS WHICH ACT ON THE CERAMIDE-ACTIVATED PROTEIN KINASE, KINASE SUPPRESSOR OF RAS, AND METHODS OF USING SAID AGENTS

Richard N. Kolesnick, New York, N.Y.; Jun Liu, Boston, Mass., and Yuhua Zhang, New York, N.Y., assignors to Sloan-Kettering Institute for Cancer Research, New York, N.Y.

Provisional application No. 60/009,900, Jan. 11, 1996. This application Jan. 10, 1997, Appl. No. 785,247.

Int. Cl.[7] **C12Q** *1/48;* **C12N** *9/12;* **A61K** *38/51*

U.S. Cl. 435—15 **3 Claims**

1. A method of determining whether an agent is capable of specifically inhibiting the ability of lipopolysaccharide to stimulate phosphorylation of the threonine residue in a Thr-Pro- or a Thr-Leu-Pro-containing polypeptide by a ceramide-activated protein kinase having a molecular weight of about 100–110 kD, which comprises:

(a) incubating the protein kinase with a reaction mixture containing a predetermined amount of a polypeptide capable of being specifically phosphorylated by the protein kinase, a predetermined amount of lipopolysaccharide, and the agent, under conditions (I) which would permit activity of the protein kinase to be linear with respect to time, lipopolysaccharide concentration and protein kinase concentration in the absence of the agent, and (ii) which would permit the specific phosphorylation by the protein kinase of a predetermined number of the threonine residues in such predetermined amount of the polypeptide in the absence of the agent;

(b) quantitatively determining the percentage of such predetermined number of threonine residues which are specifically phosphorylated in the presence of the agent, thereby determining whether the agent is capable of inhibiting the ability of lipopolysaccharide to stimulate the phosphorylation activity of the ceramide-activated protein kinase; and

(c) determining whether the agent inhibits the ability of a non-lipopolysaccharide agent to stimulate the phosphorylation activity of the ceramide-activated protein kinase, the non-lipopolysaccharide agent being known to stimulate the activity in the absence of the agent, so as to determine whether the agent is capable of specifically inhibiting the ability of

lipopolysaccharide to stimulate the phosphorylation activity of the ceramide-activated protein kinase.

U.S. Cl. 435—89 **18 Claims**

1. A process for preparing uridine diphosphate-glucose (UDP-glucose), which comprises the steps of:

adding yeast cells and uridine monophosphates (UMP) to a reaction system and reacting therewith to produce uridine triphosphates (UTP), and then

deactivating the UTP synthesizing enzymes from the yeast cells when the production yield of UTP is maximized, and then

adding UDP-glucose pyrophosphorylases and glucose 1-phosphates to the UTP-containing reaction system, to produce UDP-glucose.

6,040,159

TNF-α RIBOZYMES AND DERIVATIVES CAPABLE OF DECREASING DEGRADATION OF MRNA IN VIVO

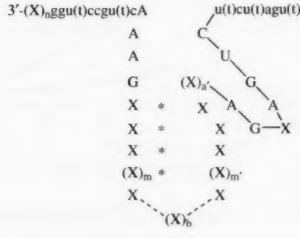
Mouldy Sioud, Oslo, Norway, assignor to Gene Shears Pty. Limited, Canberra, Australia

Continuation of application No. 07/971,058, Nov. 3, 1992, abandoned. This application Apr. 4, 1995, Appl. No. 416,516.

Int. Cl.[7] C12P *19/34;* **C07H** *21/04;* **C12N** *15/85;1/20*

U.S. Cl. 435—91.31 **10 Claims**

1. A compound having the structure (SEQ ID NO: 1):



wherein each X represents a ribonucleotide which is the same or different and may be modified in its phosphate;

wherein each of A, C, U, and G represents a ribonucleotide and a, c, u(t), and g represents a ribonucleotide or deoxyribonucleotide which may be modified in its phosphate;

wherein each of $(X)_n$ and $(X)_{n'}$ represents an oligonucleotide having a predetermined sequence;

wherein each of n and n' represents an integer;

wherein each * represents base pairing between the nucleotides located on either side thereof;

wherein each solid line represents a chemical linkage providing covalent bonds between the nucleotides located on either side thereof;

wherein a' represents an integer which defines a number of ribonucleotides with the proviso that a' may be 0 or 1 and if 0, the A located 5' of $(X)_{a'}$ is bonded to the X located 3' of $(X)_{a'}$;

wherein each of m and m' represents an integer which is greater than or equal to 1;

wherein each of the dashed lines independently represents either a chemical linkage providing covalent bonds between the nucleotides located on either side thereof or the absence of any such chemical linkage; and

wherein $(X)_b$ represents an oligonucleotide which may be present or absent with the proviso that b represents an integer which is greater than or equal to 2 if $(X)_b$ is present.

1. An isolated DNA sequence comprising at least one complete open reading frame of SEQ ID NO:6.

6,040,171

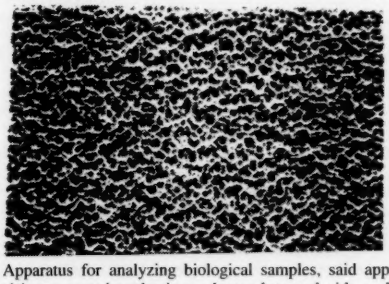
APPARATUS FOR ANALYZING BIOLOGICAL SAMPLES

Zonh-Zen Ho, Hacienda Heights; Tomasz P. Jannson, Torrance; Robert A. Lieberman, Torrance; Gajendra D. Savant, Torrance, and Allan Wang, Torrance, all of Calif., assignors to Physical Optics Corporation, Torrance, Calif.

Filed Aug. 21, 1998, Appl. No. 138,240

Int. Cl.[7] C12M *3/00*

U.S. Cl. 435—288.1 **12 Claims**



1. Apparatus for analyzing biological samples, said apparatus comprising a container having a base plate and side walls for forming a receptacle for said sample, said base plate having a first surface for receiving a sample, said surface having a distribution of features operative to redirect light incident thereto into a controlled pattern with smooth brightness variation.

6,040,172

DEFECTIVE DNA VIRAL VECTOR COMPRISING A NEURAL TISSUE-SPECIFIC PROMOTER FOR IN VIVO EXPRESSION OF A GENE

Michael G. Kaplitt, New York, N.Y., assignor to The Rockefeller University, New York, N.Y.

PCT No. PCT/US93/07685, § 371 Date Feb. 14, 1995, § 102(e) Date Feb. 14, 1995, PCT Pub. No. WO94/04695, PCT Pub. Date Mar. 3, 1994

Continuation-in-part of application No. 07/930,875, Aug. 14, 1992, abandoned. This PCT application Aug. 16, 1993, Appl. No. 381,924.

Int. Cl.[7] C12N *15/63;15/00;15/09;5/00*

U.S. Cl. 435—320.1 **21 Claims**

1. A replication defective DNA viral vector for the in vivo expression of a gene of interest in a mammalian host cell, wherein said vector comprises the gene of interest in operable linkage with a neural tissue-specific promoter such that said gene of interest is expressed in said host cell, wherein said neural tissue-specific promoter is a promoter of a gene encoding a protein normally produced by said host cell, and wherein said defective DNA viral vector entirely or almost entirely lacks viral genes.

6,040,173

NUCLEIC ACID ENCODING A NOVEL MAMMALIAN PROTEIN ASSOCIATED WITH UNCONTROLLED CELL DIVISION

Gary R. Pasternack, Baltimore, Md., assignor to Johns Hopkins University, Baltimore, Md.

Continuation of application No. 08/314,503, Sep. 28, 1994, Pat. No. 5,734,022, and a division of application No. 07/995,930, Dec. 24, 1992, abandoned, which is a continuation of application No. 07/561,989, Aug. 1, 1990, abandoned. This application Jun. 6, 1995, Appl. No. 466,743.

Int. Cl.[7] C12N *15/00;* **C07H** *21/04*

U.S. Cl. 435—320.1 **4 Claims**

1. An expression vector comprising a sequence of at least 18 contiguous nucleotides selected from the sequence of SEQ ID NO:1 or its complement under control of a promoter.

6,040,174

DEFECTIVE ADENOVIRUSES AND CORRESPONDING COMPLEMENTATION LINES

Jean-Luc Imler, Strasbourg; Majid Mehtali, Illkirch-Graffenstaden, and Andréa Pavirani, Strasbourg, all of France, assignors to Transgene S.A., Strasbourg, France

PCT No. PCT/FR94/00624, § 371 Date Jan. 30, 1995, § 102(e) Date Jan. 30, 1995, PCT Pub. No. WO94/28152, PCT Pub. Date Dec. 8, 1994

PCT Filed May 27, 1994, Appl. No. 379,452

Claims priority, application France, May 28, 1993, 93 06482

Int. Cl.[7] C12N *5/10;15/86;15/34*

U.S. Cl. 435—325 **19 Claims**

1. A complementation line comprising a complementation element for complementing in trans a defective adenoviral vector,

wherein said complementation element is either integrated into the chromosomal genome of said complementation line or inserted into an expression vector and said complementation element comprises a fragment of an adenoviral genome lacking an adenoviral 5'ITR and encoding an E1A gene product, wherein the E1A gene product is expressed under control of:

a) an E1 promoter or a heterologous promoter when the complementation line is made from a human embryonic retinal cell or A549 cell;
b) an E1 promoter or a heterologous promoter when the complementation line is made by cotransfection of the expression vector comprising the complementation element and the defective adenoviral vector; or
c) an inducible heterologous promoter.

6,040,175

AMPA-BINDING HUMAN GLUR2 RECEPTORS

Rajender Kamboj, Mississauga; Candace E. Elliott, and Stephen L. Nutt, both of Etobicoke, all of Canada, assignors to Allelix Biopharmaceuticals, Inc., Mississauga, Canada

Division of application No. 08/242,344, May 13, 1994, which is a continuation of application No. 07/896,437, Jun. 10, 1992, abandoned. This application Jun. 7, 1995, Appl. No. 483,327.

Int. Cl.[7] **C07K** *14/705;* **C12N** *5/10*

U.S. Cl. 435—325 **9 Claims**

1. A membrane preparation derived from a host cell, said host cell having incorporated expressibly therein a heterologous polynucleotide that encodes human GluR2B receptor selected from the group consisting of: (a) the sequence of amino acids 1–863 of SEQ ID NO:2, (b) a human GluR2B receptor variant having a sequence of amino acids 1–863 of SEQ ID NO:2 with the exception that there are from 1–32 conservative amino acid substitutions, (c) a membrane-bound fragment of the human GluR2B receptor of (a) or (b) comprising the extracellular N-terminal region that precedes TM-1, and (d) a membrane-bound fragment of the human GluR2B receptor of (a) comprising the extracellular C-terminal region that follows TM-4.

6,040,176

ANTIBODIES TO ICAM-RELATED PROTEIN

W. Michael Gallatin, and Rosemay Vazeux, both of Seattle, Wash., assignors to ICOS Corporation, Bothell, Wash.

Continuation of application No. 08/286,754, Aug. 5, 1994, abandoned, which is a continuation-in-part of application No. 08/102,852, Aug. 5, 1993, abandoned, which is a continuation-in-part of application No. 08/009,266, Jan. 22, 1993, abandoned, which is a continuation-in-part of application No. PCT/US93/00787, Jan. 26, 1993, which is a continuation-in-part of application No. 07/894,061, Jun. 5, 1992, abandoned, which is a continuation-in-part of application No. 07/889,724, May 26, 1992, abandoned, which is a continuation-in-part of application No. 07/827,689, Jan. 27, 1992, abandoned. This application Sep. 12, 1996, Appl. No. 714,017.

HIGH EFFICIENCY TRANSDUCTION OF T LYMPHOCYTES USING RAPID EXPANSION METHODS ("REM")

Stanley R. Riddell, Bothell, and Philip D. Greenberg, Mercer Island, both of Wash., assignors to Fred Hutchinson Cancer Research Center, Seattle, Wash.

Division of application No. 08/317,100, Oct. 3, 1994, which is a continuation of application No. 08/299,930, Aug. 31, 1994, abandoned, and a continuation of application No. PCT/US95/11182, Aug. 31, 1995, abandoned. This application Mar. 13, 1996, Appl. No. 614,585.

Int. Cl.[7] **C12N** *5/10;15/11;* **C07K** *14/55;16/28*

U.S. Cl. 435—372.3 **24 Claims**

1. A method of genetically transducing a T cell, comprising:
(a) adding initial isolated T lymphocytes to a culture medium in vitro, said T lymphocytes comprising a T cell receptor complex, wherein said T lymphocytes are isolated by use of an affinity reagent that selects antigen-specific T cells or are isolated by limiting dilution culture of antigen-stimulated T lymphocytes;
(b) adding to the culture medium a disproportionately large number of non-dividing peripheral blood mononuclear cells (PBMC) as feeder cells such that the resulting population of cells contains a ratio of at least about 40 PBMC feeder cells for each T lymphocyte in the initial population to be expanded;
(c) activating said T cell receptor complex;
(d) adding a transduction vector to said culture medium;
(e) incubating the culture, thereby producing a population of transduced T lymphocytes which become reversibly quiescent upon withdrawal of exogenous cytokine and are antigen-specific and MHC restricted.

6,040,178

ANTISENSE INHIBITION OF SMAD5 EXPRESSION

Brett P. Monia, La Costa, and Lex M. Cowsert, Carlsbad, both of Calif., assignors to Isis Pharmaceuticals Inc., Carlsbad, Calif.

Filed Feb. 23, 1999, Appl. No. 256,492

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **C07H** *21/04;* **C12Q** *1/68;* **C12N** *15/00*

U.S. Cl. 435—375 **20 Claims**

1. An antisense compound 8 to 30 nucleobases in length targeted to a coding region or 5'UTR of a nucleic acid molecule encoding human Smad5, wherein said antisense compound inhibits the expression of human Smad5, with the proviso that said antisense compound is not complementary to bases 133 to 145 of human Smad5 (SEQ ID NO: 1).

6,040,179

ANTISENSE INHIBITION OF G-ALPHA-I2 EXPRESSION

Lex M. Cowsert, Carlsbad, Calif., assignor to Isis Pharmaceuticals Inc., Carlsbad, Calif.

Filed Jun. 25, 1999, Appl. No. 339,993

Int. Cl.[7] **C07H** *21/04;* **C12Q** *1/68;* **C12N** *15/85*

U.S. Cl. 435—375 **13 Claims**

1. An antisense oligonucleotide up to 30 nucleobases in length targeted to a nucleic acid molecule encoding human G-alpha-i2 comprising at least an 8 nucleobase portion of SEQ ID NO: 8, 12, 10, 14, 15, 16, 17, 19, 20, 18, 21, 22, 23, 24, 25, 29, 30, 31, 32, 33, 34, 38, 36, 41, 43, 44, 45, 46, 47, 11, 27, 28, 37 or 42 and which inhibits expression of human G-alpha-i2.

6,040,180

IN VITRO GENERATION OF DIFFERENTIATED NEURONS FROM CULTURES OF MAMMALIAN MULTIPOTENTIAL CNS STEM CELLS

Karl K. Johe, Potomac, Md., assignor to NeuralStem Biopharmaceuticals, Ltd., College Park, Md.

Continuation-in-part of application No. 08/719,450, Sep. 25, 1996, Pat. No. 5,753,506, Provisional application No. 60/018,206, May 23, 1996. This application May 7, 1997, Appl. No. 919,580.

Int. Cl.[7] **C12N** *5/06*

U.S. Cl. 435—377 **6 Claims**

1. A method for in vitro generation of neurons, astrocytes and oligodendrocytes from an adhesion culture of mammalian multipotential CNS stem cells, wherein the mammalian multipotential CNS stem cells maintain the multipotential capacity to differentiate into neurons, astrocytes and oligodendrocytes, divide in serum-free medium supplemented with a mitogen and differentiate upon withdrawal of mitogen, comprising the steps of:

a) culturing multipotential CNS stem cells in a chemically defined serum-free culture medium containing a growth factor by:
1) dissociating cells from central nervous system tissue by mechanical trituration in the absence of divalent cations,
2) culturing the dissociated cells adhered onto a plate in a chemically defined serum-free culture medium,
3) plating dissociated cells at a density not exceeding 20,000 cells/cm^2 and, in subsequent passages, replating the cultured cells at a density not exceeding 10,000 cells/cm^2,
4) adding daily to the cultured cells a growth factor selected from the group consisting of
i) bFGF at a concentration of at least 10 ng/ml,
ii) EGF at a concentration of at least 10 ng/ml,
iii) TGF-alpha at a concentration of at least 10 ng/ml, and
iv) aFGF at a concentration of at least 10 ng/ml plus 1 μg/ml heparin,
5) replacing the culture medium with fresh medium within every two days,
6) passaging the cultured cells within four days after plating so as not to exceed 50% confluence, and
7) passaging the cultured cells by treating the cultured cells with saline solution free of divalent cations and scraping cells from the plate;
b) replacing the medium with growth factor-free, serum-free medium;
c) harvesting the stem cells;
d) plating the stem cells at a density of between 100,000 to 250,000 cells per square centimeter; and
e) culturing the cells in a glutamic acid-free chemically defined serum-free culture medium.

6,040,181

REGULATION OF BCL-2 GENE EXPRESSION

John C. Reed, Carlsbad, Calif., assignor to University of Pennsylvania, Philadelphia, Pa.

Continuation of application No. 08/465,485, Jun. 5, 1995, Pat. No. 5,831,066, which is a continuation of application No. 08/124,256, Sep. 20, 1993, abandoned, which is a continuation-in-part of application No. 07/840,716, Feb. 21, 1992, abandoned, which is a continuation-in-part of application No. 07/288,692, Dec. 22, 1988, abandoned. This application May 18, 1998, Appl. No. 80,285.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **C12Q** *1/68;* **A61K** *48/00;* **C07H** *21/02;21/04*

U.S. Cl. 435—377 **21 Claims**

1. A method for increasing the sensitivity of tumor cells to chemotherapeutic agents, wherein said cells express the human bcl-2 gene consisting of the nucleic acid sequence of SEQ ID NO:19, comprising the step of introducing an anticode oligomer to said tumor cells to reduce bcl-2 expression in said tumor cells, wherein said anticode oligomer (i) binds to pre-mRNA or mRNA expressed from said bcl-2 gene and (ii) reduces bcl-2 expression.

6,040,182

METHOD AND MATERIALS FOR EFFICIENCY PROTEIN IMMOBILIZATION ON TISSUE CULTURE TREATED ASSAY PLATES

Michael Septak, Ashland, Mass., assignor to Becton Dickinson and Company, Franklin Lakes, N.J.

Filed Nov. 12, 1997, Appl. No. 969,081

Int. Cl.[7] **C12N** *5/00*

U.S. Cl. 435—395 **48 Claims**

1. A method for achieving efficient and stable protein coating on plasma treated plastic surfaces wherein said method comprises:
(a) coating a plasma treated plastic surface with a coating solution wherein said coating solution comprises a protein or polypeptide to be immobilized in a concentration of about 1 ng/mL to about 2000 ng/mL, in a coating buffer, wherein said coating buffer has a buffer species dissolved in distilled or deionized water in a concentration of about 2 mM to about 500 mM and the pH of the coating buffer is from about 6 to about 8;
(b) incubating said coating solution on said plasma treated plastic surface;
(c) washing the plastic surface to remove any extraneous materials not firmly attached to the plastic surface;
(d) drying the plastic surface having the coating solution thereon; and
(e) obtaining a plasma treated plastic surface having a protein efficiently and stably bound thereto.

6,040,183

HELPER VIRUS-FREE AAV PRODUCTION

Forrest K. Ferrari; Xiao Xiao, and Richard Jude Samulski, all of Chapel Hill, N.C., assignors to University of North Carloina at Chapel Hill, Chapel Hill, N.C.

Filed Jun. 7, 1995, Appl. No. 484,515

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **C12N** *15/86*

U.S. Cl. 435—457 **9 Claims**

1. A method for producing substantially helper virus-free stocks of recombinant adeno-associated virus (rAAV) comprising:
(a) cotransfecting cells permissive for adenovirus-associated virus (AAV) replication with:
i) an rAAV vector which packages into infectious rAAV virions,
ii) a helper AAV vector which provides the AAV functions essential for the replication and packaging of said rAAV vector into infectious rAAV virions, and
iii) a helper virus vector which provides the helper viral functions essential for a productive AAV infection but which cannot itself be packaged into infectious helper virus virions,
wherein said vectors are maintained in said cells other than stably integrated in a cell chromosome;
(b) lysing said cells to produce a lysate containing rAAV virions substantially free of helper virus virions; and
(c) collecting said rAAV virions.

6,040,184

METHOD FOR MORE EFFICIENT ELECTROPORATION

Alan L. Greener, San Diego, Calif., and Bruce D. Jerpseth, Cedar Creek, Tex., assignors to Stratagene, La Jolla, Calif.

Provisional application No. 60/103,612, Oct. 9, 1998. This application Feb. 22, 1999, Appl. No. 253,703.

Int. Cl.[7] **C12N** *15/64*

U.S. Cl. 435—461 **45 Claims**

1. A method for transferring nucleic acids of interest into host cells, comprising:
(a) mixing competent host cells suspended in a substantially non-ionic solution comprising at least one sugar or sugar derivative, wherein the sugar derivative is selected from a ketose, amino sugar, glycoside, and lactone, with the nucleic acids of interest; and
(b) subjecting the host cells to an electrical treatment, thereby permitting the transfer of the nucleic acids of interest into the host cells.

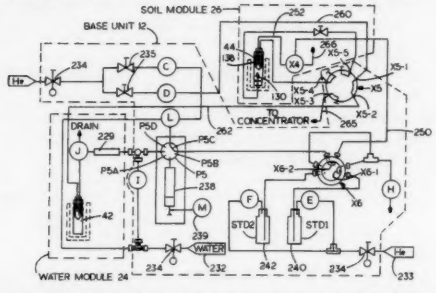
VIAL AUTOSAMPLER WITH SELECTABLE MODULES

Edmund T. Lewis, West Chester, and Thomas B. Green, Batavia, both of Ohio, assignors to Tekmar Company, Cincinnati, Ohio

Division of application No. 08/735,485, Oct. 23, 1996, which is a continuation of application No. 08/273,537, Jul. 11, 1994, abandoned. This application Apr. 24, 1997, Appl. No. 842,317.

Int. Cl.[7] **G01N** *35/10*

U.S. Cl. 436—53 **3 Claims**



3. A method of sampling a liquid sample from a first module of an autosampling device, and a gaseous sample from a second module of the autosampling device, comprising the steps of:

providing first and second sampling modules, said modules having first and second sources of samples, respectively;

providing a valve and conduit assembly including a first valve portion comprising a first multi port valve having a valve block movable to selected positions to connect ports including a first port connected by a conduit to the first module, and a second port connected through a second valve portion and conduits to the second module the valve block including a channel that is movable to a position to be filled with a standard;

selectively operating the first multi port selector valve to connect the channel to a standard source and to the first sample source and transfer a first sample and the standard to a remote instrument;

providing a second multi port valve and coupling the second multi port valve to a source of gas under pressure and in a first position the first module and purging portions of the first module while fluidly isolating the second module from the first module;

moving the second multi port valve to a second position when a second sample is to be tested and connecting the source of gas under pressure to the second module, while fluidly isolating the first module from the second module, and to transfer the second sample from the second sample source of the second module to the remote instrument, while maintaining the fluid isolation of the first module from the second module;

moving the channel of the valve block to the position to be filled with the standard; and

selectively operating the first multiport selector valve to connect the channel to the standard source and to the second sample source and transfer the second sample and the standard to the remote instrument.

METHOD OF DETERMINING THE SUPPRESSOR CELL COMPONENT OF HUMAN IMMUNE STATUS AND A MEANS FOR THE REALIZATION THEREOF

Ivan Nikolaevich Golovistikov, Russian Federation, Moscow, Donbasskaya str., 5, ap.51; Leonid Yazonovich Kacharava, Georgia, Tbilici, Mirtskhulava str., 2 ap.45, and Khallar Abdumuslimovich Alikhanov, Moscow, all of Russian Federation, assignors to Ivan Nikolaevich Golovistikov, Moscow, and Leonid Yazonovich Kacharava, Tbilici, both of Russian Federation

PCT No. PCT/RU95/00046, § 371 Date Jan. 21, 1997, § 102(e) Date Jan. 21, 1997, PCT Pub. No. WO95/25956, PCT Pub. Date Sep. 28, 1995

PCT Filed Mar. 16, 1995, Appl. No. 716,138

Claims priority, application Russian Federation, Mar. 18, 1994, 94008170

Int. Cl.[7] **G01N** *33/48*

U.S. Cl. 436—63 **13 Claims**

1. A method for determining a suppressor component of a patient's immune status comprising:

(a) preparing first and second suspensions comprising mononuclear cells of the patient;

(b) cultivating the mononuclear cells of the first suspension with a suppressor activator consisting essentially of trophoblastic β-1 glycoprotein (TBG) in an amount effective to induce activation of suppressors in the mononuclear cells of the first suspension;

(c) cultivating the mononuclear cells of the second suspension without a suppressor activator;

(d) blocking proliferation of the mononuclear cells in each of the first and second suspensions;

(e) adding responder cells to each of the first and second suspensions in equal amounts so as to obtain respective first and second test cultures;

(f) cultivating the first and second test cultures under conditions that cause the responder cells to proliferate; and

(g) determining the suppressor component of the immune system of the patient by comparing respective proliferation of the responder cells in the first and second test cultures and assessing the suppressor component based on the extent, if any, that proliferation of the responder cells of the first test culture is lower than proliferation of the responder cells of the second test culture.

IN VITRO GASTROINTESTINAL MIMETIC PROTOCOL FOR MEASURING BIOAVAILABLE CONTAMINANTS

Hoi-Ying N. Holman, Berkeley, Calif., assignor to The Regents of the University of California, Oakland, Calif.

Provisional application No. 60/066,169, Nov. 18, 1997. This application Nov. 18, 1998, Appl. No. 196,618.

Int. Cl.[7] **G01N** *33/92*

U.S. Cl. 436—71 **5 Claims**

1. A method for measuring hydrocarbon contaminants in an environmental sample comprising the steps of:

a) processing said sample to exclude particles over 1–10 mm in diameter;

b) preparing a mixture of lipids and bile salts so as to form micelles; then

c) adding said processed sample to the mixture to form a sample-lipid-bile salt mixture composition;

d) holding the sample-lipid-bile salt mixture composition at a temperature between 20 and 40° C. for 2 to 12 hrs wherein the sample-lipid-bile salt mixture composition separates into a liquid phase and a solid phase; then

e) separating the liquid phase from said solid phase of said sample-lipid-bile salt mixture composition; and

f) measuring the amount of said hydrocarbon contaminants in said liquid phase, whereby the measurement of said hydrocarbon contaminants in said liquid phase represents a fraction of said hydrocarbon contaminants in the environmental sample which would be taken up through oral ingestion of the environmental sample.

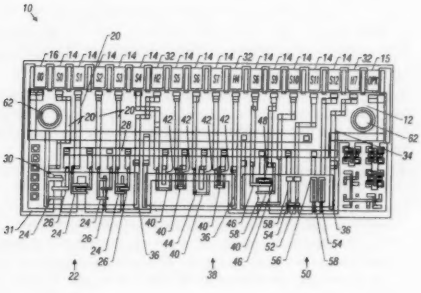
GAS SENSOR TEST CHIP SENSING METHOD

Martin Buehler, La Canada, Calif., assignor to California Institute of Technology, Pasadena, Calif.

Division of application No. 08/820,877, Mar. 21, 1997, Pat. No. 5,945,069, Provisional application No. 60/013,826, Mar. 21, 1996, Provisional application No. 60/014,772, Mar. 22, 1996. This application Aug. 10, 1999, Appl. No. 371,798.

Int. Cl.[7] **G01N** *27/12*

U.S. Cl. 436—151 **9 Claims**



1. A method of measuring characteristic responses of a gas sensor to a predetermined gas comprising:

(a) fabricating a gas sensor comprising a plurality of resistor elements, each having a plurality of electrodes with different geometric configurations, and depositing a polymer film over said electrodes;

(b) exposing said resistor elements to said predetermined gas; and

(c) measuring and storing patterns of characteristic changes in resistance of said resistor elements in response to said gas exposure.

6,040,190

METHOD FOR DETERMINING THE CONCENTRATION C OF AN ABSORBENT HOMOGENEOUSLY DISTRIBUTED IN A CARRIER

Gerd Schweiger, Graz, Austria, assignor to AVL Medical Instruments AG, Schaffhausen, Switzerland

Continuation of application No. 08/458,844, Jun. 2, 1995, abandoned. This application Apr. 14, 1997, Appl. No. 843,294.

Int. Cl.[7] **G01N** *21/00*

U.S. Cl. 436—164 **15 Claims**

1. A method of spectroscopically determining the concentration c of a sample of a nonlinear absorbent that does not conform to Lambert-Beer's law and so exhibits a non-linear relationship between concentration and absorption, the method comprising:

(a) forming a mathematical model of said nonlinear absorbent, said model including a plurality n, $n \geqq 2$, of model components each of which conforms to Lambert-Beer's law, the step of forming the mathematical model comprising:

(i) taking calibration spectroscopic data of absorption $a(\lambda)$ at the plurality n of wavelengths λ for each of a plurality of calibration samples of said non-linear absorbent, said calibration samples having known concentrations; and

(ii) from the calibration spectroscopic data taken in step (a)(i), determining parameters of the plurality of model components that would allow the plurality of model components to model the non-linear absorbency behavior of said absorbent by satisfying the following equation:

$$a(\lambda)=(\epsilon_1(\lambda)\cdot c_1+\epsilon_2(\lambda)\cdot c_2+\cdots\epsilon_n(\lambda)\cdot c_n)\cdot d$$

where each model component $\epsilon_i(\lambda)\cdot c_i$, $1 \leqq i \leqq n$, has a spectral absorption value given by $\epsilon_i(\lambda)$ and a concentration c_i; and

(b) applying the mathematical model to the sample of the absorbent, the step of applying the mathematical model comprising:

(i) taking measurement spectroscopic data for a sample of said absorbent of unknown concentration at the plurality n of wavelengths;

(ii) applying the equation set forth in (a)(ii) to said measurement spectroscopic data to determine the concentration values c_i of the plurality of model components corresponding to the measurement spectroscopic data; and

(iii) from the concentration values c_i of the plurality of model components, calculating C.

RAMAN SPECTROSCOPIC METHOD FOR DETERMINING THE LIGAND BINDING CAPACITY OF BIOLOGICALS

Ann E. Grow, 5882 Highplace Dr., San Diego, Calif. 92120

Division of application No. 08/864,015, May 27, 1997, Pat. No. 5,866,430, Provisional application No. 60/019,742, Jun. 13, 1996. This application Oct. 22, 1998, Appl. No. 177,548.

Int. Cl.[7] **G01N** *21/65*

U.S. Cl. 436—172 **11 Claims**

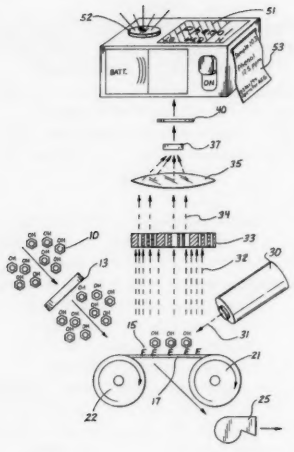
1. A nondestructive process for determining the capability of a test biological to bond with at least one ligand comprising the steps of

irradiating a test biological with a light source capable of producing Raman scattering to produce a Raman scattering spectrum of the irradiated test biological,

collecting and processing the Raman scattering spectrum, and

analyzing the processed Raman scattering spectrum to determine the capability of the test biological to react with ligands,

whereby said analyzing step includes the step of comparing the Raman scattering spectrum of the test biological so obtained for the test biological against the Raman scattering spectrum



correspondingly obtained from at least one standard sample of the same type of biological, said standard biological sample having a known ability to bind ligands.

METHOD AND MEANS FOR MAGNETIC PARTICLE SPECIFIC BINDING ASSAY

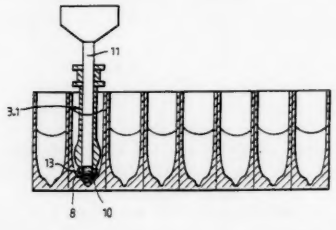
Jukka Tuunanen, Helsinki, Finland, assignor to Labsystems Oy, Helsinki, Finland

Continuation of application No. 08/495,514, filed as application No. PCT/FI94/00048, Feb. 1, 1994, abandoned. This application Aug. 26, 1997, Appl. No. 920,094.

Claims priority, application Finland, Feb. 1, 1993, 930440; Jun. 21, 1993, 932866

Int. Cl.[7] **G01N** *33/553*

U.S. Cl. 436—177 **21 Claims**



1. A method for determining the presence of an analyte in a sample, the method comprising the steps of:

a. inserting a sample to be tested into a reaction vessel;

b. inserting solid magnetic particles coated with separating reagent into said reaction vessel to react with the sample;

c. removing said particles from said reaction vessel by inserting a magnet-equipped remover into said reacting vessel, wherein said particles adhere to said remover;

d. inserting the remover containing the particles into a measuring vessel wherein at least one of said reaction and measuring vessels contains a medium and agitating the medium by moving said remover vertically while said particles adhere to said remover to improve adherence of said particles;

e. measuring the reaction between the separating reagent and the sample; and

f. determining the presence of the analyte.

U.S. Cl. 436—501 **30 Claims**

1. An in vivo method for determining an analyte in the body fluids of an individual comprising the steps of

a) placing a sensor in communication with the body fluids of said individual suspected of containing said analyte in such a way that once in place said sensor does not exit the skin of the individual,

said sensor comprising a fluorescence reagent for detecting said analyte that reversibly binds to said analyte,

said fluorescence reagent having a fluorescence intensity, an emission spectrum, an excitation spectrum, or an excited state lifetime in the presence of said analyte that is different from its fluorescence intensity, emission spectrum, excitation spectrum, or excited state lifetime in the absence of said analyte,

said sensor being configured to retain said fluorescence reagent while allowing said analyte to diffuse into and out of said sensor;

b) transdermally illuminating said sensor; and

c) measuring the fluorescence intensity, emission spectrum, excitation spectrum, or excited state lifetime of said fluorescence reagent relative to the fluorescence intensity, emission spectrum, excitation spectrum, or excited state lifetime of said fluorescence reagent in the absence of said analyte; and

d) correlating the change in fluorescence intensity, emission spectrum, excitation spectrum, or excited state lifetime of said fluorescence reagent with the presence or amount of said analyte in said individual.

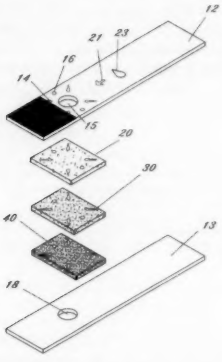
DIAGNOSTIC SANITARY TEST STRIP

Patrick Carroll, Ft. Lauderdale; Jon Schneider, Weston, both of Fla., and Douglas E. Bell, Woodstock, Ga., assignors to Home Diagnostics, Inc., Ft. Lauderdale, Fla.

Filed Jun. 10, 1997, Appl. No. 872,088

Int. Cl.[7] G01N *33/558*

U.S. Cl. 436—514 **23 Claims**



1. A diagnostic sanitary test strip device for measuring an analyte of interest in a heterogenous fluid sample, said test strip comprising:

(a) an upper support layer defining a sample receiving port for receiving the fluid sample therein;

(b) means for retaining the fluid sample to prevent spillage of the sample from said strip to make said test strip sanitary, wherein said retaining means comprises a plurality of dam partitions penetrating said test strip, said dam partitions being defined by indentations formed in said upper layer;

(c) means, in vertical alignment and contiguous contact with said sample receiving port, for uniformly spreading the fluid sample in said receiving port before allowing said fluid sample to vertically pass through said spreading means;

(d) means, in contiguous contact with said spreading means, for filtering the fluid sample received from said spreading means to remove at least one undesirable element in the fluid sample prior to passing the fluid sample through said filtering means;

(e) a reaction membrane, in contiguous contact with said filtering means, having a predetermined porosity, said membrane retaining a reagent solution capable of reacting with the analyte of interest to produce a color change in said membrane corresponding to the amount of analyte present in the fluid sample; and

(f) a lower support layer in contiguous contact with said membrane and having a reaction viewing port in vertical alignment with said membrane for displaying said color change, wherein said retaining means, said spreading means, said filtering means, and said reaction membrane interpose said lower support and said upper support to secure said test strip.

6,040,196

METHOD OF EVALUATING A TESTING ELEMENT FOR ANTIGENS OR ANTIBODIES

Ayumi Mitoh, and Tsuneo Hiraide, both of Tokyo, Japan, assignors to Asahi Kogaku Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 21, 1996, Appl. No. 754,647

Claims priority, application Japan, Nov. 21, 1995, 7-302697

Int. Cl.[7] G01N *33/543;21/00;33/53;* **A61L** *5/103*

U.S. Cl. 436—518 **20 Claims**

1. A method of evaluating an amount of antigen or antibody immobilized on a solid phase carrier comprising a calcium phosphate compound, of a test element, the method comprising:

(a) contacting the test element with a known amount of a first antibody or antigen which specifically binds to the immobilized antigen or antibody, respectively, to form a first immunocomplex;

(b) contacting the first immunocomplex with an enzyme-labelled antigen or antibody which specifically binds to the first antibody or antigen to form a labelled immunocomplex;

(c) contacting the labelled immunocomplex with a substrate which reacts with the enzyme of the enzyme-labelled antigen or antibody to produce a color; and

(d) comparing the amount of the color produced on the test element to a standard color produced by a reference test element with a known amount of the immobilized antigen or antibody thereon processed according to (a)–(c) to determine the amount of the antigen or antibody immobilized on the solid phase carrier of the test element.

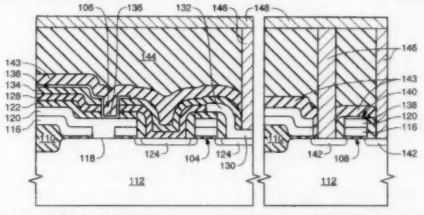
SEMICONDUCTOR MEMORY DEVICE AND METHOD OF FORMING TRANSISTORS IN A PERIPHERAL CIRCUIT OF THE SEMICONDUCTOR MEMORY DEVICE

Ceredig Roberts, Boise, Id., assignor to Micron Technology, Boise, Md.

Continuation of application No. 08/376,103, Jan. 19, 1995, abandoned. This application Jan. 21, 1997, Appl. No. 786,175.
Int. Cl.[7] H01L *21/8244*
U.S. Cl. 438—238 **3 Claims**



1. A method of forming a transistor in a peripheral circuit of a static random access memory device (SRAM), comprising the steps of:

forming a first polysilicon layer over a substrate in a memory cell array region and in a peripheral region of the SRAM;

removing a portion of the first polysilicon layer in the array region to at least partially define a memory transistor gate;

forming a second polysilicon layer over the first polysilicon layer; and

simultaneously removing a portion of the second polysilicon layer in the peripheral region and in the memory cell array region to at least partially define a periphery transistor gate in the peripheral region and a load resistor in the memory cell array region.

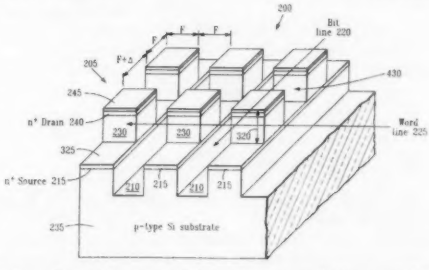
2F-SQUARE MEMORY CELL FOR GIGABIT MEMORY APPLICATIONS

Stuart Mcallister Burns, Jr., Ridgefield, Conn., and Hussein Ibrahim Hanafi, Goldens Bridge, N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Division of application No. 08/787,418, Jan. 22, 1997. This application Jan. 26, 1998, Appl. No. 13,509.
Int. Cl.[7] H01L *21/8249;29/788*
U.S. Cl. 438—238 **11 Claims**



1. A method of forming a 2F-square memory device comprising the steps of:

forming on a substrate an array of pillars arranged in rows and columns;

forming lower doped regions extending inwardly from each sidewall of said pillar, said lower doped regions being separated from each other;

forming first and second gate regions on pillar sidewalls, said first and second gate regions being opposite each other along said columns; and

forming upper doped regions on said pillars.

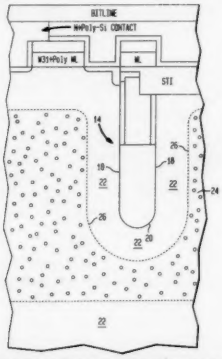
SEMICONDUCTORS HAVING DEFECT DENUDED ZONES

Martin Schrems, Langebrueck, Germany, assignor to Siemens Aktiengesellschaft, Munich, Germany

Filed Jun. 9, 1998, Appl. No. 93,796

Int. Cl.[7] H01L *21/8234*

U.S. Cl. 438—238 **21 Claims**



1. A method for processing a semiconductor substrate having an oxygen concentration in a region of the substrate adjacent to a surface of such substrate, comprising:

forming a trench in the surface of the substrate; and

subsequent to the formation of the trench, reducing the oxygen concentration within the region.

6,040,212

METHODS OF FORMING TRENCH-GATE SEMICONDUCTOR DEVICES USING SIDEWALL IMPLANTATION TECHNIQUES TO CONTROL THRESHOLD VOLTAGE

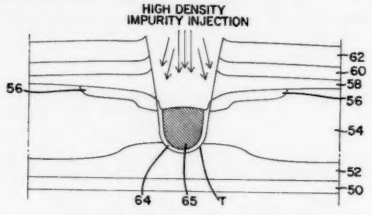
Hyun-Chul Kim, Kyungki-do, Rep. of Korea, assignor to Fairchild Korea Semiconductor, Ltd., Kyungki-do, Rep. of Korea

Filed Apr. 4, 1997, Appl. No. 833,403

Claims priority, application Rep. of Korea, Aug. 16, 1996, 96-33956

Int. Cl.[7] H01L *21/8242*

U.S. Cl. 438—242 **11 Claims**



1. A method of forming a semiconductor switching device, comprising the steps of:

forming a semiconductor substrate containing a trench therein at a first face thereof, a body region of second conductivity type extending adjacent a sidewall of the trench, and a source region of first conductivity type in the body region and extending adjacent the sidewall of the trench and the first face;

forming an electrically insulating region on the sidewall of the trench;

forming an electrically conductive region in the trench; and

implanting dopants of first conductivity type through the electrically insulating region and sidewall of the trench and into the source region of first conductivity type to increase a first conductivity type doping concentration therein.

6,040,213

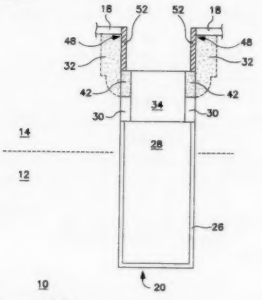
POLYSILICON MINI SPACER FOR TRENCH BURIED STRAP FORMATION

Anthony J. Canale, Essex Junction, and John E. Cronin, Milton, both of Vt., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jan. 20, 1998, Appl. No. 8,873

Int. Cl.[7] H01L *21/8242*

U.S. Cl. 438—243 **11 Claims**



1. A method comprising:

(a) providing a substrate comprising a trench having a conductor separated from walls of the trench by a dielectric material;

(b) removing a portion of the dielectric material to a level below a top surface of the conductor;

(c) filling at least a portion of a space formed by the removing of the dielectric material with a diffusible material; and

(d) forming a conductive pathway from a wall of the trench to the conductor including annealing the conductor, the wall and the diffusible material so that conductive elements from the wall and the conductor diffuse into the diffusible material.

6,040,214

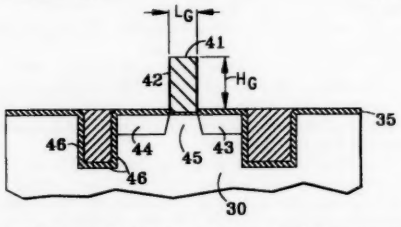
METHOD FOR MAKING FIELD EFFECT TRANSISTORS HAVING SUB-LITHOGRAPHIC GATES WITH VERTICAL SIDE WALLS

Diane C. Boyd, Lagrangeville, N.Y.; Stuart M. Burns, Brookfield, Conn.; Hussein I. Hanafi, Goldens Bridge, N.Y.; Yuan Taur, Bedford, N.Y., and William C. Wille, Red Hood, N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Feb. 19, 1998, Appl. No. 26,261

Int. Cl.[7] H01L *21/8242;21/20*

U.S. Cl. 438—244 **29 Claims**



1. Method for the formation of a metal oxide semiconductor field effect transistor (MOSFET), comprising the steps:

forming a dielectric stack on a semiconductor structure;

defining an etch window on said dielectric stack;

defining a gate hole in the dielectric stack by transferring the etch window into the dielectric stack using a reactive ion etching (RIE) process;

depositing a side wall layer;

removing the side wall layer from horizontal surfaces such that side wall spacers remain inside the gate hole thus reducing the lateral size of the gate hole;

depositing a gate conductor such that it fills the gate hole;

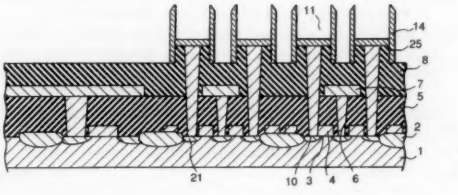
removing the gate conductor outside the gate hole;
removing at least part of the dielectric stack; and
removing the side wall spacers.

6,040,215

METHOD OF MANUFACTURING SEMICONDUCTOR DEVICE INCLUDING MEMORY CELL HAVING TRANSISTOR

Yoshihiro Takaishi, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Jun. 6, 1997, Appl. No. 870,861
Claims priority, application Japan, Jun. 7, 1996, 8-145995
Int. Cl.[7] H01L *21/8242*
U.S. Cl. 438—253 **16 Claims**



1. A method of manufacturing a semiconductor device comprising the steps of:
forming a first insulating film on a semiconductor substrate,
forming a contact hole in said first insulating film,
forming a first conductive film in said contact hole and on said first insulating film to bury said contact hole,
forming a second insulating film on said first conductive film,
selectively etching said second insulating film, said first conductive film, and a part of said first insulating film to produce a patterned second insulating film, a patterned first conductive film, and a patterned first insulating film respectively, said first insulating film being removed to a depth below said first conductive film,
forming sidewalls made of a conductive material on sides of said patterned first and second insulating films and said patterned first conductive film to connect said sidewalls with said patterned first conductive film so that the ratio of the height of the part of said sidewalls connected with said side of said patterned first insulating film to the height of the part of said sidewalls connected with said side of said patterned second insulating film is not less than 0.5,
removing said patterned second insulating film after said sidewalls are formed,
forming a dielectric film on the surface of said patterned first conductive film and said sidewalls while keeping said sidewalls in contact with said sides of said patterned first insulating films, and
forming a second conductive film to cover said dielectric film.

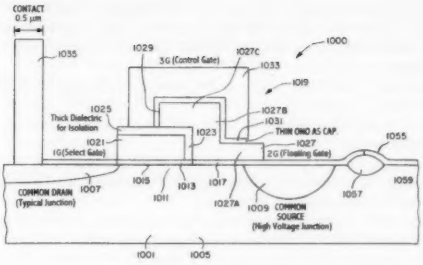
METHOD (AND DEVICE) FOR PRODUCING TUNNEL SILICON OXYNITRIDE LAYER

Kuo-Tung Sung, Hsinchu, Taiwan, assignor to Mosel Vitelic, Inc., Hsinchu, Taiwan

Filed Feb. 5, 1998, Appl. No. 19,431
Claims priority, application Taiwan, Aug. 11, 1997, 86111486
Int. Cl.[7] H01L *21/336*
U.S. Cl. 438—257 **17 Claims**

1. A method of fabricating a flash memory device, said method comprising steps of:
providing a semiconductor substrate comprising a first active region, a second active region, and an isolation region, said isolation region being defined between said first active region and said second active region;



masking a portion of said isolation region and said second active region;
introducing a nitrogen beating impurity into a surface of said first active region, said mask substantially protecting said second active region from said nitrogen bearing impurities;
removing said portion being masked; and
forming a silicon oxynitride layer from said nitrogen bearing impurity on said surface of said first active region and forming silicon dioxide on said second active region.

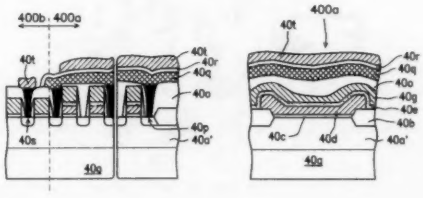
10. A method of fabricating an integrated circuit, said method comprising steps of:
providing a semiconductor substrate comprising a first active region, a second active region, and an isolation region, said isolation region being defined between said first active region and said second active region, said first active region corresponding to a flash memory cell, and said second region corresponding to a thin film MOS device;
masking a portion of said second active region and introducing a nitrogen bearing impurity into a surface of said first active region;
removing said portion being masked; and
forming a silicon oxynitride layer from said nitrogen bearing impurity on said surface of said first active region;
wherein said second active region is substantially free from any nitrogen bearing impurities to prevent a possibility of any Kooi influence on said second active region during a subsequent thermal treatment process.

6,040,217

FABRICATING METHOD OF AN ULTRA-FAST PSEUDO-DYNAMIC NONVOLATILE FLASH MEMORY

Ruei-Ling Lin, 5F-3, No. 26-12, Park II Rd., Kaohsiung-city, and Ching-Hsiang Hsu, No. 100-28, Chien-Chung Rd., Hsinchu-city, both of Taiwan

Filed Apr. 20, 1998, Appl. No. 63,033
Int. Cl.[7] H01L *21/8247*
U.S. Cl. 438—258 **30 Claims**



1. A fabricating method of an ultra-fast pseudo-dynamic nonvolatile flash memory, wherein a characteristic of the memory is to comprise a capacitor coupled to a local bit line, the method comprising:
providing a substrate with a P-well, dividing the substrate into a memory cell region and a peripheral region, forming a field oxide layer on the substrate for electrical isolation;

forming a first gate oxide layer and a first polysilicon layer on the memory cell region of the substrate in sequence, and implanting a first N-type dopant into the first polysilicon layer;

forming a dielectric layer on the memory cell region of the substrate;

forming a second gate oxide layer on the peripheral region of the substrate;

forming a second polysilicon layer over the substrate;

etching the second polysilicon layer on the peripheral region to form a gate layer;

etching the second polysilicon layer, the dielectric layer, and the first polysilicon layer on the memory cell region to form a stacked layer on the memory cell region;

removing a part of the field oxide layer by self-aligned-source etching, implanting a second N-type dopant into the memory cell region of the substrate by medium doped drain ion implantation to form a plurality of first doped regions;

implanting a third N-type dopant into the peripheral region of the substrate by lightly doped drain ion implantation to form a plurality of second doped regions;

forming an oxide spacer layer over the substrate, implanting a fourth N-type dopant to perform a source/drain ion implantation and form a plurality of first sources and a plurality of first drains on the memory cell regions of the substrate, and a second source on the peripheral region of the substrate, wherein a step of the self-aligned-source etching to remove the part of the field oxide layer is to connect the first sources;

forming a first oxide layer and a first opening therein to expose the first and the second drains;

forming a tungsten plug to fill the contact;

forming a third polysilicon layer which covers the memory cell region of the substrate;

forming a oxy-nitride layer to cover the third polysilicon layer entirely; and

covering a first metal layer over the substrate and patterning the first metal layer;

wherein, the first metal layer on the memory cell region, the oxy-nitride layer, and the third polysilicon layer form the capacitor, while the third polysilicon layer forms the local bit line.

6,040,218

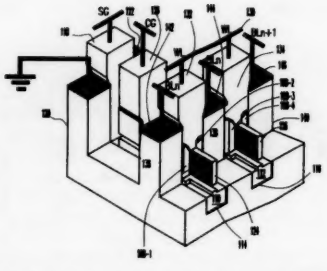
TWO SQUARE NVRAM CELL

Chung H. Lam, Williston, Vt., assignor to International Business Machines Corporation, Armonk, N.Y.

Division of application No. 09/100,729, Jun. 19, 1998. This application Sep. 13, 1999, Appl. No. 394,093.

Int. Cl.[7] H01L *21/8247*

U.S. Cl. 438—259 **9 Claims**



1. A method of forming an array of non-volatile random access memory (NVRAM) cells comprising the steps of:

a) etching a plurality of trenches in a semiconductor layer;

b) forming a source gate line of a first conductive material in said trenches;

c) forming sidewalls of said first conductive material above said source gate line along the sidewalls of said trenches;

d) forming a plate of a second conductive material between said first conductive material sidewalls;

e) plugging said trenches above said plate with said first conductive material;

f) forming perpendicular to said trenches a plurality of second trenches, said second trenches dividing said trenches such that semiconductor pillars are formed, said first conductive material sidewalls are divided into floating gates adjacent said semiconductor pillars and said first conductive material plugging said trenches is divided into word line plugs adjacent said semiconductor pillars.

6,040,219

METHOD OF FABRICATING POWER SEMICONDUCTOR DEVICE USING SEMI-INSULATING POLYCRYSTALLINE SILICON (SIPOS) FILM

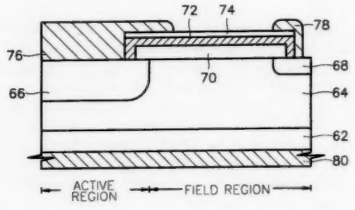
Chan-ho Park, Incheon, and Jae-hong Park, Bucheon, both of Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Suwon, Rep. of Korea

Filed Sep. 9, 1998, Appl. No. 150,171

Claims priority, application Rep. of Korea, Sep. 9, 1997, 97-46397

Int. Cl.[7] H01L *21/336*

U.S. Cl. 438—268 **14 Claims**



1. A method for manufacturing a power semiconductor device, comprising the steps of:

(a) forming a conductive collector region in a semiconductor substrate;

(b) forming a first insulating film over collector region, the first insulating film exposing a first portion of the collector region;

(c) forming a conductive base region in the exposed first portion of the collector region;

(d) forming a second insulating film over the collector region, the second insulating film exposing a second portion of the collector region and a third portion of the base region;

(f) implanting first impurities for the emitter region into the third portion of the base region;

(g) implanting second impurities for the channel stop region into the second portion of the collector region;

(h) simultaneously forming a third insulating film over the collector region, forming a conductive emitter region by diffusing the first implanted impurities, and forming a channel stop region by diffusing the second implanted impurities;

(i) removing portions of the first, second, and third insulating films over the base, emitter, and channel stop regions to create a remaining insulating film in a field region between the base region and the channel stop region;

(j) forming a semi-insulating polycrystalline silicon (SIPOS) film over the semiconductor substrate and the remaining insulating layer, such that parts of the base region, the emitter region, and the channel stop region are exposed;

(k) forming a base electrode contacting the base region;

(l) forming an emitter electrode contacting the emitter region; and

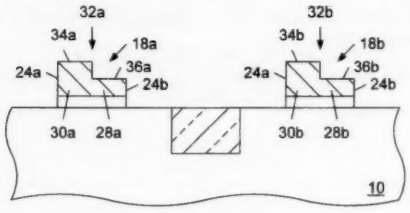
(m) forming an equipotential metal ring contacting the channel stop region.

6,040,220

ASYMMETRICAL TRANSISTOR FORMED FROM A GATE CONDUCTOR OF UNEQUAL THICKNESS

Mark I. Gardner, Cedar Creek; Daniel Kadosh, and Michael P. Duane, both of Austin, all of Tex., assignors to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Oct. 14, 1997, Appl. No. 950,203
Int. Cl.[7] H01L *21/00*
U.S. Cl. 438—286 **12 Claims**



1. A method for forming a transistor, comprising:

forming a gate dielectric upon a semiconductor substrate;

patterning a gate conductor extending upon the gate dielectric along an axis, wherein the gate conductor comprises a pair of sidewall surfaces spaced an equal distance from and parallel to said axis;

removing an upper portion of the gate conductor laterally bounded by said axis and one of said pair of sidewall surfaces to form a partially retained area of the gate conductor extending along the axis adjacent a fully retained area of the gate conductor, wherein a thickness of the gate conductor adjacent to the one of said pair of sidewall surfaces is less than a thickness of the gate conductor adjacent to the other of said pair of sidewall surfaces; and

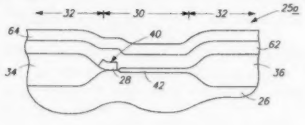
forwarding a plurality of ionized atoms toward the gate conductor at an energy level which allows a portion of said plurality of atoms to extend through the partially retained areas of the gate conductor and form a lightly doped drain (LDD) region within the substrate directly beneath the partially retained area.

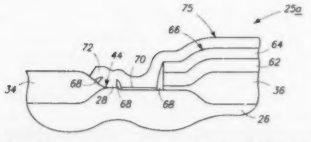
6,040,221

SEMICONDUCTOR PROCESSING METHODS OF FORMING A BURIED CONTACT, A CONDUCTIVE LINE, AN ELECTRICAL CONNECTION TO A BURIED CONTACT AREA, AND A FIELD EFFECT TRANSISTOR GATE

Monte Manning, Boise, Id., assignor to Micron Technology, Inc., Boise, Id.

Division of application No. 08/562,928, Nov. 27, 1995, Pat. No. 5,681,778. This application Jun. 16, 1997, Appl. No. 877,300.
Int. Cl.[7] H01L *21/283;21/336*
U.S. Cl. 438—297 **20 Claims**





1. A semiconductor processing method of forming a buried contact to a substrate region comprising the following steps:

providing a masking layer over a bulk semiconductor substrate;

with the masking in place, exposing the substrate to oxidation conditions effective to grow field oxide regions in unmasked areas of the substrate and define active area substrate regions in masked areas;

after forming the field oxide regions, patterning the masking layer within at least one of the active area regions to form a buried contact mask on the substrate within the at least one active area;

with the buried contact mask in place, providing a first conductive line extending over the at least one active area and field oxide;

with the buried contact mask in place, electrically insulating the first conductive line;

with the buried contact mask in place, providing a dielectric layer within the at least one active area over unmasked substrate area;

after providing the dielectric layer, removing the patterned buried contact mask from the substrate and effectively leaving buried contact area therebeneath exposed;

providing a layer of electrically conductive material over field oxide, the insulated first conductive line and exposed buried contact area; and

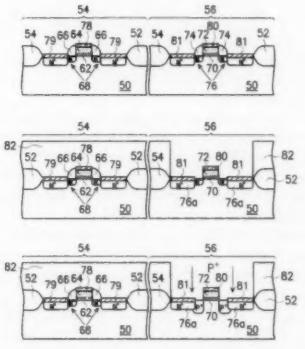
patterning the conductive material layer into a second conductive line which overlies the buried contact area.

6,040,222

METHOD FOR FABRICATING AN ELECTROSTATISTIC DISCHARGE PROTECTION DEVICE TO PROTECT AN INTEGRATED CIRCUIT

Chen-Chung Hsu, Hsinchu Hsien, and Yih-Jau Chang, Hsinchu, both of Taiwan, assignors to United Microelectronics Corp., Hsinchu, Taiwan

Filed Feb. 2, 1999, Appl. No. 241,950
Int. Cl.[7] H01L *21/336;21/8234*
U.S. Cl. 438—301 **8 Claims**



1. A method for fabricating an electrostatic discharge (ESD) protection device, which is simultaneously formed while an internal circuit is formed, wherein an isolation structure is formed on a semiconductor substrate to define a device region and a protection circuit region, a first metal-oxide semiconductor (MOS) transistor and a second MOS transistor are respectively formed on the device region and the protective circuit region, in which the first MOS transistor comprises a first gate structure and a first interchangeable source/drain region with a first lightly doped drain (LDD) structure, and the second MOS transistor comprises a second gate and a second interchangeable source/drain with a second lightly doped drain (LDD) structure, of which the second interchangeable source/drain region is doped with a first-type dopant, the method comprising:

performing a self-aligned silicide (Salicide) process over the substrate;

removing a spacer of the second MOS transistor at the protection circuit region so as to expose a portion of the second interchangeable source/drain region in the substrate, wherein the spacer is on each sidewall of the second gate of the second MOS transistor; and

implanting a second-type dopant into the exposed portion of the second interchangeable source/drain region to form a second-type dopant region so as to form a diode structure.

6,040,223

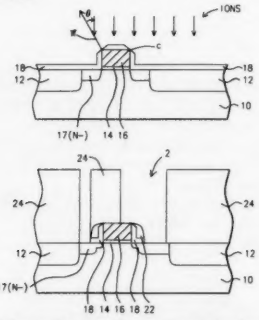
METHOD FOR MAKING IMPROVED POLYSILICON FET GATE ELECTRODES HAVING COMPOSITE SIDEWALL SPACERS USING A TRAPEZOIDAL-SHAPED INSULATING LAYER FOR MORE RELIABLE INTEGRATED CIRCUITS

Meng-Chang Liu, Chia-yi; Jyh-Feng Lin, Hua-Lien; Ming-Shu Yen, Hsin-Chu; Su-Ying Su, Taipei; Fu-Ying Chiu, YuLin, and Chien-Hung Lin, Hsin-Chu, all of Taiwan, assignors to Taiwan Semiconductor Manufacturing Company, Hsin-Chu, Taiwan

Filed Aug. 13, 1999, Appl. No. 373,636

Int. Cl.[7] H01L *21/336*

U.S. Cl. 438—303 **20 Claims**



1. A method for making FET gate electrodes having composite sidewall spacers using a trapezoidal-shaped insulating layer comprising the steps of:

providing a semiconductor substrate having device areas surrounded and electrically isolated by field oxide areas;

forming a gate oxide on said device areas;

depositing a polysilicon layer on said device areas and elsewhere on said substrate, said polysilicon layer being conductively doped;

patterning said polysilicon layer to form said FET gate electrodes on said device areas;

forming lightly doped source/drain areas adjacent to said FET gate electrodes;

depositing a first insulating layer on said FET gate electrodes, said first insulating layer having a trapezoidal shape over said FET gate electrodes such that only the top edges of said FET gate electrodes are free of said first insulating layer;

depositing a conformal second insulating layer on said first insulating layer;

anisotropically plasma etching said second insulating layer to said first insulating layer to form said sidewall spacers on sidewalls of said FET gate electrodes, said first insulating layer acting as an etch endpoint detect;

removing said first insulating layer remaining on said lightly doped source/drain areas using a wet etch, while said second insulating layer protects said first insulating layer at top edges of said FET gate electrodes;

forming source/drain contact areas adjacent to said sidewalls of said FET gate electrodes in said device areas;

depositing a blanket third insulating layer on said substrate and planarizing;

etching contact openings in said third insulating layer to said source/drain contact areas, while said second insulating layer protects said first insulating layer at top edges of said FET gate electrodes when etching said contact openings that extend over said FET gate electrodes.

6,040,224

METHOD OF MANUFACTURING SEMICONDUCTOR DEVICES

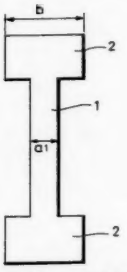
Hironori Tsukamoto, Kanagawa, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Apr. 30, 1997, Appl. No. 841,626

Claims priority, application Japan, Aug. 30, 1993, 5-214232

Int. Cl.[7] H01L *21/265*

U.S. Cl. 438—308 **11 Claims**



1. A method of manufacturing a semiconductor device having a microscopic region which is not damaged by laser-annealing, comprising the steps of:

forming a first region which requires heating on a semiconductor substrate at a first temperature;

forming a second region which should be protected from damage by not being heated to said first temperature on said first region, said second region having a first portion of a first width and a second portion having a width more than twice greater than that of said first portion, said second portion being integrally formed at least on one end of said first portion, wherein said width of said first portion is 0.2 μm or smaller and a length of said first portion is 10 μm or smaller; and

ion implanting selectively to said semiconductor substrate; and

laser-annealing said semiconductor substrate on which said first and second regions are formed, whereby the shape of said first and second portions protect said second region from damage during said annealing.

6,040,225

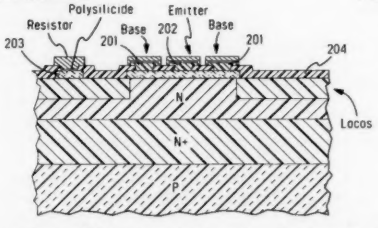
METHOD OF FABRICATING POLYSILICON BASED RESISTORS IN SI-GE HETEROJUNCTION DEVICES

Timothy Edward Boles, Tyngsboro, Mass., assignor to The Whitaker Corporation, Wilmington, Del.

Filed Aug. 29, 1997, Appl. No. 920,639

Int. Cl.[7] H01L *21/331*

U.S. Cl. 438—314 **7 Claims**



1. A method of fabricating polysilicon based resistors in silicon-germanium heterojunction devices, the method comprising the steps of:

growing a single crystal silicon collector layer on a substrate;

growing a first oxide layer of a first thickness on said collector layer and depositing a nitride layer of a second thickness on said first oxide layer;

patterning said first oxide and said nitride layers and etching said collector layer to form a mesa;

growing an isolating layer by localized oxidation of silicon (LOCOS) of a third thickness;

removing any remaining first oxide layer and nitride layer;

growing an isolating layer by localized oxidation of silicon (LOCOS) of a fourth thickness;

depositing a layer of polysilicon on the isolating layer of a fourth thickness and selectively doping with a dopant, said polysilicon layer to form at least one resistor;

activating said dopant by heating to a predetermined temperature;

patterning and etching the polysilicon layer and the isolating layer of a fourth thickness to expose said mesa;

depositing a layer of epitaxial silicon-germanium alloy on said mesa of single crystal silicon, said silicon-germanium layer being a base layer; and

depositing a layer of single crystal silicon on said silicon-germanium layer, said layer of single crystal silicon being an emitter layer.

6,040,226

METHOD FOR FABRICATING A THIN FILM INDUCTOR

Robert John Wojnarowski, Ballston Lake; James Wilson Rose, Guilderland; Ernest Wayne Balch, Ballston Spa; Leonard Richard Douglas, Burnt Hills; Evan Taylor Downey, Niskayuna, and Michael Gdula, Knox, all of N.Y., assignors to General Electric Company, Schenectady, N.Y.

Division of application No. 08/862,994, May 27, 1997. This application Oct. 23, 1998, Appl. No. 177,908.

Int. Cl.[7] **H01L** *21/20*

U.S. Cl. 438—381 **3 Claims**

1. A method for fabricating an inductor, comprising the steps of:

depositing a metallization layer over a base layer;

patterning the metallization layer to form a metal coil having an inductance value higher than a predetermined inductance value;

measuring the inductance value of the metal coil;

estimating the length of metal coil useful for obtaining the desired inductance value;

applying a dielectric layer over the metal coil; and

forming two vias in the dielectric layer, each of the vias extending to a respective portion of the coil and being separated along the coil by the estimated length.

6,040,227

IPO DEPOSITED WITH LOW PRESSURE O_3-TEOS FOR PLANARIZATION IN MULTI-POLY MEMORY TECHNOLOGY

Shou-Gwo Wuu, Hsinchu; Lung Chen, Hsin-Chu; Dun-Nian Yaung, and Yi-Miaw Lin, both of Taipei, all of Taiwan, assignors to Taiwan Semiconductor Manufacturing Company, Hsin-Chu, Taiwan

Filed May 29, 1998, Appl. No. 86,826

Int. Cl.[7] **H01L** *21/8244*

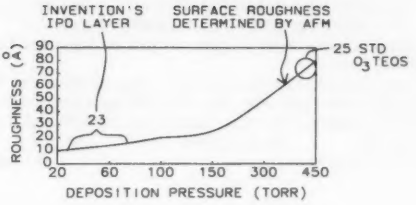
U.S. Cl. 438—382 **9 Claims**

1. A method of fabrication an inter-poly oxide (IPO) layer under a polysilicon resistor comprising:

a) providing a semiconductor structure,

b) forming an inter-poly oxide (IPO) layer over said semiconductor structure;

said inter-poly oxide (IPO) layer formed using an ozone assisted TEOS sub-atmospheric chemical vapor deposition (SACVD O_3-TEOS) process at a pressure in a range of between about 20 and 150 torr; and



c) forming a polysilicon resistor on said inter-poly oxide (IPO) layer.

6,040,228

CAPACITANCE-FORMING METHOD

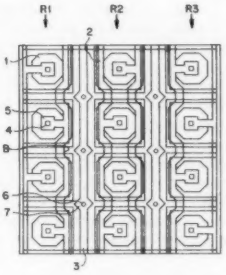
Fumihito Ito, and Guoliang Shou, both of Tokyo, Japan, assignors to Yozan, Inc., Tokyo, Japan

Filed Jun. 9, 1997, Appl. No. 871,536

Claims priority, application Japan, Jun. 7, 1996, 8-168589

Int. Cl.[7] **H01L** *21/8242*

U.S. Cl. 438—393 **6 Claims**



1. A capacitance-forming method for forming a capacitance having a predetermined capacity, comprising steps of:

i) plurally arraying an almost straight plurality of unit capacitor electrodes in a first layer in a semiconductor system;

ii) forming common electrodes in a second layer adjacent to said first layer to be faced to said unit capacitor electrodes;

iii) forming a plurality of unit capacitances by ii);

iv) forming a plurality of first and second conductors respectively connected to said first unit capacitor electrode layer and said common electrode layer in a third layer;

v) forming first and second metal terminal-contacting portions penetrating up to said third layer respectively from said unit capacitor electrodes and common electrodes;

vi) respectively connecting approximately rectangular first and second metal terminal head portions to said first and second metal terminal-contacting portions in said third layer;

vii) connecting said unit capacitor electrodes and common electrodes to said first and second conductors, respectively, through said first and second metal terminal head portions, respectively;

viii) connecting unit capacitor electrodes adjacent to each other to differnet first conductors; and

ix) parallelly connecting a predetermined number of unit capacitances;

wherein said first conductor adjacent to said second conductor is curved for detouring around said second metal terminal head portion.

6,040,229

METHOD FOR MANUFACTURING A SOLID ELECTROLYTIC CAPACITOR ARRAY

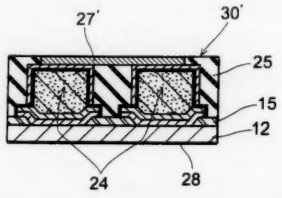
Chojiro Kuriyama, Kyoto, Japan, assignor to Rohm Co., Ltd., Kyoto, Japan

Division of application No. 08/920,517, Aug. 29, 1997, Pat. No. 5,926,363. This application Oct. 20, 1998, Appl. No. 175,786.

Claims priority, application Japan, Aug. 30, 1996, 8-230749

Int. Cl.[7] H01L *21/20*

U.S. Cl. 438—396 **8 Claims**



1. A method for manufacturing solid electrolytic capacitor arrays, comprising steps of:

(a) preparing a motherboard having an area from which a plurality of substrates can be cutout;

(b) respectively forming a plurality of chips on said plurality of substrates included in said motherboard, each of said plurality of chips being formed by sintering metallic powder;

(c) forming a plurality of solid electrolytic layers on surfaces of said plurality of chips, respectively, in a manner that each of said plurality of solid electrolytic layers is electrically insulated from said metallic powder, said plurality of solid electrolytic layers being independent from each other;

(d) forming a covering resin layer which covers said plurality of chips in a manner that portions of said plurality of solid electrolytic layers are exposed;

(e) forming at least one cathode electrode on said covering resin layer, said cathode electrode being electrically connected to each of said plurality of solid electrolytic layers;

(f) forming at least one anode electrode on a lower surface of said motherboard, said anode electrode being electrically connected to said metallic powder of each of said plurality of chips; and

(g) cutting-out said plurality of substrates from said motherboard.

6,040,230

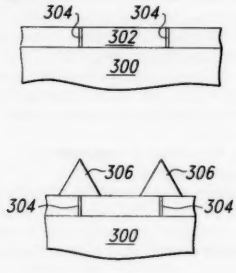
METHOD OF FORMING A NANO-RUGGED SILICON-CONTAINING LAYER

John Mark Anthony, McKinney; Robert M. Wallace, Dallas, both of Tex.; Yi Wei, Chandler, Ark., and Glen Wilk, Dallas, Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Provisional application No. 60/045,196, Apr. 30, 1997. This application Mar. 13, 1998, Appl. No. 39,075.

Int. Cl.[7] H01L *21/20*

U.S. Cl. 438—398 **8 Claims**



1. A method of forming a nano-rugged silicon-containing layer, said method comprising the steps of:

providing a first silicon-containing layer;

providing a patterning layer over said first silicon-containing layer; said patterning layer comprised of an amorphous, conductive substance;

providing a second silicon-containing layer over said patterning layer;

and wherein said patterning layer creates a nano-rugged texture in said second silicon-containing layer.

6,040,231

METHOD OF FABRICATING A SHALLOW TRENCH ISOLATION STRUCTURE WHICH INCLUDES USING A SALICIDE PROCESS TO FORM AN ASLOPE PERIPHERY AT THE TOP CORNER OF THE SUBSTRATE

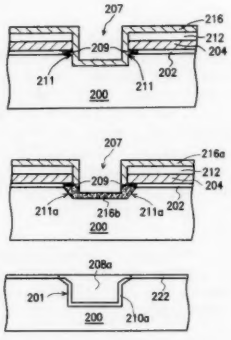
Der-Yuan Wu, Hsinchu, Taiwan, assignor to United Microelectronics Corp., Hsin-Chu, Taiwan

Filed Apr. 6, 1998, Appl. No. 55,684

Claims priority, application Taiwan, Jan. 23, 1998, 87100940

Int. Cl.[7] H01L *21/76;21/311*

U.S. Cl. 438—424 **47 Claims**



1. A method of fabricating a shallow trench isolation structure, comprising:

providing a substrate;

forming a first oxide layer, a stop layer and a second oxide layer successively on the substrate, wherein the first oxide layer has a periphery;

patterning the second oxide layer, the stop layer and the first oxide layer and a portion of the substrate to form a trench;

forming a recess at the periphery of the first oxide layer;

forming a metal layer at the trench and the recess;

performing a thermal treatment process so that a portion of the metal layer contacting with the substrate transforms to be a metal silicide layer; and

removing the metal silicide layer and the rest of the metal layer so that the top corner of the substrate becomes an aslope periphery.

6,040,232

METHOD OF MANUFACTURING SHALLOW TRENCH ISOLATION

Jing-Horng Gau, Nan-Tou Hsien, Taiwan, assignor to United Semiconductor Corp., Hsinchu, Taiwan

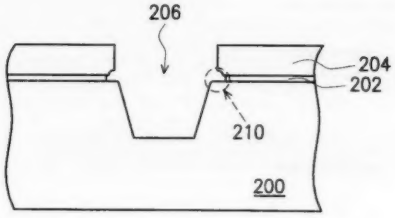
Filed Jan. 25, 1999, Appl. No. 236,955

Claims priority, application Taiwan, Nov. 6, 1998, 87118504

Int. Cl.[7] H01L *21/76*

U.S. Cl. 438—424 **11 Claims**

1. A method of manufacturing a shallow trench isolation suitable for a substrate having a pad oxide layer and a mask layer in



sequence, a trench penetrating through the mask layer and the pad oxide layer and into the substrate defining a sidewall of the mask layer, a sidewall of the pad oxide layer and exposed surface of the substrate, and a first liner oxide layer covering the sidewall of the pad oxide layer and the exposed surface of the substrate, the method comprising the steps of:

stripping away a portion of the first liner oxide layer to expose a bottom corner of the sidewall of the mask layer;

stripping away a portion of the mask layer from its sidewall and bottom corner to expose a top corner of the first oxide layer adjacent and connected to the sidewall of the pad oxide layer;

removing the first liner oxide layer;

forming a second liner oxide layer on the sidewall and the base surface of the trench; and

filling the trench with an insulating material to form a shallow trench isolation.

6,040,233

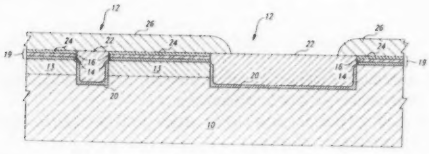
METHOD OF MAKING A SHALLOW TRENCH ISOLATION WITH THIN NITRIDE AS GATE DIELECTRIC

Robert Louis Hodges, Phoenix, Ariz., assignor to STMicroelectronics, Inc., Carrollton, Tex.

Division of application No. 08/986,271, Dec. 5, 1997, Pat. No. 5,952,707. This application May 11, 1999, Appl. No. 309,935.

Int. Cl.[7] H01L *29/51*

U.S. Cl. 438—427 **16 Claims**



1. A method of forming a semiconductor device comprising:

forming a dielectric layer atop a surface of a substrate, said substrate having a first conductivity type and including wells of a second conductivity type and contacts of the first conductivity type formed on said surface, said dielectric layer including a top component comprising silicon dioxide having a thickness of less than ten angstroms;

forming openings in said dielectric layer;

etching trenches through said wells in said openings;

forming an oxide atop said surface and in said trenches, said oxide having a thickness greater than a depth of said trenches;

removing that portion of said oxide extending above said surface by more than a height of said dielectric layer; and

forming transistors using said dielectric layer as a gate dielectric.

6,040,234

METHOD OF MANUFACTURING SEMICONDUCTOR DEVICE WITHOUT BIRD BEAK EFFECT

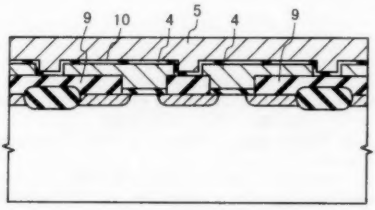
Yosiaki Hisamune, Tokyo, Japan, assignor to NEC Corporation, Japan

Filed Jun. 23, 1997, Appl. No. 881,024

Claims priority, application Japan, Jul. 30, 1996, 8-200708

Int. Cl.[7] H01L *21/225;21/76*

U.S. Cl. 438—439 **15 Claims**



1. A method of manufacturing a semiconductor device, comprising the steps of:

forming a field oxide film on said semiconductor substrate;

forming a mask film on said semiconductor substrate which is uncovered by said field oxide film;

forming diffusion layers on said semiconductor substrate using said mask film and said field oxide film as a mask, said diffusion layers having a conductive type different from that of said semiconductor substrate;

forming insulating films on said diffusion layers;

removing said mask film;

forming a polysilicon floating gate between said insulating films on said semiconductor substrate via a first gate insulating film;

forming a second gate insulating film on said polysilicon floating gate and said insulating films; and

forming a word line to cover said polysilicon floating gate via said second gate insulating film.

6,040,235

METHODS AND APPARATUS FOR PRODUCING INTEGRATED CIRCUIT DEVICES

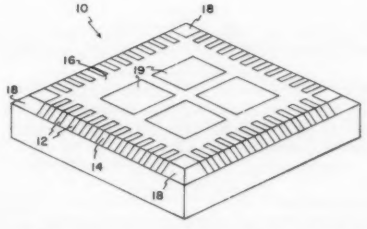
Pierre Badehi, Mobile Post Harei Yehuda, Israel, assignor to Shellcase Ltd., Jerusalem, Israel

PCT No. PCT/EP95/00097, § 371 Date Aug. 19, 1996, § 102(e) Date Aug. 19, 1996, PCT Pub. No. WO95/19645, PCT Pub. Date Jul. 20, 1995

PCT Filed Jan. 10, 1995, Appl. No. 682,556

Int. Cl.[7] H01L *21/301;21/46;21/78*

U.S. Cl. 438—464 **26 Claims**



1. A method for producing integrated circuit devices including the steps of:

producing a plurality of integrated circuits on a wafer having first and second planar surfaces, each of the integrated circuits including a multiplicity of pads;

waferwise attaching to both said surfaces of the wafer a layer of protective material;

thereafter partially cutting into the wafer and the protective material attached thereto, thereby to define notches along outlines of a plurality of prepackaged integrated circuit devices;

forming metal contacts onto the plurality of prepackaged integrated circuit devices while they are still joined together on the wafer, at least a portion of said metal contacts extending into the notches; and

thereafter separating the plurality of prepackaged integrated circuit devices into individual devices.

6,040,236

METHOD FOR MANUFACTURING SILICON THIN FILM CONDUCTIVE ELEMENT

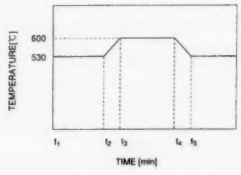
Fumiki Aiso, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

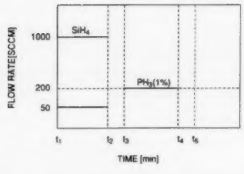
Filed Sep. 2, 1997, Appl. No. 923,746

Claims priority, application Japan, Sep. 6, 1996, 8-236020

Int. Cl.[7] **H01L** *21/22*

U.S. Cl. 438—486 **8 Claims**





1. A method of manufacturing a silicon thin film conductive element comprising the steps of :

forming, after the formation of an impurity-containing amorphous silicon film, an impurity glass layer on a surface by the use of a gas containing the impurity and an oxide gas without removing the film from a film forming device; and subsequently

crystallizing said amorphous silicon film by heat treatment.

6,040,237

FABRICATION OF A SIC SEMICONDUCTOR DEVICE COMPRISING A PN JUNCTION WITH A VOLTAGE ABSORBING EDGE

Mietek Bakowski, Skultuna; Ulf Gustafsson, Linkoping; Kurt Rottner, Kista, and Susan Savage, Jarfalla, all of Sweden, assignors to ABB Research Ltd., Zurich, Switzerland

Division of application No. 08/683,059, Jul. 16, 1996. This application Oct. 23, 1997, Appl. No. 956,959.

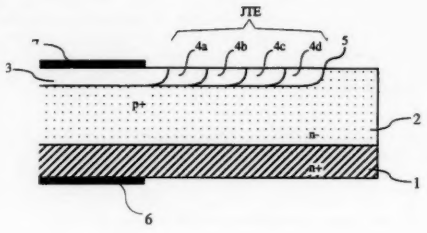
Int. Cl.[7] **H01L** *21/26*

U.S. Cl. 438—521 **9 Claims**

1. A method of manufacturing a semiconductor component, said method comprising the steps of:

forming a lower doped layer of the first conducting type in a silicon carbide wafer at the surface of the wafer;

forming a higher doped anode layer of the second conducting type at the surface of and in said silicon carbide wafer, said lower doped layer and said anode forming a planar pn junction;



masking an area of the wafer adjacent a prospective first zone not to be implanted; and

implanting an implant in the exposed area of the wafer, thus forming a first junction termination extension zone of the second conducting type surrounding the anode, wherein the implantation dose is such that the effective sheet charge density in the first zone is at most equal to the characteristic sheet charge density Q_0, corresponding to a doping such that the zone is completely depleted at full design voltage.

6,040,238

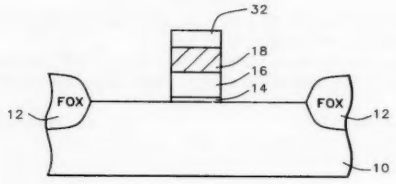
THERMAL ANNEALING FOR PREVENTING POLYCIDE VOID

Chie-Ming Yang; Jih-Hwa Wang, and Yen-Yi Lin, all of Hsin-Chu, Taiwan, assignors to Taiwan Semiconductor Manufacturing Company, Ltd., Hsin-Chu, Taiwan

Filed Jan. 8, 1998, Appl. No. 4,190

Int. Cl.[7] **H01L** *21/3205;21/4763*

U.S. Cl. 438—592 **15 Claims**



1. A method of fabricating gate electrodes in the manufacture of an integrated circuit device comprising:

growing a layer of gate silicon oxide over the surface of a semiconductor substrate;

depositing a polysilicon layer overlying said gate silicon oxide layer;

forming a tungsten silicide layer overlying said polysilicon layer;

thermally annealing said tungsten silicide layer at a temperature of 750 to 850° C. for 20 to 60 seconds whereby said tungsten silicide layer is stabilized and stress relaxed;

thereafter depositing a hard mask layer overlying said tungsten silicide layer wherein said annealing step prevents silicon atoms from diffusing out of said polysilicon layer into said tungsten silicide layer and causing voids in said polysilicon layer and wherein the absence of said voids prevents the formation of silicon pits in said semiconductor substrate; and

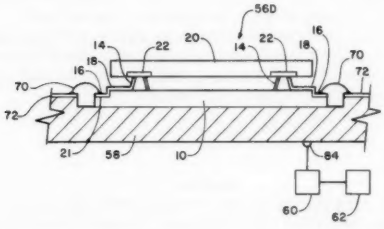
patterning said hard mask, said tungsten silicide, said polysilicon and said gate silicon oxide layers to complete fabrication of said gate electrodes in the manufacture of said integrated circuit device.

6,040,239

NON-OXIDIZING TOUCH CONTACT INTERCONNECT FOR SEMICONDUCTOR TEST SYSTEMS AND METHOD OF FABRICATION

Salman Akram, Boise, and Warren M. Farnworth, Nampa, both of Id., assignors to Micron Technology, Inc., Boise, Id.

Filed Aug. 22, 1997, Appl. No. 916,892
Int. Cl.[7] H01L *21/44;21/66*
U.S. Cl. 438—612 47 Claims



1. A method for fabricating an interconnect for testing a semiconductor component having a contact comprising:

providing a substrate;

forming a contact member on the substrate configured for contacting the contact on the component;

forming a conductive layer on the contact member;

electrolessly depositing a barrier layer on the conductive layer comprising a first material configured to prevent diffusion of the conductive layer; and

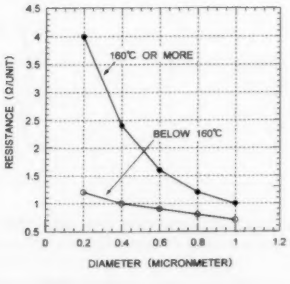
electrolessly depositing a non-oxidizing layer on the barrier layer comprising a second material configured to provide a touch surface on the contact member for making a temporary electrical connection with the contact on the component.

6,040,240

METHOD FOR FORMING INTERCONNECTION STRUCTURE

Yoshihisa Matsubara, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Apr. 28, 1999, Appl. No. 300,439
Claims priority, application Japan, Apr. 30, 1998, 10-120494
Int. Cl.[7] H01L *21/44*
U.S. Cl. 438—618 9 Claims



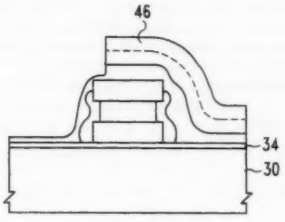
1. A method for forming an interconnection structure the steps of: forming an exposed copper interconnect overlying on a substrate to form a wafer, thermally treating the wafer in a thermal treatment furnace under a non-oxidizable atmosphere, dropping a temperature of the copper interconnect below 160° C. under the non-oxidizable atmosphere and exposing the wafer thermally treated to atmosphere for cooling the wafer.

6,040,241

METHOD OF AVOIDING SIDEWALL RESIDUE IN FORMING CONNECTIONS

Tzung-Han Lee, Taipei, and Horng-Nan Chern, Tainan, both of Taiwan, assignors to United Microelectronics Corp., Hsin-chu, Taiwan

Filed Feb. 11, 1998, Appl. No. 21,750
Int. Cl.[7] H01L *21/336*
U.S. Cl. 438—622 13 Claims



1. A method for forming insulation over conductor, said method comprising the steps of:

providing a substrate with a gate structure formed over, wherein said gate structure includes:

a polysilicon layer over said substrate;

a tungsten silicide layer over said polysilicon layer;

an upper insulator layer over said tungsten silicide layer; and

insulator spacers with a recessed region covering conformably on sidewalls of said upper insulator layer, said tungsten silicide layer and said polysilicon layer;

forming a dielectric layer over said gate structure and said substrate; and

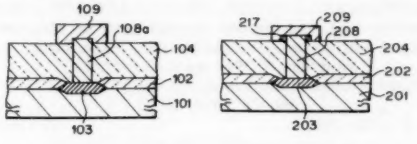
performing an etching back process to remove a portion of said dielectric layer for thinning said dielectric layer and having a recess free sidewall on said dielectric layer around said gate structure.

6,040,242

METHOD OF MANUFACTURING A CONTACT PLUG

Eiichirou Kakehashi, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Feb. 21, 1997, Appl. No. 804,352
Claims priority, application Japan, Feb. 28, 1996, 8-041164
Int. Cl.[7] H01L *21/28*
U.S. Cl. 438—672 17 Claims



6. A method of manufacturing a semiconductor device, comprising:

a first step of forming a first insulating film on a semiconductor substrate;

a second step of forming a first film which can be selectively etched to said first insulating film, and of forming a second insulating film on said first film;

a third step of forming an opening which reaches said first insulating film in an area where a contact hole is to be formed;

a fourth step of forming a spacer on a side surface of said opening;

a fifth step of forming said contact hole which reaches said semiconductor substrate by selectively etching said second insulating film and said first insulating film to said spacer and said first film;

a sixth step of forming a second film to fill said contact hole and cover said first film and said spacer;

a seventh step of forming a buried contact plug filling said contact hole by etching said second film, said spacer and said first film to expose said first insulating film.

6,040,243

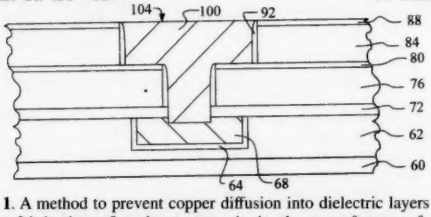
METHOD TO FORM COPPER DAMASCENE INTERCONNECTS USING A REVERSE BARRIER METAL SCHEME TO ELIMINATE COPPER DIFFUSION

Jianxun Li; Simon Chooi, and Mei-Sheng Zhou, all of Singapore, Singapore, assignors to Chartered Semiconductor Manufacturing Ltd., Singapore, Singapore

Filed Sep. 20, 1999, Appl. No. 398,292

Int. Cl.[7] H01L *21/44*

U.S. Cl. 438—687 **20 Claims**



1. A method to prevent copper diffusion into dielectric layers in the fabrication of a damascene via in the manufacture of an integrated circuit device comprising:

providing copper traces through an isolation layer overlying a semiconductor substrate;

depositing a passivation layer overlying said copper traces and said isolation layer;

depositing a dielectric layer overlying said passivation layer;

depositing a cap layer overlying said dielectric layer;

patterning said cap layer and said dielectric layer to form an opening for planned said damascene via and to expose the top surface of said passivation layer overlying said copper traces;

depositing a barrier layer overlying said passivation layer and said dielectric layer;

etching through said barrier layer to expose the top surfaces of said passivation layer and said cap layer wherein remaining said barrier layer isolates sidewalls of said opening; and

etching through said passivation layer to the top surface of said copper traces to complete said damascene via in the manufacture of said integrated circuit device.

6,040,244

POLISHING PAD CONTROL METHOD AND APPARATUS

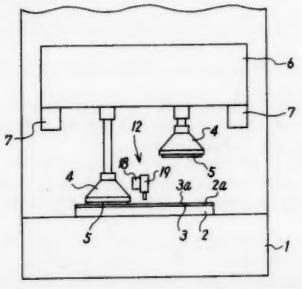
Hatsuyuki Arai, and Yasushi Ikeyama, both of Kanagawa, Japan, assignors to Speedfam Co., Ltd., Tokyo, Japan

Filed Sep. 11, 1997, Appl. No. 927,314

Claims priority, application Japan, Sep. 11, 1996, 8-262575

Int. Cl.[7] H01L *21/302*

U.S. Cl. 438—691 **17 Claims**



1. A method for monitoring and controlling accuracy of a polishing pad adhered to a surface plate mounted on a machine for polishing wafers comprising the steps of:

scanning a surface of said plate with a sensor, prior to adhesion of said pad to said plate, to measure a position of said plate surface;

inputting said surface position into a controlling means to be used as a reference surface for measuring thickness of said pad;

adhering said pad to said plate surface;

scanning said pad with said sensor prior to polishing to measure pre-polishing thickness and contour of said pad;

polishing said wafers;

scanning said pad with said sensor after polishing to measure post-polishing thickness and contour of said pad; and

outputting from said controlling means a pad conditioning signal or a pad replacement signal based on differences between said pre-polishing pad thickness and contour and said post-polishing pad thickness and contour.

6,040,245

IC MECHANICAL PLANARIZATION PROCESS INCORPORATING TWO SLURRY COMPOSITIONS FOR FASTER MATERIAL REMOVAL TIMES

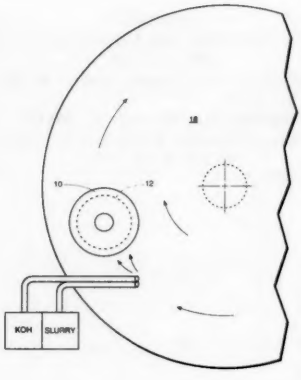
Gurtej S. Sandhu; Richard L. Elliott; Trung T. Doan, and Jody D. Larsen, all of Boise, Id., assignors to Micron Technology, Inc., Boise, Id.

Continuation of application No. 08/992,399, Dec. 17, 1997, which is a continuation of application No. 08/692,903, Jul. 30, 1996, abandoned, which is a continuation of application No. 08/493,205, Jun. 20, 1995, Pat. No. 5,540,810, which is a continuation of application No. 08/109,848, Aug. 20, 1993, abandoned, which is a continuation of application No. 07/989,243, Dec. 11, 1992, abandoned. This application May 12, 1999, Appl. No. 310,506.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] H01L *21/304*

U.S. Cl. 438—692 **4 Claims**



1. A method of planarizing a wafer, comprising steps of:

providing a wafer having at least one layer of material over a substrate;

supplying a chemical mechanical planarization solution and a pH adjusting solution as a to slurry mixture;

chemical mechanical planarizing said wafer using said slurry mixture and removing at least a first portion of said one layer of material; and

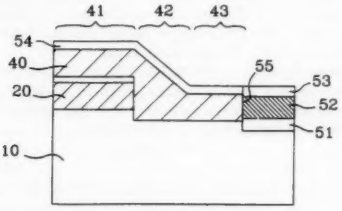
after removing said first portion of said one layer of material, altering a flow ratio of said pH adjusting solution relative said chemical mechanical planarization solution and continuing said chemical mechanical planarizing of said water.

6,040,246

METHOD OF MANUFACTURING AN INTEGRATED OPTICAL COMPONENT COMPRISING A THICK WAVEGUIDE COUPLED TO A THIN WAVEGUIDE

Léon Goldstein, Chaville; Denis Leclerc, Igny, and Béatrice Dagens, Paris, all of France, assignors to Alcatel, Paris, France

Filed Sep. 8, 1998, Appl. No. 148,480
Claims priority, application France, Sep. 11, 1997, 97 11298
Int. Cl.[7] **H01L** *21/02;21/20;21/3065;* **G02B** *6/13;6/136*
U.S. Cl. 438—706 **6 Claims**



1. A method of manufacturing an integrated optical component comprising a thick waveguide coupled to a thin waveguide via a coupling interface, said method consisting in:

depositing a first guiding layer of said thick waveguide on a substrate;

locally etching said first guiding layer over a portion allocated both to the coupling interface and to the thin waveguide;

depositing a second guiding layer on the first guiding layer and on the locally etched portion so as to form said thick waveguide in a manner such that it has a maximum thickness in a first zone, a graded-thickness section in a second zone, and a reduced-thickness section in a third zone;

locally etching the second guiding layer over a portion of the third zone, said portion being allocated to the thin waveguide; and

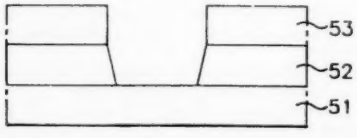
depositing a third guiding layer in said portion of said third zone so as to form said thin waveguide.

6,040,247

METHOD FOR ETCHING CONTACT

Seong Woo Chung, Chungcheongbuk-do, Rep. of Korea, assignor to LG Semicon Co., Ltd., Chungcheongbuk-do, Rep. of Korea

Continuation of application No. 08/371,070, Jan. 10, 1995, abandoned. This application Jan. 7, 1997, Appl. No. 779,744.
Int. Cl.[7] **H01L** *21/302*
U.S. Cl. 438—713 **2 Claims**



1. A method for forming a semiconductor device comprising the steps of:

providing an insulation layer on a substrate;

exposing a portion of said insulation layer by providing a photoresist pattern on said insulation layer;

performing a first etching step of said insulation layer, said first etching step including the steps of:

introducing into an etching chamber a first gas including CF_4, a second gas including a polymer forming gas, other than CF_4, and a third gas including an inert gas; and

controlling a first flow rate of said inert gas to have a first flow rate value; and

performing a second etching step of said insulation layer, said second etching step ;including the step of controlling a second flow rate of said inert gas to have a second flow rate value, said second flow rate value being greater than said first flow rate value,

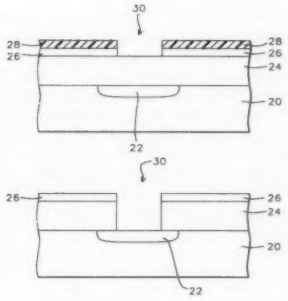
wherein said second etching step yields a contact hole in said insulation layer having sloped sidewalls.

6,040,248

CHEMISTRY FOR ETCHING ORGANIC LOW-K MATERIALS

Chao-Cheng Chen, Matou; Ming-Hsin Huang, Hsin-chu; Hun-Jan Tao, Hsin-chu, and Chia-Shiung Tsai, Hsin-chu, all of Taiwan, assignors to Taiwan Semiconductor Manufacturing Company, Hsin-Chu, Taiwan

Filed Jun. 24, 1998, Appl. No. 104,032
Int. Cl.[7] **H01L** *21/302;21/461;* **C23F** *1/02*
U.S. Cl. 438—725 **18 Claims**



7. A method for forming a contact on a semiconductor wafer comprising:

(a) providing a semiconductor wafer;

(b) forming a organic polymer layer on said semiconductor wafer;

(c) patterning a hardmask on said organic polymer layer;

(d) anisotropically etching said organic polymer layer in a high density plasma) etcher with an etchant gas containing oxygen and chlorine, under conditions which preserve the pattern integrity of the hardmask and form an essentially un-bowed, vertical profiled opening; and

(e) forming a conductive contact in said opening.

6,040,249

METHOD OF IMPROVING DIFFUSION BARRIER PROPERTIES OF GATE OXIDES BY APPLYING IONS OR FREE RADICALS OF NITROGEN IN LOW ENERGY

Thomas C. Holloway, Murphy, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Filed Aug. 8, 1997, Appl. No. 907,668
Int. Cl.[7] **H01L** *21/318*
U.S. Cl. 438—769 **14 Claims**

1. A method of providing a MOSFET having improved gate oxide diffusion barrier properties, comprising the steps of:

(a) providing a partially fabricated MOSFET having an exposed gate oxide surface;

(b) converting the surface of said exposed gate oxide to an oxynitride by a very low energy implant of nitrogen into said exposed gate oxide surface wherein said low energy is from about 50 eV to about 1000 eV; and

(c) completing fabrication of said MOSFET.

6,040,250

MULTI-LAYER THERMOFORMABLE LAMINATES AND METHODS OF THEIR MANUFACTURE

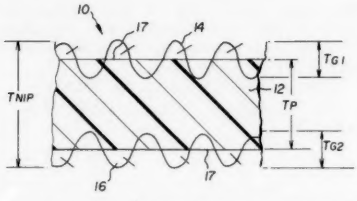
William C. Paul, Mt. Vernon, and Gloria Sieloff, Evansville, both of Ind., assignors to General Electric Company, Pittsfield, Mass.

Division of application No. 08/575,006, Dec. 19, 1995, Pat. No. 5,895,709, which is a continuation of application No. 08/265,528, Jun. 24, 1994, abandoned. This application Jun. 9, 1998, Appl. No. 94,147.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **B32B** *5/18;5/28*

U.S. Cl. 442—61 **15 Claims**



1. A thermoformable multi-layer laminate structure having been made by a process comprising the steps of:

forming a polymer layer of an at least partially molten thermoplastic polymeric material having opposite sides;

superposing first and second layers of glass cloth materials in confronting relationship with said partially molten thermoplastic polymer layer on the opposite sides thereof; and

passing the superposed layers through a compression nip providing a gap which is less than the combined thickness of the layers and engaging free surfaces of said glass cloth layers with the partially molten thermoplastic polymeric material therebetween whereby the compression nip forces said partially molten thermoplastic polymer layers to flow into and impregnate the first and second glass cloth layers and said free surfaces of said glass cloth layers protrude from said polymer layer to form a core structure.

PRESS PAD FOR HIGH-PRESSURE AND LOW-PRESSURE PRESSES

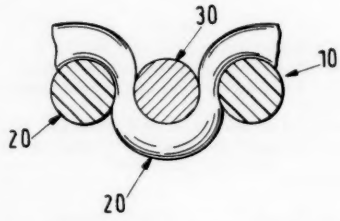
Bruno Hennecken, Aachen, Germany, assignor to Rheinische Filztuchfabrik GmbH, Stolberg/Rhld., Germany

Filed Nov. 27, 1995, Appl. No. 562,871

Claims priority, application Germany, Nov. 25, 1994, 94 18 984 U

Int. Cl.[7] **D03D** *15/00*

U.S. Cl. 442—239 **6 Claims**



1. A press pad which is made of asbestos-free material, consisting essentially of:

at least one yarn of Group I in combination with at least one yarn of Group II, wherein Group I includes:

(A) yarn comprised of filaments of at least one aromatic polyamide and filaments of at least one metallic material selected from the group consisting of metals and metal alloys; and

(B) yarn comprised of filaments of at least one metallic material selected from the group consisting of metals and metal alloys, and

wherein Group II includes:

(A) filaments which are comprised of one of at least one silicone polymer or a mixture of filaments of different silicone polymers and which are heat resistant, and

(B) filaments which are comprised of an outer layer and a metallic core, the outer layer being composed of filaments of at least one material from Group II (A) or (B), and the metallic core being composed of at least one filament of at

least one metallic material selected from the group consisting of metals and metal alloys, and being one of fixedly connected with the outer layer or not fixedly connected with the outer layer; and

(C) wrapped filaments which are comprised of filaments of at least one material from Group II (A) or (B) and which are wrapped by metallic filaments composed of at least one metallic material selected from the group consisting of metals and metal alloys, and

wherein the press pad does not include asbestos.

DUSTPROOF FABRIC WORN IN A CLEAN ROOM

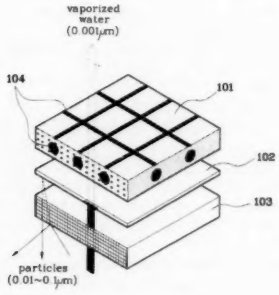
Chang-su Lim, Kyungki-do; Hyeog-ki Kim, Seoul; Sue-ryeon Kim, Kyungki-do, and Il-kyoung Kim, Kyoungsanbuk-do, all of Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Suwon, Rep. of Korea

Filed Oct. 8, 1998, Appl. No. 168,095

Claims priority, application Rep. of Korea, Dec. 24, 1997, 97-73509

Int. Cl.[7] **B32B** *3/00*

U.S. Cl. 442—261 **17 Claims**



1. A dustproof fabric comprising:

an inner layer comprising a knit fabric;

an intermediate layer attached to said inner layer and comprising a non-micro porous and moisture absorbent polyurethane resin film; and

an outer layer attached to said intermediate layer opposite said inner layer, said outer layer comprising a high density woven fabric of polyester yarns, a first set of spaced apart conductive yarns aligned with one another in the direction of the warp of the woven fabric, and a second set of spaced apart conductive yarns aligned with one another in the direction of the weft of the woven fabric.

METHOD FOR PRODUCING A REACTION SINTERED CERAMIC

Hideki Kita, Fujisawa, Japan, assignor to Isuzu Ceramics Research Institute Co., Ltd., Fujisawa, Japan

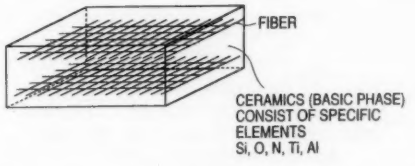
Continuation of application No. 08/787,995, Jan. 23, 1997, abandoned, which is a continuation of application No. 08/498,304, Jul. 3, 1995, abandoned, which is a continuation of application No. 08/321,776, Oct. 12, 1994, abandoned. This application Jan. 23, 1997, Appl. No. 787,995.

Claims priority, application Japan, Oct. 12, 1993, 5-278959; Feb. 8, 1994, 6-035500; Mar. 31, 1994, 6-085410

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **C04B** *35/58*

U.S. Cl. 501—97.1 **11 Claims**



1. A method for making one of a SIALON and Si_3N_4 reaction sintered ceramic, comprising the steps of:

forming a green composition from a mixture of about 20–65 weight % of a powder of Si and about 35–49 weight % of an oxide including Al and O;

reaction sintering said green composition at about 1400° C. to 1450° C. in an atmosphere of nitrogen gas;

heating at a temperature range of about 1000° C. to 1700° C. while oxidizing said sintered composition in an oxidation atmosphere to a nitride phase having a porosity of 15% or less.

HYDROCARBON CONVERSION CATALYST COMPOSITION AND PROCESSES THEREFOR AND THEREWITH

Charles A. Drake, Nowata; An-hsiang Wu, and Jianhua Yao, both of Bartlesville, all of Okla., assignors to Phillips Petroleum Company, Bartlesville, Okla.

Filed Nov. 7, 1997, Appl. No. 966,137

Int. Cl.[7] **B01J** *29/06;21/00;21/16;27/14*

U.S. Cl. 502—64 **3 Claims**

1. A process for the preparation of a catalyst suitable for the conversion of a hydrocarbon to a C_6 to C_8 aromatic hydrocarbon and an olefin which comprises

(A) combining a ZSM-5 zeolite with a clay wherein the ratio of clay to zeolite is in the range of from about 1:20 to about 20:1;

(B) contacting the resulting zeolite-clay composition of (A) with ammonium phosphate; and thereafter

(C) heating the resulting composition of (B) with steam.

6,040,258

ZEOLITE CIT-5 AND METHOD OF MAKING

Masahito Yoshikawa, Nagoya, Japan, and Mark E. Davis, Pasadena, Calif., assignors to California Institute of Technology, Pasadena, Calif.

Continuation-in-part of application No. 08/910,770, Aug. 13, 1997. This application Jul. 21, 1998, Appl. No. 119,806.

Int. Cl.[7] B01J *29/06*

U.S. Cl. 502—64 **33 Claims**

1. A zeolite comprising an oxide of a tetravalent element or mixture of oxides of tetravalent elements and, optionally, an oxide of a trivalent element or mixtures of oxides of trivalent elements and having, after calcination, the X-ray diffraction lines of Table II.

14. A method of preparing a crystalline material comprising an oxide of a tetravalent element or mixture of oxides of tetravalent elements and, optionally, an oxide of a trivalent element or mixtures of oxides of trivalent elements, and having, after calcination, the X-ray diffraction pattern lines of Table II, said method comprising contacting in admixture under crystallization conditions sources of said oxides, a source of alkali metal comprising lithium, and a templating agent comprising a N(16) methylsparteinium cation.

6,040,259

METAL-CONTAINING ZEOLITE CATALYST, PREPARATION THEREOF AND USE FOR HYDROCARBON CONVERSION

Gary David Mohr, League City, Tex., and Johannes Petrus Verduijn, Rotterdam, Netherlands, assignors to Exxon Chemical Patents Inc., Houston, Tex.

Provisional application No. 60/018,583, May 29, 1996. This application May 29, 1997, Appl. No. 865,727.

Int. Cl.[7] B01J *29/06*

U.S. Cl. 502—67 **41 Claims**

1. A zeolite bound zeolite hydrocarbon conversion catalyst which does not contain significant amounts of non-zeolitic binder and contains at least one hydrogenation/dehydrogenation metal and comprises:

(a) first crystals of a first zeolite, and

(b) a binder comprising second crystals of a second zeolite; and

(c) an effective amount of at least one hydrogenation/dehydrogenation metal:

wherein said zeolite bound zeolite catalyst is prepared by (i) providing said first crystals of said first zeolite; (ii) forming a silica bound aggregate comprising at least a portion of said at least one hydrogenation/dehydrogenation metal and said first crystals of said first zeolite; and (iii) converting to said second zeolite the silica binder of said silica bound aggregate, wherein said portion of said at least one hydrogenation/dehydrogenation metal is added during the preparation of said zeolite bound zeolite hydrocarbon conversion catalyst after step (i).

6,040,260

PROCESS FOR THE PREPARATION OF REPOLYMERIZED CATALYST COMPOSITION AND A PROCESS FOR POLYMERIZING α-OLEFINS

Ismo Pentti, Kulloo, and Pauli Leskinen, Helsinki, both of Finland, assignors to Borealis A/S, Lyngby, Denmark

Division of application No. 08/571,029, Dec. 12, 1995, Pat. No. 5,641,721, which is a continuation of application No. 08/174,787, Dec. 29, 1993, abandoned. This application Jun. 16, 1997, Appl. No. 876,442.

Claims priority, application Finland, Dec. 29, 1992, 925913

Int. Cl.[7] C08F *4/654*

U.S. Cl. 502—103 **12 Claims**

1. A process for preparing a catalyst comprising

(a) forming a procatalyst composition by depositing a transition metal compound on a suitable support;

(b) adding said procatalyst composition to a viscous substance having a viscosity of from 1,000 to 15,000 cP;

(c) prepolymerizing said procatalyst composition with a prepolymerization monomer in the presence of said viscous substance to obtain a prepolymerized catalyst composition.

6,040,261

SUPPORTED SINGLE-SITE CATALYST AND OLEFIN POLYMERIZATION PROCESS

Gregory G. Hlatky, Morrow, Ohio, assignor to Equistar Chemicals, LP, Houston, Tex.

Filed Apr. 15, 1999, Appl. No. 292,370

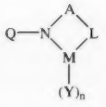
Int. Cl.[7] B01J *31/00*

U.S. Cl. 502—117 **16 Claims**

1. A process which comprises:

(a) reacting an amine-functionalized support of the structure: Q—NH_2 wherein Q is an inorganic solid or polymer support, with a compound of the formula X—A—L, wherein X is a leaving group, A is a linking group, and L is a polymerization-stable pi-bonded ancillary ligand that is covalently bonded to A, to produce a supported ligand of the formula: Q—NH—A—L; and

(b) reacting the supported ligand with a transition or lanthanide metal compound to produce a tethered catalyst of the structure:



where M is a Group 3 to 10 transition or lanthanide metal, Y is a ligand selected from the group consisting of halide, alkoxy, siloxy, dialkylamino, C_1–C_{10} alkyl, C_6–C_{15} aryl, C_7–C_{15} alkaryl or aralkyl, and n is the number of Y groups and equals the valence of M minus 2.

6,040,262

CATALYST AND USE THEREOF

Christoph Martin Fougret, Falkirk, United Kingdom, and Wolfgang Friederich Holderich, Frankenthal, Germany, assignors to BP Chemicals Limited, London, United Kingdom

METHODS OF MAKING HIGHLY DISPERSED SUBSTANTIALLY UNIFORM CERIUM AND ZIRCONIUM MIXED-METAL-OXIDE COMPOSITE SUPPORTS FOR EXHAUST CONVERSION CATALYSTS

John G. Nunan, Tulsa, Okla., assignor to Asec Manufacturing General Partnership, Catoosa, Okla.

Continuation-in-part of application No. 08/802,723, Feb. 20, 1997, Provisional application No. 60/012,007, Feb. 21, 1996. This application Sep. 10, 1998, Appl. No. 150,875.

Int. Cl.[7] **B01J** *21/00;23/00*

U.S. Cl. 502—242 **2 Claims**

1. A method of preparing a promoted catalyst support effective in enhancing the performance of catalytically active metals in the conversion of exhaust gas from internal combustion engines, comprising:

a. Impregnating a suitable refractory oxide support material with a solution of a primary metal acetate and at least one secondary metal acetate, said primary metal acetate selected from the group consisting of acetates of Ce and Zr that produce, when in admixture with said at least one secondary metal acetate, mixed-metal oxides after calcination, and an organic depositing reagent selected from the group consisting of soluble sugars, saccharides, polysaccharides, or derivations thereof, and polyols that upon drying forms a matrix in which said primary and secondary metal acetates remain intimately and uniformly mixed, thereby forming an impregnated support material and, thereafter,

b. Drying and calcining the impregnated support material thereby producing a support having dispersed thereon a substantially homogeneous composition of mixed-metal-oxide crystallites, said composition containing less than about 10 wt. % single-metal-oxide crystallites, uniformly dispersed on a refractory-oxide-support.

6,040,266

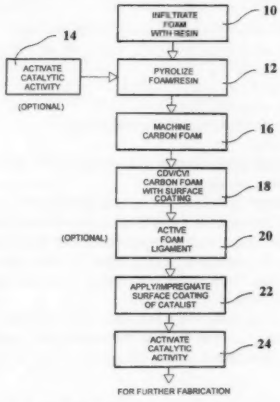
FOAM CATALYST SUPPORT FOR EXHAUST PURIFICATION

Thomas F. Fay, III, Fair Oaks; Raffaele La Ferla, Hermosa Beach; Andrew J. Sherman, Granada Hills, and Edwin P. Stankiewicz, Sherman Oaks, all of Calif., assignors to Ultramet, Pacoima, Calif.

Filed Feb. 22, 1994, Appl. No. 199,684

Int. Cl.[7] **B01J** *21/04;21/18*

U.S. Cl. 502—439 **29 Claims**



1. A method of producing an acoustic baffle/catalyst foam support material including the following steps:

providing a polyurethane open cell foam material having a pore density between ten and 100 pores per inch,

providing a resin material,

infiltrating the polyurethane foam with the resin material to produce an impregnated foam,

pyrolizing the impregnated foam to form a carbon foam skeleton, and

coating the carbon foam skeleton with one or more of the following group of materials without blocking said pores to produce a coated foam support comprising five to thirty five percent solid compared to sixty five to ninety five percent voids, the group of materials being SiC, Si_3N_4, $MoSi_2$ or metal which withstands temperatures in excess of 900° C., and

applying a catalyst to the coated carbon foam skeleton without blocking said pores, and wherein such catalyst is a metal or metals from the platinum group, and

recovering said acoustic baffle/catalyst foam support material, said acoustic baffle/catalyst foam support material having a through-flow configuration.

16. An acoustic baffle/catalyst support including:

an open cell carbon foam skeleton,

a surface coating on the carbon foam skeleton forming a support comprising five to thirty five percent solid compared to sixty five to ninety five percent voids,

wherein the surface coating is formed by one or more of the following group of materials SiC, Si_3N_4, $MoSi_2$ or metal which withstands temperatures in excess of 900° C., and

a catalytic layer on the surface coating and wherein such catalytic layer is formed from a platinum group metal or metals, said acoustic baffle/catalyst support having opposed sides and being adapted to permit fluid to flow through said voids from one of said opposed sides to the other.

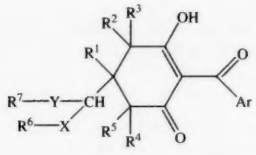
1. A 2-aroylcyclohexanedione of the formula I

(I)



where the variables have the following meanings:

R^1 is hydrogen;

R^2, R^3 and R^4 independently of one another are hydrogen or C_1–C_4-alkyl;

R^5 is hydrogen, C_1–C_4-alkyl or (C_1–C_4-alkoxy)carbonyl;

R^6 and R^7 independently of one another are C_1–C_4-alkyl, benzyl or together are an ethylene or propylene chain, where each methylene unit may carry one or two C_1–C_4-alkyl radicals;

X and Y are oxygen;

Ar is phenyl, which carries from one to four substituents selected from the group consisting of halogen cyano, nitro, —N=N—Ph, (C_1–C_4-alkoxy)carbonyl, —N(R^9)—COR^{10}, —N(R^9)—SO_2—R^{11}, —SO_2—N(R^9)R^{10}, —S(O)$_m$—R^8, C_1–C_4-alkyl, C_1–C_4-alkoxy, C_1–C_4-haloalkyl and C_1–C_4-haloalkoxy, where the four last-mentioned radicals in turn may carry one or two of the following substituents: C_1–C_4-alkoxy, C_1–C_4-alkylthio and/or cyano;

Ph is phenyl which may carry one to three substituents selected from the group consisting of halogen, cyano, nitro, —S(O)$_n$—R^{23}, (C_1–C_4-alkoxy)carbonyl, —SO_2—N(R^{24})R^{25}, —N(R^{24})—COR^{25}, —N(R^{24})—SO_2R^{26}, C_1–C_4-alkyl, C_1–C_4-alkoxy, C_1–C_4-haloalkyl and C_1–C_4-haloalkoxy, where the four last-mentioned radicals in turn may carry one or two of the following substituents: C_1–C_4-alkoxy, C_1–C_4-alkylthio and/or cyano;

m and n independently of one another are 0, 1 or 2;

R^8 and R^{23} independently of one another are C_1–C_4-alkyl or C_1–C_4-haloalkyl, which both may carry one or two C_1–C_4-alkoxy, C_1–C_4-alkylthio and/or cyano radicals;

R^9, R^{10}, R^{24} and R^{25} independently of one another are hydrogen, C_1–C_4-alkyl, C_1–C_4-haloalkyl or phenyl, which may carry one to three halogen, C_1–C_4-alkyl, and/or C_1–C_4-alkoxy radicals;

R^{11} and R^{26} independently of one another are C_1–C_4-alkyl or C_1–C_4-haloalkyl, both may carry one or two cyano, phenyl and/ or benzyl radicals;

or an agriculturally utilizable salt of I or an ester of I with a C_1–C_{10}-carboxylic, sulfonic or phosphonic acid or inorganic acid.

7. A method of controlling undesired plant growth, which comprises allowing a herbicidally active amount of a 2-aroylcyclohexanedione of the formula I or an agriculturally utilizable salt or an ester of I, as defined in claim **1**, to act on plants, their habitat or on seed.

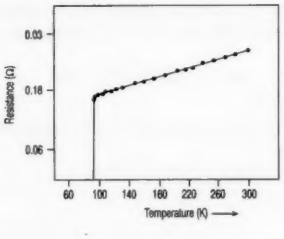
PREPARATION OF SUPERCONDUCTING FILMS AND A PROCESS FOR PREPARING THE FILMS

Jacob Koshy; Jijimon Kumpukkattu Thomas; Jose Kurian; Yogendra Prasad Yadava, and Alathoor Damodaran Damodaran, all of Trivandrum, India, assignors to Council of Scientific & Industrial Research, New Delhi, India

Division of application No. 08/924,662, Sep. 5, 1997, Pat. No. 5,856,276, which is a continuation of application No. 08/506,885, Aug. 14, 1995, abandoned, which is a continuation of application No. 08/221,154, Mar. 31, 1994, abandoned. This application Aug. 3, 1998, Appl. No. 127,828.

Int. Cl.[7] **A01L** *39/24;* **B05D** *5/12*

U.S. Cl. 505—471 **17 Claims**



1. A process for the preparation of a ceramic substrate of the formula $REBa_2MO_6$ where RE represents rare earth metals and M represents metals Nb, Sb, Sn, Hf, and Zr, which process comprises:

(i) reacting salts of rare earth metals, barium, and a metal selected from the group consisting of Nb, Sn, Sb, Hf, and Zr in an organic medium to form a mixture,

(ii) forming pellets of the resultant mixture,

(iii) calcining the pellets to form a homogenous mixture;

(iv) grinding the calcined material;

(vi) sintering the resultant product; and

(vii) allowing the resultant product to cool to room temperature to obtain the ceramic substrate.

6,040,276

PROCESS AND WATER-BASE FLUID UTILIZING HYDROPHOBICALLY MODIFIED CELLULOSE DERIVATIVES AS FILTRATE REDUCERS

Annie Audibert, Le Vesinet; Jean-Francois Argillier, Suresnes, both of France; Louise Bailey, Comberton Cambridge, and Paul I. Reid, Cambridgeshire, both of United Kingdom, assignors to Institut Francais Du Petrole, France

Division of application No. 08/673,478, Jul. 1, 1996, Pat. No. 5,669,456. This application Mar. 5, 1997, Appl. No. 812,334.

Claims priority, application France, Mar. 3, 1994, 94 02572

This patent is subject to a terminal disclaimer.

U.S. Cl. 507—214 **18 Claims**

1. In a water-base drilling, well completion or well workover fluid, the improvement wherein the fluid contains a predetermined amount of at least one water soluble cellulose derivative hydrophobically modified by a hydrophobic alkyl radical having between 8 to 18 carbon atoms, and between 0.5 and 10 g/l of HM HEC, between 2 and 4 g/l of viscosifying polymer, between 10 and 100 g/l of KCl or NaCl and between 0 and 30 g/l of reactive clay.

6,040,277

GREASE COMPOSITIONS EMPLOYING FLUORINATED POLYMER OILS AND HEXAGONAL LATTICE BORON NITRIDE

Gerardo Caporiccio, Milan, Italy, assignor to Dow Corning Corporation, Midland, Mich.

Filed Mar. 8, 1994, Appl. No. 207,512

Claims priority, application Italy, Sep. 13, 1993, MI93A1965

Int. Cl.[7] C10M *125/26*

U.S. Cl. 508—155 **11 Claims**

1. A grease composition comprising:

(A) between 5 and 45 weight percent of a thickening agent comprising boron nitride powder having a bimodal particle size distribution in which between 25 and 75 weight percent of the boron nitride has an average particle size in the range of from 2 to 50 micrometers and between 75 and 25 weight percent of the boron nitride has an average particle size in the range of from 0.01 to 1 micrometer; and

(b) between 55 and 95 weight percent of a liquid fluorinated polymer oil.

6,040,278

WATER-FREE RELEASE/LUBRICATION AGENT FOR TREATING THE WALLS OF A DIE FOR ORIGINAL SHAPING OR RESHAPING

Douwe Marten Kok, Scheemda, and Harold Gankema, Groningen, both of Netherlands, assignors to Acheson Industries, Inc., Port Huron, Mich.

Filed Sep. 23, 1998, Appl. No. 159,199

Claims priority, application Germany, Mar. 9, 1998, 198 10 031

Int. Cl.[7] C10M *111/04*

U.S. Cl. 508—208 **13 Claims**

1. Water-free composition for treating the walls of a die for original shaping or reshaping, comprising in weight percent, about 7% to 30% of at least one wax material selected from the group consisting of polyethylene, polybutene, polypropylene, and ethylene-propylene copolymer, and at least 70% to about 93% of a silicone oil selected from a least one of the group consisting of silicone oil, vegetable oil, and mineral oil.

6,040,279

LUBRICANT COMPOSITION SUITABLE FOR DIRECT FUEL INJECTED, CRANKCASE-SCAVENGED TWO-STROKE CYCLE ENGINES

Sumanth Addagarla, Richmond, and Glenn E. Callis, Walnut Creek, both of Calif., assignors to Chevron Chemical Company LLC, San Francisco, Calif.

Division of application No. 08/790,558, Nov. 25, 1996, Pat. No. 5,866,520, Provisional application No. 60/010,936, Jan. 31, 1996. This application Jun. 24, 1998, Appl. No. 104,075.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] C10M *129/68*

U.S. Cl. 508—437 **6 Claims**

1. A lubricant composition suitable for direct fuel injected, crankcase-scavenged two-stroke cycle engines comprising:

(a) a major amount of at least one oil of lubricating viscosity;

(b) a minor amount of an additive comprising:

(1) an esterified polyalcohol, and

(2) an aliphatic aromatic amine-phosphate; and

(c) a minor amount of a polyisobutylene having a number average molecular weight of from 400 to 2,500, wherein the amount of polyisobutylene is no more than 10 weight %.

6,040,280

LUBRICANT AND SURFACE CONDITIONER SUITABLE FOR CONVERSION COATED METAL SURFACES

Timm L. Kelly, Birmingham, and Gary L. Rochfort, Shelby Township, both of Mich., assignors to Henkel Corporation, Gulph Mills, Pa.

PCT No. PCT/US96/18554, § 371 Date Jun. 1, 1998, § 102(e) Date Jun. 1, 1998, PCT Pub. No. WO97/20903, PCT Pub. Date Jun. 12, 1997

Provisional application No. 60/007,853, Dec. 1, 1995. This PCT application Nov. 27, 1996, Appl. No. 77,592.

Int. Cl.[7] C10M *173/02*

U.S. Cl. 508—503 **20 Claims**

1. A liquid concentrate suitable for mixing with water to produce a liquid lubricant and surface conditioner forming composition, said concentrate comprising water and:

(A) an amount of a component selected from the group consisting of molecules of oxa acids and their methyl esters corresponding to general formula (I):

$$CH_3(CH_2)_nO(CH_2CH_2O)_xCH_2C(O)OR \quad (I),$$

where each of n and x, which may be the same or different, is a positive integer, x is not less than 8, and R represents H or CH_3; and

(B) an amount of a component selected from the group consisting of:

(B.1) molecules corresponding to general formula (I) when x is not more than 7;

(B.2) molecules conforming to general formula (II):

$$R^1O(CH_2CH_2O)_y(CH_2CHCH_3O)_zH \quad (II),$$

where R^1 is a moiety selected from the group consisting of (i) saturated and unsaturated straight and branched chain aliphatic monovalent hydrocarbon moieties and (ii) saturated and unsaturated straight and branched chain aliphatic monovalent hydrocarbon moiety substituent bearing phenyl moieties in which the aromatic ring in the phenyl moiety is directly bonded to the oxygen atom appearing immediately after the R^1 symbol in formula (II); y is a positive integer, and z is zero, one, or two;

(B.3) molecules conforming to general formula (III):

$$R^2C(O)O(CH_2CH_2O)_pH \quad (III),$$

where R^2 is selected from the group consisting of saturated and unsaturated straight and branched chain aliphatic monovalent hydrocarbon moieties and p is a positive integer;

(B.4) molecules conforming to general formula (IV):

$$HO(CH_2CH_2O)_q(CH_2CHCH_3O)_r(CH_2CH_2O)_{q'}H \quad (IV),$$

where each of q and q', which may be the same or different, represents a positive integer from 2 to 10 and r represents a positive integer from 3 to 60; and

(B.5) molecules conforming to general formula (V):

$$HO(CH_2CHCH_3O)_s(CH_2CH_2O)_t(CH_2CHCH_3O)_{s'}H \quad (V),$$

where each of s and s', which may be the same or different, represents a positive integer from 10 to 63 and t represents a positive integer from 2 to 20,

wherein the amount of component (B) has a ratio to the amount of component (A) that is from about 0.2: 1.0 to about 10:1.0.

USE ALKALI AND/OR TRIETHANOLAMINE SALTS OF THE ALKANOYLAMIDOCARBOXYLIC ACIDS IN METAL WORKING

Heinz Bereuter; Thomas Bereuter, both of Hard; Wolfgang Bereuter, Salzburg, and Ingrid Kohlhaupt, Hard, all of Austria, assignors to Heinz Bereuter, Australia

PCT No. PCT/EP96/05837, § 371 Date Jul. 5, 1998, § 102(e) Date Jul. 5, 1998, PCT Pub. No. WO97/25394, PCT Pub. Date Jul. 17, 1997

PCT Filed Dec. 24, 1996, Appl. No. 101,253

Claims priority, application Austria, Jan. 4, 1996, 10/96

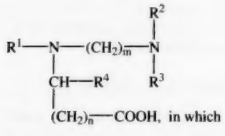
Int. Cl.[7] C10M *133/06*

U.S. Cl. 508—508 **6 Claims**

1. A method to reduce foaming of corrosion-inhibiting metal working compositions, comprising the steps of

selecting at least one of alkali metal salts and triethanolamine salts of alkanoylamidocarboxylic acids of a general formula

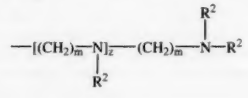
(A)



R^1 denoted an alkanoyl or an alkanesulfonyl radical, each having 6 to 20 carbon atoms,

R^2 denotes the radical

R^3 denotes the radical $—R^2$ or



R^4 denotes a hydrogen atom;

m is 2

n is 0 or 1

z denotes an integer form 0 to 3, and

adding an amount of at least 5 percent by weight to a concentrate of said corrosion-inhibiting metal working compositions in aqueous solution, as antifoams.

STYLING SHAMPOO COMPOSITIONS WHICH DELIVER IMPROVED HAIR CURL RETENTION AND HAIR FEEL

Susan Marie Guskey, Montgomery; Everett Junior Inman, Cincinnati; Teresa Ann Desch, Loveland; Lynne Anne Fritschi, and Stephanie Lynn Killion, both of Cincinnati, all of Ohio, assignors to The Procter & Gamble Company, Cincinnati, Ohio

Continuation-in-part of application No. 09/017,597, Feb. 3, 1998, abandoned. This application Jan. 25, 1999, Appl. No. 237,272.

Int. Cl.[7] C11D *1/65;3/37;9/36*

U.S. Cl. 510—119 **25 Claims**

1. A styling shampoo composition comprising:

(a) from about 5% to about 50% by weight of a detersive surfactant selected from the group consisting of anionic surfactants, zwitterionic and amphoteric surfactants, and combinations thereof;

(b) from about 0.025% to about 3% by weight of an organic cationic deposition polymer which has a cationic charge density of from about 0.2 meq/gm to about 7 meq/gm and an average molecular weight of from about 5,000 to about 10 million;

(c) from about 0.1% to about 10% by weight of a water-insoluble hair styling polymer;

(d) from about 0.1% to about 10% by weight of a volatile, water-insoluble carrier for the hair styling polymer;

(e) from about 0.005% to about 2.0% by weight of a crystalline hydroxyl-containing stabilizing agent; and

(f) from about 22% to about 94.3% by weight water;

wherein the composition is characterized by having a Hair Feel Index (HFI)≧0.65 and a Curl Retention Value (CRV)≧70.

6,040,283

CONCENTRATED ALKALINE GLUTARALDEHYDE-PHENOLIC DISINFECTANT

Norman A. Miner, Fort Worth, Tex., assignor to Microchem Laboratory, Inc., Fort Worth, Tex.

Filed Jul. 8, 1998, Appl. No. 112,162

Int. Cl.[7] C11D *3/48;3/30*

U.S. Cl. 510—161 **9 Claims**

1. A high level disinfectant and sterilant solution useful to disinfect and sterilize heat-sensitive medical, dental and veterinary devices, comprising a two-part system for mixing just prior to use, wherein the two-part system comprises:

(a) as a first part a concentrate of from about 10.0% w/w to 25.0% w/w of glutaraldehyde, and a phenolic chemical at a concentration of 0.5% w/w to 2.2% w/w, to provide a pH of about 3.5 to 4.5; and

(b) as a second and separate contained part an activated buffer form of EDTA, at a sufficient level to give the final disinfectant a buffered pH of between 7.0 and 8.5.

1. A composition useful as a paint remover, comprising: propylene carbonate, hydrogen peroxide, and water, wherein the amount of propylene carbonate is more than 50 percent by weight of the composition.

6,040,285
COMPOSITION FOR STRIPPING PAINTS, VARNISHES OR LACQUERS

Jean-Pierre Lallier, Courbevoie; Patrick Marie, Houilles; Jean-Marie Aubry, Oignies; Marie-José Marti, Templeuve, and Valérie Del Nero, Lille, all of France, assignors to Elf Atochem, S.A., France

Filed Dec. 8, 1997, Appl. No. 986,407
Claims priority, application France, Dec. 6, 1996, 96 15040
Int. Cl.[7] **C09D** *9/00;9/04;* **C11D** *9/04;7/52*
U.S. Cl. 510—206 **14 Claims**

1. A composition for stripping paints, varnishes or lacquers from a substrate, comprising:

(A) a mixture of (A1) at least one aromatic solvent selected from the group consisting of benzaldehyde and anisole, and of (A2) benzoic acid;

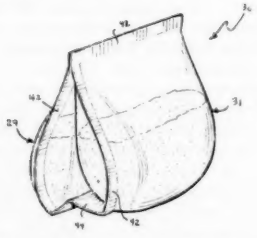
(B) 99 to 30 parts by weight of water;

(A)+(B) equals in total 100 parts by weight.

6,040,286
THROUGH-THE-WASHER-DRYER POUCH-TYPE DETERGENT BAG AND METHOD OF USE

Karen L. Huff, 8215 Orchard Ave. #6, La Mesa, Calif. 91941

Filed Dec. 26, 1995, Appl. No. 910,548
Int. Cl.[7] **C11D** *17/04;* **B08B** *3/00*
U.S. Cl. 510—297 **6 Claims**



1. A through-the-washer-dryer detergent bag comprising;

a pair of containers each having an inner panel and an outer panel; each of said panels being made of air and water permeable material and each of said panels having a left edge, a right edge, a top edge and a bottom edge; said respective top edges and left edges of said respective sets of inner and outer panels being sealed together adjacent their respective edges to form two containers each having an interior chamber therein having a total volume V_T; said chambers each having a length **L2**, a height **H5**, and a width **W2**; **L2** is in the range of 2.5"–6", **H5** is in the range of 2.5"–6", and **W2** is in the range of 0.5"–2.5"; a granular detergent particulate in each of said chambers; the size of said detergent particulate being in the range of 5–250 microns and the total weight of said detergent particulate being in the range of 1–8 ounces; the volume of said particulate being in the range of 0.40 V_T–0.70 V_T, and the remaining air volume in each of said containers having a volume in the range of 0.30 V_T–0.60 V_T; and

the top edges of said respective containers being sealed together and a web of material having a top surface and a bottom surface connects the respective bottom edges of said respective containers together thus forming an air and water passageway between the inner panels of said respective containers and said top surface of said web of material.

6. A method of providing cleaning, fabric-softening and anti-static properties to clothes which comprises:

(a) picking up a detergent bag having the following structure:

a front panel having a left edge, a right edge, a top edge and a bottom edge; said front panel being made of air and water permeable material;

a rear panel having a left edge, a right edge, a top edge and a bottom edge; said rear panel being made of air and water permeable material;

said respective left edges, right edges and top edges of said front and rear panels being sealed together adjacent their respective edges to form a container having an interior chamber therein having a total volume V_T; said chamber having a length **L1**, a height **H1** and a width **W1**; **L1** is in the range of 2.51"–6", **H1** is in the range of 2.5"–6', and **W1** is in the range of 0.5"–2.5"; said front and rear panels are impregnated with a fabric softener/anti-static ingredients; and

a granular detergent particulate in said chamber; the size of said particulate being in the range of 5–250 microns and the total weight of said detergent particulate being in the range of 1–8 ounces; the volume of said detergent particulate being in the range of 0.40 V_T–0.70 V_T, and the remaining air volume of said chamber having a volume in the range of 0.30 V_T–0.60 V_T.

(b) dropping said detergent bag into a clothes washing machine set to a wash cycle and as said bag comes into contact with water in said clothes washing machine, said bag puffs up;

(c) agitating said detergent bag in the water during a wash cycle in said clothes washing machine causing water to permeate the interior chamber of said bag and dissolve said detergent and said dissolved detergent and air is then forced out of said chamber as said chamber collapses and said bag becomes flattened;

(d) continued agitation of said detergent bag in said washing machine causes said bag to curl up into a wad of material; and

(e) transferring clothes that have finished a wash cycle along with said bag in its wadded state into a clothes dryer that heats up the wadded bag sufficiently to release its fabric softener/anti-static ingredients.

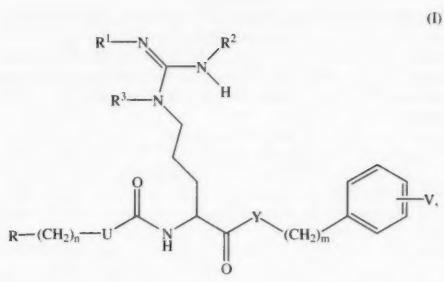
U.S. Cl. 514—2 **7 Claims**

1. A compound of the formula



(I)

wherein

R denotes a phenyl, 1-naphthyl or 2-naphthyl, a 5-membered heteroaromatic ring linked via a carbon atom and containing a nitrogen, oxygen or sulphur atom or a nitrogen atom and an oxygen, a sulphur or further nitrogen atom, wherein a nitrogen atom of an imino group of said 5-membered heteroaromatic ring is optionally substituted by an alkyl, alkoxycarbonylalkyl, carboxyalkyl,. dialkylaminoalkyl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl or· alkoxycarbonyl, or a 6-membered heteroaromatic ring linked via a carbon atom, containing 1, 2 or 3 nitrogen atoms, wherein a 1,4-butadienylene group is optionally attached both to the 5-membered or to the 6-membered heteroaromatic rings via two adjacent carbon atoms to form bicyclic heteroaromatic rings which are optionally bound via a carbon atom of the 1,4-butadienylene group,

wherein the groups mentioned for R hereinbefore, including the mono- and bicyclic heteroaromatic rings in their carbon skeleton, are optionally mono-, di- or at most trisubstituted by fluorine, chlorine,bromine, alkyl, cycloalkyl groups with 3 to 8 carbon atoms, alkoxy, phenyl, phenylalkoxy, trifluoromethyl, alkoxycarbonylalkyl, carboxyalkyl, dialkylaminoalkyl, hydroxy, amino, acetylamino, propionylamino, benzoyl, benzoylamino, benzoylmethylamino, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, alkanoyl, cyano, trifluoromethoxy, trifluoromethylthio, trifluoromet[]hylsulphynyl or trifluoromethylsulphonyl, wherein the substituents are identical or different and the ab)ovementioned benzoyl, benzoylamino and benzoylmethylamino groups are optionally substituted in the phenyl moiety by fluorine, chlorine, bromine, alkyl, trifluoromethyl, amino or acetylamino,

or R is a diphenylmethyl group, wherein

the phenyl groups independently of one another are optionally mono- or disubstituted by fluorine, chlorine, bromine, methyl, methoxy, hydroxycarbonylmethoxy, alkoxycarbonylmethoxy, hydroxy or trifluoromethyl, wherein the substituents in each case are identical or different;

n denotes the numbers 0, 1 or 2,

U denotes a single bond, a oxygen atom or an —NH— group,

R^1 denotes a branched or unbranched aliphatic alkylcarbonyl containing 2 to 5 carbon atoms optionally substituted in the alkyl moiety by an alkoxycarbonyl, phenylalkoxycarbonyl, phenyl or by a 5- or 6-membered heteroaromatic ring linked via a carbon atom or a benzoyl group wherein the phenyl moiety is optionally replaced by a 5- or 6-membered heteroaromatic ring linked via a carbon atom,

wherein the 5-membered heteroaromatic rings mentioned hereinbefore contain a nitrogen, an oxygen or sulphur atom or a nitrogen atom and an additional oxygen, sulphur or further nitrogen atom and are optionally substituted by an alkyl group at a nitrogen atom, the 6-membered heteroaromatic rings contain 1, 2 or 3 nitrogen atoms; wherein phenyl groups and 5- or 6-membered heteroaromatic rings in their carbon skeleton mentioned hereinbefore are optionally mono-, di- or trisubstituted by fluorine, chlorine, bromine, alkyl, cycloalkyl

groups with 3 to 8 carbon atoms, alkoxy, trifluoromethyl, alkoxycarbonylalkyl, carboxyalkyl, hydroxy, amino, acetylamino, propionylamino, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, alkanoyl, cyano, trifluoromethoxy, trifluoromethylthio, trifluoromethylsulphynyl or trifluoromethylsulphonyl, wherein the substituents are identical or different, the aminocarbonyl group in this subparagraph is optionally mono- or disubstituted at the nitrogen atom by alkyl, phenylalkyl, (1-naphthyl)alkyl, (2-naphthyl)alkyl, alkoxycarbonylalkyl, phenylalkoxycarbonylalkyl, phenoxycarbonylalkyl, carboxyalkyl, diphenylalkyl, phenyl, cycloalkyl or cycloalkylalkyl groups with 3 to 8 carbon atoms in the ring in each case, the substituents are identical or different and the abovementioned phenyl groups are optionally independently, mono- or disubstituted by fluorine, chlorine, bromine, methyl, methoxy, hydroxycarbonylmethoxy, alkoxycarbonylmethoxy, hydroxy or trifluoromethyl;

or R^1 is an alkoxycarbonyl or phenylalkoxycarbonyl, wherein the phenyl moiety is optionally mono- or disubstituted by fluorine, chlorine, bromine, methyl, methoxy, hydroxycarbonylmethoxy, alkoxycarbonylmethoxy, hydroxy or trifluoromethyl wherein the substituents in each case are identical or different,

or R^1 is phenyl, a five-membered heteroaromatic ring bound via a carbon atom which contains a nitrogen, oxygen or sulphur atom or a nitrogen atom and an oxygen, sulphur or further nitrogen atom, wherein a nitrogen atom of an imino group of said five-membered heteroaromatic ring is optionally substituted by an alkyl, or a 6-membered heteroaromatic ring linked via a carbon atom, which contains 1, 2 or 3 nitrogen atoms, wherein the phenyl group and 5- and 6-membered heteroaromatic rings in their carbon skeleton are optionally mono-, di- or at most trisubstituted, by fluorine, chlorine, bromine, alkyl, cycloalkyl groups with 3 to 8 carbon atoms, phenylalkyl, alkoxy, trifluoromethyl, alkoxycarbonylalkyl, carboxyalkyl, hydroxy, amino, acetylamino, propionylamino, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, alkanoyl, cyano, trifluoromethoxy, trifluoromethylthio, trifluoromethylsulphinyl or trifluoromethylsulphonyl and wherein the substituents are identical or different;

or, if R^2 denotes a hydrogen atom, R^1 is optionally methyl;

R^2 denotes a hydrogen atom, an alkyl or phenylalkyl optionally mono- or disubstituted in the phenyl moiety by fluorine, chlorine, bromine, alkyl, trifluoromethyl, amino or acetylamino, wherein the substltuents are identical or different;

R^3 denotes a hydrogen atom or an alkyl;

Y denotes an oxygen atom or $—NR^4—$ wherein

R^4 denotes a hydrogen atom, a branched or unbranched alkyl with 1 to 6 carbon atoms or a phenylmethyl group;

m denotes the number 1 or 2 and

V denotes a hydrogen atom, fluorine, chlorine, bromine, iodine, cyano, alkyl, hydroxy, alkoxy, phenylalkoxy-, alkylcarbonyl, dialkylamino, hydroxymethyl, hydroxyethyl, hydroxypropyl, hydroxybutyl, trifluoromethyl, trifluoromethoxy, trifluoromethylthio or the group $—(CH_2)_o—Y^1—W'Y^2$, wherein

o denotes the number 0, 1 or 2,

W denotes the $—SO_2—$ group or the group >C=X wherein

X denotes an oxygen atom or one of the divalent groups =N—$CONH_2$ or =N—CN,

Y1 denotes a single bond, an oxygen atom or $—NR^5—$ wherein

R^5 denotes a hydrogen atom or a straight-chained or branched alkyl with 1 to 6 carbon atoms or

R^5 together with the group Y^2, the enclosed nitrogen atom and the enclosed group >C=X forms a saturated heterocyclic ring with 5 to 7 ring members,

Y^2 denotes a straight-chained or branched alkyl with 1 to 10 carbon atoms optionally substituted by a hydroxy, alkoxycarbonyl, aminocarbonyl, a cycloalkyl group with 4 to 10 carbon atoms, a straight-chained or branched alkoxy with 1 to 5 carbon atoms, an aminoalkyl, alkylaminoalkyl, dialkylaminoalkyl, phenylmethoxy, 2-phenylethoxy, phenyl or phenylalkyl with 1 to 3 carbon atoms in the alkyl moiety optionally mono-, di- or trisubstituted in the phenyl moiety by fluorine, chlorine, bromine, methyl, trifluoromethyl, cyano, amino, hydroxy, methoxy, acetyl, acetylamino, aminocarbonyl, methylaminocarbonyl or dimethylaminocarbonyl, wherein the substituents are identical or different; or

Y2 is $—NR^6R^7$ wherein:

R^6 denotes a hydrogen atom, a straight-chained or branched alkyl with 1 to 6 carbon atoms optionally substituted by a hydroxy, carboxy, alkoxycarbonyl or dialkylamino with the proviso that the hydroxy is not bound in the 1-position of the alkyl, a cycloalkyl group with 4 to 8 carbon atoms, or R^6 is phenyl, phenylmethyl, 2-phenylethyl or 3-phenylpropyl optionally mono-, di- or trisubstituted in the phenyl moiety by fluorine, chlorine, bromine, methyl, trifluoromethyl, hydroxy, methoxy, amino, acetylamino, aminocarbonyl, methylaminocarbonyl, dimethylaminocarbonyl or cyano, wherein the substituents are identical or different, or R^6 is an alkanoyl, benzoyl, phenylalkanoyl, alkoxycarbonyl or aminocarbonyl; and

R^7 has the meanings given for R^6 with the exception of a phenyl, alkanoyl, benzoyl, phenylalkanoyl, alkoxycarbonyl or aminocarbonyl or

R^6 and R^7 together denote an n-alkylene group with 4 to 6 carbon atoms or

R^7 together with the group R^5 of the group $—NR^5—$ mentioned for Y^1 hereinbefore denotes an unbranched alkylene group or oxoalkylene group with 2 to 4 carbon atoms;

wherein all the abovementioned alkyl, cycloalkylalkyl, alkoxy, phenoxycarbonylalkyl, phenylalkoxy, phenylalkoxycarbonyl, phenylalkoxycarbonylalkyl, phenylalkanoyl, phenylalkyl, diphenylalkyl, naphthylalkyl, alkoxycarbonylalkyl, alkoxycarbonylmethoxy, carboxyalkyl, aminoalkyl, monoalkylamino, dialkylamino, alkylaminoalkyl, dialkylaminomethyl, dialkylaminoalkyl, alkylaminocarbonyl, dialkylaminocarbonyl, alkanoyl and alkoxycarbonyl, unless otherwise stated, each contain 1 to 5 carbon atoms in the alkyl and alkoxy moieties, or a tautomer, diastereomer, enantiomer or physiologically acceptable salt thereof.

LIGAND GROWTH FACTOR GP30 THAT BINDS TO THE ERBB-2 RECEPTOR PROTEIN AND INDUCES CELLULAR RESPONSES

Marc E. Lippman, Bethesda, and Ruth Lupu, Gaithersburg, both of Md., assignors to Georgetown University, Washington, D.C.

Division of application No. 08/096,277, Jul. 26, 1993, Pat. No. 5,578,482, which is a continuation-in-part of application No. 07/875,788, Apr. 29, 1992, abandoned, which is a continuation-in-part of application No. 07/640,497, Jan. 14, 1991, abandoned, and a continuation-in-part of application No. 07/917,988, Jul. 24, 1992, abandoned, which is a continuation-in-part of application No. 07/872,114, Apr. 22, 1992, abandoned, which is a continuation of application No. 07/528,438, May 25, 1990, abandoned. This application Aug. 26, 1996, Appl. No. 703,089.

Int. Cl.[7] **C07K** *14/475;17/02;* **A61K** *38/18*

U.S. Cl. 514—12 **7 Claims**

1. A substantially pure protein, wherein said protein:

binds to heparin-Sepharose;

has an apparent molecular weight as measured by SDS PAGE under denaturing conditions of about 30 kDa;

has an apparent molecular weight as measured by SDS PAGE of about 22 kDa after N-glycanase digestion;

has an amino acid sequence of a peptide of approximately 22 kDa molecular weight as measured by SDS PAGE produced by in vitro translation of poly A RNA from MDA-MB-231 cells;

upon hydrolysis with *S. aureus* V8 protease or elastase produces a peptide pattern the same as that produced by the same protease from a peptide of approximately 22 kDa molecular weight as measured by SDS PAGE produced by in vitro translation of poly A RNA from MDA-MB-231 cells.

PCT No. PCT/EP95/02676, § 371 Date Jan. 14, 1997, § 102(e) Date Jan. 14, 1997, PCT Pub. No. WO96/02554, PCT Pub. Date Feb. 1, 1996

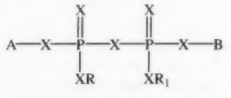
PCT Filed Jul. 10, 1995, Appl. No. 776,138

Claims priority, application European Pat. Off., Jul. 15, 1994, 94202059

Int. Cl.[7] **A61K** *31/70;* **C07H** *19/207*

U.S. Cl. 514—47 **16 Claims**

1. A dinucleoside-5',5'-P^1,P^2-pyrophosphate of the formula (I):



(I)

wherein:

the symbols A and B each independently represent a 5'-C' radical of a non-naturally occurring nucleoside selected from 1-thyminyl-3-azido-2,3-dideoxy-D-riboside and 1-uracilyl-3-azido- 2,3-dideoxy-D-riboside;

the symbols X each independently represent oxygen or sulfur;

the symbols R and R_1 each independently represent hydrogen or an alkyl group of from 1 to 10 carbon atoms, which may optionally contain an unsaturation and/or one or two substituents selected from hydroxy, mercapto, chloro, iodo, fluoro, bromo, amino, (C_1– C_4)alkylamino, di-(C_1–C_4)alkylamino, (C_1–C_4)alkoxy and (C_1–C_4)alkylthio;

and the addition salts of the compounds of formula (I) wherein R and/or R_1 represent hydrogen with bases providing biologically acceptable cations.

2. A dinucleoside of claim **1** wherein the symbol A represents a 5'-C' radical of a non-naturally occurring nucleoside selected from: 1-thyninyl-3-azido-2, 3-dideoxy-D-riboside and 1-uracilyl-3-azido-2,3-dideoxy-D-riboside;

the symbol B represents a 5'-C' radical of a non-naturally occurring nucleoside selected from:

1-thyminyl-3-azido-2,3-dideoxy-D-riboside and 1-uracilyl-3-azido-2,3-dideoxy-D-riboside;

one or two of the symbols X selected from those which are directly linked through a double bond to the phosphorous atom(s) and those that are part of the moiety XR and XR_1 represent(s) oxygen or sulfur and each of the other X represents oxygen;

the symbols R and R_1 each independently represent hydrogen or an alkyl radical of 1 to 4 carbon atoms;

and the addition salts of the compounds wherein R and/or R_1 represent hydrogen with bases providing biologically acceptable cations.

10. A pharmaceutical composition comprising a dinucleoside-5',5'-P^1,P^2-pyrophosphate of the formula (I):

(I)

as defined in claims **1–6** wherein:

the symbols A and B, each independently represents a 5'-C' radical of a non-naturally occurring nucleoside selected from 1-thyminyl-3-azido-2,3dideoxy-D-riboside, 1-(5-fluoro)uracilyl-2-deoxy-D-riboside, 1-uracilyl-3-azido-2,3-dideoxy-D-riboside, 9-guaninyl-2,3-dideoxy-D-riboside, 9-hypoxanthinyl-2,3-dideoxy-D-riboside, 1-cytosinyl- 2,3-dideoxy-D-riboside, and 9-adeninyl-2,3-dideoxy-D-riboside;

the symbols X each independently represent oxygen or sulfur;

the symbols R and R_1 each independently represent hydrogen or an alkyl group of from 1 to 10 carbon atoms;

and the addition salts of the compounds of formula (I) wherein R and/or R_1 represent hydrogen with bases providing biologically acceptable cations in combination with a pharmaceutically acceptable carrier.

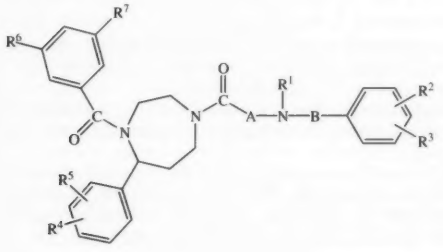
1. A compound corresponding to the formula I:



wherein

R^1 is hydrogen or lower alkyl,

R^2 is hydrogen, lower alkyl, lower alkoxy, halogen or trifluoromethyl, and

R^3 is hydrogen, lower alkyl, lower alkoxy, halogen or trifluoromethyl, or

R^2 and R^3 together are alkylenedioxy with 1 to 2 carbon atoms, bonded to adjacent carbon atoms of the phenyl ring,

R^4 is hydrogen, lower alkyl, lower alkoxy, halogen or trifluoromethyl, and

R^5 is hydrogen, lower alkyl, lower alkoxy, halogen or trifluoromethyl, or

R^4 and R^5 together are alkylenedioxy with 1 to 2 carbon atoms, bonded to adjacent carbon atoms of the phenyl ring,

R^6 is lower alkyl, halogen or trifluoromethyl,

R^7 is lower alkyl, halogen or trifluoromethyl,

A is a $—(CH_2)_n—$ group in which n represents an integer from 1 to 3, or an $—NH—(CH_2)_m—$ group in which m represents an integer from 2 to 3, and

B is an alkylene chain with 1 to 3 carbon atoms, optionally substituted by lower alkyl,

or a pharmaceutically acceptable acid addition salt thereof.

FORMULATIONS AND METHODS OF REDUCING TOXICITY OF ANTINEOPLASTIC AGENTS

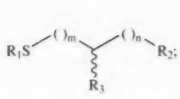
Frederick H. Hausheer, and Thomas J. Dodd, both of Boerne, Tex., assignors to BioNumerik Pharmaceuticals, Inc., San Antonio, Tex.

Division of application No. 08/954,678, Oct. 17, 1997, Pat. No. 5,919,816, which is a continuation-in-part of application No. 08/553,005, Nov. 3, 1995, Pat. No. 5,902,610, which is a continuation-in-part of application No. 08/338,379, Nov. 14, 1994, Pat. No. 5,789,000. This application Jan. 6, 1999, Appl. No. 225,695.

Int. Cl.[7] **A61K** *31/35;31/40;31/55*

U.S. Cl. 514—221 **20 Claims**

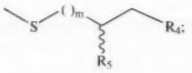
1. A pharmaceutical formulation comprising a solution or suspension of i) an effective amount of an Antibiotic or Antiviral agent; and ii) a compound of the formula:



(I)

wherein:

R_1 is hydrogen, lower alkyl or



R_2 and R_4 are each individually $SO_3^-M^+$, $PO_3^{2-}M_2^{2+}$, or $PO_2S^{2-}M_m^{2+}$;

R_3 and R_5 are each individually hydrogen, hydroxy or sulfhydryl;

m and n are individually 0, 1, 2, 3 or 4, with the proviso that if m or n is 0, then R_3 is hydrogen; and

M is hydrogen or an alkali metal ion; or

a pharmaceutically acceptable salt thereof, and one or more pharmaceutically acceptable carriers, excipients or diluents.

COMPOUNDS USEFUL FOR INHIBITION OF FARNESYL PROTEIN TRANSFERASE

Arthur G. Taveras, Denville, and George F. Njoroge, Union, both of N.J., assignors to Schering Corporation, Kenilworth, N.J.

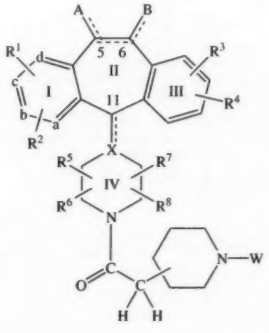
Provisional application No. 60/026,114, Sep. 13, 1996, Provisional application No. 60/050,009, Jun. 17, 1997. This application Sep. 11, 1997, Appl. No. 927,470.

Int. Cl.[7] **A61K** *31/445;31/495;31/535;* **C07D** *401/14;403/14*

U.S. Cl. 514—232.8 **31 Claims**

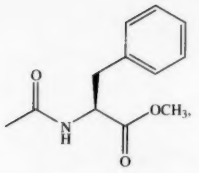
1. A compound of the formula:

(1.0)



or a pharmaceutically acceptable salt or solvate thereof, wherein: one of a, b, c and d represents N or NR^9 wherein R^9 is O^-, —CH3 or $—(CH_2)_nCO_2H$ wherein n is 1 to 3, and the remaining a, b, c and d groups represent CR^1 or CR^2;

each R^1 and each R^2 is independently selected from H, halo, $—CF_3$, $—OR^{10}$, $—COR^{10}$, $—SR^{10}$, $—S(O)_tR^{11}$ (wherein t is 0, 1 or 2), —SCN, $—N(R^{10})_2$, $—NR^{10}R^{11}$, $—NO_2$, $—OC(O)R^{10}$, $—CO_2R^{10}$, $—OCO_2R^{11}$, —CN, $—NHC(O)R^{10}$, $—NHSO_2R^{10}$, —CONHR[10], $—CONHCH_2CH_2OH$, $—NR^{10}COOR^{11}$,



$—SR^{11}C(O)OR^{11}$, $—SR^{11}N(R^{75})_2$ wherein each R^{75} is independently selected from H and $—C(O)OR^{11}$, benzotriazol-1-yloxy, tetrazol-5-ylthio, or substituted tetrazol-5-ylthio, alkynyl, alkenyl or alkyl, said alkyl or alkenyl group optionally being substituted with halo, $—OR^{10}$ or $—CO_2R^{10}$;

R^3 and R^4 are the same or different and each independently represents H, any of the substituents of R^1 and R^2, or R^3 and R^4 taken together represent a saturated or unsaturated C_5–C_7 fused ring to the benzene ring (Ring III);

R^5, R^6, R^7 and R^8 each independently represents H, $—CF_3$, $—COR^{10}$, alkyl or aryl, said alkyl or aryl optionally being substituted with $—OR^{10}$, $—SR^{10}$, $—S(O)_tR^{11}$, $—NR^{10}COOR^{11}$, $—N(R^{10})_2$, $—NO_2$, $—COR^{10}$, $—OCOR^{10}$, $—OCO_2R^{11}$, $—CO_2R^{10}$, OPO_3R^{10} or R^5 is combined with R^6 to represent =O or =S and/or R^7 is combined with R^8 to represent =O or =S;

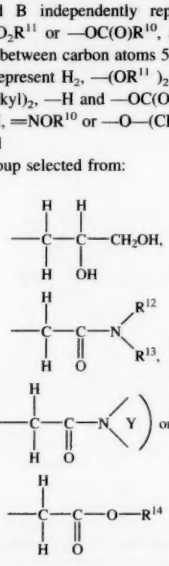
R^{10} represents H, alkyl, aryl, or aralkyl;

R^{11} represents alkyl or aryl;

X represents CH or C, which C contain a double bond (represented by the dotted line) to carbon atom 11;

the dotted line between carbon atoms 5 and 6 represents an optional double bond, such that when a double bond is present, A and B independently represent $—R^{10}$, halo, $—OR^{11}$, $—OCO_2R^{11}$ or $—OC(O)R^{10}$, and when no double bond is present between carbon atoms 5 and 6, A and B each independently represent H_2, $—(OR^{11})_2$; H and halo, dihalo, alkyl and H, $(alkyl)_2$, —H and $—OC(O)R^{10}$, H and $—OR^{10}$, =O, aryl and H, $=NOR^{10}$ or $—O—(CH_2)_p—O—$ wherein p is 2, 3 or 4; and

W represents a group selected from:



wherein:

R^{12} is selected from the group consisting of: (1) H; (2) alkyl; (3) aryl; (4) arylalkyl;

R^{13} is selected from the group consisting of: (1) H; (2) alkyl; (3) alkoxy; (4) heterocycloalkyl; (5) aryl; and (5) aralkyl;

R^{14} is selected from the group consisting of: (1) H; (2) alkyl; (3) aryl; and (4) heteroaryl;

ring

represents a heterocycloalkyl ring wherein Y represents the remainder of the ring, said remainder comprising carbon atoms and optionally a hetero atom selected from the group consisting of: NH, NR^{15}, O and S, and said remainder optionally having an aryl ring fused thereto;

R^{15} represents $—C(O)OR^{16}$; and

R^{16} represents alkyl.

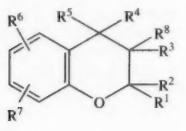
U.S. Cl. 514—253 **17 Claims**

1. A chroman of the formula



wherein

R^1 is A,

R^2 is H or A,

R^1 and R^2 together are also alkylene having 3–6 C atoms,

R^3 is, OH, or OAc,

R^4 is H,

R^3 and R^4 together are also a bond,

R^5 is 1H-6-pyridazinon-1-yl, which is unsubstituted or monosubstituted or disubstituted by A, F, Cl, Br, I, OA, OAc, NO_2, NH_2, AcNH, HOOC and/or AOOC,

R^6 and R^7 are each H, A, HO, AO, CHO, ACO, ACS, HOOC, AOOC, AO—CS, ACOO, A—CS—O, hydroxyalkyl having 1–6 C atoms, mercaptoalkyl having 1–6 C atoms, NO_2, NH_2, NHA, NA_2, CN, F, Cl, Br, I, CF_3, ASO, ASO_2, AO—SO, AO—SO_2, AcNH, AO—CO—NH, H_2NSO, HANSO, A_2NSO, H_2NSO_2, $HANSO_2$, A_2NSO_2, H_2NCO, HANCO, A_2NCO, H_2NCS, HANCS, A_2NCS, ASONH, ASO_2NH, AOSONH, $AOSO_2NH$, ACO-alkyl, nitroalkyl, cyanoalkyl, A—C(=NOH) or A—C(=NNH_2),

R^8 is H

A is alkyl having 1–6 C atoms;

alkyl is of 1–6 C atoms; and

Ac is alkanoyl having 1–8 C atoms or aroyl having 7–11 C atoms, or a physiologically acceptable salt thereof.

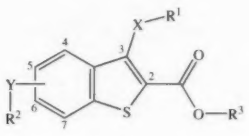
U.S. Cl. 514—253 **10 Claims**

1. A compound of formula I,

I



wherein

X represents O or $S(O)_m$;

R^1 and R^2 independently represent phenyl, naphthyl or heteroaryl containing 1, 2 or 3 heteroatoms independently selected from N, S and O; the ring being optionally fused to a saturated or unsaturated heterocyclic ring containing 1, 2 or 3 heteroatoms independently selected from N, S and O; the ring system as a whole being optionally substituted by one or more groups selected from OH, halogen, CN, NH_2, $(CH_3SO_2)HN$, $(CH_3SO)_2N$, C_{1-6} alkyl (optionally substituted by OH or CH_3CO_2) and C_{1-6} alkoxy;

Y represents a bond, O, $(CH_2)_n$, $O(CH_2)_n$, $(CH_2)_nO$, or $CH(C_{1-6}$ alkyl)O;

R^3 represents H or C_{1-6} alkyl;

m represents 0, 1, or 2; and

n represents 1, or 2;

provided that:

(i) when R^2 is linked to Y via a nitrogen atom, then Y does not represent O, $O(CH_2)_n$ or CH_2O; and

(ii) when R^3 represents H, then neither R^1 nor R^2 is substituted by $(CH_3SO_2)_2N$;

or a pharmaceutically acceptable salt thereof.

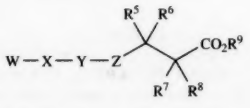
1. A compound of the formula



wherein W is selected from the group consisting of

a 5- or 6-membered monocyclic aromatic or nonaromatic ring system having 1, 2, 3 or 4 heteroatoms selected from the group consisting of N, O, and S wherein the ring nitrogen atoms are unsubstituted or substituted with one R^1 substituent and the ring carbon atoms are unsubstituted or substituted with one or two R^1 substituents, and

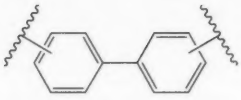
a 9- to 1 4-membered polycyclic ring system, wherein one or more of the rings is aromatic, and wherein the polycyclic ring system has 1, 2, 3 or 4 heteroatoms selected from the group consisting of N, O, and S wherein the ring nitrogen atoms are unsubstituted or substituted with one R^1 substituent and the ring carbon atoms are unsubstituted or substituted with one or two R^1substituents;

X is selected from the group consisting of

$-(CH_2)_v-$, and

$-(CH_2)_vNR^4(CH_2)_v-$; wherein any methylene (CH_2) carbon atom, other than in R^4, is either unsubstituted or substituted with one or two R^3 substitutents;

Y is



wherein the biphenyl ring system is either unsubstituted or substituted with one or more R^1 substituents;

Z is selected from the group consisting of

$-CH_2CH_2-$ and $-CH{=}CH-$, wherein either carbon atom can be substituted by one or two R^3 substituents;

each R^1 is independently selected from the group consisting of hydrogen, halogen, C_{1-10} alkyl, C_{3-8} cycloalkyl, C_{3-8} cycloheteroalkyl, C_{3-8} cycloalkyl C_{1-6} alkyl, C_{3-8} cycloheteroalkyl C_{1-6} alkyl, aryl, aryl C_{1-8} alkyl, amino, amino C_{1-8} alkyl, C_{1-3} acylamino, C_{1-3} acylamino C_{1-8} alkyl, $(C_{1-6}$ alkyl$)_p$amino, $(C_{1-6}$ alkyl$)_p$amino C_{1-8} alkyl, C_{1-4} alkoxy, C_{1-4} alkoxy C_{1-6} alkyl, hydroxycarbonyl, hydroxycarbonyl C_{1-6} alkyl, C_{1-3} alkoxycarbonyl, C_{1-3} alkoxycarbonyl C_{1-6} alkyl, hydroxycarbonyl- C_{1-6} alkyloxy, hydroxy, hydroxy C_{1-6} alkyl, C_{1-6} alkyloxy-C_{1-6} alkyl, nitro, cyano, trifluoromethyl, trifluoromethoxy, trifluoroethoxy, C_{1-8} alkyl-$S(O)_p$, $(C_{1-8}$ alkyl$)_p$aminocarbonyl, C_{1-8} alkyloxycarbonylamino, $(C_{1-8}$ alkyl$)_p$aminocarbonyloxy, (aryl C_{1-8} alkyl$)_p$amino, (aryl)$_p$amino, aryl C_{1-8} alkylsulfonylamino, and C_{1-8} alkylsulfonylamino;

or two R^1 substituents, when on the same carbon atom, are taken together with the carbon atom to which they are attached to form a carbonyl group;

each R^3 is independently selected from the group consisting of hydrogen,
aryl,
C_{1-10} alkyl,
aryl—$(CH_2)_r$—O—$(CH_2)_s$,
aryl—$(CH_2)_r S(O)_p$—$(CH_2)_s$,

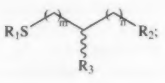
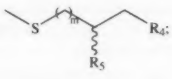
1. A pharmaceutical formulation comprising a solution or suspension of i) an effective amount of a vinca alkaloid; and ii) a compound of the formula:

(I)



wherein:
R_1 is hydrogen, lower alkyl or



R_2 and R_4 are each individually $SO_3^-M^+$, $PO_3^{2-}M_2^{2+}$, or $PO_2S^{2-}M_2^{2+}$;
R_3 and R_5 are each individually hydrogen, hydroxy or sulfhydryl;
m and n are individually 0, 1, 2, 3 or 4, with the proviso that if m or n is 0, then R_3 is hydrogen; and
M is hydrogen or an alkali metal ion; or
a pharmaceutically acceptable salt thereof, and one or more pharmaceutically acceptable carriers, excipients or diluents.

WATER-SOLUBLE ESTERS OF CAMPTOTHECIN COMPOUNDS

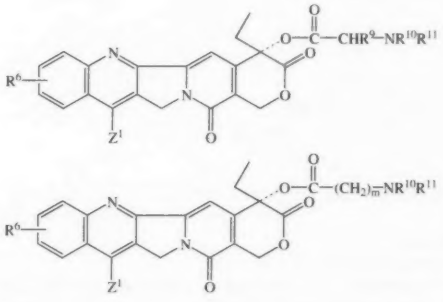
Monroe E. Wall, Chapel Hill, and Mansukh C. Wani, Durham, both of N.C., assignors to Research Triangle Institute, Research Triangle Park, N.C.

Division of application No. 08/818,725, Mar. 14, 1997, Pat. No. 5,916,896, which is a division of application No. 08/277,642, Jul. 20, 1994, Pat. No. 5,646,159. This application Feb. 1, 1999, Appl. No. 241,076.

Int. Cl.^{7} A61K *31/44*

U.S. Cl. 514—283 **5 Claims**

1. A method of treating leukemia or solid tumors susceptible to CPT in a mammal in need thereof, comprising administering to said mammal an effective amount for treating said leukemia or solid tumors susceptible to CPT, a camptothecin ester having the structure:



wherein
R^6 is cyano, formyl, hydroxy, C_{1-8} alkoxy, nitro, amino, halogen, trifluoromethyl, aminomethyl, azido, amido, hydrazino, $OC(O)R^7$ or $OC(O)NR^7R^8$ where R^7 and R^8 are, independently hydrogen or C_{1-8} alkyl; and
Z^1 is H, C_{1-8} alkyl, $CH_2NR^1R^2$ where (a) R^1 and R^2 are, independently, hydrogen, C_{1-6} alkyl, C_{3-7} cycloalkyl, C_{3-7} cycloalkyl-C_{1-6} alkyl, C_{2-6} alkenyl, hydroxy-C_{1-6} alkyl, C_{1-6} alkoxy-C_{1-6} alkyl, (b) R^1 is hydrogen, C_{1-6} alkyl, C_{3-7} cycloalkyl, C_{3-7} cycloalkyl-C_{1-6} alkyl C_{2-6} alkenyl, hydroxy-C_{1-6} alkyl or C_{1-6} alkoxy-C_{1-6} alkyl and R^2 is —COR^3 where R^3 is hydrogen, C_{1-6} alkyl, perhalo-C_{1-6} alkyl, C_{3-7} cycloalkyl, C_{3-7} cycloalkyl-C_{1-6} alkyl, C_{2-6} alkenyl, hydroxy-C_{1-6} alkyl, C_{1-6} alkoxy, C_{1-6} alkoxy-C_{1-6} alkyl, or (c) R^1 and R^2 taken together with the nitrogen atom to which they are attached form a saturated 3–7 membered heterocyclic ring which may contain a O, S or NR^4 group, where R^4 is hydrogen, C_{1-6} alkyl, perhalo-C_{1-6} alkyl, aryl, aryl substituted with one or more groups selected from the group consisting of C_{1-6} alkyl, halogen, nitro, amino, C_{1-6} alkylamino, perhalo-C_{1-6} alkyl, hydroxy-C_{1-6} alkyl, C_{1-6} alkoxy, C_{1-6} alkoxy-C_{1-6} alkyl and —COR^5 where R^5 is hydrogen, C_{1-6}alkyl, perhalo-C_{1-6} alkyl, C_{1-6} alkoxy, aryl, and aryl substituted with one or more C_{1-6} alkyl, perhalo-C_{1-6} alkyl, hydroxy-C_{1-6} alkyl, or C_{1-6} alkoxy-C_{1-6} alkyl groups;
R^9 is the side chain of one or the naturally occurring α-amino acid selected from the group consisting of glycine, alanine, valine, leucine, isoleucine, serine, threonine, proline, phenylalanine, tyrosine, tryptophan, lysine, arginine, histidine, aspartate, glutamate, asparagine, glutamine, cysteine and methionine;
R^{10} and R^{11} are, independently, hydrogen or C_{1-8} alkyl;
m is an integer of 1 to 6; and
n is an integer of 1 or 2; and pharmaceutically acceptable salts thereof.

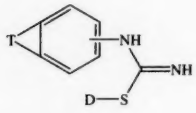
1. A method of treatment or prophylaxis of diseases or conditions in which inhibition of NOS is beneficial which comprises administering to a person in need thereof a therapeutically effective amount of a compound of formula (1)

I



wherein

D represents alkyl C1 to 6

T represents a C_{3-5} saturated or unsaturated alkylene chain substituted by $(CH_2)_m$—NXY, —O—$(CH_2)_2$—NH— substituted by —$(CH_2)_m$—NXY; or —U—$(CH_2)_a$—N(X)—$(CH_2)_b$—;

U represents NH, O or CH_2;

a and b, which may be the same or different, represent an integer 0 to 3, provided that a+b is in the range 1 to 3;

X and Y, which may be the same or different, represent hydrogen, alkyl C1 to 6, or a group —$(CH_2)_nQ$,

or NXY together represents piperidinyl, pyrrolidinyl, morpholinyl, or tetrahydroisoquinolinyl;

Q represents phenyl optionally substituted by alkyl C1 to 6, alkoxy C1 to 6, trifluoromethyl, halogen, nitro or cyano;

m and n independently represents an integer 0 to 5;

or a pharmaceutically acceptable salt thereof.

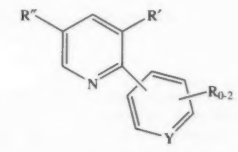
U.S. Cl. 514—334 **21 Claims**

1. A process for synthesizing a compound of the formula I:



I

wherein:

0-2 R groups are present;

each R, R' and R" independently represents C_{1-10}alkyl, C_{6-10}aryl, aralkyl, halo, —$S(O)_mH$, —$S(O)_mC_{1-6}$alkyl, —$S(O)_m$aryl, nitro, amino, C_{1-6}alkylamino, di-C_{1-6}alkylamino, —$S(O)_mNH_2$, —$S(O)_mNHC_{1-6}$alkyl, —$S(O)_mNHC(O)CF_3$ and cyano,

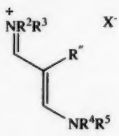
the alkyl and aryl groups, and the alkyl and aryl portions of aralkyl, —$S(O)_mC_{1-6}$alkyl, —$S(O)_m$aryl, C_{1-6}alkylamino, di-C_{1-6}alkylamino and —$S(O)_mNHC_{1-6}$alkyl being optionally substituted with 1–3 groups selected from —$S(O)_mC_{1-6}$alkyl, —CN, C_{1-6}alkoxy, amino, C_{1-6}alkylamino, di-C_{1-6}alkylamino, —$S(O)_mNH_2$, —$S(O)_mNHC_{1-6}$alkyl, —$S(O)_mNHC(O)CF_3$ and aryloxy;

Y is N;

and m is 0, 1 or 2,

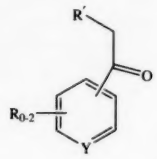
comprising reacting a compound of formula II:

II



wherein R^2 through R^5 each independently represent C_{1-6} alkyl, aryl or aralkyl, and X- represents a suitable counterion, with a compound of the formula III:

III



wherein R, R' and Y are as previously defined, in the presence of a base to produce a compound of formula I.

2-SUBSTITUTED IMIDAZOLES USEFUL IN THE TREATMENT OF INFLAMMATORY DISEASES

Scott A. Beers; Elizabeth A. Malloy, both of Flemington; Michael P. Wachter, Bloomsbury, and Wei Wu, Somerville, all of N.J., assignors to Ortho-McNeil Pharmaceutical, Inc., Raritan, N.J.

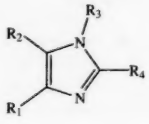
Provisional application No. 60/051,301, Jun. 30, 1997. This application Jun. 29, 1998, Appl. No. 106,698.

Int. Cl.[7] A61K *31/44;* **C07D** *401/04*

U.S. Cl. 514—341 **10 Claims**

1. A compound of Formula I

I



wherein:

one of R1 and R2 is phenyl optionally substituted by one or more of the members of the group consisting of C1–5 alkyl, halogen, nitro, trifluoromethyl and nitrile; the other is pyridyl optionally substituted by one or more of the members of the group consiting of C1–5alkyl and halogen;

R_3 is hydrogen, SEM, C_{1-5}alkoxycarbonyl, aryloxycarbonyl, aryiC_{1-5}alkyloxycarbonyl, arylC_{1-5}alkyl, phthalimidoC_{1-5} alkyl, aminoC_{1-5}alkyl, diaminoC_{1-5}alkyl, succinmidoC_{1-5} alkyl, C_{1-5}alkylcarbonyl, arylcarbonyl, C_{1-5}alylcarbonylC_{1-5} alkyl, aryloxycarbonylC_{1-5}alkyl, or

substituted arylC_{1-5}alkyl

wherein the aryl substituents are independently selected from one or more members of the group consisting of C_{1-5}alkyl, C_{1-5}alkoxy, halogen, amino, C_{1-5}alkylamino, and diC_{1-5}alkylamino;

R_4 is $(A)_n$-$(CH_2)_q$-X wherein:

A is sulfur;

n is 1;

q is 0–9;

X is selected from the group consisting of amino, C_{1-5}alkylamino, phthalimido, amido, phenylcarbonyl, C_{1-5}alkylaminocarbonyl, phenylaminocarbonyl, arylC_{1-5}alkylaminocarbonyl, C_{1-5}alkylsulfonyl, phenylsulfonyl,

substituted amido

wherein the carbonyl substituent is selected from the group consisting of C_{1-5}alkyl, phenyl, arylC_{1-5}alkyl, thienyl, furanyl, and naphthyl,

substituted phenylcarbonyl

wherein the phenyl substituents are independently selected from one or members of the group consisting of C_{1-5}alkyl, halogen and C_{1-5}alkoxy,

substituted C_{1-5}alkylsulfonyl

wherein the alkyl substituent is selected from the group consisting of hydroxy and phthalimido,

substituted phenylsulfonyl

wherein the phenyl substituents are independently selected from one or members of the group consisting of bromine, fluorine, chlorine, C_{1-5}alkoxy and trifluoromethyl,

with the proviso:

if A is sulfur and X is other than, C_{1-5}alkylaminocarbonyl, phenylarninocarbonyl, arylC_{1-5}alkylaminocarbonyl, C_{1-5}alkylsulfonyl or phenylsulfonyl, then q must be equal to or greater than 1;

and pharmaceutically acceptable salts thereof.

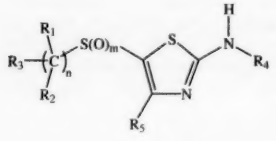
1. A compound of the formula

(I)



and pharmaceutically acceptable salts thereof wherein:

R_1 and R_2 are independently hydrogen, fluorine or alkyl;

R_3 is aryl or heteroaryl;

R_4 is alkyl, cycloalkyl, aryl, cycloalkylalkyl, arylalkyl, heteroaryl, heteroarylalkyl, heterocycloalkyl, heterocycloalkylalkyl; or

CO-alkyl, CO-cycloalkyl, CO-aryl, CO-alkyl-cycloalkyl, CO-alkyl-aryl, CO-heteroaryl, CO-alkyl-heteroaryl, CO-heterocycloalkyl, CO-alkyl-heterocycloalkyl; or

CONH-alkyl, CONH-cycloalkyl, CONH-aryl, CONH-alkyl-cycloalkyl, CONH-alkyl-aryl, CONH-heteroaryl, CONH-alkyl-heteroaryl, CONH-heterocycloalkyl, CONH-alkyl-heterocycloalkyl; or

COO-alkyl, COO-cycloalkyl, COO-aryl, COO-alkyl-cycloalkyl, COO-alkyl-aryl, COO-heteroaryl, COO-alkyl-heteroaryl, COO heterocycloalkyl, COO-alkyl-heterocycloalkyl; or

SO_2-cycloalkyl, SO_2-aryl, SO_2-alkyl-cycloalkyl, SO_2-alkyl-aryl, SO_2-heteroaryl, SO_2-alkyl-heteroaryl, SO_2-heterocycloalkyl, SO_2-alkyl-heterocycloalkyl; or C(NCN)NH-alkyl, C(NCN)NH-cycloalkyl, C(NCN)NH-aryl, C(NCNNH)-alkyl-cycloalkyl, C(NCN)NH-alkyl-aryl,

C(NCN)NH-heteroaryl, C(NCN)NH-alkyl-heteroaryl, C(NCN)NH-heterocycloalkyl, C(NCN)NH-alkyl-heterocylcoalkyl; or

$C(NNO_2)$NH-alkyl, $C(NNO_2)$NH-cycloalkyl, $C(NNO_2)$NH-aryl, $C(NNO_2)$NH-alkyl-cycloalkyl, $C(NNO_2)$NH-alkyl-aryl, $C(NNO_2)$NH-heteroaryl, $C(NNO_2)$NH-alkyl-heteroaryl, $C(NNO_2)$NH-heterocyloalkyl, $C(NNO_2)$NH-alkyl-heterocycloalkyl; or

C(NH)NH-alkyl, C(NH)NH-cycloalkyl, C(NH)NH-aryl, C(NH)NH-alkyl-cycloalkyl, C(NH)NH-alkyl-aryl, C(NH)NH-heteroaryl, C(NH)NH-alkyl-heteroaryl, C(NH)NH-heterocycloalkyl, C(NH)NH-alkyl-heterocycloalkyl; or

C(NH)NHCO-alkyl, C(NH)NHCO-cycloalkyl, C(NH)NHCO-aryl, C(NH)NHCO-alkyl-cycloalkyl, C(NH)NHCO-alkyl-aryl, C(NH)NHCO-heteroaryl, C(NH)NHCO-alkyl-heteroaryl, C(NH)NHCO-heterocylcloalkyl, C(NH)NHCO-alkyl-heterocycloalkyl; or

$C(NOR_6)$NH-alkyl, $C(NOR_6)$NH-cycloalkyl, $C(NOR_6)$NH-aryl, $C(NOR_6)$NH-alkyl-cycloalkyl, $C(NOR_6)$NH-alkyl-aryl, $C(NOR_6)$NH-heteroaryl, $C(NOR_6)$NH-alkyl-heteroaryl, $C(NOR_6)$NH-heterocylcoalkyl, $C(NOR_6)$NH-alkyl-heterocycloalkyl;

R_5 is hydrogen or alkyl;

R_6 is hydrogen, alkyl, cycloalkyl, aryl, cycloalkylakyl, arylalkyl, heteroaryl, heteroarylalkyl, heterocycloalkyl or heterocycloalkylalkyl;

m is an integer of 0 to 2; and

n is an integer of 1 to 3.

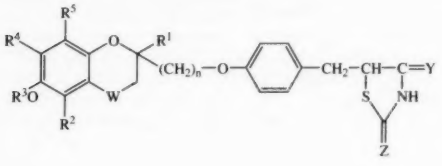
Int. Cl.[7] **A61K** *31/425*

U.S. Cl. 514—370 **7 Claims**

1. A method for the treatment of an animal, including man, suffering from inappropriate endothelial cell activation, which method comprises administration of a therapeutically effective amount of a compound of formula (I):



in which:

R^1 and R^2 are the same or different and each represents a hydrogen atom or a C_1–C_5 alkyl group;

R^3 represents a hydrogen atom, a C_1–C_6 aliphatic acyl group, a (C_5–C_7 cycloalkane) carbonyl group, an aromatic acyl group which is a benzoyl or naphthoyl group optionally with one or more nitro, amino, alkylamino, dialkylamino, alkoxy, halo, alkyl or hydroxy substituents, a heterocyclic acyl group having one or more oxygen, sulphur or nitrogen hetero atoms and with 4 to 7 ring atoms, an optionally halo-substituted phenylacetyl or phenylpropionyl group, a cinnamoyl group, a (C_1–C_6 alkoxy) carbonyl group or a benzoyloxycarbonyl group;

R^4 and R^5 are the same or different and each represents a hydrogen atom, a C_1–C_5 alkyl group or a C_1–C_5 alkoxy group, or R^4 and R^5 together represent a C_1–C_4 alkylenedioxy group;

n is 1, 2 or 3;

W represents the —CH_2–, >CO or >CH—OR^6 group (in which R^6 represents any one of the atoms or groups defined for R^3 and may be the same as or different from R^3); and

Y and Z are the same or different and each represents an oxygen atom or an imino (=NH) group;

or a pharmaceutically acceptable salt thereof.

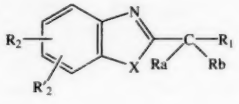
U.S. Cl. 514—394 **16 Claims**

1. A compound selected from those of formula (I):

(I)



wherein:

R_1 represents hydroxy, linear or branched (C_1–C_6)alkoxy (optionally substituted by aryl), trihalomethyl, cyano, sulpho, amino substituted by one or more, identical or different, linear or branched (C_1–C_6)alkyl, optionally substituted aryl, acyl, arylsulphonyl and/or alkylsulphonyl), mercapto, linear or branched (C_1–C_6)alkylthio, linear or branched (C_1–C_6)trialkylammonium, aryloxy, arylthio wherein aryl is an aromatic group containing no hetero atoms, arylaminocarbonyl, arylcarbonylamino, arylsulphonylamino, arylaminosulphonyl, arylureido, arylthioureido, arylsulphonyl, arylsulphonyloxy, (C_3–C_7)-cycloalkyloxy, (C_3–C_7)cycloalkylthio, (C_6–C_8)bicycloalkyloxy (optionally substituted by aryl), or

(C_6–C_8)bicycloalkylthio (optionally substituted by aryl), it being understood that each aryl is optionally substituted,

Ra and Rb, which may be identical or different, represent hydrogen, hydroxy, or linear or branched (C_1–C_6)alkyl (optionally substituted by aryl),

X represents NR (wherein R represents hydrogen or linear or branched (C_1–C_6)alkyl),

R_2 represents imidazolyl, benzimidazol-1-yl, naphthyl, pyridyl, thiazolyl, oxazolyl, benzothiazolyl, benzoxazolyl, pyrrolyl, furyl, thienyl, imidazopyridinyl, triazolyl, or tetrazolyl, each of those groups being optionally substituted by one or more, identical or different, halogen, linear or branched (C_1–C_6)alkyl, linear or branched (C_1–C_6)trihaloalkyl, linear or branched (C_1–C_6)alkoxy, nitro, cyano, carboxy, linear or branched (C_1–C_6)alkoxycarbonyl, hydroxy, amino (optionally substituted by one or more, identical or different, linear or branched (C_1–C_6)alkyl, acyl, alkylsulphonyl, and/or arylsulphonyl), optionally-substituted phenyl, and/or optionally-substituted bicycloalkyl,

R'_2 represents hydrogen or optionally-substituted aryl,

the term "aryl group" being understood to mean a mono- or bi-cyclic aromatic group optionally containing 1 to 4 hetero atoms selected from nitrogen, sulphur, and oxygen, and the term "optionally substituted" as applied to the aryl, phenyl and bicycloalkyl groups meaning a substitution of those groups by one or more, identical or different, halogen atoms, linear or branched (C_1–C_6)alkyl, linear or branched (C_1–C_6)trihaloalkyl, linear or branched (C_1–C_6)alkoxy (optionally substituted by a carboxy or alkoxycarbonyl group), hydroxy, nitro, cyano, amino (optionally substituted by one or more, identical or different, linear or branched (C_1–C_6)alkyl, acyl, alkylsulphonyl and/or arylsulphonyl groups), carboxy, linear or branched (C_1–C_6)alkoxycarbonyl, hydroxyaminocarbonyl, alkylsulphonylamino, arylsulfonylamino, alkylsulphonylaminocarbonyl, arylsulphonylaminocarbonyl, optionally substituted phenyl, and/or optionally substituted bicycloalkyl groups,

their isomers and addition salts thereof with a pharmaceutically-acceptable acid or base.

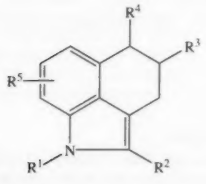
1. A compound represented by the following formula (I) or a salt thereof:

(I)



where R^1 represents a hydrogen atom or a straight-chained, branched or cyclic alkyl group having 1–4 carbon atoms which may be substituted by any group selected from the group consisting of one carboxyl group, one alkoxycarbonyl group having 1–4 carbon atoms and one hydroxyl group; R represents a phenyl group which may be mono- or disubstituted by any group selected from the group consisting of a halogen atom, an alkyl group having 1–4 carbon atoms which may be substituted by one hydroxyl group, an alkoxyl group having 1–4 carbon atoms which may be substituted by one hydroxyl group, an optionally protected hydroxyl group, a nitro group, an optionally protected amino group, an acetylamino group, a cyano group, an optionally protected carboxyl group, an alkoxycarbonyl group having 1–4 carbon atoms, a carbamoyl group and a trifluoromethyl group; either one of R^3 and R^4 represents a hydrogen atom and the other represents a group represented by the following formula (II):

—NR^6R^7 (II)

(where R^6 and R^7 each represent a hydrogen atom, a phenyl group, a benzyl group, an alkyl group having 1–4 carbon atoms which may be monosubstituted by any group selected from the group consisting of one hydroxyl group, one amino group, one carboxyl group and one alkoxycarbonyl group having 1–4 carbon atoms, a formyl group, an alkanoyl group having 1–4 carbon atoms which may be monosubstituted by an amino group, or a benzoyl group which may be monosubstituted by an amino group; R^6 and R^7 may form a pyrrolidine, piperidine, morpholine, or piperazine ring together with the nitrogen atom to which they are bound, provided that the nitrogen atom at the 4-position of the piperazine ring where a hydrogen atom is substituted may be substituted by any group selected from the group consisting of an oxalo group, and alkoxyoxalyl group having 1–4 carbon atoms, an alkanoyl group having 1–4 carbon atoms which may be substituted by one hydroxyl group and an alkyl group having 1–4 carbon atoms); R^5 represents a hydrogen atom, a halogen atom, an alkyl group having 1–4 carbon atoms, an optionally protected hydroxyl group, a cyano group, a nitro group or an alkoxyl group having 1–4 carbon atoms which may be monosubstituted by a group selected from the group consisting of one carboxyl group, one alkoxycarbonyl group having 1–4 carbon atoms and one hydroxyl group; when R^4 is a hydrogen atom, R^6 and R^7 is not a formyl group, an alkanoyl group having 1–4 carbon atoms which may be monosubstituted by an amino group, or a benzoyl group which may be monosubstituted by an amino group; and a pharmaceutically acceptable carrier thereof.

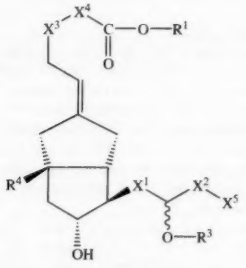
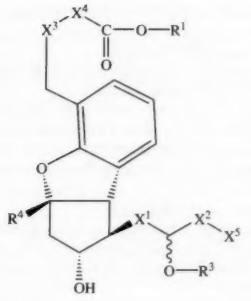
1. A method for treating bacterially induced meningitis, comprising administering an effective amount of a compound of formula I or Ia

formula I



and

formula Ia



wherein

X^1 is a $—CH_2—CH_2—$, trans —CH═CH— or —C≡C— group,

X^2 is a linear or branched saturated hydrocarbon chain having from 1 to 6 carbon atoms,

X^3 is an —O— or $—CH_2—$ group,

X^4 is a $—CH_2—$ or $(—CH_2)_3—$ group,

X^5 is a hydrogen atom or a $—C≡C—R^2$ group,

R^1 is a hydrogen atom, an alkyl group having from 1 to 6 carbon atoms, a cycloalkyl group having 5 or 6 carbon atoms or a phenyl group,

R^2 is a linear or branched, saturated or unsaturated hydrocarbon chain having from 1 to 6 carbon atoms,

R^3 is a hydrogen atom, an acyl radical having from 1 to 4 carbon atoms or a benzyl radical, and

R^4 is a hydrogen atom or a methyl group,

wherein the $O—R^3—$ group is in the α- or β-configuration,

or a salt thereof with a physiologically tolerable base when R^1 represents a hydrogen atom.

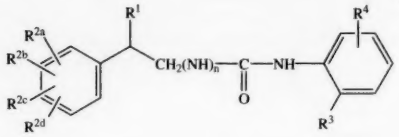
1. A compound of formula (I):

(I)



wherein:

R^1 represents an alkyl group having from 1 to 12 carbon atoms;

R^{2a}, R^{2b}, R^{2c} and R^{2d} are the same or different and each represents:

a hydrogen atom;

an alkyl group having from 1 to 12 carbon atoms;

an alkyl group which has from 1 to 4 carbon atoms and which is substituted by from 1 to 5 fluorine atoms;

an alkyl group which has from 1 to 12 carbon atoms and which is substituted by an unprotected or protected hydroxy group;

a group of formula —(C=O)—B^1

wherein B^1 represents a hydrogen atom, an alkyl group having from 1 to 12 carbon atoms, a group of formula —O—D,

wherein D represents a hydrogen atom or a carboxy-protecting group,

a group of formula —NR^aR^b,

wherein R^a and R^b are the same or different and each represents a hydrogen atom, an alkyl group having from 1 to 12 carbon atoms,

a nitro group;

a group of formula —NR^cR^d,

wherein R^c represents a hydrogen atom or an alkyl group having from 1 to 4 carbon atoms and R^d represents an alkyl group having from 1 to 4 carbon atoms;

a hydroxy group or a protected hydroxy group;

an alkoxy group having from 1 to 10 carbon atoms;

a group of formula —O—B^2—(C=O)—B^1,

wherein B^1 is as defined above and B^2 represents an alkylene group having from 1 to 5 carbon atoms;

a group of formula —O—B^2—B^3,

wherein B^2 is as defined above and B^3 represents an alkoxy group having from 1 to 6 carbon atoms, an alkylthio group having from 1 to 6 carbon atoms, an alkylsulfinyl group having from 1 to 6 carbon atoms, an alkylsulfonyl group having from 1 to 6 carbon atoms or an alkylsulfonylarmino group having from 1 to 6 carbon atoms;

a cyano group;

a group of formula —CH=N—OB^4,

wherein B^4 represents a hydrogen atom or an alkyl group having from 1 to 4 carbon atoms;

an alkylthio group having from 1 to 6 carbon atoms;

an alkylsulfinyl group having from 1 to 6 carbon atoms;

an alkylsulfonyl group having from 1 to 6 carbon atoms;

an alkylsulfonylamino group having from 1 to 6 carbon atoms;

a group of formula —$SO_2NR^eR^f$,

wherein R^e represents a hydrogen atom or an alkyl group which has from 1 to 6 carbon atoms and R^f represents an alkyl group which has from 1 to 6 carbon atoms;

or a halogen atom; or

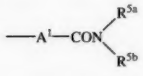
R^{2a} and R^{2b} are adjacent to each other and together represent a group of formula

wherein m is an integer of from 1 to 3;

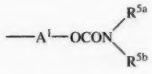
R^3 represents an alkyl group having from 1 to 6 carbon atoms;

R^4 represents a group of formula (II), (III), (IV), (V), (VI), (VII), (VIII) or (IX):

(II)



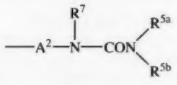
(III)



(IV)

(V)

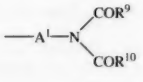
(VI)



(VII)

(VIII)

(IX)



wherein:

A^1 represents a single bond, an alkylene group having from 1 to 6 carbon atoms or an alkenylene group having from 2 to 6 carbon atoms;

A^2 represents an alkyene group having from 1 to 6 carbon atoms or an alkenylene group having from 2 to 6 carbon atoms;

A^3 represents a single bond, an alkylene group having from 1 to 6 carbon atoms or an alkenylene group having from 2 to 6 carbon atoms;

R^{5a} and R^{5b} are the same or different and each represents a hydrogen atom, an alkyl group having from 1 to 4 carbon atoms or a group of formula $—A^4R^{5c}$,

wherein A^4 represents a single bond, an alkylene group having from 1 to 6 carbon atoms or an alkenylene group having from 2 to 6 carbon atoms;

R^{5c} represents an alkoxy group having from 1 to 4 carbon atoms;

R^6 represents an alkyl group having from 1 to 4 carbon atoms or a phenyl group which is substituted or unsubstituted;

R^7 represents a hydrogen atom or an alkyl group having from 1 to 4 carbon atoms;

R^8 represents an alkyl group having from 1 to 12 carbon atoms, an alkyl group having from 1 to 12 carbon atoms substituted by an unprotected or protected carboxy group, an alkyl group having from 1 to 12 carbon atoms substituted by from 1 to 5 fluorine atoms, an alkoxy group having from 1 to 10 carbon atoms, an aralkoxy group in which an alkoxy group having from 1 to 4 carbon atoms is substituted by a carbocyclic aryl group having from 6 to 10 ring carbon atoms, a phenyl group which is substituted or unsubstituted;

R^9 and R^{10} are the same or different and each represents an alkyl group having from 1 to 4 carbon atoms;

or a ortho-phenylene group; and

n represents 0;

or pharmaceutically acceptable salts thereof.

COMPOSITION BASED ON PROPYLENE POLYMERS FOR EXPANDED GRANULES, PROCESS FOR OBTAINING IT AND ITS USE

Emmanuel Delaite, Braine-le-Comte; Jean Charlier, Ceroux-Mousty, and Giuliano Bertozzi, Brussels, all of Belgium, assignors to Solvay Poloyolefins Europe-Belgium (Societe Anonyme), Brussels, Belgium

Filed Jul. 23, 1998, Appl. No. 121,103

Claims priority, application Belgium, Jul. 24, 1997, 09700642

Int. Cl.[7] C08J *9/00*

U.S. Cl. 521—59 **14 Claims**

1. Composition for expanded granules, which comprises, per 100 parts by weight,

from 60 to 90 parts by weight of a propylene homopolymer (A) having a melt flow index (MFI), measured according to the ASTM D 1238 (1986) standard, under a load of 2.16 kg at 230° C. and expressed in g/10 min, ranging from 0.1 to 20 and

from 40 to 10 parts by weight of a propylene random copolymer (B) containing from 3 to 20 mol % of ethylene and/or of an α-olefin having from 4 to 6 carbon atoms, the MFI of which ranges from 25 to 3000 g/10 min.

6,040,349

PRODUCTION OF RIGID POLYURETHANES FOAMS WITH REDUCED DENSITY

Gottfried Knorr, Schwarzheide; Udo Rotermund, Ortrand; Eva Baum, Schwarzheide; Holger Seifert, Hüde, and Werner Wiegmann, Rahdem, all of Germany, assignors to BASF Aktiegesellschaft, Ludwigshafen, Germany

Filed Mar. 11, 1998, Appl. No. 38,388

Claims priority, application Germany, Mar. 11, 1997, 197 09 868

Int. Cl.[7] C08G *18/32*

U.S. Cl. 521—131 **15 Claims**

1. A process for producing rigid polyurethane foams having reduced density comprising reacting

a) organic and/or modified organic polyisocyanates with

b) at least one higher-molecular-weight compound having at least two reactive hydrogen atoms and, optionally,

c) low-molecular-weight chain extenders and/or crosslinkers

in the presence of

d) blowing agent

e) catalysts and, optionally,

f) other auxiliaries and/or additives,

wherein the blowing agent (d) comprises a mixture of cyclopentane, at least one compound which is homogeneously miscible with cyclopentane selected from the group consisting of alkanes and alkenes having 3 or 4 carbon atoms in the molecule, and carbon dioxide produced from water and isocyanate, and wherein the higher-molecular-weight compound (b) having at least two reactive hydrogen atoms comprise polyethers which contain aromatics and nitrogen.

EPOXY RESIN TYPE COMPOSITION FOR STIFFENING VEHICLE BODY AND METHOD FOR STIFFENING VEHICLE BODY

Takayuki Fukui, Kanagawa-ken, Japan, assignor to Nissan Motor Co., Ltd., Kanagawa-ken, Japan

Filed Aug. 26, 1998, Appl. No. 140,314

Claims priority, application Japan, Aug. 26, 1997, 9-229865

Int. Cl.[7] C08L *63/00*

U.S. Cl. 521—135 **18 Claims**

1. An epoxy resin type composition for stiffening a vehicle body, comprising:

epoxy resin;

a powdery methacrylate type polymer in an amount of 2 to 45 parts by weight relative to 100 parts by weight of said epoxy resin;

a thermally active hardening agent for epoxy resin in an amount of 1 to 20 parts by weight relative to 100 parts by weight of said epoxy resin;

a thermally decomposable organic type foaming agent in an amount of 0.5 to 20 parts by weight relative to 100 parts by weight of said epoxy resin; and

a mixture of an inorganic salt with a shape of a predetermined aspect ratio and a granular inorganic salt, said mixture being in an amount of 50 to 200 parts by weight relative to 100 parts by weight of said epoxy resin wherein a mixing ratio of said granular inorganic salt is 0 to 50% by weight relative to a total amount of said mixture.

6,040,351

FOAM RUBBER COMPOSITION AND A MOLDED PRODUCT OF FOAM RUBBER

Tomoaki Okita, Kasugai; Katsumi Nakashima, Ichinomiya; Takashi Mizushima, Nagoya, and Takeru Wadaki, Ichihara, all of Japan, assignors to Toyoda Gosei Co. Ltd., Aichi-ken, Japan

Filed Jun. 5, 1998, Appl. No. 90,996

Claims priority, application Japan, Jun. 6, 1997, 9-149026

Int. Cl.[7] C08J *9/10*

U.S. Cl. 521—140 **22 Claims**

1. A foam rubber composition comprising:

(A) a low-molecular ethylene-propylene-5-ethylidene-2norbornene terpolymer having a Mooney viscosity (ML_{1+4} at 100° C.) of about 20 to about 40, an ethylene/propylene ratio (C2/C3) by weight of about 65/35 to about 50/50, an iodine value of about 20 to about 30, and a Q value (Mw/Mn) not exceeding 3 as determined by gel permeation chromatography;

(B) a high-molecular ethylene-propylene-5-ethylidene-2-norbornene terpolymer having a Mooney viscosity (ML_{1+4} at 100° C.) of about 100 to about 300, an ethylene/propylene ratio (C2/C3) by weight of about 65/35 to about 50/50, an iodine value of about 20 to about 30 and a Q value (Mw/Mn) of about 6 to about 10;

(C) a vulcanizing system agent containing sulfur as a vulcanizer, and zinc carbamate and sulfenamide as accelerators; and

(D) a foaming agent containing N, N'-dinitrosopentamethylenetetramine and urea;

said composition having an (A)/(B) ratio by weight of about 45/55 to about 15/85, and containing about 3.0 to about 6.0 parts by weight of (C) and about 3.0 to about 8.0 parts by weight of (D) relative to a total of 100 parts by weight of (A) and (B).

6,040,352

FREE RADICAL POLYMERIZATION PROCESS USING A MONOCHROMATIC RADIATION SOURCE

Robin E. Wright, Inver Grove Heights, Minn., assignor to 3M Innovative Properties Company, Saint Paul, Minn.

Filed Jun. 11, 1998, Appl. No. 96,005

Int. Cl.[7] C08F *2/46*

U.S. Cl. 522—2 **33 Claims**

1. A method of preparing an adhesive composition comprising exposing a free-radically polymerizable pre-adhesive composition to a monochromatic radiation source having a peak intensity at a wavelength falling within the range of about 250 nanometers to about 600 nanometers to polymerize said pre-adhesive composition and form said adhesive composition.

6,040,353

RADIATION CURABLE SILICONE COMPOSITIONS

Shedric Oneal Glover; Chi-long Lee, and Wen-hong Tong, all of Midland, Mich., assignors to Dow Corning Corporation, Midland, Mich.

Filed Nov. 25, 1998, Appl. No. 199,623

Int. Cl.[7] C08F *2/50;* **C08J** *3/28;* **C08L** *83/07;83/06*

U.S. Cl. 522—15 **20 Claims**

1. A radiation curable silicone composition comprising:

(A) a vinyl ether functional silicon compound;

(B) a cationic photoinitiator;

(C) a free radical photoinitiator; and

(D) dodecylphenol.

6,040,354

IMPRESSION COMPOUND WITH A SILICON BASE AND WAX ADMIXTURE

Heijo Hübner, Wörthsee; Dierk Lübbers, and Wolfgang Mühlbauer, both of Hamburg, all of Germany, assignors to Ernst Mühlbauer KG, Germany

PCT No. PCT/EP96/00723, § 371 Date Aug. 21, 1997, § 102(e) Date Aug. 21, 1997, PCT Pub. No. WO96/26246, PCT Pub. Date Aug. 29, 1996

PCT Filed Feb. 21, 1996, Appl. No. 894,573

Claims priority, application Germany, Feb. 21, 1995, 195 05 896; May 16, 1995, 195 17 962

U.S. Cl. 523—109 **44 Claims**

1. A composition, comprising at least one wax and at least one compound selected from the group consisting of polysiloxanes, polysulphides and aziridine-free polyethers, wherein said at least one wax is not hydrogenated castor oil, paraffin wax or microwax, wherein said composition is made by heating a mixture of said at least one wax and said at least one compound to a temperature above the melting point of said at least one wax, dispersing said mixture to provide an emulsion, and shock cooling said emulsion.

6,040,355

FOUNDRY CURING SYSTEM

Kenneth R Kurple, 9533 Springborn Rd., Anchorville, Mich. 48004

Filed Jul. 1, 1998, Appl. No. 108,623

Int. Cl.[7] B22C *1/20*

U.S. Cl. 523—139 **4 Claims**

1. A process for producing a sand core which has been previously coated with resin, said resin being mixture of an isocyanate and a component selected from the group consisting of lignin, liquid protein, starches, epoxy ester, polyester polyols, polyether polyols, and epoxy resins, said process further utilizing heated air as a catalyst, said heated air having a temperature in the range of 180° F. to 1000° F., comprising the steps of:

filling a mold with said sand which has been previously coated with a resin, said resin being a mixture of an isocyanate and a component selected from the group consisting of lignin, liquid protein, starches, epoxy ester, polyester polyols, polyether polyols, and epoxy resins; and,

heating said sand core with air having a temperature in the range of 180° F. to 1000° F.

6,040,356

DURABLE GRAVURE INK AND USES OF THE SAME

Masahiro Kanki; Mutsuhiro Kawano, and Takashi Matano, all of Shinjuku-Ku, Japan, assignors to Dai Nippon Printing Co., Ltd., Japan

PCT No. PCT/JP97/02999, § 371 Date May 11, 1998, § 102(e) Date May 11, 1998, PCT Pub. No. WO98/08905, PCT Pub. Date Mar. 5, 1998

PCT Filed Aug. 28, 1997, Appl. No. 51,886

Claims priority, application Japan, Aug. 28, 1996, 8-243979; Dec. 3, 1997, 9-347309

Int. Cl.[7] C08K *5/3415;5/3432;* **C08L** *27/06;27/12;75/08*

U.S. Cl. 523—160 **5 Claims**

1. A durable gravure ink comprising:

(A) a high weather resistant pigment selected from the group consisting of quinacridone, perylene and anthracene series red pigments, isoindolinone series yellow pigments, Prussian blue, fast sky blue, and a black pigment comprising a mixture of said red, yellow and blue pigments;

(B) a high alkali resistant pigment selected from the group consisting of polyazo red pigments, polyazo yellow pigments, indanthrene blue, and aniline black; and

(C) a high weather and high alkali resistant binder selected from the group consisting of a vinyl chloride-vinyl acetate copolymer, a cyclized rubber, a polyurethane comprising an acrylic polyol or polyether polyol and a polyisocyanate, nitrocellulose, an epoxy resin, polyvinyl fluoride, polyvinylidene fluoride, and mixtures thereof,

wherein, (1) if said ink is red, said pigments comprise a mixture of at least one red pigment of (A) and at least one red pigment of (B), (2) if said ink is yellow, said pigments comprise a mixture of at least one yellow pigment of (A) and at least one yellow pigment of (B), (3) if said ink is blue, said pigments comprise a mixture of at least one blue pigment of (A) and at least one blue pigment of (B), and (4) if said ink is black, said pigment comprises a mixture of at least one black pigment of (A) and at least one black pigment of (B).

U.S. Cl. 523—206 **7 Claims**

1. A waterborne coating composition comprising a principal resin selected from the group consisting of polyurethane resins, acrylic resins and mixtures thereof, water, an inorganic pigment used in mixture with a pigment treatment composition comprising ester resin selected from the group consisting of polyester, phosphate ester and pyrophosphate ester resins, aminoplast resin and solvent, wherein the pigment is selected from the group consisting of titanium dioxide, iron oxides, chromium oxides, lead oxides, zinc chromate, antimony oxides, cadmium sulfide, cadmium selenide and nickel titanate and any of the preceding pigments treated with aluminum oxides, and mixtures thereof, treated by a method of

a) forming a pigment treatment composition comprising
i) 25.0 to 65% by weight based on total pigment treatment composition weight of a resin selected from the group consisting of polyester resins having an acid number between 15 and 50, and phosphate ester and pyrophosphate ester resins having an acid number between 10 and 50, and
ii) 5.0 to 25.0% by weight based on total pigment treatment composition of an aminoplast resin, and
iii) 10 to 45% by weight based on total pigment treatment composition of solvent selected from the group consisting of ethylene and propylene glycol ethers,
b) combining the pigment treatment composition and the inorganic pigment to form a mixture
c)grinding the pigment mixture to form a pigment paste, and
d) forming a dispersion of the pigment grind, wherein the dispersion comprises between 1 and 20.0% by weight of the coating composition.

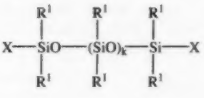
1. An organopolysiloxane composition comprising:
(A) 100 parts by weight of an organopolysiloxane of the following general formula (I):

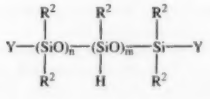
(1)



wherein R^1 and X are independently selected from the group consisting of alkyl, aryl, aralkyl, and alkenyl radicals having 1 to 10 carbon atoms, substituted ones or these radicals wherein some of the hydrogen atoms attached to carbon atoms are replaced by halogen atoms, and hydroxyl radicals, k is an integer of at least 4, alkenyl or hydroxyl or both radicals account for 0.001 to 1 mol % of the entire R^1 and X radicals,

(B) 0.1 to 50 parts by weight of an organohydrogenpolysiloxane having at least three hydrogen atoms each attached to a silicon atom in a molecule, represented by the following general formula (2):

(2)



wherein R^2 is selected from the group consisting of alkyl, aryl, and aralkyl radicals having 1 to 10 carbon atoms, and substituted monovalent ones of these radicals wherein some of the hydrogen atoms attached to carbon atoms are replaced by halogen atoms, Y is hydrogen or R^2, m is an integer of at least 1, n is an integer inclusive of 0, the sum of m+n is an integer of 3 to 500,

(C) 0 to 20 parts by weight of a compound having an active hydrogen radical,

(D) a platinum group metal catalyst enclosed in a compound selected from the group consisting of thermoplastic organic resins; thermoplastic silicone resins, and heat-fusible compounds with a molecular weight of up to 1,000, all having a melting or softening point of 40 to 200° C., in an amount to give 1 to 1,000 parts by weight of platinum group metal atom per million parts by weight of the entire composition,

(E) a platinum group metal catalyst in an amount to provide platinum group metal in an amount of from 1/100,000 up to 1/10 (by weight) of the amount of platinum group metal available from component (D),

(F) 0.001 to 20 parts by weight of an addition reaction retarder, and

(G) 0 to 1,000 parts by weight of a filler.

MEDICAL ELECTRICAL LEAD AND REINFORCED SILICONE ELASTOMER COMPOSITIONS USED THEREIN

Mark J. Paulsen, Santa Barbara, Calif.; Jennifer P. Miller, Elk River, and Michael J. Ebert, Fridley, both of Minn., assignors to Medtronic, Inc., Minneapolis, Minn.

Division of application No. 08/697,991, Sep. 4, 1996. This application Jun. 2, 1999, Appl. No. 324,410.

Int. Cl.[7] **C08K** *5/21*

U.S. Cl. 524—212 **4 Claims**

1. An uncured elastomer blend composition suitable for curing by cross linking, the composition comprising two aliquots in combination:

the first aliquot comprising an intimately admixed mixture of the following components:

(1) approximately 23 to 45 percent by weight of silica that had been silyliated by treatment and contains trialkylsilyl groups;

(2) approximately 55 to 77 per cent by weight of a polysiloxane copolymer composed of divalent —R_1R_2SiO—, divalent —R_3R_4SiO— and end-blocking $R_5R_6R_7SiO$— units, where R_1 and R_2 independantly are lower alkyl of 1 to 6 carbons, phenyl or trifluoropropyl, R_3 is vinyl, allyl, or other olefinic group having up to 4 carbons, R_4 is lower alkyl of 1 to 6 carbons, phenyl or trifluoropropyl, and R_5, R_6, and R_7 independantly are lower alkyl of 1 to 6 carbons, phenyl, vinyl, allyl, or other olefinic group having up to 4 carbons and one double bond, the polysiloxane copolymer has a degree of polymerization (D. P.) approximately in the range of 3500 to 6500, and the olefin containing —R_3R_4SiO— groups are present randomly distributed in the polysiloxane copolymer and approximately in the 0.05 to 0.3 mol percent range, with the provisos that when R_1, or R_2, or both represent phenyl groups then proportion of the phenyl-containing divalent siloxane units does not exceed 15 mol per cent. and when R_1 or R_2 or both represent trifluoropropyl groups, then the proportion of the trifluoropropyl-containing divalent siloxane units does not exceed approximately 40 mol per cent in the polysiloxane copolymer; and a

(3) a catalyst,

the second aliquot comprising an intimately admixed mixture of the following components:

(1) approximately 23 to 45 percent by weight of silica that had been silyliated by treatment and contains trialkylsilyl groups;

(2) approximately 55 to 77 per cent by weight of a polysiloxane copolymer composed of divalent $—R_1R_2SiO—$, divalent $—R_3R_4SiO—$ and end-blocking $R_5R_6R_7SiO—$ units, where R_1 and R_2 independantly are lower alkyl of 1 to 6 carbons, phenyl or trifluoropropyl, R_3 is vinyl, allyl, or other olefinic group having up to 4 carbons, R_4 is lower alkyl of 1 to 6 carbons, phenyl or trifluoropropyl, and R_5, R_6, and R_7 independantly are lower alkyl of 1 to 6 carbons, phenyl, vinyl, allyl, or other olefimic group having up to 4 carbons and one double bond, the polysiloxane copolymer has a degree of polymerization (D. P.) approximately in the range of 3500 to 6500, and the olefin containing $—R_3R_4SiO—$ groups are present randomly distributed in the polysiloxane copolymer and approximately in the 0.05 to 0.3 mol percent range, with the provisos that when R_1, or R_2, or both represent phenyl groups then proportion of the phenyl-containing divalent siloxane units does not exceed 15 mol per cent. and when R_1 or R_2 or both represent trifluoropropyl groups, then the proportion of the trifluoropropyl-containing divalent siloxane units does not exceed approximately 40 mol per cent in the polysiloxane copolymer, and

(3) an organohydrogen polysiloxane cross-linker,

the catalyst and the cross-linker being present in the first and second aliquots respectively in sufficient amounts to cause the cross-linking reaction to occur after the first and second aliquots are intimately mixed.

STARCH COPOLYMER PRODUCTS AND PROCESS

Gary Luebke, Olathe, Kans.; Kenneth Curtis Benton, Cedar Rapids, and Yakov A. Letuchy, Iowa City, both of Iowa, assignors to Penford Corporation, Bellevue, Wash.

Provisional application No. 60/055,841, Aug. 15, 1997. This application Aug. 13, 1998, Appl. No. 133,625.

Int. Cl.[7] **C08L** *3/04*

U.S. Cl. 524—734 **38 Claims**

1. A method for the preparation of a starch copolymer product which is the reaction product of starch and one or more synthetic monomers capable of undergoing free radical polymerization wherein said reaction product is in the form of an emulsion or dispersion having weight-average particle sizes less than 180 nm as measured by Capillary Hydrodynamic Fractionation comprising the steps of:

(a) dissolving or colloidally dispersing starch in an aqueous solvent to form a starch solution or dispersion;

(b) heating the starch solution or dispersion to a specified temperature range;

(c) adding to the starch solution or dispersion a first portion of said synthetic monomer and a free radical initiator for initiation of polymerization of the starch component and said synthetic monomer; and

(d) after free radical polymerization of said synthetic monomers has been initiated in the presence of said starch, adding additional portions of synthetic monomer capable of undergoing free radical polymerization to the starch solution or dispersion wherein at least 75% of the total synthetic monomer to be reacted with said starch is added more than one hour after initiation of said free radical polymerization.

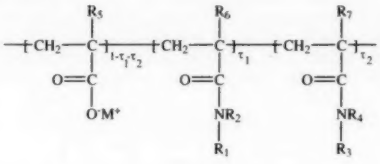
1. A (meth)acrylic copolymer having monomer units represented by the formula



wherein

the M^+ are monovalent cations arising from the neutralization of the —COOH groups, it being possible, however, for this neutralization to have been only partial;

R_1 and R_2 are selected from the group consisting of: hydrogen, long-chain linear or branched cycloalkyl or alkyl radicals, containing from 8 to 30 carbon atoms, and aryl radicals having from 8 to 22 carbon atoms, with the condition that at least one of R_1 and R_2 is not hydrogen;

R_3 and R_4 are independently selected from the group consisting of: a hydrogen atom, short-chain cycloalkyl and alkyl radicals having from 1 to 7 carbon atoms and aryl radicals having from 6 to 7 carbon atoms;

R_5, R_6 and R_7 are each, independently of one another, selected from the group consisting of a hydrogen atom and a methyl radical;

τ_1 represents the molar ratio of long-chain amide units with respect to all monomeric units of copolymer; and

τ_2 represents the molar ratio of optional short-chain amide units with respect to all monomeric units of the copolymer molecule, and

the weight-average molecular weight of the copolymer does not exceed 30,000 and τ_1 , is between 0.01 and 0.30.

6,040,387

POLY (METH) ACRYLAMIDES WITH IMPROVED COLOR STABILITY UNDER THERMAL STRESS

Klaus Albrecht, Mainz; Werner Hoess, Heusenstamm, and Hartmut Schikowsky, Darmstadt, all of Germany, assignors to Roehm GmbH Chemische Fabrik, Darmstadt, Germany

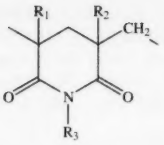
Division of application No. 08/759,131, Dec. 2, 1996, Pat. No. 5,837,780. This application May 12, 1998, Appl. No. 75,880.

Claims priority, application Germany, Dec. 1, 1995, 195 44 562

Int. Cl.[7] G08F *8/32*

U.S. Cl. 525—330.5 **6 Claims**

1. A molded article MA prepared from a molding composition MC, consisting of: a polymer PM containing units of formula (I):



wherein R_1 and R_2 are hydrogen and methyl and R_3 denotes hydrogen, C_1–C_{18} alky, C_5–C_8 cycloalkyl, C_6–C_{10} aryl, C_6–C_{10} aryl-C_1–C_4 alkyl, wherein these groups can be substituted up to three times with groups selected from the group consisting of C_1–C_4 alkyl, C_1–C_4 alkoxy and halogen, said polymer prepared by:

imidizing a (meth)acrylate ester with a primary amine in a reaction extruder thereby preparing polymer PM; and

blending from 0.005–1 wt % of at least one reducing inorganic phosphorous compound IP selected from the group consisting of phosphinic and phosphonic acid and its alkali metal, alkaline-earth metal, aluminum and ammonium salts, wherein the ammonium ion can be substituted with up to four C_1–C_4 alkyl and/or C_5–C_8 cycloalkyl groups, with the polymer PM after conclusion of the imidation reaction.

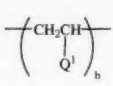
U.S. Cl. 525—527 **6 Claims**

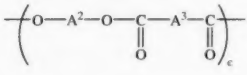
1. A one-component epoxy resin composition comprising a polyepoxy compound and a heterocycle-containing compound having a structure represented by any of he following general formulae (2) through (9):

(2)

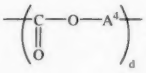
(3)



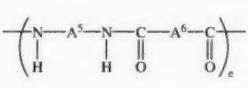
(4)



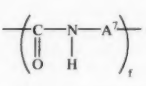
(5)



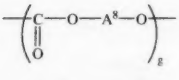
(6)



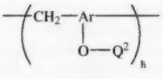
(7)



(8)

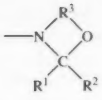


(9)



wherein in formula (2), "a" represents an integer of 3 to 200, A^1 represents at least one member selected from the group consisting of alkylene group which is either substituted by —X—Z or unsubstituted, arylene group, arylalkylene group, haloalkylene group and a residue available on ring-opening polymerization of a glycidyl ether; wherein in formula —X—Z, X represents a divalent hydrocarbon group which may optionally have one or more linkages selected from the group consisting of ether, imino, amide, urethane, urea and sulfide linkages and Z represents a heterocyclic group of the formula (1):

(1)



wherein R_1 and R^2 may be the same or different and each represents hydrogen atom, straight-chain or branched C_1 to C_6 alkyl or alkenyl, or C_6 to C_0 aryl; or R^1 and R^2, taken together with the adjacent carbon atom, represents C_5 to C_7 cycloalkyl; R^3 represents C_1 to C_{10}, alkylene;

wherein at least three of A^1 in formula (2) represent alkylene group substituted by —X—Z;

wherein in formula (3), "b" represents an integer of 3 to 200, and Q^1 represents at least one member selected from the group consisting of hydrogen atom, alkyl group, aryl group, haloalkyl group, haloaryl group, alkoxycarbonyl group, acetoxy group and —X—Z;

wherein at least three of Q^1 in formula (3) represent —X—Z;

wherein in formula (4), "c" represents an integer of 2 to 200, and A^2 and A^3 may be the same or different and each represents at least one member selected from the group consisting of alkylene group which is either substituted by —X—Z or unsubstituted, arylene group which is either substituted by —X—Z or unsubstituted, aralkylene group and haloalkylene group;

wherein at least three of A^2 and A^3 in formula (4) represent at least one species selected from the group consisting of alkylene group substituted by —X—Z and arylene group substituted by —X—Z;

wherein in formula (5), "d" represents an integer of 3 to 200, and A^4 represents at least one selected from the group consisting of alkylene group which is either substituted by —X—Z or unsubstituted, arylene group which is either substituted by —X—Z or unsubstituted, aralkylene group and haloalkylene group;

wherein at least three of A^4 in formula (5) represent at least one species selected from the group consisting of alkylene group substituted by —X—Z and arylene group substituted by —X—Z;

wherein in formula (6), "e" represents an integer of 2 to 200, and A^5 and A^6 may be the same or different and each represents at least one selected from the group consisting of alkylene group which is either substituted by —X—Z or unsubstituted, arylene group which is either substituted by —X—Z or unsubstituted, aralkylene group and haloalkylene group;

wherein at least three of A^5 and A^6 in formula (6) represent at least one species selected from the group consisting of alkylene group substituted by —X—Z and arylene group substituted by —X—Z;

wherein in formula (7), "f" represents an integer of 3 to 200, and A^7 represents at least one selected from the group consisting of alkylene group which is either substituted by —X—Z or unsubstituted, arylene group which is either substituted by —X—Z or unsubstituted, aralkylene group and haloalkylene group;

wherein at least three of A^1 in formula (7) represent at least one species selected from the group consisting of alkylene group substituted by —X—Z and arylene group substituted by —X—Z;

wherein in formula (8), "g" represents an integer of 3 to 200, and A^8 represents at least one selected from the group consisting of alkylene group which is either substituted by —X—Z or unsubstituted, arylene group which is either substituted by —X—Z or unsubstituted, aralkylene group and haloalkylene group;

wherein at least three of A^0 in formula (8) represent at least one species selected from the group consisting of alkylene group substituted by —X—Z and arylene group substituted by —X—Z;

wherein in formula (9), "h" represents an integer of 3 to 200, Ar represents aryl group, and Q^2 represents at least one species selected from the group consisting of hydrogen atom, epoxy group and —X—Z; and wherein at least three of Q^2 in formula (9) represent —X—Z.

SATURATED TRICYCLIC LIGAND CONTAINING METAL COMPLEXES AND OLEFIN POLYMERIZATION PROCESS

Peter N. Nickias, Midland, Mich.; Tobin J. Marks, Evanston, Ill., and Yasushi Obora, Ibaraki, Japan, assignors to The Dow Chemical Company, Midland, Mich., and Northwestern University, Evanston, Ill.

Provisional application No. 60/023,608, Aug. 9, 1996. This application Aug. 1, 1997, Appl. No. 904,363.

Int. Cl.[7] C08F *4/44*

U.S. Cl. 526—160 **11 Claims**

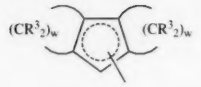
1. A metal complex corresponding to the formula:

$$L_1ZL_2MX_mX'_n$$

wherein:

M independently each occurrence is a metal of Group 4 of the Periodic Table of the Elements;

L_1 is a partially saturated tricyclic group that is bound to M by means of delocalized π-electrons, said group containing up to 50 nonhydrogen atoms and corresponding to the formula:



wherein R^3 independently each occurrence is hydrogen, or a silyl, hydrocarbyl or silyl-substituted hydrocarbyl group of up to 10 nonhydrogen atoms, and each w, independently, is a whole number from 4 to 6;

L_2 is a substituted cyclopentadienyl group that is bound to M by means of delocalized π-electrons, said cyclopentadienyl group being substituted at one and only one of its two distal positions with a bulky group, R^4, selected from the group consisting of C_{3-20} hydrocarbyl groups bonded to the cyclopentadienyl ring by means of a secondary or tertiary substituted carbon atom, and aryl groups of up to 20 carbons, said L_2group containing up to 50 nonhydrogen atoms;

Z is a divalent substituent bridging L_1 and L_2 of up to 50 non-hydrogen atoms having the formula, $—(ER^2_2)_m—$, wherein E independently each occurrence is carbon, silicon or germanium, R^2 independently each occurrence is selected from the group consisting of hydrocarbyl, hydrocarbyloxy, silyl, and germyl of up to 20 atoms other than hydrogen, and m is an integer from 1 to 3;

X each occurrence is a monovalent, anionic moiety having up to 40 non-hydrogen atoms, optionally, two X groups may be covalently bound together forming a divalent dianionic moiety having both valences bound to M, further optionally, 2 X groups may be covalently bound together to form a neutral, conjugated or nonconjugated diene that is bonded to M by means of delocalized π-electrons (whereupon M is in the +2 oxidation state), or still further optionally one or more X and one or more X' groups may be bonded together thereby forming a moiety that is both covalently bound to M and coordinated;

m is 1 or 2 and is equal to two less than the formal oxidation state of M, except when 2 X groups together form a neutral conjugated or non-conjugated diene that is π-bonded to M, in which case in is equal to the formal oxidation state of M,

X' is a neutral ligand having up to 20 non-hydrogen atoms other than a diene, and optionally X' and L_1 or X' and L_2 are covalently bonded together, and n is a number from 0 to 3.

1. A method for the polymerization of cycloolefins, which comprises polymerizing said cycloolefins in the presence of a catalyst which is a reaction product of

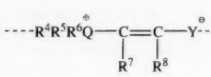
A. a nickel(0) compound or a compound which can be converted in situ into a nickel(0) compound, with, optionally,

B. a compound of the formula

(I)

and (obligatorily)

C. a compound of the formula



(II)

where

R^1 to R^6 are, independently of one another, straight-chain or branched C_1–C_{20}-alkyl, C_1–C_{20}-alkoxy, C_3–C_8-cycloalkyl, C_2–C_{20}-alkenyl, di-(C_1–C_4-alkyl)amino, C_6–C_{12}-aryloxy, C_7–C_{15}-aralkyl, C_7–C_{15}-aralkoxy or C_6–C_{12}-aryl,

E and Q are, independently of one another, nitrogen, phosphorus, arsenic or antimony,

X is oxygen, sulphur, $=NR^9$, $=CR^9R^{10}$, $=C=C=O$, $=C=C=S$, $=C=PR^1R^2R^3$,

Y is oxygen or NR^9,

R^7, R^8 are, independently of one another, hydrogen, C_1–C_{20}-alkyl, C_2–C_{20}-alkenyl, C_1–C_{20}-alkoxy, C_3–C_8-cycloalkyl, C_6–C_{12}-aryl, C_6–C_{12}-aryloxy, C_6–C_{12}-ar-C_1– C_{20}-alkyl, C_6–C_{12}-ar-C_1–C_{20}-alkoxy, C_1–C_{20}-alkyl-C_6–C_{12}-aryl, C_1–C_{20}-alkyl-C_6– C_{12}-aryloxy, chlorine, cyano, NHR^{12}, NR^{12}_2, OR^{12}, $COOR^{12}$, $COOR^{11}$, $CONR^{12}$, COR^{12}, SR^{12}, SO_2R^{12}, OSO_2R^{12}, $P(O)(OR^{12})_{2-y}R^{13}_y$,

R^7 may also be SO_3R^{11} or

R^7 and R^8 together with the two carbon atoms to which they are bound form an isocyclic or heterocyclic ring,

R^9 and R^{10} are, independently of one another, R^1 or hydrogen, silyl, acyl, chlorophenyl, nitrophenyl, C_1–C_6-alkylphenyl, cyano, phenyl-C_2–C_6-alkenyl, silyl, trihalogenosilyl, tri-C_1–C_{30}-organosilyl, C_1–C_{16}-acyl, cyano, halogen, tri-C_1–C_{30}-organostannyl, $-BH_2$, di-C_1–C_{20}-organoboranyl, dihalogenoboranyl,

R^{11} is an alkali metal, thallium, 1/2 alkaline earth metal, ammonium, phosphonium, C_1–C_{12}-alkyl or C_6–C_{12}-aryl,

R^{12}, R^{13} are, independently of one another, C_1– C_{20}-alkyl, C_2–C_{20}-alkenyl, C_3–C_8-cycloalkyl or C_6–C_{12}-aryl and

y is zero, 1 or 2.

BASE RESISTANT FLUORINATED POLYMERS

Paul Gregory Bekiarian, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del.

Division of application No. 08/973,382, Dec. 3, 1997, Pat. No. 5,852,150, Provisional application No. 60/000,062, Jun. 8, 1995. This application Oct. 23, 1998, Appl. No. 178,038.

Int. Cl.[7] **C08F** *214/26;* **C08L** *27/10*

U.S. Cl. 526—206 **15 Claims**

1. A polymer which is the product of free radically copolymerizing, in the presence of an organic iodide, a reaction mixture of monomers comprising tetrafluoroethylene, a compound of the formula CF_2=CFOR[1], wherein R^1 is an n-alkyl containing 1 to 6 carbon atoms, and, optionally, other free radically copolymerizable monomers, provided that:

said polymer contains about 0.1 to about 5 percent by weight of iodine; and

repeat unit (I), derived from tetrafluoroethylene, and repeat unit (II), derived from a compound of the formula CF_2=CFOR[1], are at least 50 mole percent of the repeat units of said polymer.

U.S. Cl. 526—238.22 **5 Claims**

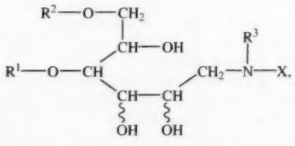
1. A water-treatment composition for use in the treatment of aqueous systems, said composition comprising,

a water-soluble polymer, said polymer comprising the polymerized residue of,

at least one water-treatment monomer in amounts effective to provide the polymer with the capability of performing at least one of a water-treatment function selected from the group consisting of dispersing particulate matter, inhibiting the formation of mineral scale, inhibiting the deposition of mineral scale and inhibiting corrosion in an aqueous system; and

a polymerizable, photo-inert, latently-detectable moiety represented by structure (III)

(III)



wherein, R^1 is selected from the group consisting of H, a monosaccharide, and a polysaccharide;

R^2 is selected from the group consisting of H, a monosaccharide, and a polysaccharide

wherein R^1 and R^2 are not both H, provided that if R^1 is H then R^2 is a polysaccharide, and if R^2 is H then R^1 is a polysaccharide; R^3 is C_1–C_{18} alkyl, H or NH_2, and X is the residue of a moiety selected from the group consisting of alpha-methyl stryl, acrylamide or methacrylamide,

said polymerizable, photo-inert, latently-detectable moiety being present in amounts effective to allow the water soluble polymer to be detected at concentrations of less than 100 parts per million and within a wavelength range of from 300 to 800 nanometers when the residue of the photo-inert, latently-detectable moiety is contacted with an amount of a photoactivator which is effective to cause the residue of the photo-inert, latently detectable moiety to absorb within said wavelength range.

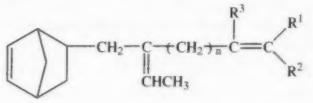
Claims priority, application Japan, Dec. 26, 1994, 6-322099; Mar. 31, 1995, 7-075288; May 25, 1995, 7-126535

Int. Cl.[7] **C08F** *10/02*

U.S. Cl. 526—281 **10 Claims**

1. A chain polyene group-containing norbornene compound represented by the formula (I):

(I)



wherein n is an integer of 1 to 5, R^1 is a hydrogen atom or an alkyl group of 1 to 5 carbon atoms, and R^2 and R^3 are each independently a hydrogen atom or an alkyl group of 1 to 5 carbon atoms, provided that R^1 and R^2 are not hydrogen at the same time.

3. An unsaturated ethylene copolymer wherein:

(A) said copolymer is a random copolymer of

(i) ethylene,

(ii) an α-olefin of 3 to 20 carbon atoms, and

(iii) at least one chain polyene group-containing norbornene compound represented by formula (I) of claim **1**;

(B) said copolymer comprises:

(i) constituent units derived from said ethylene in an amount of 30 to 92% by mol,

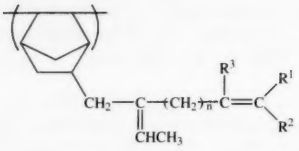
(ii) constituent units derived from said α-olefin of 3 to 20 carbon atoms in an mount of 6 to 70% by mol, and

(iii) constituent units derived from said chain polyene group-containing norbornene compound represented by formula (I) of claim **1** in an amount of 0.1 to 30% by mol, in which

(iv) the molar ratio of (i) said constituent units derived from said ethylene/(ii) said constituent units derived from said α-olefin of 3 to 20 carbon atoms is in the range of 40/60 to 92/8;

(C) said constituent unit derived from the chain polyene-group containing norbornene compound represented by formula (I) of claim **1** has a structure represented by the following formula:

(II)



wherein n is an integer of 1 to 5, R^1 is an alkyl group of 1 to 5 carbon atoms, and R^2 and R^3 are each independently a hydrogen atom or an alkyl group of 1 to 5 carbon atoms; and

(D) said copolymer has an intrinsic viscosity (η), as measured in Decalin at 135° C., of 0.05 to 10 dl/g.

LOW GLASS TEMPERATURE ORGANOSILOXANES

Norman Häberle, München; Franz-Heinrich Kreuzer, Martinsried, and Jürgen Küpfer, München, all of Germany, assignors to Consortium fur elektrochemische Industrie GmbH, Munich, Germany

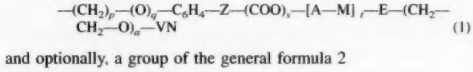
Filed Jun. 10, 1998, Appl. No. 90,025

Claims priority, application Germany, Jun. 19, 1997, 197 26 047

Int. Cl.[7] C08G *77/06*

U.S. Cl. 528—26 **22 Claims**

1. An organosiloxane which comprises at least one group of the general formula 1



(1)

and optionally, a group of the general formula 2

(2)

where

X is a cholesteryl, dihydrocholesteryl, doristeryl, isosorbidyl, isomannidyl or cholic acid radical or an unsubstituted or substituted radical selected from 1,4-phenyl, 4,4'-biphenylyl, 1,4-cyclohexylene, 4,4'-bicyclohexylene, 4,4'-cyclohexylenephenylene, or 2,5-substituted 1,3-dioxanyl and pyrimidinyl radicals where the substituent is a C_1- to C_5-alkoxy radical, C_1- to C_5-alkyl radical, cyano radical, chloro radical, or nitro radical,

Q is a —COO— group or a —OOC— group or a —O— group or a chemical bond or a —O—(C═O)—O— group,

Z is a chemical bond or a group —CH_2— or —CH_2—CH_2—,

A is a 1,4-phenylene, 1,5-naphthylene, 2,6-naphthylene, 2,7-naphthylene, 4,4'-biphenylene, 1,4-cyclohexylene, 4,4'-bicyclohexylene, 4,4'-cyclohexylenephenylene, 2,5-(1,3-dioxanylene) or a pyrimidinylene radical,

M is a chemical bond, an oxygen atom, or a group —COO—, —OCO— or —OOC—$(CH_2)_v$—$COOCH_2CH_2$—,

VN is a group —COO—CH═CH_2, —COO—C(CH_3)═CH_2, —$(CH_2)_u$—O—CH═CH_2, —CH═CH_2, or an oxiranyl group,

E is a group $(CH_2)_r$, where individual CH_2 groups can be replaced by oxygen,

m and p are each integers from 3 to 6,

r is 0 or an integer from 1 to 10,

n, q and s are each 0 or 1,

t is 0 or an integer from 1 to 3,

u and v are each an integer from 2 to 8, and

a is 0 or an integer from 1 to 6, with the proviso that in the groups of the general formulae 1 and 2 no oxygen atoms are attached directly to one another

wherein at least one of E or $-(CH_2CH_2O)-$ is present.

5. A process for preparing an organosiloxane as claimed in claim **1**, in which organosiloxanes composed of units of the general formula 6

$$[R_bH_cSiO_{(4-b-c)/2}] \quad (6)$$

in which R are C_1–C_4 alkyl radicals, b is 0, 1, or 2, and c is 0 or 1 are reacted with a mixture of compounds of the general formulae 4 and, optionally, 7

$$H_2C{=}CH{-}(CH_2)_{p-2}{-}(O)_q{-}C_6H_4{-}Z{-}(COO)_s{-}[A{-}M]_t{-}E{-}(CH_2{-}CH_2{-}O)_u{-}VN \quad (4)$$

$$H_2C{=}CH{-}(CH_2)_{m-2}{-}(O)_n{-}(A)_t{-}Q{-}X \quad (7)$$

in which

Z, A, E, M, VN, Q, m, n, p, q, s, t and a are as defined for the general formulae 1 and 2, with the proviso that in the compounds of the general formulae 4 and 7 no oxygen atoms are attached directly to one another.

COATINGS FOR COILS

Tatiana Temtchenko, Alessandria, and Massimo Malavasi, Milan, both of Italy, assignors to Ausimont S.p.A., Milan, Italy

Filed Jun. 10, 1997, Appl. No. 872,502

Claims priority, application Italy, Apr. 17, 1997, MI96A1177

Int. Cl.[7] **C08G** *18/50*

U.S. Cl. 528—70 **17 Claims**

1. A process for coating coils with crosslinkable compositions comprising blocked isocyanates and (per)fluoropolyetheral polymers having an average number molecular weight of between 500 and 5000 and hydroxyl bifunctional termination and having improved stain release properties, no dirt pick-up and resistance to pressure marking and to hostile environments, said (per)fluoropolyetheral polymers comprising repeating units selected from the group consisting of:

a) $-(C_3F_6O)_{m'}(CFYO)_{n'}-$ wherein the unit (C_3F_6O) and (CFYO) are perfluorooxyalkylenic units statistically distributed along the chain; m' and n' are integers such as to give the molecular weight indicated above, and the ratio m'/n' between 5 and 40, when n' is different from 0; Y is equal to F or CF_3; n' can also be 0; said units can be linked to each other by a bridge bond —O—R'_f—O—, wherein R'_f has the meaning defined in c) hereunder;

b) $-(C_2F_4O)_{p'}(CFYO)_{q'}(C_3F_6O)_{t'}-$ wherein p' and q' are integers such that p'/q' ranges between 5 and 0.3, and such that the molecular weight is that indicated above; t' being an integer with the meaning of m', Y=F or CF_3; t' can be 0 and q'/q'+p'+t' lower than or equal to 1/10 and the t'/p' ratio is from 0.2 to 6;

c) $-CR_4R_5CF_2CF_2O-$ wherein R_4 and R_5 are equal to or different from each other and chosen from H, Cl, F or perfluoroalkyl 1–4 C atoms, the molecular weight being that indicated above, said unit inside the fluoropolyoxyalkylenic chain being linked to each other as follows:

$$-(OCR_4R_5CF_2CF_2)_{p'}-O-R'_f-O-(CR_4R_5CF_2CF_2O)_{q'}-$$

wherein R'_f is a fluoroalkylenic group from 1 to 4 C, and p+q is at least 1 and such that the molecular weight is that indicated above,

d) $-(CF(CF_3)CF_2O-$ said units being linked each other inside the fluoropolyoxyalkylenic chain as follows:

$$-(OCF_2CF(CF_3))_{a'}O-CF_2(R'_f)_xCF_2-O-(CF(CF_3)CF_2O)_{b'}-$$

wherein R'_f has the meaning indicated above, x is 0 or 1, a and b are integers and a+b is at least 1 and such that the molecular weight is that indicated above, and

e) $-(C_2F_4O)_{a'}(CFYO)_{b'}-$ wherein a' and b' are integers such that the molecular weight is within the range indicated, a'/b' ranges between 5 and 0.3, Y has the meaning indicated above, having hydroxyl bifunctional termination;

said process comprising coating coils with said composition, and crosslinking said polymers, said crosslinking being carried out with the blocked isocyanates having at least three NCO groups.

SYNTHESIS AND USE OF AMINO ACID FLUORIDES AS PEPTIDE COUPLING REAGENT

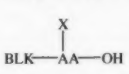
Louis A. Carpino, and Ayman Ahmed El-Faham, both of Amherst, Mass., assignors to Research Corporation Technologies, Inc., Tucson, Ariz.

Division of application No. 08/466,319, Jun. 6, 1995, Pat. No. 5,750,767, which is a continuation of application No. 08/284,964, Aug. 2, 1994, Pat. No. 5,712,418, which is a continuation-in-part of application No. 07/426,121, Oct. 23, 1989, Pat. No. 5,360,928. This application Jan. 5, 1998, Appl. No. 2,860.

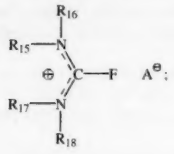
Int. Cl.[7] **C07K** *1/08*

U.S. Cl. 530—333 **23 Claims**

1. A process for forming a peptide bond between a first amino acid having a free amino group and a protected carboxy group and a second amino acid or between a peptide having a free amino group and a protected carboxy group with a second amino acid which comprises (a) reacting the second amino acid of the formula:



with a fluoroformamidinium salt of the formula:



and (b) reacting the product of (a) with the first amino acid or peptide wherein

AA is an amino acid residue;

BLK is a N-amino protecting group;

X is absent or is a protecting group on the side chain of the second amino acid;

R_{15}, R_{16}, R_{17} and R_{18} are independently lower alkyl, aryl, aryl lower alkyl, cycloalkyl, cycloalkyl lower alkyl or

R_{15} and R_{16} taken together with the nitrogen atom to which they are attached form a 5- or 6-membered ring containing a nitrogen ring atom and 4 or 5 carbon ring atoms and up to total of 10 carbon atoms, or

R_{17} and R_{18} taken together with the nitrogen atom to which they are attached form a 5- or 6-membered ring containing a nitrogen ring atom and 4–5 ring carbon atoms and up to a total of 10 carbon atoms or

R_{16} and R_{17} taken together with the nitrogen atoms to which they are attached and the carbon atom attached to said nitrogen atoms form a 5- or 6-membered ring containing 2 nitrogen ring atoms and 3–4 ring carbon atoms and up to a total of 10 carbon atoms and

A is a counterion.

U.S. Cl. 530—334 **18 Claims**

1. A spotting method for the rapid synthesis of a plurality of peptides, said peptides differing from spot to spot from each other in the sequence of amino acid residues making up the peptides, which comprises;

providing a single, unitary, solid phase support having a planar surface, said surface bearing chemically reactive groups to which the C-terminal of a peptide under synthesis can be covalently bonded;

covalently bonding to the reactive groups in freely selected discrete spotting zones, a starting amino acid residue of the sequence of each peptide to be synthesized by wetting each freely selected discrete spotting zone with a small aliquot of a solution of an N-protected derivative of the starting amino acid residue, and

synthesizing the different peptides by coupling additional amino acid residues to the starting amino acid residue, in a predetermined sequence, by wetting each discrete spotting zone with small aliquots of solutions of N-protected derivatives of the amino acids according to said predetermined sequence,

whereby there is obtained a unitary, single solid phase support bearing a plurality of different, bound peptides.

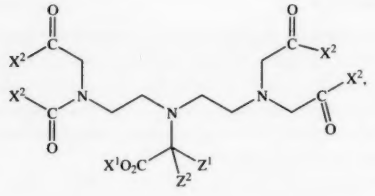
1. A compound of general formula I

(I)



in which

each X^1 independently of one another, is a hydrogen atom or a metal ion equivalent of an element of atomic numbers 20–32, 39–51 or 57–83,

each X^2 independently of one another, is a group O—X^1 wherein X^1 has the above-identified meaning,

or $N(R^1)R^2$ in which

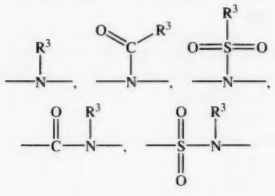
each R^1, R^2 independently of one another, is

a) a hydrogen atom or b) a saturated or unsaturated, branched or straight-chain C_1–C_{20} chain or a cyclic or bicyclic unit formed from a C_1–C_{20} chain or part of a C_1–C_{20} chain, which

(i) is interrupted by zero to three moieties selected from the group consisting of oxygen atoms, sulfur atoms, sulfoxy groups, sulfono groups, and combinations thereof,

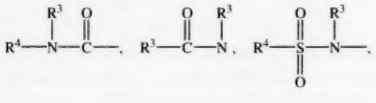
(ii) is substituted by zero to six moieties selected from the group consisting of phenyl, pyridyl, R^3S, R^3OOC, R^3O groups and combinations thereof, and

(iii) further contains zero to three moieties selected from the group consisting of



carbonyl groups, thiocarbonyl groups and combinations thereof,

and the phenyl and pyridyl groups are substituted zero to three times, independently of one another, by moieties selected from the group consisting of R^3O_2C,



-continued

R^4 groups and combinations thereof or $N(R^1)(R^2)$ is a four- to eight-membered ring, which is unsubstituted or substituted by moieties selected from the group consisting of two additional oxygen atoms, two carbonyl groups and combinations thereof, and at least two of the radicals with X^1 have X^1 as a metal ion equivalent of an element of atomic numbers 20–32, 39–51 and 57–83,

Z^1 is a saturated or unsaturated, cyclic or bicyclic unit formed from a C_6–C_{20} chain or part of a C_6–C_{20} chain which is substituted by zero to six moieties selected from the group consisting of phenyl, R^3OOC, R^3O groups and combinations thereof, and the phenyl groups are unsubstituted or substituted singly or repeatedly, independently of one another, by moieties selected from the group consisting of R^3O_2C—, R^3O—, R^4 groups and combinations thereof, or

a saturated or unsaturated branched or straight-chain C_6–C_{20} chain which is substituted by one to six phenyl groups which are unsubstituted or substituted singly or repeatedly, independently of one another, by moieties selected from the group consisting of R^3O_2C—, R^3O—, R^4 groups and combinations thereof,

Z^2 is a) a hydrogen atom or b) a saturated or unsaturated cyclic or bicyclic unit formed by a C_6–C_{20} chain or part of a C_6–C_{20} chain, which is substituted by zero to six moieties selected from the group consisting of phenyl,

R^3OOC, R^3O groups and combinations thereof

and the phenyl groups are substituted zero to three times, independently of one another, by moieties selected from the group consisting of R^3O_2C—, R^3O, R^3 groups and combinations thereof, or

a saturated or unsaturated branched or straight-chain C_6–C_{20} chain which is substituted by one to six phenyl groups which are unsubstituted or substituted singly or repeatedly, independently of one another, by moieties selected from the group consisting of R^3O_2C—, R^3O—, R^4 groups and combinations thereof,

each R^3 independently of one another, is a) a hydrogen atom or b) a phenyl radical or a straight-chain, branched or cyclic C_1–C_6 radical, which

(i) is interrupted by zero to two moieties selected from the group consisting of oxygen atoms, phenylene groups and combinations thereof,

(ii) is substituted with moieties selected from the group consisting of zero to three HO radicals, zero to three HOOC radicals, zero to two phenyl radicals, and combinations thereof,

each R^4 independently of one another, is a phenyl radical or a straight-chain, branched or cyclic C_1–C_6 radical, which is interrupted by zero to two moieties selected from the group consisting of oxygen atoms, phenylene groups and combinations thereof, and is substituted with moieties selected from the group consisting of zero to three HO radicals, zero to three HOOC radicals, zero to two phenyl radicals and combinations thereof,

in which free carboxylic acid groups not used for complexing of the compounds of general formula I according to the invention are optionally present in the form of their salts with physiologically compatible inorganic cations, organic cations, or both.

1. An isolated recombinant cDNA molecule encoding a protein having serine protease inhibitory activity and having one or more NAP domains, wherein each NAP domain includes the sequence:

Cys-A1-Cys-A2-Cys-A3-Cys-A4-Cys-A5-Cys-A6-Cys-A7-Cys-A8-Cys-A9-Cys-A10 [FORMULA IV],

wherein

(a) A1 is an amino acid sequence of 7 to 8 amino acid residues;

(b) A2 is an amino acid sequence of 3 to 5 amino acid residues;

(c) A3 is an amino acid sequence of 3 amino acid residues;

(d) A4 is an amino acid sequence;

(e) A5 is an amino acid sequence of 3 to 4 amino acid residues;

(f) A6 is an amino acid sequence;

(g) A7 is an amino acid residue;

(h) A8 is an amino acid sequence of 10 to 12 amino acid residues;

(i) A9 is an amino acid sequence of 5 to 7 amino acid residues; and

(j) A10 is an amino acid sequence;

wherein each of A2, A4, A6 and A10 has an independently selected number of independently selected amino acid residues and each sequence is selected such that each NAP domain has in total less than about 120 amino acid residues.

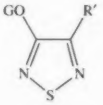
1. A process for preparing a compound of formula 1

1



wherein

R^1 is hydrogen, halogen, NR^6R^7, R^4, —OR^4, —SR^4, SOR^4, —SO_2R^4, C_{3-10}-cycloalkyl, C_{4-12}-(cycloalkylalkyl), —Z—C_{3-10}-cycloalkyl, —Z—C_{4-12}-(cycloalkylalkyl), —OR^5Y, —SR^5Y, —OR^5ZY, —SR^5ZY, —OR^5ZR^4, —SR^5ZR^4, phenyl or benzyloxycarbonyl, or phenyl or benzyloxycarbonyl substituted with one or more substituents independently selected from halogen, —CN, C_{1-4}-alkyl, C_{1-4}-alkoxy, —OCF_3, or —CF_3;

R^4 is C_{1-15}-alkyl, C_{2-15}-alkenyl, or C_{2-15}-alkynyl, each of which is optionally substituted with one or more substituents independently selected from halo, —CF_3, —CN, Y, phenyl or phenoxy, or phenyl or phenoxy substituted with one or more substituents independently selected from halo, —CN, C_{1-4}-alkyl, C_{1-4}-alkoxy, —OCF_3, or —CF_3;

Z is oxygen or sulphur;

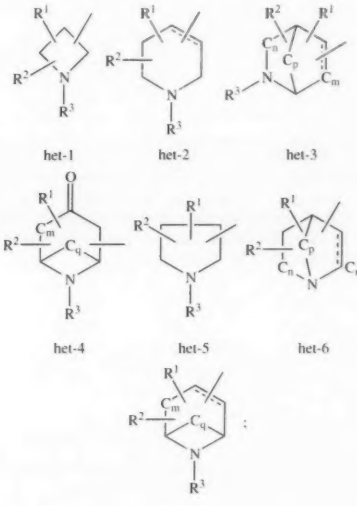
R^5 is C_{1-15}-alkylene, C_{2-15}-alkenylene, or C_{2-15}-alkynylene;

Y is a 5 or 6 membered heterocyclic group;

R^6 and R^7 independently are C_{1-6}-alkyl; or

R^6 and R^7 together with the nitrogen atom from a 4- to 6-membered ring;

G is an azacyclic or azabicyclic ring system selected from:



het-1 het-2 het-3

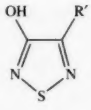
het-4 het-5 het-6

het-7

R^1 and R^2, independently, are hydrogen, C_{1-15}-alkyl, C_{2-5}-alkenyl, C_{2-5}-alkynyl, C_{1-10}-alkoxy, or C_{1-5}-alkyl substituted with one or more substituents independently selected from —COR^6, halo or phenyl;

$R^{6'}$ is hydrogen or C_1–C_3 alkyl;
R^3 is C_{1-5}-alkyl, C_{2-5}-alkenyl or C_{2-5}-alkynyl;
m, n, p and p, independently, are 0, 1 or 2;
q is 1 or 2; and
- - - is a single or double bond;
comprising contacting a compound of formula 2

2



wherein R' is as defined supra; with a compound of the formula G—OH, a phosphorous(III) compound, and a diester of azodicarboxylate.

Int. Cl.[7] C07D *473/18*

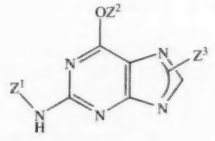
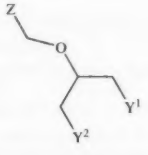
U.S. Cl. 544—276 **17 Claims**

1. A process for preparing the compound 2-(2-amino-1,6-dihydro-6-oxo-purin-9-yl)methoxy-3-hydroxy-1-propyl-L-valinate or a pharmaceutically acceptable salt or diastereomers thereof, comprising:

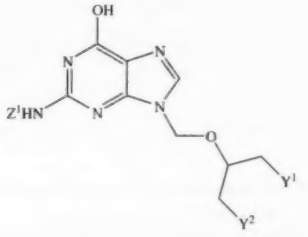
(a) condensing a guanine derivative of Formula (II)



wherein the solid curved line between the two nitrogens of the imidazole ring together with Z^3 indicate a mixture of N-7 and N-9 isomers, Z^1, Z^2, and Z^3 are independently hydrogen or a silyl group of the formula $—SiR^5R^6R^7$, provided that at least one of Z^1, Z^2 and Z^3 must be a silyl group, in which R^5, R^6, and R^7 are independently lower alkyl, or optionally, Z^1 may be an amino-protecting group selected from the group consisting of acyl of the formula R—C(O)—, wherein R is alkyl of 1–6 carbon atoms; trityl, optionally substituted with methoxy, and N-(9-fluorenylmethoxycarbonyl, with a glycerol derivative of Formula (III)

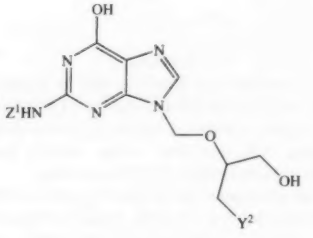


wherein Y^1 and Y^2 independently are aralkyloxy, or one of Y^1 and Y^2 is halo or acyloxy, wherein acyl is as defined above, and the other is aralkyloxy, and Z is a leaving group selected from acyloxy as defined above, benzoyloxy, halo, mesyloxy or tosyloxy, optionally in the presence of a catalyst, to produce a compound of Formula (IV)



wherein Z^1 is hydrogen or an amino-protecting group as defined above, and Y^1 and Y^2 are as defined above;

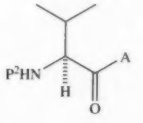
(b) deprotecting the compound of Formula (IV) by basic hydrolysis when one of Y^1 and Y^2 is halo or acyloxy as defined above, and the other is aralkyloxy, or by hydrogenolysis when both Y^1 and Y^2 are aralkyloxy, to a compound of Formula (V)

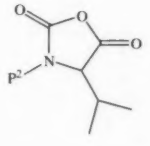


wherein Z^1 is as defined above, and Y^2 is aralkyloxy;

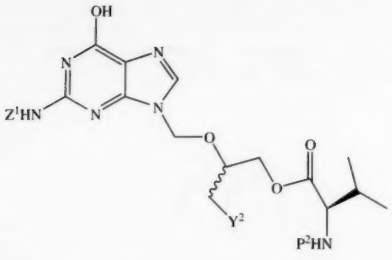
(c) optionally converting the compound of Formula (V) into an acid addition salt;

(d) esterifying the compound of Formula (V) with an activated protected derivative of L-valine of Formulae (VI) or (VIa)





wherein A is a carboxy-activating group, and P^2 is an amino-protecting group, to produce a monovalinate of Formula (VII)



wherein Z^1 is as defined above, P^2 is an amino-protecting group and Y^2 is aralkyloxy; and

(e) deprotecting the compound of Formula (VII) to 2-(2-amino-1,6-dihydro-6-oxo-purin-9-yl)methoxy-3-hydroxy-1-propyl-L-valinate or a pharmaceutically acceptable salt thereof; optionally followed by

(f) converting 2-(2-amino-1,6-dihydro-6-oxo-purin-9-yl)methoxy-3-hydroxy-1-propyl-L-valinate into a pharmaceutically acceptable salt thereof; or

(g) separating the 2-(2-amino-1,6-dihydro-6-oxo-purin-9-yl)methoxy-3-hydroxy-propyl-L-valinate into its (R) and (S) diastereomers.

PURINE COMPOUNDS HAVING PDE IV INHIBITORY ACTIVITY AND METHODS OF SYNTHESIS

David J. Cavalla, Cambridge, United Kingdom; Mark Chasin, Manalapan, N.J., and Peter Hofer, Liestal, Switzerland, assignors to Euro-Celtique S.A., Luxembourg

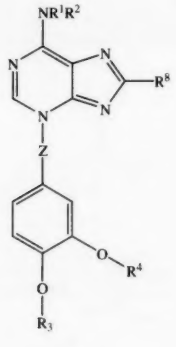
Provisional application No. 60/069,371, Dec. 12, 1997. This application Dec. 10, 1998, Appl. No. 209,922.

Int. Cl.[7] **C07D** *473/34;239/48;239/42*

U.S. Cl. 544—277 **12 Claims**

1. A method of forming a compound having the formula (I):

(I)



wherein:

Z is selected from the group consisting of CH_2, CH_2CH_2, $CH(CH_3)$, CH=CH, C≡C, NH, $N(C_1–C_3$ alkyl), O, S, $C(O)CH_2$ and OCH_2;

R^1 and R^2 are independently selected from the group consisting of hydrogen and a $C_1–C_8$ straight or branched alkyl or a $C_3–C_8$ cycloalkyl;

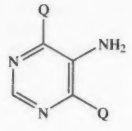
R^3 is a $C_1–C_{12}$ straight or branched alkyl;

R^4 is a $C_3–C_{10}$ cycloalkyl optionally substituted with OH, or a $C_3–C_{10}$ cycloalkenyl optionally substituted with OH; and

R^8 is a $C_1–C_8$ straight or branched alkyl or a $C_3–C_8$ cycloalkyl, optionally substituted with OH; said method comprising the steps of

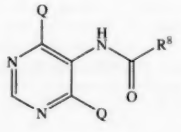
(a) reacting a compound of the formula (II)

(II)



wherein Q is a halogen, with an effective amount of a compound selected from the group consisting of an acid anhydride having an $R^8C(O)$ moiety or an acid halide having an $R^8C(O)$ moiety; to form a compound of the formula (III)

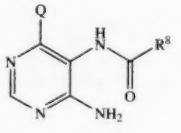
(III)



wherein Q and R^8 are as defined above;

(b) transforming the 6-halo group of said compound (III) to an amine by displacement with ammonia to form compound (IV)

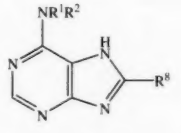
(IV)



wherein Q and R^8 are as defined above;

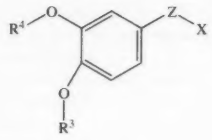
(c) reacting said compound (IV) with a base to cause cyclization to a 6-halo intermediate, said 6-halo group is then transformed to an amine by displacement with an amine group of the formula NR_1R_2, wherein R_1R_2 are as defined above, to form compound (V)

(V)



wherein R^1, R^2 and R^8 are as defined above;

(d) reacting said compound (V) with an effective amount of compound (VI)



(VI)

where R^3 and R^4 are as defined above and X is a halogen; to form the compound of formula (I).

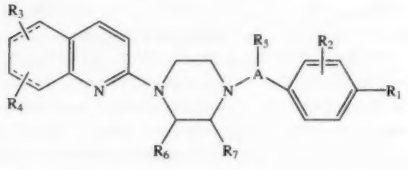
1. A compound of the formula:



or the pharmaceutically acceptable addition salts thereof, wherein:

R_1 and R_2 independently represent hydrogen, fluoro, chloro, bromo, C_2–C_6 alkyl, trifluoromethyl, trifluoromethoxy or SO_2NH_2, provided that at least one of R_1 and R_2 is not hydrogen;

R_3 and R_4 are the same or different and represent hydrogen, halogen, C_1–C_6 alkyl, C_1–C_4 alkoxy, alkylthio, hydroxy, amino, mono or dialkyl amino where each alkyl is C_1–C_6 alkyl, cyano or trifluoromethyl; and

R_5, R_6, and R_7 are the same or different and represent hydrogen or C_1–C_6 alkyl.

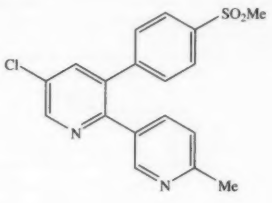
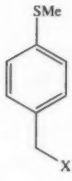
16. A process for making a compound of formula II

II



comprising reacting a compound of formula 12

12

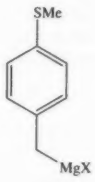


wherein

X is a halogen belonging to the group consisting of iodide, chloride, bromide and fluoride;

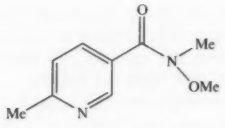
with magnesium in the presence of a solvent/co-solvent mixture to yield a compound of formula 13

13



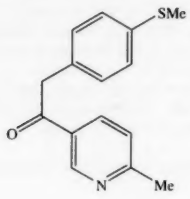
reacting the compound of formula 13 with a compound of formula 9a

9a



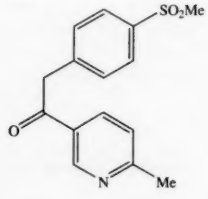
to yield a compound of formula 15a

15a



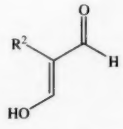
and oxidizing the compound of formula 15a using an oxidizing agent and optionally a catalyst under acid conditions to yield a compound of formula

5a

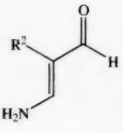


condensing a compound of formula A1 or A2

A1



A2



wherein

R^2 is F, Cl, Br, I, CN, or azide;

under acidic conditions, and optionally in the presence of a non-reactive solvent and in the presence of an ammonium reagent, with compound 5a to yield a compound of Formula II.

6,040,451

SUBSTITUTED INDOLES AND USES THEREOF

Yoon T. Jeon, Ridgewood, and Charles Gluchowski, Wayne, both of N.J., assignors to Synaptic Pharmaceutical Corporation, Paramus, N.J.

Continuation of application No. 08/926,316, Sep. 5, 1997, Pat. No. 5,948,804, which is a division of application No. 08/608,598, Feb. 29, 1996, Pat. No. 5,677,321. This application Jun. 30, 1999, Appl. No. 345,470.

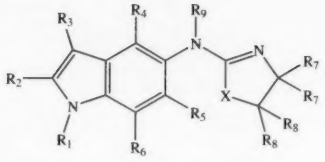
1. A compound having the structure:



wherein each of R_1, R_2 and R_3 is independently —H; straight chained or branched C_1–C_7 alkyl, monofluoroalkyl or polyfluoroalkyl; straight chained or branched C_2–C_7 alkenyl or alkynyl;

wherein each of R_4, R_5 and R_6 is independently —H, —F, —Cl, —Br, —I, —OH, —OR_7, —$OCOR_7$, —SR_7, —$N(R_7)_2$, —CN, —CO_2R_7, —$CON(R_7)2$, or —COR_7; straight chained or branched C_1–C_7 alkyl, monofluoroalkyl or polyfluoroalkyl; straight chained or branched C_2–C_7 alkenyl or alkynyl; C_3–C_7 cycloalkyl or cycloalkenyl; C_4–C_7 heterocycloalkyl or heteroaryl; phenyl, substituted phenyl or phenyl substituted C_1–C_4 alkyl wherein the substituted phenyl or phenyl substituted C_1–C_4 alkyl is substituted with —H, —F, —Cl, —Br, —I, —NO_2, —CN, straight chained or branched C_1–C_7 alkyl, straight chained or branched C_2–C_7 alkenyl or alkynyl, —NR_{10}, —OR_{10}, —COR_{10}, —CO_2R_{10}, or —$CON(R_{10})_2$;

wherein each R_7 is independently —H; —$N(R_{10})_2$, —$NR_{10}COR_{10}$, —$(CH_2)_nOR_{10}$, —SO_nR_{10}, —$SO_nN(R_{10})_2$, —$(CH_2)_nN(R_{10})_2$, or —$(CH_2)_nNR_{10}COR_{10}$; straight chained or branched C_1–C_7 alkyl; straight chained or branched C_2–C_7 alkenyl or alkynyl; phenyl, substituted phenyl or phenyl substituted C_1–C_4 alkyl wherein the substituted phenyl or phenyl substituted C_1–C_4 alkyl is substituted with —H, —F, —Cl, —Br, —I, —NO_2, —CN, straight chained or branched C_1–C_7 alkyl, straight chained or branched C_2–C_7 alkenyl or alkynyl, —NR_{10}, —OR_{10}, —COR^{10}, —CO_2R_{10}, or —$CON(R_{10})_2$;

wherein each n is independently an integer from 1 to 4;

wherein each R_8 is independently —H; straight chained or branched C_1–C_7 alkyl; straight chained or branched C_2–C_7 alkenyl or alkynyl; C_3–C_7 cycloalkyl or cycloalkenyl; phenyl, substituted phenyl or phenyl substituted C_1–C_4 alkyl wherein the substituted phenyl or phenyl substituted C_1–C_4 alkyl is substituted with —H, —F, —Cl, —Br, —I, —NO_2, —CN, straight chained or branched C_1–C_7 alkyl, straight chained or branched C_2–C_7 alkenyl or alkynyl, —NR_{10}, —OR_{10}, —COR_{10}, —CO_2R_{10}, or —$CON(R_{10})_2$;

wherein R_9 is independently —H; straight chained or branched C_1–C_7 alkyl; straight chained or branched C_2–C_7 alkenyl or alkynyl; C_3–C_7 cycloalkyl or cycloalkenyl; C_4–C_7 heterocycloalkyl or heteroaryl; phenyl, substituted phenyl or phenyl substituted C_1–C_4 alkyl wherein the substituted phenyl or phenyl substituted C_1–C_4 alkyl is substituted with —H, —F, —Cl, —Br, —I, —NO_2, —CN, straight chained or branched C_1–C_7 alkyl, straight chained or branched C_2–C_7 alkenyl or alkynyl, —NR_{10}, —OR_{10}, —COR_{10}, —CO_2R_{10}, or —$CON(R_{10})_2$;

wherein each R_{10} is independently —H; straight chained or branched C_1–C_7 alkyl; straight chained or branched C_2–C_7 alkenyl or alkynyl; and

wherein X is independently CH_2, O, NH or S; or

a pharmaceutically acceptable salt thereof.

ONE-POT PROCESS FOR THE PREPARATION OF 5-SULFONYL-SUBSTITUTED BENZOTRIAZOLES UV ABSORBERS

Mervin G. Wood, Poughquag, N.Y.; William Wiggins, Mobile, Ala.; Catherine Blake, Saraland, Ala.; Albert Carpenter, Mobile, Ala., and Wha Chen, Freemont, Calif., assignors to Ciba Specialty Chemicals Corporation, Tarrytown, N.Y.

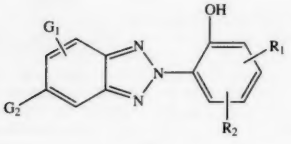
Filed Jan. 21, 1999, Appl. No. 234,879

Int. Cl.[7] **C07D** *249/20*

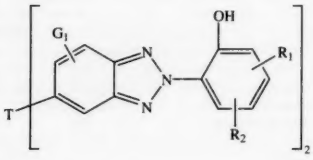
U.S. Cl. 548—259 **18 Claims**

1. A one-pot, two-step process for the preparation of a compound of formula A, B, C or D

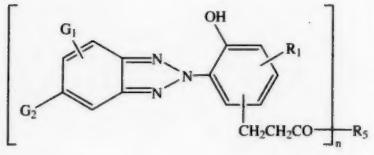
(A)



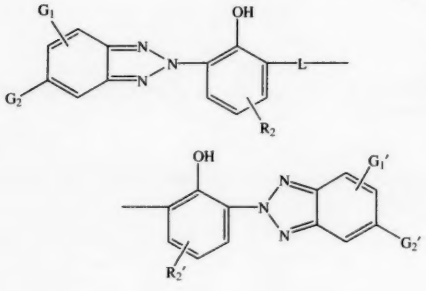
(B)



(C)



(D)



wherein

G_1, G_1', G_2 and G_2' are independently hydrogen, halogen, nitro, cyano, R_3SO—, R_3SO_2—, —$COOG_3$, perfluoroalkyl of 1 to 12 carbon atoms, —CO—G_3, —CO—NH—G_3 or —CO—$N(G_3)_2$,

G_3 is hydrogen, straight or branched chain alkyl of 1 to 24 carbon atoms, straight of branched chain alkenyl of 2 to 18 carbon atoms, cycloalkyl of 5 to 12 carbon atoms, phenylalkyl of 7 to 15 carbon atoms, phenyl, or said phenyl or said phenylalkyl substituted on the phenyl ring by 1 to 4 alkyl of 1 to 4 carbon atoms,

with the proviso that at least one of G_1, G_1', G_2 and G_2' is R_3SO_2,

R_1 is hydrogen, straight or branched chain alkyl of 1 to 24 carbon atoms, straight of branched chain alkenyl of 2 to 18 carbon atoms, cycloalkyl of 5 to 12 carbon atoms, phenylalkyl of 7 to 15 carbon atoms, phenyl, or said phenyl or said phenylalkyl substituted on the phenyl ring by 1 to 4 alkyl of 1 to 4 carbon atoms,

R_2 and R_2' are independently straight or branched alkyl chain of 1 to 24 carbon atoms, straight or branched chain alkenyl of 2 to 18 carbon atoms, cycloalkyl of 5 to 12 carbon atoms, phenylalkyl of 7 to 15 carbon atoms, phenyl, or said phenyl or said phenylalkyl substituted on the phenyl ring by 1 to 3 alkyl of 1 to 4 carbon atoms; or R_2 is hydroxyl or —OR_4 where R_4 is straight or branched chain alkyl of 1 to 24 carbon atoms; or said alkyl substituted by one or more —OH, —OCO—R_{11}, —OR_4, —NCO, —NH_2 or —$N(R_4)_2$ groups or mixtures thereof; or said alkyl or said alkenyl interrupted by one or more —O—, —NH— or —NR_4— groups or mixtures thereof and which can be unsubstituted or substituted by one or more —OH, —OR_4 or —NH_2 groups or

wherein

X is —O—or —$N(R_{16})$—,

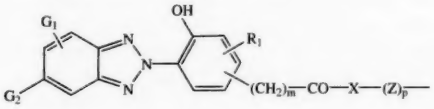
Y is —O—or —$N(R_{17})$—,

Z is C_2–C_{12}-alkylene, C_4–C_{12}-alkylene interrupted by one to three nitrogen atoms, oxygen atoms or a mixture thereof, or is C_3–C_{12}-alkylene, butenylene, butynylene, cyclohexylene or phenylene, each substituted by a hydroxyl group,

m is zero, 1 or 2,

p is 1, or p is also zero when X and Y are —$N(R_{16})$— and —$N(R_{17})$—, respectively,

R_{15} is a group —CO—$C(R_{18})$=C(H)R_{19} or, when Y is —$N(R_{17})$—, forms together with R_{17} a group —CO—CH=CH—CO—, wherein R_{18} is hydrogen or methyl, and R_{19} is hydrogen, methyl or —CO—X—R_{20}, wherein R_{20} is hydrogen, C_1–C_{12}-alkyl or a group of the formula,



wherein the symbols R_1, X, Z, m and p have the meanings defined above, and R_{16} and R_{17} independently of one another are hydrogen, C_1–C_{12}-alkyl, C_3–C_{12}-alkyl interrupted by 1 to 3 oxygen atoms, or is cyclohexyl or C_7–C_{15}aralkyl, and R_{16} together with R_{17} in the case where Z is ethylene, also forms ethylene,

n is 1 or 2,

when n is 1, R_5 is Cl, OR_6 or NR_7R_8, or

R_5 is —$PO(OR_{12})_2$, —$OSi(R_{11})_3$ or —OCO—R_{11}, or straight or branched chain C_1–C_{24}alkyl which is interrupted by —O—, —S— or —NR_{11} and which can be unsubstituted or substituted by —OH or —OCO—R_{11}, C_5–C_{12} cycloalkyl which is unsubstituted or substituted by —OH, straight chain or branched C_2–C_{18}alkenyl which is unsubstituted or substituted by —OH, C_7–C_{15}aralkyl, —CH_2—CHOH—R_{13} or glycidyl,

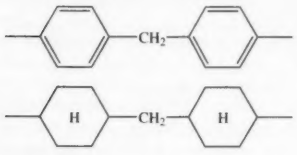
R_6 is hydrogen, straight or branched chain C_1–C_{24}alkyl which is unsubstituted or substituted by one or more OH, OR_4 or NH_2 groups, or —OR_6 is —$(OCH_2CH_2)_wOH$ or —$(OCH_2CH_2)_wOR_{21}$ where w is 1 to 12 and R_{21} is alkyl of 1 to 12 carbon atoms,

R_7 and R_8 are independently hydrogen, alkyl of 1 to 18 carbon atoms, straight or branched chain C_3–C_{18}alkyl which is interrupted by —O—, —S— or —NR_{11}—, C_5–C_{12}cycloalkyl, C_6–C_{14}aryl or C_1–C_3hydroxylalkyl, or R_7 and R_8 together with the N atom are a pyrrolidine, piperidine, piperazine or morpholine ring,

when n is 2, R_5 is one of divalent radicals —O—R_9—O— or —$N(R_{11})$—R_{10}—$N(R_{11})$—,

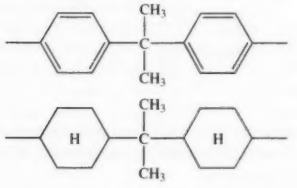
R_9 is C_2–C_8alkylene, C_4–C_8alkenylene, C_4alkynylene, cyclohexylene, straight or branched chain C_4–C_{10}alkylene which is interrupted by —O— or by —CH_2—CHOH—CH_2—O—R_{14}—O—CH_2—CHOH—CH_2—,

R_{10} being straight or branched chain C_2–C_{12}alkylene which may be interrupted by —O—, cyclohexylene, or



or R_{10} and R_{11} with the two nitrogen atoms form a piperazine ring,

R_{14} is straight or branched chain C_2–C_8alkylene, straight or branched chain C_4–C_{10}alkylene which is interrupted by —O—, cycloalkylene, arylene or



where R_7 and R_8 are independently hydrogen, alkyl of 1 to 18 carbon atoms or R_7 and R_8 together are alkylene of 4 to 6 carbon atoms, 3-oxapentamethylene, 3-iminopentamethylene or 3-methyliminopentamethylene,

R_{11} is hydrogen, straight or branched chain C_1–C_{18}alkyl, C_5–C_{12}cycloalkyl, straight or branched chain C_3–C_8alkenyl, C_6–C_{14}aryl or C_7–C_{15}aralkyl,

R_{12} is straight or branched chain C_1–C_{18}alkyl, straight or branched chain C_3–C_{18}alkenyl, C_5–C_{10}cycloalkyl, C_6–C_{16}aryl or C_7–C_{15}aralkyl,

R_{13} is H, straight chain or branched C_1–C_{18}alkyl which is substituted by $—PO(OR_{12})_2$, phenyl which is unsubstituted or substituted by OH, C_7–C_{15}aralkyl or $—CH_2OR_{12}$,

L is alkylene of 1 to 12 carbon atoms, alkylidene of 2 to 12 carbon atoms, benzylidene, p-xylylene, α,α,α',α'-tetramethyl-m-xylylene or cycloalkylidene, and

T is —SO—, $—SO_2—$, —SO—E—SO—, —SO—E—SO_2— or $—SO_2—E—SO_2—$,

where E is alkylene of 2 to 12 carbon atoms, cycloalkylene of 5 to 12 carbon atoms, or alkylene interrupted or terminated by cyclohexylene of 8 to 12 carbon atoms,

which comprises

reacting in a first step a compound corresponding to formula A, B, C or D wherein

at least one of G_1, G_1', G_2 or G_2' is halogen,

with an aliphatic, phenylalkyl or aromatic mercaptan of the formula

R_3SH or R_3SM

wherein

R_3 is alkyl of 1 to 20 carbon atoms, $—(CH_2)_xCOOG_3$ where x is 1 to 18, hydroxyalkyl of 2 to 20 carbon atoms, alkenyl of 3 to 18 carbon atoms, cycloalkyl of 5 to 12 carbon atoms, phenylalkyl of 7 to 15 carbon atoms, aryl of 6 to 10 carbon atoms or said aryl substituted by one or two alkyl of 1 to 4 carbon atoms or 1,1,2,2-tetrahydroperfluoroalkyl where the perfluoroalkyl moiety is of 6 to 16 carbon atoms, and

M is an alkali metal or an alkaline earth metal salt of said mercaptan,

in an aprotic solvent at a temperature between 30 and 180° C. in the presence of an alkali metal or alkaline earth metal oxide, carbonate or hydroxide or an aminic compound to form, but not isolate, the compound corresponding to formula A, B, C or D wherein

at least one of G_1,G_1', G_2 or G_2' is $R_3S—$

and, in a second step,

oxidizing said R_3S-substituted compound in an inert solvent at a temperature between 30 and 150° C. using 10% to 70% hydrogen peroxide and a catalyst selected from the oxides of Group VA and VIA metals of the periodic table in the presence of formic acid to give the desired R_3SO_2-substituted compound of formula A, B, C or D.

HIGH PRODUCTIVITY PROCESS TO PRODUCE MALEIC ANHYDRIDE FROM N-BUTANE

Aldo Bertola, Milan, and Salvatore Cassarino, Rome, both of Italy, assignors to Pantochim S.A., Feluy, Belgium

Filed Jun. 22, 1999, Appl. No. 337,542

Claims priority, application Belgium, Jun. 23, 1998, 09800475

Int. Cl.[7] **C07D** *307/36*

U.S. Cl. 549—262 **32 Claims**

1. A process for the production of maleic anhydride by the oxidation of n-butane with molecular oxygen or a molecular oxygen containing gas in the vapor phase at a temperature of about 300° C. to 550° C. in the presence of a suitable phosphorous-vanadium mixed oxide catalyst, with or without modifying components, comprising the steps of:

a) Preparing a reaction mixture comprising oxygen, butane, carbon dioxide and a recycle gaseous stream, wherein the oxygen concentration in the reaction mixture ranges from 5 to 16% by volume, the butane concentration in the reaction mixture ranges from 2 to 20% by volume, the carbon dioxide concentration in the reaction mixture does not exceed 60% by volume and is in a molar ratio to carbon monoxide of at least 1.5 to 1.0,

b) Feeding the reaction mixture to an inlet of an oxidation reactor operating at an inlet pressure in the range of 2.03 to 6.03 bar where a suitable V.P.O. catalyst causes a portion of the butane to react to produce maleic anhydride,

c) Cooling the reaction gases comprising oxygen, non-converted butane, organic by-products, carbon dioxide, carbon monoxide, water steam and maleic anhydride produced,

d) Recovering the maleic anhydride by absorption in a solvent in a maleic anhydride absorber, operating the absorption at an outlet pressure ranging from 1.21 to 4.5 bar, to form a stream comprising recovered maleic anhydride and a stream comprising recycling exhaust gases,

e) Water scrubbing the recycling exhaust gases after removal of maleic anhydride, so as to eliminate all organics present, except butane,

f) Compressing the recycling exhaust gases after the water scrubbing to the pressure of reaction,

g) Separating the compressed recycling exhaust gases to form a first fraction and a second fraction, purging said first fraction of the compressed recycling exhaust gases to avoid accumulation of inerts and of carbon oxides, said recycle gaseous stream comprising said second fraction, and optionally

h) Washing said purge of the compressed recycling exhaust gases with the solvent referred to at step d), to remove by absorption a large fraction of the butane contained in said purge gas stream, the absorbed butane being then desorbed in the maleic anhydride absorber and recovered in the recycling exhaust gases after the removal of maleic anhydride in the maleic anhydride absorber.

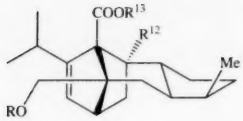
1. A compound having the formula I:

I



wherein

R is

(a) $C(=O)OR^1$,

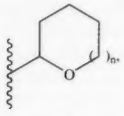
(b) $C(=O)NR^2R^3$,

(c) $C(=O)R^4$,

(d) $CH(R^2)OR^5$,

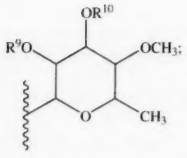
(e) $C(R^6)(R^7)(R^8)$,

(f)



or

(g)



with the proviso that when R^{12} is CHO, R is not (g);

R^1 is

(a) C_1–C_{14} alkyl,

(b) C_2–C_{14} alkenyl,

(c) C_2–C_{14} alkynyl,

(d) C_3–C_{20} cycloalkyl,

(e) C_3–C_{20} cycloalkenyl,

(f) aryl or

(g) aryl C_{1-6} alkyl;

R^2 and R^3 are independently

(a) H or

(b) R^1;

R^4 is

(a) H,

(b) R^1 or

(c) $-(CH_2)_mNR^2R^3$;

R^5 is

(a) R^1 or

(b) $-(CH_2)_xO(CH_2)_yH$;

R^6 is

(a) H,

(b) R^1,

(c) $-(CH_2)_xCHR_{11}(CH_2)_zH$,

(d) $-(CH_2)_xC{\equiv}C(CH_2)_zH$,

(e) $-(CH_2)_xC(R^7){=}CH(CH_2)_zH$,

(f) $-(CH_2)_xC{\equiv}C(CH_2)_mR^{11}$,

(g) $-(CH_2)_xC(R^7){=}CH(CH_2)_mR^{11}$,

R^7 and R^8 are independently

(a) H, or

(b) C_1–C_{14} alkyl;

R^9 and R10 are independently

(a) H,

(a) C_1–C_{14} alkyl,

(a) C_2–C_{14} alkenyl,

(a) aryl C_{1-6} alkyl;

R^{11} is

(a) OR^7,

(b) $OCH_2CH_2(CH_2)_nOR^7$, or

(c) NR^2R^3;

R^{12} is

(a) $-C(=O)R^{14}$,

(b) —CH=NOH, or

(c) $-CH_2OCH_3$;

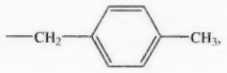
R^{13} is

(a) H,

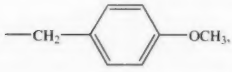
(b) $-CH_2C_6H_5$,

(c) $-CH_2CH{=}CH_2$,

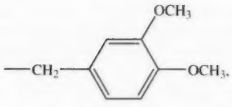
(d)



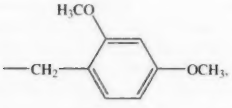
(e)



(f)

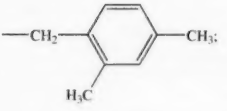


(g)



or

(h)



R^{14} is

(a) H,

(b) C_1–C_4 alkyl,

(c) $-CCl_3$,

(d) $-CBr_3$,

(e) $-CF_3$, or

(f) OH;

n is 0 or 1;

m is 1–6;

x is 2–6;

y is 0–6;

z is 0–6 or

a pharmaceutically or agriculturally acceptable salt thereof.

TAXOIDS, THEIR PREPARATION AND PHARMACEUTICAL COMPOSITIONS CONTAINING THEM

Hervé Bouchard, Thiais; Jean-Dominique Bourzat, Vincennes, and Alain Commerçon, Vitry-sur-Seine, all of France, assignors to Rhone Poulenc Rorer SA, Antony, France

Continuation-in-part of application No. 08/913,972, Sep. 26, 1997, and a continuation of application No. PCT/FR96/00441, Mar. 25, 1996. This application Mar. 17, 1999, Appl. No. 271,300.

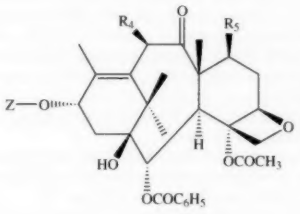
This patent is subject to a terminal disclaimer.

Int. Cl.[7] C07D *305/14*

U.S. Cl. 549—510 **12 Claims**

1. A taxoid of general formula:

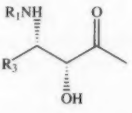
(I)



in which:

Z represents a hydrogen atom or a radical of general formula:

(II)



in which:

R_1 represents a benzoyl radical unsubstituted or substituted with one or more identical or different atoms or radicals selected from halogen atoms, and alkyl radicals containing 1 to 4 carbon atoms, alkoxy radicals containing 1 to 4 carbon atoms or trifluoromethyl radicals, a thenoyl radical, a furoyl radical, and a radical R_2—O—C(=O)— in which

R_2 represents an alkyl radical containing 1 to 8 carbon atoms, an alkenyl radical containing 2 to 8 carbon atoms, an alkynyl radical containing 3 to 8 carbon atoms, a cycloalkyl radical containing 3 to 6 carbon atoms, a cycloalkenyl radical containing 4 to 6 carbon atoms, a phenyl radical, which is unsubstituted or substituted with one or more atoms or radicals selected from halogen atoms, alkyl radicals containing 1 to 4 carbon atoms, and alkoxy radicals containing 1 to 4 carbon atoms, cyano radicals, carboxyl radicals, and alkoxycarbonyl radicals in which the alkyl portion contains 1 to 4 carbon atoms;

a phenyl or an α- or β-naphthyl radical, which is unsubstituted or substituted with one or more atoms or radicals selected from halogen atoms, alkyl radicals containing 1 to 4 carbon atoms, alkoxy radicals containing 1 to 4 carbon atoms, and a 5-membered aromatic heterocyclic radical;

R_3 represents a phenyl radical;

R_4 represents an alkanoyloxy radical in which the alkanoyl portion contains 2 to 6 carbon atoms in an unbranched or branched chain, this radical unsubstituted or substituted with one or more halogen atoms, or with an alkoxy radical containing 1 to 4 carbon atoms, or alternatively, R_4 represents a cycloalkanoyloxy radical in which the cycloalkanoyl portion contains 4 to 8 carbon atoms, or alternatively, R_4 represents a benzoyloxy radical;

R_5 represents an alkoxy radical containing 1 to 4 carbon atoms in an unbranched or branched chain, substituted by an alkylthio radical containing 1 to 4 carbon atoms.

HIGH PURITY OXYGEN FOR ETHYLENE OXIDE PRODUCTION

Vasilis Papavassiliou, Kent; Matthew Lincoln Wagner, White Plains, both of N.Y., and Roger William Day, Southbury, Conn., assignors to Praxair Technology, Inc., Danbury, Conn.

Filed Jul. 24, 1997, Appl. No. 899,706

Int. Cl.[7] C07D *301/10;301/03*

U.S. Cl. 549—534 **8 Claims**

1. A method for enhancing the yield of ethylene oxide by reducing the presence of argon during ethylene oxide production, said method comprises

a) combining ethylene, high purity gas containing at least 99.5% oxygen and a ballast gas with a recycle gas to form a gaseous reaction mixture;

b) feeding said reaction mixture into a catalyst filled reactor such that an effluent emerges therefrom;

c) passing at least a portion of said effluent from said reactor to a recovery unit to selectively remove ethylene oxide, thereby forming an ethylene oxide depleted gas stream;

d) passing at least a portion of the ethylene oxide depleted gas stream to a stripping unit to selectively remove carbon dioxide therefrom;

e) passing at least a portion of the carbon dioxide depleted gas stream to purge and the remaining portion to recycle as a recycle gas;

f) recompressing the recycle gas; and

g) adjusting the flow of the purge stream to effectively reduce the concentration of argon.

METHOD OF PREPARING 16α, 17α-DIALKYLATED STEROIDS

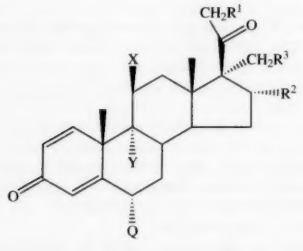
Raymond E. Conrow, Crowley, Tex., assignor to Alcon Laboratories, Inc., Fort Worth, Tex.

Provisional application No. 60/067,148, Dec. 2, 1997. This application Nov. 5, 1998, Appl. No. 186,975.

Int. Cl.[7] C07J *9/00;5/00;7/00;7/00;71/00*

U.S. Cl. 552—543 **9 Claims**

1. A method of preparing a 16α, 17α-dialkylated steroid of the formula



wherein R^1 is H or CHR^4R^5;

R^2 is C_1–C_4 alkyl;

R^3 is H, C_1–C_3 alkyl, C≡CH, CH=CH_2, or phenyl;

X is $OSiR^7R^8R^9$ or OC(=O)R^6;

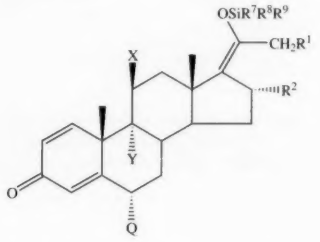
Y is H, F, or Cl; or X and Y taken together are a covalent bonds; or X and Y taken together form an epoxide group;

R^4, R^5 and R^6 are independently H or C_1–C_4 alkyl;

R^7, R^8 and R^9 are independently C_1–C_4 alkyl; and

Q is H or CH_3;

comprising reacting in a solvent an enol silyl ether of the formula



with an enol silyl ether cleaving agent and an alkylating agent of the formula R^3CH_2Z

wherein

R^3 is selected from the group consisting of hydrogen, a primary alkyl group of up to three carbon atoms total, an ethenyl group, an ethynyl group, and a phenyl group; and

Z is Cl, Br or I.

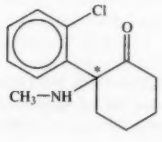
1. Process for the resolution of racemic 2-(o-chlorophenyl)-2-methylaminocyclohexanone of the formula:



wherein * is an asymmetric carbon atom, which comprises the following steps:

1) reaction of racemic 2-(o-chlorophenyl)-2-methylaminocyclohexanone with an enantiomeric form of tartaric acid,

2) isolation of the formed tartaric acid salt of 2-(o-chlorophenyl)- 2-methylaminocyclohexanone and

3) reaction of the isolated tartaric acid salt of 2-(o-chlorophenyl)- 2-methylaminocyclohexanone with an alkali, whereby an isomer of 2-(o-chlorophenyl)-2-methylaminocyclohexanone can be isolated,

wherein steps 1 and 2 are carried out in water or in a mixture of water and an alcohol and/or ketone, ether or ester.

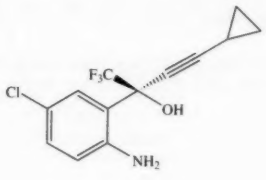
U.S. Cl. 564—390 **3 Claims**

1. A process for the preparation of an amino alcohol compound of formula (V-i):

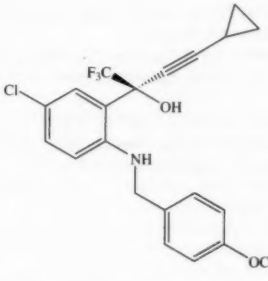
(V-i)



comprising

(1) adding a toluene solution of 2,3-dichloro-5,6-dicyano-1,4-benzoquinone to a toluene solution of a compound of formula (III-i):

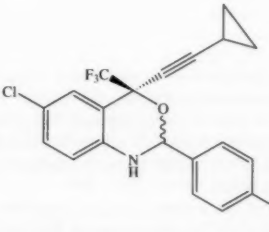
(III-i)



while maintaining a reaction temperature of about 0° C. to about 10° C.;

(2) maintaining the reaction temperature at about 0° C. for about 1 hour to form a toluene slurry of 2,3-dichloro-5,6-dicyano-1,4-dihydroxybenzene and a compound of formula (IV-i):

(IV-i)



(3) filtering the slurry to remove the 2,3-dichloro-5,6-dicyano-1,4-dihydroxybenzene;

(4) washing the 2,3-dichloro-5,6-dicyano-1,4-dihydroxybenzene waste cake with toluene;

(5) combining the filtrate and toluene washings;

(6) concentrating in vacuo the filtrate and toluene solution of the compound of formula (IV-i) with methanol to remove most of the toluene;

(7) adding dropwise to the compound of formula (IV-i) in methanol at a temperature of about 40° C. to about 45° C. an aqueous solution of sodium hydroxide forming a clear solution of the amino alcohol and p-methoxy-benzaldehyde;

(8) adding dropwise to the clear solution of the amino alcohol a solution of $NaBH_4$ in an aqueous solution of sodium hydroxide maintaining a reaction temperature of about 40° C. to about 45° C.;

(9) stirring the reaction mixture for about 30 minutes;

(10) neutralizing the reaction with glacial acetic acid to a pH of about 8 to about 9;

(11) adding water to form a slurry;

(12) cooling the slurry to about −15° C. to about 0° C. for about 1 hour; and

(13) filtering the cooled slurry of the amino alcohol and washing with water to give the crude crystalline amino alcohol as a pale yellow solid.

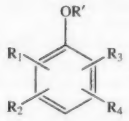
1. A process for hydroxylating a phenolic compound with hydrogen peroxide through a hydroxylation reaction, comprising the step of carrying out said hydroxylation reaction in the presence of an effective quantity of a catalyst to catalyze said hydroxylation reaction comprising a triflate of a rare earth element, of scandium or of bismuth, wherein the phenolic compound corresponds to the general formula (I):

(I)



wherein:

R' represents a hydrogen atom, a saturated or unsaturated linear or branched acyclic or aliphatic hydrocarbon radical having 1 to 24 carbon atoms, a saturated or unsaturated monocyclic or polycyclic cycloaliphatic radical, or a saturated or unsaturated linear or branched aliphatic radical bearing a cyclic substituent, and

R_1, R_2, R_3 and R_4, are identical or different, and represent:

a hydrogen atom,

a linear or branched alkyl radical having 1 to 6 carbon atoms,

a linear or branched alkenyl radical having 2 to 6 carbon atoms,

a linear or branched alkoxy radical having 1 to 6 carbon atoms,

an acyl group having 2 to 6 carbon atoms, or

a radical having the formula:

R_5—OH,

R_5—$COOR_6$,

R_5—X, or

R_5—CF_3,

wherein R_5 represents a valency bond or a linear or branched, saturated or unsaturated divalent hydrocarbon radical having 1 to 6 carbon atoms; R_6 represents a hydrogen atom or a linear or branched alkyl radical having 1 to 6 carbon atoms;

x represents a halogen atom, optionally, two groups R_1 and R_2 and R_3 and R_4 placed on two vicinal carbon atoms, together and with the carbon atoms bearing them, form a benzene ring.

U.S. Cl. 800—288 **63 Claims**

1. A fertile transgenic maize plant comprising a chromosomally integrated expression cassette comprising (i) a modified maize EPSPS gene encoding an EPSPS protein having isoleucine at position 102 and serine at position 106 and (ii) a promoter active in maize operably linked to said EPSPS gene, wherein the yield of said fertile transgenic maize plant is not affected by a glyphosate application rate that affects the yield of a maize plant lacking said modified maize gene, wherein said fertile transgenic maize plant comprises a transformation event selected from the group consisting of GA21, seed comprising said GA21 transformation event having been deposited as ATCC Accession Number 209033, FI117, seed comprising said FI117 transformation event having been deposited as ATCC Accession Number 209031, GG25, seed comprising said GG25 transformation event having been deposited as ATCC Accession Number 209032, and GJ11, seed comprising said GJ11 transformation event having been deposited as ATCC Accession Number 209030.

11. A method of preparing a fertile transgenic maize plant comprising:

(i) providing an expression cassette comprising (a) a modified maize EPSPS gene encoding an EPSPS protein having isoleucine at position 102 and serine at position 106 and (b) a promoter active in maize operably linked to said EPSPS gene;

(ii) contacting recipient maize cells with said expression cassette under conditions permitting the uptake of said expression cassette by said recipient cells;

(iii) selecting recipient cells comprising a chromosomally incorporated expression cassette;

(iv) regenerating plants from said selected cells; and

(v) identifying a fertile transgenic maize plant, the yield of which is not affected by a glyphosate application rate that affects the yield of a maize plant lacking said modified maize gene,

wherein said fertile transgenic maize plant comprises a transformation event selected from the group consisting of GA21, seed comprising said GA21 transformation event having been deposited as ATCC Accession Number 209033, FI117, seed comprising said FI117 transformation event having been deposited as ATCC Accession Number 209031, GG25, seed comprising said GG25 transformation event having been deposited as ATCC Accession Number 209032, and GJ11, seed comprising said GJ11 transformation event having been deposited as ATCC Accession Number 209030.

GENETICALLY ENGINEERED DUCKWEED

Anne-Marie Stomp, and Nirmala Rajbhandari, both of Raleigh, N.C., assignors to North Caroline State University, Raleigh, N.C.

Provisional application No. 60/055,474, Aug. 12, 1997. This application Aug. 11, 1998, Appl. No. 132,536.

Int. Cl.[7] **C12N** *5/04;15/82;15/84;* **A01H** *1/00*

U.S. Cl. 800—294 **65 Claims**

1. A method for stably transforming duckweed tissue with a nucleotide sequence of interest, the method comprising the steps of:

(a) inoculating a duckweed plant tissue with Agrobacterium comprising a vector which comprises a nucleotide sequence of interest; and

(b) co-cultivating the tissue with the Agrobacterium to produce stably transformed tissue.

SOYBEAN CULTIVAR 943347632294

Craig K. Moots, Taylorville, Ill., assignor to Monsanto Corporation, St. Louis, Mo.

Filed Mar. 25, 1998, Appl. No. 47,501

Int. Cl.[7] **A01H** *5/00;5/10;1/02;* **C12N** *5/04*

U.S. Cl. 800—312 **11 Claims**

1. A soybean seed designated 943347632294 and having ATCC Accession No. 203595.

6,040,500

SOYBEAN CULTIVAR CX433RR

Michael P. Conway, Plainfield, Ind., assignor to Dekalb Genetics Corporation, DeKalb, Ill.

Filed Jan. 15, 1999, Appl. No. 231,246

Int. Cl.[7] **A01H** *5/00;5/10;1/04;* **C12N** *5/04*

U.S. Cl. 800—312 **19 Claims**

1. Soybean seed designated CX433RR, wherein a sample of said seed has been deposited under accession number PTA-715.

6,040,501

SOYBEAN CULTIVAR B630518RR

Howard L. Gabe, Uberlândia-MG, Brazil, assignor to Novartis AG, Basel, Switzerland

Filed Feb. 12, 1999, Appl. No. 249,125

Int. Cl.[7] **A01H** *5/00;5/10;1/02;* **C12N** *5/04*

U.S. Cl. 800—312 **29 Claims**

1. Seed of soybean cultivar B630518RR having been deposited under ATCC Accession No: 203822.

6,040,502

SOYBEAN CULTIVAR C405323

Kevin Threlkeld, Washington, Iowa, and Donald McClure, Melbourne, Canada, assignors to Novartis AG, Basel, Switzerland

Filed Feb. 15, 1999, Appl. No. 250,233

Int. Cl.[7] **A01H** *5/00;5/10;1/02;* **C12N** *5/04*

U.S. Cl. 800—312 **29 Claims**

1. Seed of soybean cultivar C405323 having been deposited under ATCC Accession No: 203824.

6,040,503

BEAN-NUT POPPING BEANS

Jeffrey D. Ehlers, Moreno Valley, and Mark H. Sterner, Riverside, both of Calif., assignors to Appropriate Engineering and Manufacturing, Riverside, Calif.

Filed Sep. 2, 1997, Appl. No. 921,490

Int. Cl.[7] **A01H** *5/00;5/10;1/04*

U.S. Cl. 800—313 **33 Claims**

1. A bean plant of the species *Phaseolus vulgaris* which exhibits the phenotypic characteristics of early maturity, bush type growth habit, synchronous fruiting, photoperiod insensitivity, and which produces a bean that pops at a moisture of about 5 to 12 percent.

6,040,504

COTTON PROMOTER

Douglas Rice, Durham; Nadine Carozzi, Raleigh, both of N.C.; David M. Anderson, Altadena, Calif.; Kanniah Rajasekaran, Sierra Madre, Calif.; Thirumale S. Rangan, Pasadena, Calif.; Richard Yenofsky, Arcadia, Calif., and Richard Lotstein, Durham, N.C., assignors to Novartis Finance Corporation, New York, N.Y.

Continuation of application No. 08/218,697, Mar. 28, 1994, which is a continuation of application No. 07/759,969, Sep. 16, 1991, abandoned, which is a continuation of application No. 07/274,452, Nov. 18, 1988, abandoned, which is a continuation-in-part of application No. 07/122,209, Nov. 18, 1987, abandoned. This application Feb. 10, 1998, Appl. No. 21,203.

Int. Cl.[7] **A01H** *5/00;* **C07H** *21/04;* **C12N** *1/21;5/14;15/82*

U.S. Cl. 800—314 **15 Claims**

1. An isolated DNA molecule comprising a nucleic acid fragment having the sequence of:

(a) the approximately 1 kb DNA fragment of genomic clone rbc-gY (ATCC Accession No. 40486) between the XbaI site and the translation start site of the coding region of the cotton small subunit ribulose biphosphate carboxylase gene; or

(b) the approximately 1 kb DNA fragment of genomic clone rbc-gX (ATCC Accession No. 40487) between the PstI site and the translation start site of the coding region of the ribulose biphosphate carboxylase gene.

HYBRID MAIZE PLANT AND SEED 38F70

Hartwig Josef Bernhard Wehrmann, Staufen, Germany, assignor to Pioneer Hi-Bred International, Inc., Des Moines, Iowa

Filed Mar. 6, 1998, Appl. No. 35,960

Int. Cl.[7] **A01H** *5/00;4/00;1/00;* **C12M** *5/04*

U.S. Cl. 800—320.1 **13 Claims**

1. Hybrid maize seed designated 38F70, representative seed of said hybrid 38F70 having been deposited under ATCC accession number PTA-336.

6,040,506

INBRED CORN LINE HX621

Thomas Hoegemeyer, Hooper, Nebr., assignor to Hoegemeyer Hybrid, Hooper, Nebr.

Filed Jan. 6, 1999, Appl. No. 226,011

Int. Cl.[7] **A01H** *5/00;4/00;1/04;5/10;* **C12N** *5/06*

U.S. Cl. 800—320.1 **28 Claims**

1. An inbred corn seed designated HX621, wherein a sample of said seed has been deposited under ATCC Accession No. PTA-968.

6,040,507

INBRED CORN LINE HX622

Thomas Hoegemeyer, Hooper, Nebr., assignor to Hoegemeyer Hybrid, Hooper, Nebr.

Filed Jan. 11, 1999, Appl. No. 227,892

Int. Cl.[7] **A01H** *5/00;5/10;1/04;4/00;* **C12N** *5/04*

U.S. Cl. 800—320.1 **28 Claims**

1. An inbred corn seed designated HX622, wherein a sample of said seed has been deposited under ATCC Accession No. PTA-967.

6,040,508

INBRED CORN PLANT 01HG12 AND SEEDS THEREOF

Michael A. Hall, Sycamore, Ill., assignor to Dekalb Genetics Corporation, DeKalb, Ill.

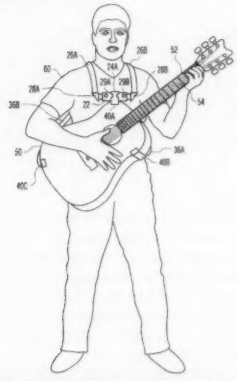
Filed Jan. 14, 1999, Appl. No. 229,522

Int. Cl.[7] **A01H** *5/00;4/00;1/00;* **C12N** *5/04*

U.S. Cl. 800—320.1 **43 Claims**

1. Inbred corn seed of the corn plant 01HGI2, a sample of said seed having been deposited under ATCC Accession No. 203926.

6,040,509
ERGONOMIC POSITIONING APPARATUS FOR GUITAR OR LIKE INSTRUMENTS
Keith Fanella, 40-21 Kuiken Ter., Fair Lawn, N.J. 07410
Filed Mar. 6, 1998, Appl. No. 36,506
Int. Cl.[7] G10D *3/00*
U.S. Cl. 84—280 **20 Claims**



1. An apparatus for the suspension of a string instrument on a body of a player while the player is standing, the string instrument having a main body and a neck extending from said main body, said apparatus comprising:

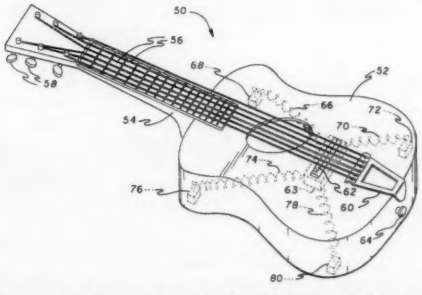
(a) a strap-connector assembly including:

i) a shoulder strap assembly for extending over a person's shoulders, and

ii) first, second and third release connectors secured to said shoulder strap assembly; and

(b) first, second and third attachment devices for attachment at different respective securing positions to said main body of said instrument, each of said attachment devices including a mating connector for connecting to a respective said release connector of said strap-connector assembly, and at least one of said attachment devices including an anchoring device for adjustably attaching the respective attachment device to said main body at any of a plurality of desired locations at the respective securing position such that said string instrument can be set at a desired orientation and angle relative to said player's body.

6,040,510
ACOUSTIC STRINGED INSTRUMENT ENHANCEMENT DEVICE
James S. Yaun, 115 Captain Lowman Rd., Chapin, S.C. 29036
Provisional application No. 60/046,305, May 13, 1997. This application Mar. 16, 1998, Appl. No. 39,183.
Int. Cl.[7] G10D *3/02*
U.S. Cl. 84—294 **13 Claims**



1. In combination: an acoustic stringed instrument enhancement device and a stringed instrument, the stringed instrument including a soundbox having a neck end, a shoulder strap attachment end, an upper sounding board having an inner surface, a lower sounding board having an inner surface, a bridge and a saddle disposed upon the upper sounding board, a sound hole extending through the upper sounding board, and a plurality of strings stretched over the saddle and above the sound hole, and said acoustic enhancement device comprising:

a vibration transmitting block affixed to the inner surface of the upper sounding board directly under and substantially parallel to the saddle;

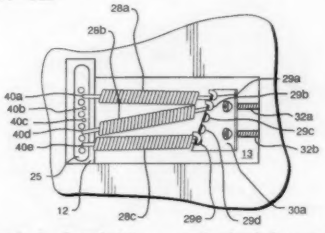
two bottom blocks affixed in spaced opposition on the inner surface of the lower sounding board at the neck end of the soundbox;

a first tensioned spring having an upper end removably attached to said vibration transmitting block, and having a lower end removably attached to one of said bottom blocks;

a second tensioned spring having an upper end removably attached to said vibration transmitting block, and having a lower end removably attached to the other of said bottom blocks; and,

wherein the two tensioned springs are disposed within the soundbox in a V-shaped configuration.

6,040,511
METHOD OF OPTIMIZING A GUITAR TREMOLO
Brian W. Hall, 52 Ann's La., Hampton, N.H. 03842
Filed Jan. 11, 1999, Appl. No. 228,912
Int. Cl.[7] G10D *3/00*
U.S. Cl. 84—313 **8 Claims**



1. A method of optimizing a spring-loaded tremolo device including a base plate having a bridge fulcrum, a block and a plurality of tremolo device tension springs biasing said tremolo device in an at rest position, said method substantially balancing uneven stresses applied to a stringed instrument system, such as a guitar, caused by differing instrument string tensions applied by a plurality of string tension tuners, said method comprising the steps of:

asymmetrically loading said tremolo device to counteract said uneven stresses applied to the instrument by said differing string tensions;

ensuring that said bridge fulcrum is substantially free to rotate;

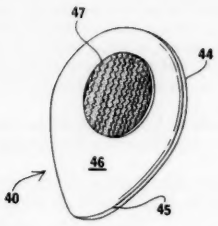
tuning said instrument to pitch by adjusting said instrument string tension using said string tension tuners;

cycling said tremolo device to stretch said tremolo tension springs to their maximum available length of travel and to return said tension springs back to a neutral position; and

re-tuning said instrument by adjusting said tremolo spring tension until instrument strings at opposite edges of said tremolo device provide their proper pitches.

6,040,512
GUITAR PICK WITH HOOK AND LOOP CLOSURE MATERIAL
Zackery Polley, 5671 Miles Ave., #D, Oakland, Calif. 94618
Filed Jun. 18, 1998, Appl. No. 99,478
Int. Cl.[7] G10D *3/16*
U.S. Cl. 84—322 **6 Claims**

1. A guitar pick, for use in playing a stringed instrument such as a guitar having a guitar body, comprising:



a gripping portion;

a picking portion, the gripping portion and pick portion having an overall teardrop shape, substantially thin and having two sides; and

hook closure material mounted on the gripping portion on one of the sides.

6,040,513

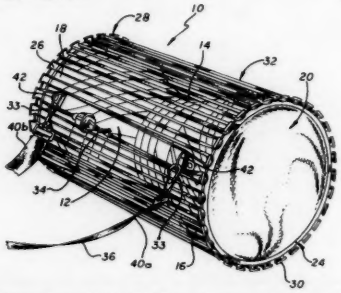
DRUM COUNTERHOOP

Remo D. Belli, Valencia, Calif., assignor to Remo, Inc., Valencia, Calif.

Filed Mar. 24, 1997, Appl. No. 823,357

Int. Cl.[7] G10D *13/02*

U.S. Cl. 84—411 R **2 Claims**



1. A drum for emitting different tones and pitches having in combination, a drum shell, a drum head attached to each end of the drumshell, first and second counterhoops, said first counterhoop for fitting over one of said drumheads and said second counterhoop for fitting over said other drum head, and each of said counterhoops provided with a plurality of spaced-apart arm members projecting from said first and second counterhoops, each of said arm members being T-shaped to prevent a cord in threaded engagement therewith from slipping off said arm member inadvertently and provided for receiving said cord in said threaded engagement back and forth with relative speed between the arm members and each of said counterhoops forming taut cord strands in generally parallel relation to each other around and spaced apart from the drumshell, to enable two or more of said cord strands to be squeezed or pressed together when the drumhead is struck to produce changes in the tones and pitches of the sounds emanating from the drum.

6,040,514

LEGLESS CONGA DRUM STAND FOR USE WHILE SITTING OR KNEELING

Tsun-Chi Liao, Taichung, Taiwan, assignor to HWA Shin Musical Instrument Co., Ltd., Taichung, Taiwan

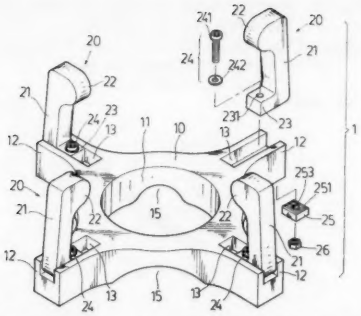
Filed May 6, 1998, Appl. No. 72,684

Int. Cl.[7] G10D *13/02*

U.S. Cl. 84—421 **4 Claims**

1. A type of structural improvement of conga drum stand, said conga drum stand comprises mainly:

a carrier, being shaped as a ring frame, at its center being a round hole, extending radially from the rim of said carrier



being the formation of several balancing blocks, on top of each of said balancing blocks being an open trough, and on the bottom of each of the balancing blocks being recessed upward a long channel to correspond the positions of said open troughs; on the bottom side of said open trough being a long hole that communicates to said long channel; on the wall of said round hole and between every two balancing blocks being an arched sound escape arc;

a same number of positioning blocks as said open troughs with the same width as the open troughs, each of said positioning blocks having an erected block body, the top of said block body projecting sideways to form a block end, the bottom of said block body projecting toward the same side as said block end being the formation of a block base; running vertically on said block base being a locking hole; the block bases of said positioning blocks being installed in said open troughs, said locking hole being penetrated by a locking component through said long hole, its bottom end extending to the long channel and being tightened by a hexagonal nut to fix said positioning block;

so configured that each positioning block may be moved freely inside said open trough.

6,040,515

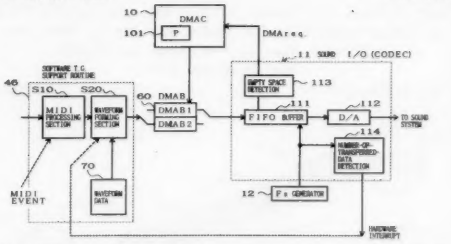
METHOD AND DEVICE FOR GENERATING A TONE

Masahiro Mukojima, and Ryo Kamiya, both of Hamamatsu, Japan, assignors to Yamaha Corporation, Hamamatsu, Japan

Division of application No. 08/770,357, Dec. 20, 1996, Pat. No. 5,973,251. This application Sep. 2, 1999, Appl. No. 388,987. Claims priority, application Japan, Dec. 21, 1995, 7-349046

Int. Cl.[7] G10H *7/00*

U.S. Cl. 84—603 **3 Claims**



1. A tone generating device for generating a tone waveform by executing predetermined software via a processing unit, said processing unit including a processor for executing the predetermined software, a buffer memory, a digital-to-analog converter and a counter,

said processing unit generating the tone waveform by, on the basis of the predetermined software, performing:

a first step of, upon reception of performance information, generating tone-generation control information corresponding to the performance information;

a second step of generating a plurality of waveform samples on the basis of the tone-generation control information and storing the generated waveform samples into said buffer memory;

a third step of sending one of the waveform samples stored in said buffer memory to said digital-to-analog converter, every sampling cycle;

a fourth step of, via said counter, counting a number of the waveform samples sent to said digital-to-analog converter, every sampling cycle; and

a fifth step of generating a start signal for activating said second step each time it is detected on the basis of a counted value of said counter that a predetermined number of the waveform samples have been sent to said digital-to-analog converter.

6,040,516

TONE GENERATION SYSTEM USING COMPUTER SOFTWARE AND STORAGE MEDIUM STORING THE COMPUTER SOFTWARE

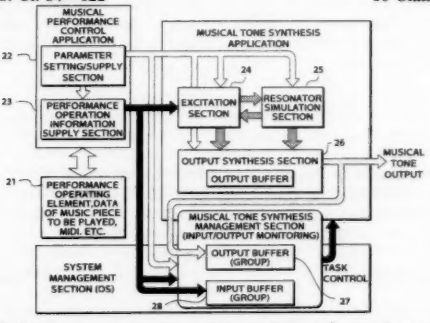
Hideyuki Masuda, Hamamatsu, Japan, assignor to Yamaha Corporation, Hamamatsu, Japan

Filed Mar. 30, 1999, Appl. No. 281,167

Claims priority, application Japan, Mar. 31, 1998, 10-103946

Int. Cl.[7] **G10H** *1/08*

U.S. Cl. 84—622 **10 Claims**



1. A tone generator system using computer software, the computer software comprising:

a musical tone synthesis module for generating a musical tone signal by generating an excitation signal in response to an request for generating said excitation signal and at least delaying and looping the generated excitation signal;

a first monitoring module for monitoring whether or not said request for generating said excitation signal is issued;

a second monitoring module for monitoring whether or not said musical tone signal is generated by said musical tone synthesis module; and

an interruption module for interrupting execution of said musical tone synthesis module when said first monitoring module detects that said request for generating said excitation signal is not issued, and at the same time said second monitoring module detects that said musical tone signal is not generated.

6,040,517

RHYTHMIC TONE GENERATOR

Yoshiaki Sakamoto, Tokyo, Japan, assignor to RIC Company, Ltd., Japan

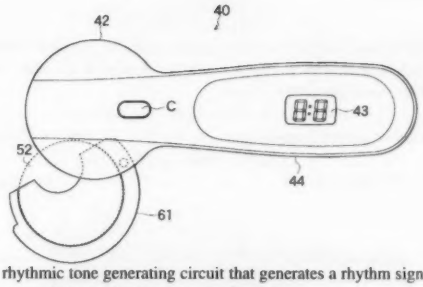
Filed Jun. 3, 1999, Appl. No. 325,440

Claims priority, application Japan, Jun. 4, 1998, 10-170554; Mar. 3, 1999, 11-099192

Int. Cl.[7] **G10H** *1/40*

U.S. Cl. 84—713 **20 Claims**

1. A rhythmic tone generator adapted to be attached to an ear of a user, comprising:



a rhythmic tone generating circuit that generates a rhythm signal comprising a plurality of sets of pulses;

a battery that supplies electric power to said rhythm tone generating circuit;

a tone generating device that is driven by the rhythm signal to generate tones;

a casing that houses said rhythm tone generating circuit, said battery, and said tone generating device; and

an attaching device that attaches said casing to a concha of the user so that said casing is located on the concha;

wherein the rhythmic tone generator is attached to the ear without being inserted into an ear hole, so as to generate the rhythmic tones in the vicinity of the ear hole.

6,040,518

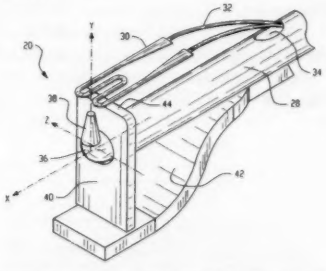
WAFER TEMPERATURE MONITORING DEVICE UTILIZING FLEXIBLE THERMOCOUPLE

David W. Kinnard, Olney, Md., assignor to Eaton Corporation, Cleveland, Ohio

Filed Dec. 22, 1998, Appl. No. 218,912

Int. Cl.[7] **H01L** *35/34*

U.S. Cl. 136—201 **20 Claims**



1. A thermocouple support arm assembly (**20**), comprising:

an arm (**28**) extending longitudinally along a first axis (X) and having a thermocouple (**30**) extending therefrom;

an anvil (**40**) supported by said arm (**28**) and at least partially occupying a plane defined by a second axis (Y) and a third axis (Z), said anvil positioned below said thermocouple; and

a mounting mechanism (**36**) for mounting said anvil (**40**) on said arm (**28**) such that said anvil (**40**) is permitted three degrees of rotational freedom with respect to said arm along, respectively, axes X, Y and Z;

wherein when a substrate is positioned above said thermocouple (**30**) to at least partially rest upon said thermocouple and said anvil (**40**), said anvil moves with respect to said arm (**28**) along said axes (X, Y, Z) to force said thermocouple into contact with said substrate.

6,040,519

UNIT SHEATH

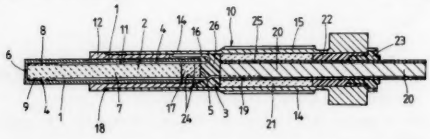
Hideki Kita, and Hideo Kawamura, both of Kanagawa-ken, Japan, assignors to Isuzu Ceramics Research Institute Co., Ltd., Kanagawa-ken, Japan

Filed Oct. 6, 1998, Appl. No. 166,564

Claims priority, application Japan, Nov. 21, 1997, 9-336546

Int. Cl.[7] H01L *35/02*

U.S. Cl. 136—230 **11 Claims**



1. A unit sheath comprising a protective envelope of ceramics high in density, the envelope being opened at its one end and closed at its opposing end, a metallic filament of any one of pure tungsten, molybdenum and alloy thereof received in the envelope, a high-density sealant of any one of glass and heat resisting synthetic resin for hermetically closing the envelope at the opened end, and a filler of non-conductive, unburned material packed in the space around the metallic filament in the envelope, the filler containing therein an additive that may be subjected to the oxidation at the temperature lower than that of the metallic filament, resulting in the deoxidation in the envelope.

SOLAR CELL AND METHOD OF MANUFACTURING THE SAME

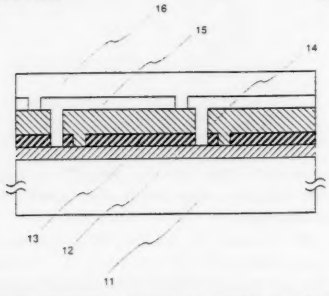
Hisao Morooka, Yamanashi; Takamitsu Miura, Kanagawa; Hiroshi Yamada, Yamanashi; Katsuki Kurihara, Yamanashi; Mitsutaka Matsuse, Yamanashi, and Yasuyuki Arai, Kanagawa, all of Japan, assignors to Semicondutor Energy Laboratory Co., Ltd., Kanagawa, and TDK Corporation, Tokyo, both of Japan

Filed Apr. 22, 1998, Appl. No. 64,175

Claims priority, application Japan, May 16, 1997, 9-143078

Int. Cl.[7] H01L *31/045;31/0392*

U.S. Cl. 136—245 **21 Claims**



7. A solar cell comprising a flexible substrate and a photoelectric conversion layer disposed over the flexible substrate and constituted by a laminated layer of thin films comprising non-single crystalline silicon,

wherein the flexible substrate is made of an alloy comprising iron and nickel,

wherein the flexible substrate has a coefficient of linear thermal expansion of 2.0 ppm/° C. to 10.0 ppm/° C., and

wherein a nickel content of the alloy is 30 wt % to 51 wt %.

6,040,521

N-TYPE WINDOW LAYER FOR A THIN FILM SOLAR CELL AND METHOD OF MAKING

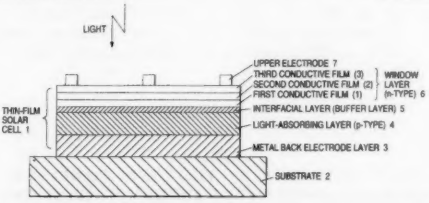
Katsumi Kushiya; Daisuke Okumura, and Ichiro Sugiyama, all of Tokyo, Japan, assignors to Showa Shell Sekiyu K.K., Tokyo, Japan

Filed May 9, 1997, Appl. No. 854,092

Claims priority, application Japan, Nov. 8, 1996, 8-311182

Int. Cl.[7] H01L *31/032;31/0272*

U.S. Cl. 136—265 **6 Claims**



1. A thin-film solar cell comprising a metal back electrode layer having formed thereon in this order a p-type CIGS light absorbing layer, an interfacial layer, an n-type window layer, and an upper electrode, wherein the n-type window layer comprises transparent conductive films which have a stacked structure comprising a first transparent conductive film formed on the interfacial layer and serving as an interface-protective film, a second transparent conductive film formed on the first transparent conductive film, and a third transparent conductive film formed on the second transparent conductive film.

6,040,522

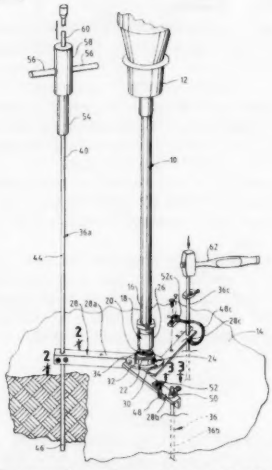
ELECTRICALLY GROUNDED LAND SURFACE MOUNTING FOR ELECTRICAL EQUIPMENT

William C. Beggs, 4110 Shawanee La., NE., Atlanta, Ga. 30319

Filed Apr. 16, 1998, Appl. No. 61,554

Int. Cl.[7] H01R *4/66*

U.S. Cl. 174—7 **16 Claims**



1. A base for mounting and grounding an electrical fixture in an earthen site comprising

at least one collar member having a first end adapted to receive support means for an electrical fixture,

a flange member engaging the collar member and supporting the first end of the collar member in an upright position,

at least one elongated ground rod dowel member having a first end portion, a body portion and a second end portion,

the first end portion being joined to the collar member by the flange member, and

the second end portion and the body portion being positioned deeply within the earth at the site for transmitting and discharging electrical charges from the fixture and support means into the earth.

6,040,523

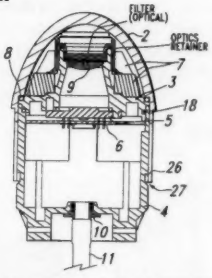
SNAP-FIT DESIGN OF AN AIRBORNE MISSILE SYSTEMS SEEKER/DETECTOR SECTION USING ENGINEERING PLASTICS

Robert J. Cunningham, Plano, Tex., assignor to Raytheon Company, Lexington, Mass.

Provisional application No. 60/032,822, Dec. 11, 1996, abandoned. This application Dec. 1, 1997, Appl. No. 982,554.

Int. Cl.[7] H05K *9/00*

U.S. Cl. 174—35 R **17 Claims**



1. A detector/seeker assembly which comprises:

an electrically conductive molded plastic two-piece housing including a relatively rigid electrically conductive first housing portion having a groove and a second housing portion having a sidewall extending over and adjacent said first housing portion, said second housing portion having a plurality of relatively flexible tab portions, a part of each of said tab portions extending into said groove and making mechanical contact with said first housing portion via said groove to provide a press fit therebetween;

an electrically conductive member disposed within said housing and electrically connected to said first housing portion to form an electrically shielded first chamber within said housing for containing equipment to be shielded from electromagnetic radiations therein and a second chamber for containing optics therein; and

a second groove disposed in at least one of said member and said first housing portion and an electrically conductive o-ring disposed in said second groove and contacting said member and said first housing portion to provide an electrically conductive path between said member and said first housing portion.

6,040,524

PRINTED CIRCUIT BOARD HAVING TWO HOLES CONNECTING FIRST AND SECOND GROUND AREAS

Yuji Kobayashi, and Shinichiro Yamashita, both of Kanagawa, Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Dec. 6, 1995, Appl. No. 568,317

Claims priority, application Japan, Dec. 7, 1994, 6-303886

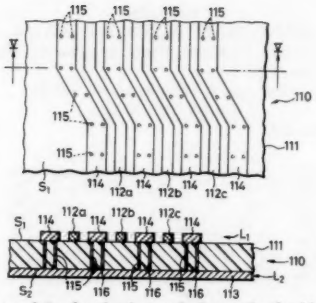
Int. Cl.[7] H01B *7/34*

U.S. Cl. 174—36 **25 Claims**

1. In a printed circuit board, the combination of:

at least a first dielectric lamina having opposed surfaces;

a first layer deposited on one of said surfaces and comprised of a plurality of first layer signal lines on said one of said surfaces connected to a signal source, and a plurality of first ground areas of a defined width connected to ground arranged between said first layer signal lines on said one of said



surfaces of the first lamina such that each of said first layer signal lines has one of said first ground areas on a side thereof so that each of said first layer signal lines is not immediately adjacent to another of said first layer signal lines;

a second substantially uninterrupted layer on the other of said surfaces of the first lamina and constituting a second ground area connected to ground which is substantially coextensive with said other of said surfaces;

at least two holes extending through said first lamina between one of said first ground areas and said second ground area and each of said holes having openings at one of said first ground areas and at said second ground area; and

conductive means in said holes electrically connecting said first and second ground areas for shielding said first layer signal lines on said one of said surfaces from each other and wherein the separation between said holes extending between one of said first ground areas and said second ground area is less than the width of said one of said first ground areas.

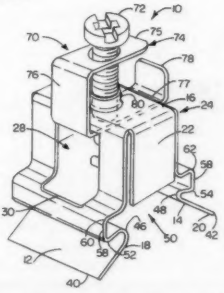
ELECTRICAL CLIP AND METHOD

Jacques Chauquet, Ayse-Bonneville, and Jean Claude Fuchs, L'Etrat, both of France, assignors to Erico International Corporation, Solon, Ohio

Provisional application No. 60/015,613, Apr. 18, 1996. This application Apr. 14, 1997, Appl. No. 843,223.

Int. Cl.[7] H02G *7/00*

U.S. Cl. 174—40 CC **18 Claims**



1. An electrical spring steel clip for attaching an electrical conductor to a bus bar having a face and opposed edges comprising a housing having at least one window through which said conductor is inserted transversely of said bus bar, said housing having two spring legs shaped to embrace and snap around both edges of said bus bar, said housing being open to said face of the bus bar, and means on said housing to clamp a conductor inserted through said window against said face of the bus bar.

6,040,526

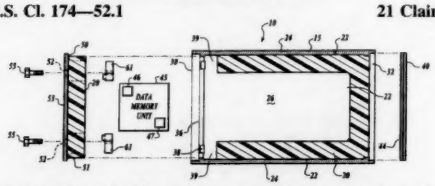
ACCESS PANEL RETENTION DEVICE

Richard A. Olzak, Kirkland, Wash., assignor to AlliedSignal, Morristown, N.J.

Filed Apr. 2, 1998, Appl. No. 54,168

Int. Cl.[7] H05K *5/06*

U.S. Cl. 174—52.1 **21 Claims**



1. A crash-survivable enclosure assembly for protecting a data memory unit used in vehicles, the crash-survivable enclosure assembly comprising:

an enclosure having an access opening and an inner enclosure surface;

a fixed position access panel support element extending inwardly from the inner enclosure surface, the support element having inner and outer support surfaces;

an access panel, having a panel inner surface, removably positioned against the outer support surface of the support element, the inner enclosure surface and the access panel inner surface defining an inner cavity; and

a retention device comprising:

a mechanical member having a main surface mounted against the inner support surface of the support element;

a fulcrum extending from the main surface and engaging the access panel inner surface; and

a fastener element biasing the mechanical member and the access panel towards one another so the fulcrum presses against the panel inner surface and the support element is captured between the access panel and the mechanical member.

6,040,527

CABLE JOINT WITH GROUNDING CONNECTION AND/OR SCREEN CROSS-BONDING FOR POWER CABLES

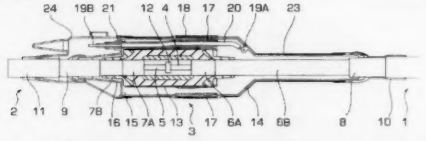
Jo De Buyst, Aalst, and Jozef Renier Catharina Cardinaels, Wetteren, both of Belgium, assignors to Alcatel, Paris, France

Filed Nov. 18, 1998, Appl. No. 195,436

Claims priority, application European Pat. Off., Nov. 28, 1997, 97402882

Int. Cl.[7] H01R *4/00*

U.S. Cl. 174—88 C **10 Claims**



1. A cable joint for connecting power cables, each cable having a terminus and having a conductor having bared portions successively surrounded by a first insulation layer, a semi-conductive layer, a metallic screen, and a second insulation layer,

said cable joint including a junction body having a first end and a second end, said junction body comprising:

connection means for connecting said bared portions of the conductors together at the terminus of each cable and first insulation means for surrounding said connection means,

said cable joint further including:

a metallic member having an inner and an outer side forming a shield over the junction body, and second insulation means covering said metallic member as well as end portions of the second insulation layer of the power cables,

said metallic member having at least two parts electrically separated by a shield break and each of the parts provided with a terminal electrically coupled to the metallic screen of each of said power cables,

wherein at least one of said terminals is an internal terminal located at the inner side of said metallic member and is connected to a first end of an insulated conductor located inside said metallic member and having a second end of the insulated conductor which extends outside said metallic member.

6,040,528

INSULATING SUPPORTING STRUCTURE FOR HIGH-VOLTAGE APPARATUS INCLUDING INORGANIC INSULATING LAYER FORMED ON A SURFACE OF AN ORGANIC INSULATING STRUCTURE

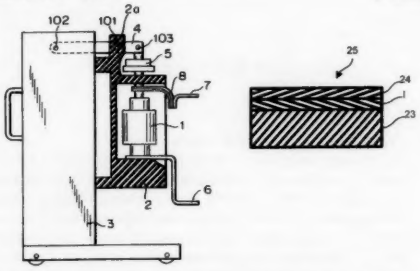
Tadao Kitamura, and Hisaji Shinohara, both of Kawasaki, Japan, assignors to Fuji Electric Co., Ltd., Kawasaki, Japan

Filed Oct. 17, 1994, Appl. No. 324,396

Claims priority, application Japan, Oct. 18, 1993, 5-259503

Int. Cl.[7] H01B *17/00*

U.S. Cl. 174—138 C **8 Claims**



1. An electrically insulating supporting structure for a high voltage electric apparatus having a high voltage charging part and a ground potential part, the structure being adapted to be disposed between the high voltage charging part and the ground potential part, the structure comprising:

an organic insulating structure formed in a predetermined shape;

an inorganic insulating layer comprising a layer coated on a surface of the organic insulating structure; and

an intermediate layer containing a mixture consisting essentially of organic powder and inorganic powder and located between the insulating layer and the organic insulating structure.

6,040,529

FLEXIBLE SUBSTRATE

Naoki Takeshita; Manabu Kusano; Fumihiko Sagawa, all of Fukushima-ken, and Taizo Nakagawa, Fukuhisma-ken, all of Japan, assignors to Alps Electric Co., Ltd., Tokyo, Japan

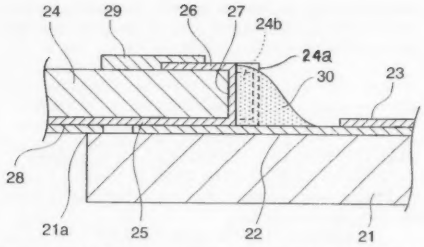
Filed Feb. 18, 1998, Appl. No. 25,598

Claims priority, application Japan, Feb. 19, 1997, 9-0521039

Int. Cl.[7] H05K *1/00*

U.S. Cl. 174—254 **4 Claims**

3. A flexible substrate wherein a conductor pattern for connection is formed on one side thereof so as to be opposed to a conductor pattern provided on a printed circuit board, wherein an island-like conductor pattern is formed on the other side of said flexible substrate in correspondence with said flexible substrate conductor pattern for connection, wherein said flexible substrate conductor pattern and said island-like conductor pattern are connected to each other through an electrode provided on an end



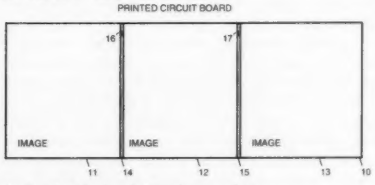
surface of said flexible substrate, and wherein said electrode is being connected to the conductor pattern of said printed circuit board.

6,040,530

VERSATILE PRINTED CIRCUIT BOARD FOR TESTING PROCESSING RELIABILITY

Robert J. Wharton, Rocklin; Eric R. Daniel, Sacramento, and Joseph D. Brown, Rocklin, all of Calif., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Dec. 5, 1997, Appl. No. 986,078
Int. Cl.[7] H01R *9/09*
U.S. Cl. 174—261 **21 Claims**



1. A printed circuit board comprising:

a first image, the first image comprising:

a first array pattern for attaching a package,

a first power plane, and

a first ground plane;

a second image, the second image comprising:

a second array pattern for attaching a package,

a second power plane, and

a second ground plane;

a first routing area between the first image and the second image, the first routing area electrically and physically isolating the first power plane from the second power plane, the first routing area also physically isolating the first ground plane from the second ground plane; and,

a first single trace extending through the first routing area, the first single trace electrically connecting the first ground plane to the second ground plane.

6,040,531

PROCESS FOR CONTROLLING BODY WEIGHT

Karen Miller-Kovach, Centerport, N.Y.; Sarah May Watson, Camberley; Marian Jane Way, Fareham, both of United Kingdom; Wanema Frye, Overland Park, Kans.; Mary Grace Melnyk, Astoria, and Adrienne Forman, Great Neck, both of N.Y., assignors to Weight Watchers (UK) Limited, United Kingdom

Continuation-in-part of application No. PCT/US96/17511, Nov. 1, 1996. This application Jul. 18, 1997, Appl. No. 896,855.

Claims priority, application United Kingdom, Nov. 1, 1995, 9522364

Int. Cl.[7] G06F *15/02*
U.S. Cl. 177—25.16 **17 Claims**

17. A process for weight control comprising the steps of:

storing data in a computer memory from which can be obtained a numerical whole number point value for each of a variety of food servings based on the calories, fat and dietary fiber content of the serving wherein each numerical point value is based on a predetermined fraction of the energy content of the food serving increased on the basis of fat content and decreased on the basis of fiber content;

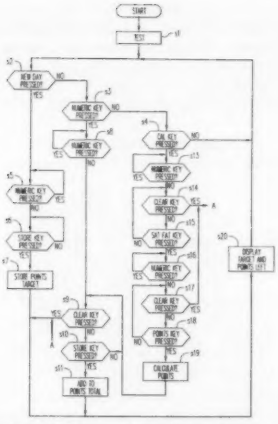
obtaining said numerical whole number point value for candidate food servings for a day's menu;

determining a minimum and maximum whole number numerical daily point total appropriate to produce a restricted daily energy intake based on the current weight of the individual;

calculating the sum of the numerical point values for said candidate food servings;

determining whether the calculated sum lies within the determined minimum and maximum; and

ingesting the food servings corresponding to a total lying within said determined minimum and maximum.

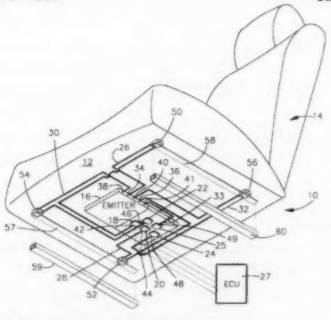


6,040,532

VEHICLE OCCUPANT WEIGHT SENSOR

Carl A. Munch, Troy, Mich., assignor to TRW Inc., Lyndhurst, Ohio

Filed Oct. 26, 1998, Appl. No. 178,945
Int. Cl.[7] G01G *19/52*
U.S. Cl. 177—144 **18 Claims**



1. A vehicle seat weight sensor comprising:

a light source for providing a predetermined amount of light;

a light detector for detecting light from said light source and providing a signal indicative thereof;

a member for mounting to a vehicle seat and impeding passage of light between said light source and said light detector according to a load applied to the vehicle seat; and

an electronic control device coupled to said light detector for determining, in response to said light detector signal, a weight value according to the load applied to the vehicle seat.

6,040,533

SWITCH ARRANGEMENT FOR A VEHICLE SEAT

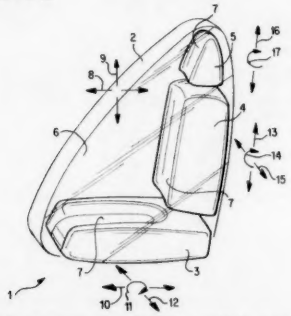
Peer-Oliver Wagner, Biebertal, Germany, assignor to Bayerische Motoren Werke Aktiengesellschaft, Germany

Filed Jul. 13, 1998, Appl. No. 114,189

Claims priority, application Germany, Jul. 11, 1997, 197 29 866

Int. Cl.[7] H01H *9/26*

U.S. Cl. 200—5 A **14 Claims**



1. A switch arrangement adjusting a vehicle seat in a vehicle, comprising:

a plurality of individual switch bodies, each having a shape which corresponds to a shape of a respective important element of the vehicle seat and being manipulatable to produce a corresponding relative movement of the respective element of the vehicle seat; and

an operating part in addition to the switch bodies, which operating part is manipulatable to produce a corresponding movement of the entire vehicle seat;

wherein said switch bodies for adjusting respective elements of the vehicle seat are mounted on the operating part.

6,040,534

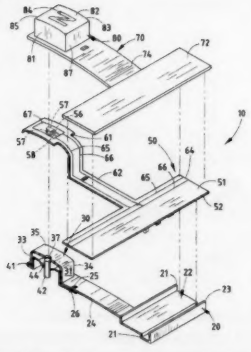
INTEGRALLY MOLDED SWITCH LIGHTING AND ELECTRONICS

Jack A. Beukema, Holland, Mich., assignor to Prince Corporation, Holland, Mich.

Filed Oct. 13, 1998, Appl. No. 170,736

Int. Cl.[7] H01H *13/70;9/18*

U.S. Cl. 200—5 A **13 Claims**



1. An integrated electrical control assembly comprising:

a polymeric cover including a graphic element formed thereon;

a flex circuit including an electroluminescent panel, said panel positioned within said cover to be aligned with said graphic element; and

a substrate sandwiching said flex circuit to said cover, wherein said substrate includes a first section of a rigid polymeric material and a second section including a carbon-filled elastomeric material and wherein said flex circuit includes switch contacts aligned with a switch actuator formed in said elastomeric material to define a switch.

6,040,535

STARTER SWITCH, IN PARTICULAR IGNITION STARTER SWITCH FOR MOTOR VEHICLE

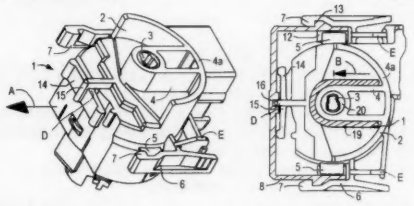
Robert Thalhammer, Iffeldorf, Germany, assignor to Merit-Malta Ltd., Mriehel, Malta

Filed Jan. 5, 1998, Appl. No. 2,767

Claims priority, application Germany, Jan. 8, 1997, 197 00 358

Int. Cl.[7] B60R *25/02*

U.S. Cl. 200—43.08 **10 Claims**



1. A starter switch formed as an ignition starter switch for a motor vehicle, comprising a starter switch housing; a rotor having a coupling for receiving a rotatable drive pin of a lock cylinder of a steering lock; a steering lock housing provided on the motor vehicle; means for releasably mounting the starter switch on the steering lock housing; guiding means for supporting the starter switch on the steering lock housing for displacement transversely to an axial direction of the lock cylinder, said guiding means being formed as guiding shoulders provided on said starter switch housing and extending transversely to the axial direction of the lock cylinder so as to be engaged by guiding webs of the steering lock housing, said guiding shoulders together with the guiding webs forming an abutment against an axial withdrawal of the starter switch from the steering lock housing, said starter switch housing being provided with arresting means for fixing the starter switch housing on the steering lock housing against a radial withdrawal.

6,040,536

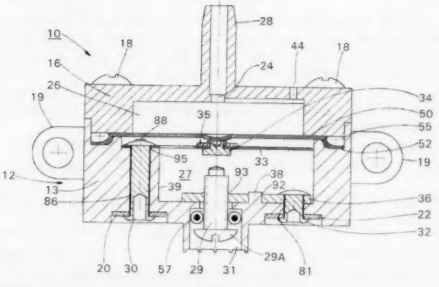
PRESSURE RESPONSIVE SWITCH AND METHOD OF MAKING SAME

Bearge Miller; Norman K. Miller, both of Glen Mills; Gevork Sarkisian, Philadelphia; Karen Sarkissian, Philadelphia, and Anatoly Galperin, Philadelphia, all of Pa., assignors to Miller Edge, Inc., Jennersville, Pa.

Filed Jan. 26, 1998, Appl. No. 12,993

Int. Cl.[7] H01H *35/34*

U.S. Cl. 200—83 N **2 Claims**



1. A pressure responsive switch comprising:

a) a housing base with an open side;

b a housing cover that communicates with the open side of the housing base to form a fluid-tight housing;

c) first and second electrically-conductive terminals passing through said housing;

d) an adjustable contact for adjusting the sensitivity of the switch, the adjustable contact being electrically connected to said first terminal;

e) a pressure responsive member disposed within the housing, the pressure responsive member communicating with the housing to define first and second chambers wherein at least a portion of said pressure responsive member is deflectable in response to a change in pressure within either of said chambers;

f) means that communicate with said housing for applying an operative pressure within at least one of said chambers; and

g) a spring-contact assembly disposed within said housing and electrically connected to the second electrically-conductive terminal, said spring-contact assembly being positioned to have at least a portion of the spring-contact assembly be carried by the deflectable portion of the pressure responsive member into contact with said adjustable contact during said change in pressure within one of said chambers, thereby making an electrical connection between the first terminal and the second terminal wherein said spring-contact assembly comprises an elongated flexible member that extends radially inwards from an annular metallic member, said annular metallic member being secured to said housing.

6,040,537

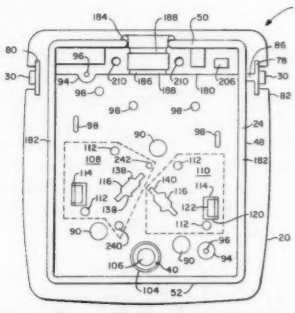
FOOT OPERATED CONTROL UNIT

Larry E. McClintock, Putnam, Conn., assignor to Linemaster Switch Corporation, Woodstock, Conn.

Filed Apr. 30, 1997, Appl. No. 846,736

Int. Cl.[7] **H01H** *21/26*

U.S. Cl. 200—86.5 **19 Claims**



16. A foot operated control unit for controlling a power circuit of an associated power driven device, the control unit comprising:

at least one control mechanism connectable with the power circuit for controlling the operation thereof, the control mechanism comprising a first switch having a body and a switch actuator biased outwardly from the switch body;

lever means for actuating the control mechanism comprising a first lever having an actuator portion engageable with the switch actuator and an arm extending laterally and upwardly from the actuator portion;

a base adapted to be placed on a supporting surface, the base having a base plate defining at least one mounting station comprising a mounting bracket, positioning pin means extending upwardly from the base plate for mounting the control mechanism, and mounting means for pivotally mounting the lever means to the base plate;

a foot operated cover mounted to the base and pivotally moveable between a non-actuating position and at least one actuating position, the cover having a first actuator peg extending downwardly from an interior surface, the first actuator peg being engageable with the arm of the first lever; and

spring means engaged with the base and the cover for biasing the cover to the non-actuating position, the spring means comprising a first spring;

wherein the first switch is actuated by pushing the cover to a first actuating position against the bias of the first spring, wherein the first actuator peg engages the arm of the first lever and pushes the arm down, the first lever pivots, engaging the actuator portion with the switch actuator and actuating the first switch.

6,040,538

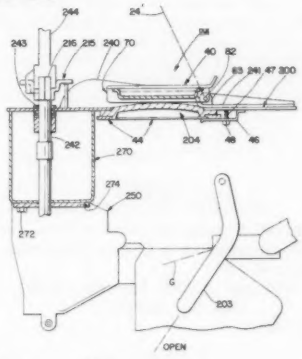
SWITCHGEAR ASSEMBLY

Thomas G. French, Chicago; Raphael H. Guio, Palatine; Henry W. Kowalyshen, Niles; Buddy B. McGlone, Lombard; Gregory C. Mears, and John C. Opfer, both of Chicago, all of Ill., assignors to S&C Electric Company, Chicago, Ill.

Division of application No. 08/705,460, Aug. 29, 1996, Pat. No. 5,864,107, which is a continuation-in-part of application No. 08/653,176, May 24, 1996, abandoned. This application Dec. 14, 1998, Appl. No. 210,704.

Int. Cl.[7] **H01H** *9/00;* **H02B** *13/00*

U.S. Cl. 200—293 **21 Claims**



9. Switchgear comprising:

a housing having an exterior and enclosing electrical components;

a first array of viewing provisions for viewing predetermined interior portions of said housing;

a second array of operating controls for operating one or more of said electrical components;

a third array of display panels, each of said display panels being generally planar and located on said exterior of said housing and movably mounted about a first edge of said display panel and with respect to said housing and covering said viewing provisions when said display panels are in a predetermined position, said display panels comprising means for displaying representations of said electrical components and the energized/deenergized status of said electrical components; and

electrical interconnection means for providing electrical interconnection from one or more of said electrical components to the exterior of said housing, said first array of viewing provisions of said second array of operating controls being generally provided along a first surface area of said housing, and said electrical interconnection means being provided generally along a second surface area of said housing, said first and second surface areas generally defining a predetermined angle therebetween.

6,040,539

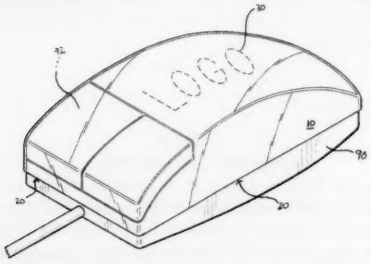
PROTECTIVE COVER FOR A COMPUTER MOUSE

Todd N. Hiegel, 403 Lake Cliff Dr., Erie, Pa. 16511

Provisional application No. 60/070,794, Jan. 8, 1998. This application Jan. 6, 1999, Appl. No. 225,514.

Int. Cl.[7] H01H *9/04;* **G06K** *11/18*

U.S. Cl. 200—302.1 **8 Claims**



1. In combination with a computer mouse having a top, a bottom, and sides, a cover comprising:

a flexible, elastic material having smaller dimensions than said mouse that when stretched covers the entire top of said computer mouse and a portion of each side of said computer mouse such that said cover is secured to said mouse by the tension of said material against said sides of said mouse caused by the stretching of said material into position such that said material snugly fits and conforms to the contour of said mouse, whereby said top of said mouse is protected from potential contaminants, and said bottom of said mouse is left free for proper use.

6,040,540

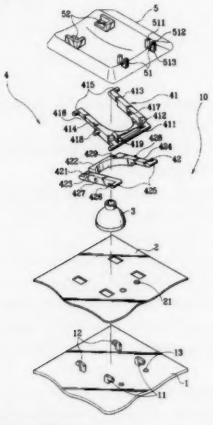
KEYSWITCH STRUCTURE

Ching Cheng Tsai, Keelung, and Wen To Chou, Taipei Hsien, both of Taiwan, assignors to Chicony Electronics Co., Ltd., Taipei Hsien, Taiwan

Filed Jan. 13, 1999, Appl. No. 229,557

Int. Cl.[7] H01H *13/70*

U.S. Cl. 200—344 **8 Claims**



1. A key switch comprising:

a base plate member having a lower pivot groove formed therein;

a conductive membrane fixedly mounted on said base plate member;

an elastic member;

a key having an upper pivot groove and a pivot recess formed therein;

a key support mechanism having first and second support levers, said first and second support levers being centrally pivotally mounted each to the other and having identical U-shaped structural contours, said first support lever forming first and second vertical shafts and having a first pivot shaft slidably mounted within said upper pivot groove of said key and having a first lateral shaft pivotally mounted within said lower pivot groove of said base plate member, said second support lever forming a third and a fourth vertical shaft and having a second pivot shaft pivotally secured within said pivot recess of said key, said pivot recess containing at least one-half of the length of said second pivot shaft, said pivot recess forming first and second walls, said first and second walls being contiguous with said second pivot shaft, said first wall having a hook formed thereon, said hook having a length greater than a radius of said second pivot shaft, said second wall having a thickness less than that of said first wall to allow for structural flexibility, said second support lever having a second lateral shaft in slidable electrical contact with said conductive member.

6,040,541

KEY SWITCH

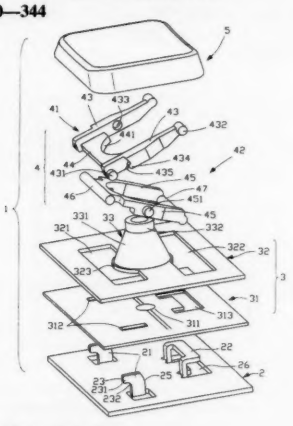
Yu-Chieh Li, Taipei, Taiwan, assignor to Hon Hai Precision Ind. Co., Ltd., Taipei Hsien, Taiwan

Filed May 4, 1999, Appl. No. 305,686

Claims priority, application Taiwan, Jun. 25, 1998, 87210199

Int. Cl.[7] H01H *13/70*

U.S. Cl. 200—344 **10 Claims**



1. A key switch, comprising:

a key cap;

a base having a first engaging means and a second engaging means each upwardly extending therefrom, the first engaging means comprising a first side distal from the second engaging means and a second side proximate the second engaging means;

a support linkage pivotably interconnected between the key cap and the base, consisting of a first link and a second link, the first link comprising a pair of arms, each of the arms having an engaging pin abutting against the first side of the first engaging means and an extension abutting against the second side of the first engaging means for pivotably engaging the first link to the base; and

a circuit board assembly disposed above the base and responsive to a downward movement of the key cap to indicate a depression of the key cap.

6,040,542

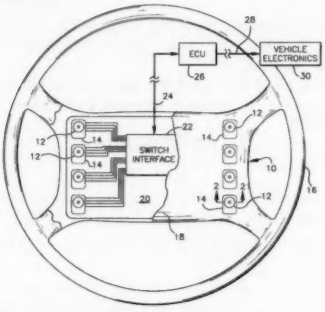
FLEXIBLE SWITCH APPARATUS AND METHOD FOR MAKING SAME

George B. Wolfe, Plymouth, Mich., assignor to TRW Inc., Lyndhurst, Ohio

Filed Oct. 21, 1998, Appl. No. 176,186

Int. Cl.[7] H10H *1/10*

U.S. Cl. 200—512 **16 Claims**



3. A switch apparatus comprising:

a substrate of a resilient material having a substantially planar first surface, a channel formed through said substrate to define a flex portion of said substrate, at least part of said flex portion of said substrate being movable relative to said substrate between a first position and a second position which is different from the first position;

a layer of an elastic material disposed over at least a substantial portion of said first surface of said substrate, said layer of elastic material urging said flex portion to the first position of said flex portion; and

a switch element operatively associated with said flex portion of said substrate, said switch element having an electrical condition which varies as a function of the position of said flex portion relative to said substrate;

said switch element further including a substantially rigid housing having a sidewall portion which extends outwardly from the first surface of said flex portion and terminates in an end portion of said housing spaced from said substrate, said layer of elastic material integrally connected with a substantial part of said housing.

6,040,543

EXPLOSION PROOF TOGGLE SWITCH

Nabil L. Mina, Roselle; Santosh Vilanilam, Hinsdale, and Garrett S. Yarbrough, Chicago, all of Ill., assignors to EGS Electrical Group LLC, Skokie, Ill.

Filed Aug. 13, 1999, Appl. No. 373,948

Int. Cl.[7] H01H *21/80*

U.S. Cl. 200—559 **10 Claims**

1. A toggle switch comprising:

a housing having electrical contact means contained in a cavity thereof and operatively connectable to electrically conductive terminals extending through said housing;

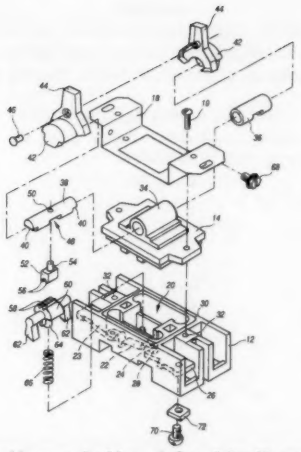
a cover for covering the cavity of said housing;

said cover being formed with an integrally formed transverse journal portion;

a bushing received by said journal portion;

a shaft received by said bushing and being rotatable therein; and

a pair of interconnected handle members each engaging a respective end of said shaft;



wherein said cover, bushing, shaft and handle members are removable from said housing as a unitary assembly.

6,040,544

OPTOELECTRONIC SEPARATION APPARATUS

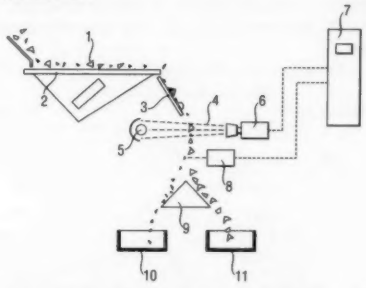
Matthäus Schantz, Rēut; Franz Köppl, Erlbach, and Dirk Flottmann, Altötting, all of Germany, assignors to Wacker-Chemie GmbH, Munich, Germany

Filed May 8, 1998, Appl. No. 75,033

Claims priority, application Germany, May 9, 1997, 197 19 698

Int. Cl.[7] B07C *5/00*

U.S. Cl. 209—577 **7 Claims**



1. An apparatus for the optoelectronic classification and separation of semiconductor material comprising:

a separating device (**2**);

a slide face (**3**) adjacent to said separating device, and means for adjusting the angle of the slide face (**3**) to the horizontal so that a center of gravity of the material to be separated is as low as possible;

said separating device (**2**) and said slide face (**3**) each having a surface made of the semiconductor material to be separated;

a radiation source (**5**) producing a beam path (**4**), and said semiconductor material to be separated falling through said beam path (**4**) so that the largest projection surface of the material during the falling faces the radiation source;

a shape recognition device (**6**) for transmitting a shape of the semiconductor material to be separated to a control unit (**7**); and

at least one diverter device (**8**) being controlled by said controller unit (**7**) for diverting and separating said semiconductor material.

6,040,545

TIG WELDING METHOD AND WELDING APPARATUS

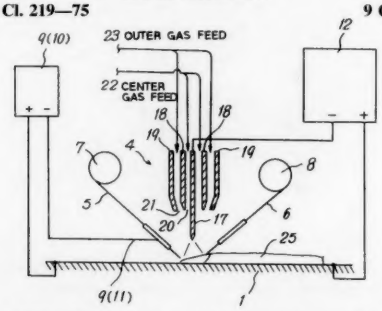
Keishi Taki, Yokohama, and Yutaka Yanagi, Ichikawa, both of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jun. 9, 1998, Appl. No. 93,717

Claims priority, application Japan, Jun. 10, 1997, P.9-152716; May 26, 1998, P.10-144882

Int. Cl.[7] B23K *9/167*

U.S. Cl. 219—75 9 Claims



1. A TIG welding method in which inner and outer double gas shields are formed coaxially around a tungsten electrode to generate an arc and a plurality of wires as filler material are continuously fed to the arc generating portion to perform a TIG welding operation, wherein at least one of the wires is fed under a heated condition as a hot wire and at least one of other wires is fed under a non-heated condition as a cold wire for cooling a molten pool.

6,040,546

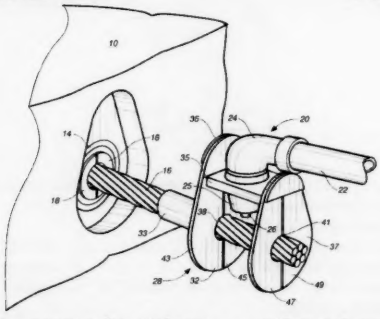
METHOD AND APPARATUS FOR CUTTING A TENDON USED IN A POST-TENSION ANCHOR SYSTEM

Felix L. Sorkin, 4115 Greenbriar Dr., P.O. Box 1503, Stafford, Tex. 77477

Filed May 23, 1999, Appl. No. 317,097

Int. Cl.[7] B23K *9/00*

U.S. Cl. 219—121.39 19 Claims



1. An apparatus for attachment to a cutting torch used for severing a tendon used in a post-tension anchor system, the apparatus comprising:

a first shield having an opening formed therein, said opening adapted to allow the tendon to pass therethrough;

a tubular extension extending outwardly of said first shield at said opening, said tubular extension having an interior adapted to extend around the tendon on a side of said first shield; and

a bracket member affixed to said first shield and adapted to attach to the cutting torch such that the cutting torch has a nozzle residing on an opposite side of said first shield.

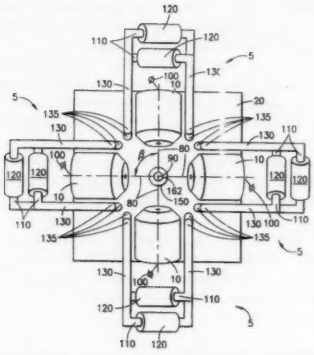
U.S. Cl. 219—121.48 8 Claims

1. A plasma generator (**5**) for generating and deflecting a plasma jet comprising an electrode chamber (**10**) having a gas inlet (**50**); and an outlet orafice (**40**); an electrode (**60**) positioned within the electrode chamber, the electrode defining an electrode axis (**80**); and a first magnetic deflection system for applying a first magnetic field (**B1**) to a plasma flowing from the electrode chamber outlet so as to cause the plasma to flow away from the electrode axis in a first direction as a result of a first force (**F1**) on the plasma caused by the first magnetic field, the first magnetic deflection system comprising a first U-shaped member formed from a first base (**110**) and a pair of first poles (**130**) having ends (**135**) and a first coil (**120**) positioned about the base, wherein the first magnetic deflec-



tion system is positioned about the electrode chamber so that the poles of the pair of first poles are on opposite sides of the electrode axis defined by the electrode positioned within the electrode chamber;

the generator being further characterized in that:

the generator is provided with a second magnetic deflection system for applying a second magnetic field to a plasma flowing from the electrode chamber outlet so as to cause the plasma to flow away from the electrode axis in a second direction as a result of a second force (**F2**) on the plasma caused by the second magnetic field, the second magnetic deflection system comprising a second U-shaped member formed from a second base (**110**) and a pair of second poles (**130**) having ends (**135**) and a second coil (**120**) positioned about the second base, wherein the second magnetic deflection system is positioned about the electrode chamber so that the poles of the pair of second poles are on opposite sides of the electrode axis defined by the electrode positioned within the electrode chamber, and wherein the first pair of poles and the second pair of poles are uniformly positioned about the electrode axis so that the magnetic field across the first pair of poles is substantially perpendicular to the magnetic field across the pair of second poles.

LASER BEAM MACHINING APPARATUS AND CORRESPONDING METHOD WHICH EMPLOYS A LASER BEAM TO PRETREAT AND MACHINE A WORKPIECE

Masaru Kanaoka, Nagoya, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

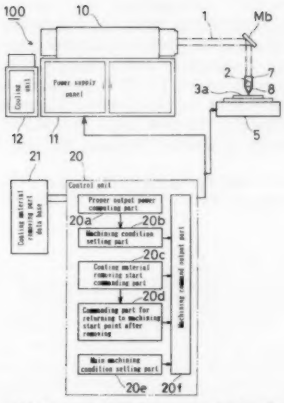
Continuation of application No. 08/395,826, Feb. 28, 1995, abandoned. This application Oct. 14, 1997, Appl. No. 949,394. Claims priority, application Japan, Feb. 28, 1994, 6-030262

Int. Cl.[7] **B23K** *26/00*

U.S. Cl. 219—121.61 **20 Claims**

15. A laser beam machining method comprising a preliminary machining step for pretreating a workpiece and a main machining step for machining the workpiece along a final machining locus;

the preliminary machining step including steps for irradiating a laser beam along the final machining locus, under preliminary machining conditions so as to evenly obtain an energy density and an energy distribution different from an energy density and an energy distribution in at least one of main machining conditions for cutting and welding and thermal treatment in the main machining step, so as to remove beforehand a surface material of the workpiece; and



the main machining step including a step for irradiating the laser beam to an area of the workpiece on which the surface substance has been removed, while changing the energy density and the energy distribution of the laser beam according to the main machining condition, so as to machine the workpiece.

6,040,550

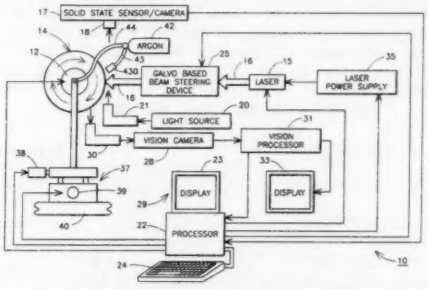
APPARATUS AND METHOD FOR LASER WELDING THE OUTER JOINTS OF METAL BELLOWS

Dale U. Chang, 2900 Sun Bittern Ct., Windermere, Fla. 34786

Provisional application No. 60/029,823, Oct. 28, 1996. This application Aug. 29, 1997, Appl. No. 921,292.

Int. Cl.[7] **B23K** *26/00*

U.S. Cl. 219—121.63 **61 Claims**



1. An apparatus for making a metal bellows of a type comprising a plurality of bellows diaphragms joined together, said apparatus comprising:

a laser for generating a laser beam;

an arbor for rotating a plurality of bellows diaphragms positioned together in side-by-side relation adjacent said laser;

optical tracking means for optically tracking a position of a rotating outer joint of the plurality of bellows diaphragms as said arbor rotates; and

beam steering means for steering the laser beam for edge welding the rotating outer joint responsive to the optical tracking means such that the laser beam is steered to impinge concurrently on an outer peripheral edge of each of at least a pair of stacked diaphragms.

6,040,551

APPARATUS FOR HARDENING THE INSIDE CONTOUR OF A GUN BARREL WITH LASER RADIATION

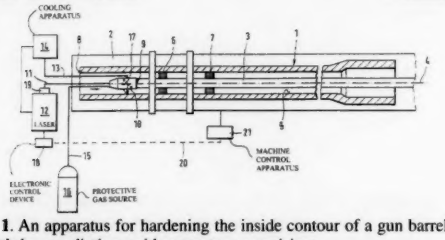
Herbert Manz, Leverkusen; Haluk Tuncer, Düsseldorf, and Manfred Zaeper, Unterüss, all of Germany, assignors to Rheinmetall W & M GmbH, Unterluss, Germany

Filed Sep. 18, 1998, Appl. No. 156,501

Claims priority, application Germany, Sep. 18, 1997, 197 41 028

Int. Cl.[7] **B23K** *26/00;26/14*

U.S. Cl. 219—121.65 **6 Claims**



1. An apparatus for hardening the inside contour of a gun barrel with laser radiation, said apparatus comprising:

a ND:YAG laser; a program controlled groove cutting machine having a drawing rod which is pulled during linear displacement, and means for centering the rod in a gun barrel for displacement in the direction of a bore axis of the gun barrel; a laser head secured to the muzzle end of the rod for displacement along the boare axis of the gun barrel; an optical fiber connecting the output radiation of the laser to said laser head; and, beam-deflecting optics disposed in said laser head for guiding laser radiation exiting said optical fiber out of the laser head via a beam exit opening in a direction onto the inside surface of the gun barrel in a direction perpendicular to the inside surface of the gun barrel.

6,040,552

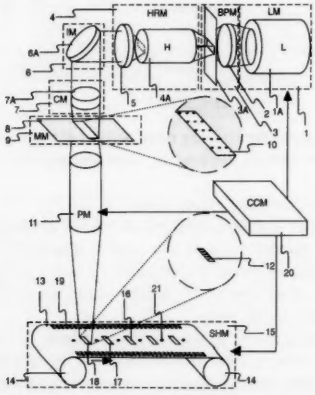
HIGH-SPEED DRILLING SYSTEM FOR MICRO-VIA PATTERN FORMATION, AND RESULTING STRUCTURE

Kanti Jain, 18 Algonquian Trail, Briarcliff Manor, N.Y. 10510; Thomas J. Dunn, 1497 Cross Rd., Mohegan Lake, N.Y. 10547; Nestor O. Farmiga, 43 Ward St., Clifton, N.J. 07011; Carl Weisbecker, 122 Fairview Ave., Port Chester, N.Y. 10573, and Carl C. Kling, 22 Annadale St., Armonk, N.Y. 10504

Filed Jan. 30, 1997, Appl. No. 794,217

Int. Cl.[7] **B23K** *26/00*

U.S. Cl. 219—121.7 **28 Claims**



26. A vertical mask and projection sub-subassembly (**26**) for use in a mask-patterned laser via-drilling system, for installation optically downstream from a source of uniformized, shaped laser radiation, processed by upstream optics into a positionally-reduced sub-beam in any assigned beamline position **1**, **2**, **3** . . . n in a set of beamline positions **1**–n, each beamline position being assigned for imaging a via-drilling pattern onto a substrate segment, as a second sub-subassembly to work downstream from any first sub-subassembly in optical series said vertical mask/projection sub-subassembly, comprising:

mask pattern means (**9**), positioned for receiving the said related balanced sub-beam from a first sub-subassembly mounted in the assigned beamline position, for forwarding a mask-patterned sub-beam for the beamline position; and

projection means (**11**) positioned for receiving the mask-patterned sub-beam for the beamline position from said related mask pattern means (**9**), and for imaging said mask-patterned sub-beam for the beamline position onto a receiving means.

6,040,553

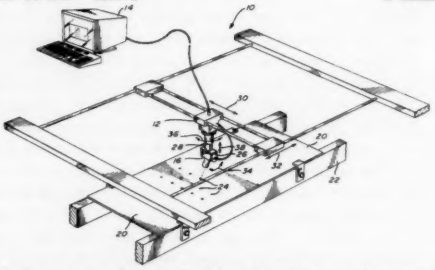
METHOD OF MANUFACTURING AIR CONVEYOR PANELS BY LASER ABLATION DRILLING

Yvan Ross, Richelieu, Canada, assignor to GEBO Conveyors Consultants & Systems, Inc., Canada

Filed Oct. 29, 1998, Appl. No. 182,331

Int. Cl.[7] **B23K** *26/00*

U.S. Cl. 219—121.71 **8 Claims**



1. An automated method of manufacturing an air conveyor panel, the panel comprising an array of holes used as air nozzles, the method comprising the steps of:

(a) mapping the desired location, shape and axial orientation of cavities in said panel with a computer;

(b) sequentially directing a laser beam at each desired location of cavities with said computer;

(c) sequentially laser ablation drilling said cavities by photothermally vaporizing a portion of said panel at each desired location, a major portion of said cavities consisting of holes piercing said panel for use as the air nozzles, and

wherein the laser beam has an intensity sufficient to photothermally vaporize a portion of said panel at each desired location.

6,040,554

WELDING ROBOT CONTROL SYSTEM

Akihiro Terada, Fujiyoshida, and Mitsuhiro Okuda, Oshinomura, both of Japan, assignors to Fanuc Ltd, Yamanashi, Japan

PCT No. PCT/JP97/02532, § 371 Date Mar. 19, 1998, § 102(e) Date Mar. 19, 1998, PCT Pub. No. WO98/03294, PCT Pub. Date Jan. 29, 1998

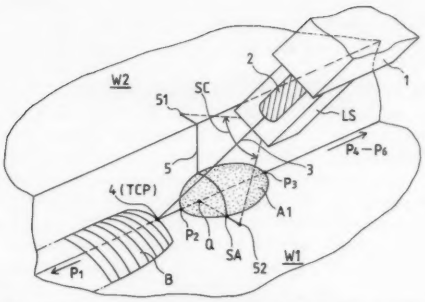
PCT Filed Jul. 22, 1997, Appl. No. 43,487

Claims priority, application Japan, Jul. 19, 1996, 8-207641

Int. Cl.[7] **B23K** *9/127*

U.S. Cl. 219—124.34 **6 Claims**

1. A control system for controlling a welding robot for performing arc welding by moving a welding torch mounted on a robot hand along a welding reference line, said system comprising:



a laser sensor mounted on said robot hand, for repeatedly detecting a characteristic point of a joint shape of workpieces by scanning a region in an advancing directions of said welding robot with a laser beam;

properness determining means for determining whether the detected characteristic point is proper or improper as a point representing a position of said welding reference line, when the characterizing point is detected by said laser sensor;

first storing means for storing data representing the position of the detected point as data of a welding reference line representative point when the detected characteristic point is determined to be proper by said properness determining means;

detection substitutive point determining means for determining a detection substitutive point to be substituted for the detected characteristic point when it is determined that the detected characteristic point is improper by said properness determining means or when the characteristic point is not detected by said laser sensor;

second storing means for storing data representing a position of the detection substitutive point as data of the welding reference line representative point; and

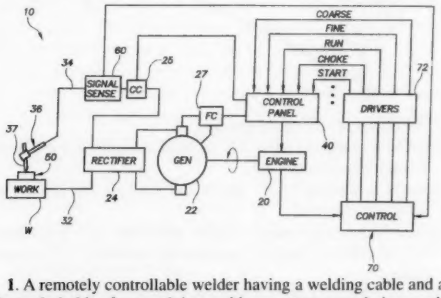
means for successively determining a target point of movement of said welding robot, based on the data of the welding reference line representative point stored in said first storing means and the data of the welding reference line representative point stored in said second storing means.

6,040,555

REMOTE CONTROL FOR WELDERS AND METHOD THEREFOR

Randolph C. Tiller, Glenview, Ill., and Robert G. Williams, Appleton, Wis., assignors to Illinois Tool Works Inc., Glenview, Ill.

Filed Feb. 20, 1998, Appl. No. 27,330
Int. Cl.[7] B23K *9/10*
U.S. Cl. 219—132 **42 Claims**



1. A remotely controllable welder having a welding cable and an electrode holder for supplying weld current to a workpiece and a start switch for starting the welder, the system comprising:

a remote device having a start signal circuit having a constant current source circuit electrically coupleable between the workpiece and the electrode holder, the start signal circuit produces a start signal on the welding cable when coupled between the workpiece and electrode holder;

a sensor circuit disposed along the welding cable, the sensor circuit producing a start sense signal in response to detecting the start signal on the welding cable;

a start control circuit coupled between the sensor circuit and the start switch, the start control circuit at least temporarily actuating the start switch in response to detection of the start sense signal;

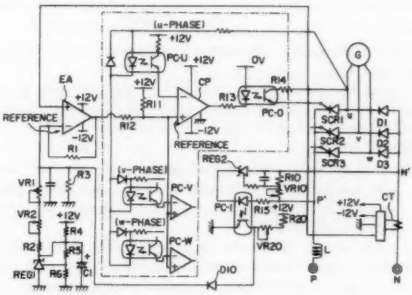
whereby the welder is energizable when the start signal circuit is electrically coupled between the workpiece and the electrode holder.

6,040,556

ENGINE DRIVEN ARC WELDER

Keigo Shinya; Wen Long Kou, both of Koka-gun; Osamu Suzuki, and Shunichi Tetsui, both of Kawagoe, all of Japan, assignors to Denyo Kabushiki Kaisha, Tokyo-to, Japan

Filed Sep. 30, 1998, Appl. No. 162,785
Claims priority, application Japan, Oct. 1, 1997, 9-268950
Int. Cl.[7] B23K *9/095*
U.S. Cl. 219—133 **1 Claim**



1. An engine driven arc welder comprising:

a welding generator driven by an engine;

an output circuit for controlling output of the welding generator in accordance with a control signal to deliver the output to the welding output terminals;

a current detector for detecting current flowing in the welding output terminals;

an error detector for comparing the output of the current detector with a reference signal to detect error therebetween;

a control signal producing circuit which produces a control signal in accordance with the output of the error detector and which delivers the control signal to said output circuit;

a voltage detector for detecting the voltage applied to the welding output terminals;

said welder showing a welding output characteristic having a constant current control arc characteristic in accordance with the reference signal and exhibiting a drooping characteristic in the vicinity of the arcing voltage and a further constant current control arc characteristic with an increasing current when the arc voltage is lowered; and

an adjustment circuit for determining the magnitude of the reference signal to be delivered to the error detector in accordance with the output of said voltage detector,

thereby to change the reference signal to allow an inter-characteristic transfer point between the constant current control arc characteristic and the drooping characteristic to be adjustable wherein said adjustment circuit changes the reference signal to allow the inter-characteristic transfer voltage from the constant current control arc characteristic corresponding to arc current to the drooping characteristic to be adjustable, and changes the reference signal to allow inter-characteristic transfer current from the drooping characteristic to the constant current control arc characteristic corresponding to short-circuit current to be adjustable.

6,040,557

DROP-IN AIR HEATER FOR AN ENGINE WITH HEATER SUPPORT FRAME HAVING PRONGS ENGAGING HEATER HOLDERS

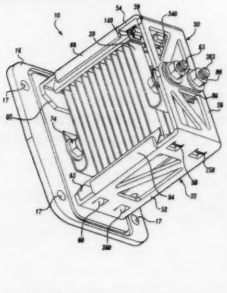
Andrew J. Prust, Coon Rapids, and Jan P. Thimmesch, Eden Prairie, both of Minn., assignors to Phillips & Temro Industries Inc., Eden Prairie, Minn.

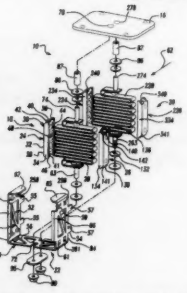
Continuation-in-part of application No. 09/209,388, Dec. 10, 1998. This application Feb. 10, 1999, Appl. No. 248,510.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] F02M *31/12*

U.S. Cl. 219—206 **18 Claims**





1. An air intake for an internal combustion engine, said air intake comprising:

an air intake tube having a passage for communicating air and defining a direction of airflow, the air intake tube including a cavity communicating with the passage; and

a heater including:

a mounting flange coupling the heater to the air intake tube and sealing said cavity, said mounting flange defining a plane substantially parallel to said direction of airflow through said heater,

a frame coupled to the mounting flange, said frame having a pair of opposed upright walls, said flange and said frame defining a channel for communicating air through said heater, each upright wall having an upstream face and a downstream face relative to said direction of airflow,

a heating element assembly in heat transfer relationship with the air passage, and

stops extending from one of said upstream and downstream faces of said upright walls to limit movement of said heating element assembly in a first direction within said channel.

6,040,558

IMAGE HEATING APPARATUS

Michihito Yamazaki, Tokyo, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed May 4, 1998, Appl. No. 71,160

Claims priority, application Japan, May 14, 1997, 9-137995

Int. Cl.[7] G03G *15/20*

U.S. Cl. 219—216 **37 Claims**

1. An image heating apparatus comprising:

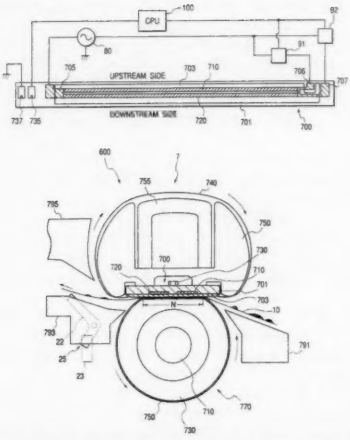
a heater;

a film sliding on said heater; and

a back-up member for forming a nip with said heater via said film, said back-up member receiving a driving force to drive said film;

wherein a recording material bearing an image thereon is pinched and conveyed in said nip whereby the image on said recording material is heated by the heat supplied from said heater via said film;

said heater includes a first heat-generating member for generating heat by electric power supply thereto, and a second heat-generating member, provided at the downstream side of said first heat-generating member with respect to the moving direction of the recording material, for generating heat by electric power supply thereto; and



wherein an amount of heat generation is substantially equivalent for said first and second heat-generating members when there is an absence of the recording material in said nip when electric power is supplied to said first and second heat-generating members, and the amount of heat generation of said first heat-generating member is larger than that of said second heat-generating member when there is a presence of the recording material in said nip.

6,040,559

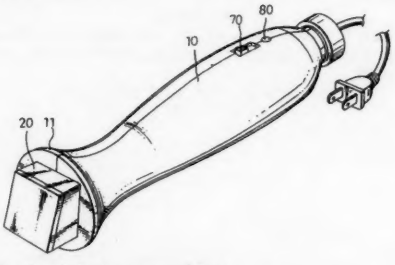
ELECTRIC HEAT PEN WITH SANDWICHED HEATER ELEMENT

Ammy Chou, Taipei, Taiwan, assignor to Welcome Company, Ltd., Taiwan

Filed Mar. 21, 1997, Appl. No. 821,473

Int. Cl.[7] H05B *1/00*

U.S. Cl. 219—229 **6 Claims**



1. An electric heat pen comprising:

a pen base adapted to be held in the hand of a user, said pen base having a longitudinal axis;

a pen head fastened to one end of said pen base and defining a receiving chamber;

an electric heating element mounted inside the receiving chamber of said pen head and electrically connected to produce heat;

an upper conductor and a lower conductor respectively disposed in contact with said electric heating element, said electric heating element being actuated to produce heat when said upper conductor and said lower conductor are respectively connected to two opposite terminals of power supply; and

a hot plate that covers said receiving chamber of said pen head and that is heated by said electric heating element, said hot plate forming a non-zero angle with said longitudinal axis of said pen base;

wherein said receiving chamber of said pen head is covered with a top cover, and a spring plate is mounted inside said receiving chamber, and attached to said top cover to impart a downward pressure to said upper conductor against said electric heating element and said lower conductor; and

wherein a steel plate is sandwiched in between said spring plate and said upper conductor, and an electrically insulative heat resisting film is sandwiched in between said upper conductor and said steel plate.

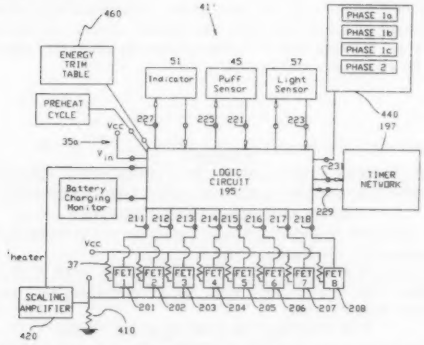
POWER CONTROLLER AND METHOD OF OPERATING AN ELECTRICAL SMOKING SYSTEM

Grier S. Fleischhauer, Midlothian; Charles T. Higgins; D. Bruce Losee, both of Richmond, all of Va.; J. Robert Nelson, Jr., Easton, Conn.; Robert L. Ripley, Midlothian, Va.; Masato Sano, Sumoto, Japan; David E. Sharpe, Chesterfield, and Michael L. Watkins, Chester, both of Va., assignors to Philip Morris Incorporated, New York, N.Y.

Continuation-in-part of application No. 08/755,044, Oct. 22, 1996, abandoned. This application Oct. 16, 1997, Appl. No. 951,255.

Int. Cl.[7] H05B *1/02*

U.S. Cl. 219—494 **82 Claims**



1. A method of controlling application of electrical power from a power source to heater elements of an electrically operated smoking system, said method comprising the steps of:

establishing in a controller of the electrical smoking system an executable power cycle comprising at least first and second differentiated phases, said establishing step providing each of said first and second differentiated phases with a preselected time period (t_{phase}), an adjustable duty cycle (dc_{phase}) and a preselected total energy (J_{phase}), respectively; and

responsively to a puff on the smoking system, modulating power application to a heater element during each of said first and second differentiated phases in accordance with said established power cycle by:

referencing a voltage of a power source; and

adjusting said duty cycle of said phase responsively to said referencing step such that said respective preselected total energy level of said phase is achievable within said respective preselected time period of said phase.

6,040,561

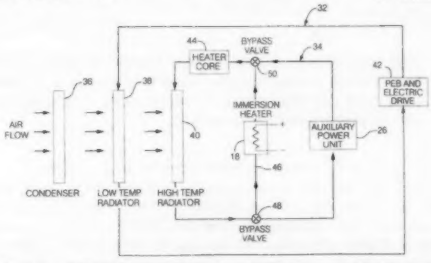
HIGH VOLTAGE BUS AND AUXILIARY HEATER CONTROL SYSTEM FOR AN ELECTRIC OR HYBRID VEHICLE

Balarama Vempaty Murty, West Bloomfield, Mich., assignor to General Motors Corporation, Detroit, Mich.

Filed Jun. 30, 1999, Appl. No. 343,735

Int. Cl.[7] H05B *1/02*

U.S. Cl. 219—494 **15 Claims**



1. An auxiliary heater control system for a vehicle having a climate control system and one or more wheels powered by an electric motor that is energized from a power source via a voltage supply bus, said heater control system comprising:

a heater control circuit having an electric heating element that is electrically coupled to the voltage supply bus and thermally coupled to the climate control system to provide heat for use by the climate control system using energy from the power source, said heater control circuit further including an input and being responsive to a control signal on said input to provide operating power from the voltage supply bus to said heating element; and

a vehicle system controller having an input for receiving a cabin heat request from the climate control system and having an output coupled to said input of said heater control circuit, said system controller being responsive to a cabin heat request to provide said heater control circuit with said control signal, whereby said electric heating element provides heat to the climate control system in response to a cabin heat request;

wherein said vehicle system controller is operable to monitor the voltage on the voltage supply bus and to provide said control signal to said heater control circuit when the monitored voltage exceeds a lower threshold voltage, whereby said electric heating element dissipates energy supplied to said voltage supply bus when the monitored voltage exceeds the lower threshold voltage.

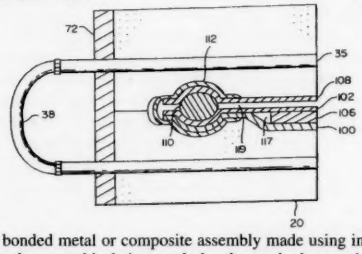
Int. Cl.[7] H05B *6/10*

U.S. Cl. 219—633 **9 Claims**



1. A bonded metal or composite assembly made using induction heating, the assembly being made by the method comprising the steps of:

(a) assembling at least two workpieces to sandwich at least one bonding material selected from the group consisting of temperature-activated adhesives, braze alloys, and bonding agents to form an assembly;

(b) enclosing the assembly in a sealable retort including a metal susceptible to heating inductively;

(c) placing the assembly and retort in an induction heating press;

(d) energizing the induction heating press to heat the retort and, in turn, the bonding material until the bonding material melts;

(e) de-energizing the induction heating press to cool the retort and, in turn, the bonding material to bond the workpieces together to form bonded workpieces;

(f) recovering the bonded workpieces in the retort from the press;

(g) optionally, placing shims at selected locations within the retort and the workpieces to define a bondline where the workpieces will be bonded and bead regions where the workpieces do not bond; and

(h) optionally, forming at least one workpiece by stretching or expanding that workpiece in at least one bead region by introducing pressure into the retort, wherein the energizing step heats the retort with subsequent transfer of heat from the retort to the bonding material through the workpieces.

METHOD AND DEVICE FOR CONTROLLING FAST PERIODIC MOTION

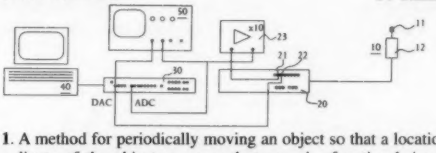
Erwin Neher, and Frank Würriehausen, both of Bovenden, Germany, assignors to Max-Planck-Gesellschaft zur Forderung der Wissenschaften e.V., Munich, Germany

Filed Mar. 13, 1998, Appl. No. 42,343

Claims priority, application Germany, Mar. 14, 1997, 197 10 714

Int. Cl.[7] H01J *40/14*

U.S. Cl. 250—206 **14 Claims**



1. A method for periodically moving an object so that a location coordinate of the object corresponds to an aim function being a function of time (t) at least in one periodic sub-interval of each cycle, comprising the step of driving the object so that a location of the object changes in response to a command function, wherein said command function is represented as

$$y(t) = \sum_{i}^{n} a_i \cdot A_i(t),$$

wherein a_i comprise a finite number of n command parameters and A_i comprise a finite number of series expansion functions, said command function being derivable by

parameterizing the aim function as a series expansion which is represented as

$$y'(t) = \sum_{i}^{\infty} a'_i \cdot A_i(t),$$

wherein a'_i comprise parameters of said series expansion and A_i comprise corresponding series expansion functions, and

determining n command parameters for which an optimization criterion is satisfied in the periodic sub-interval for the command function.

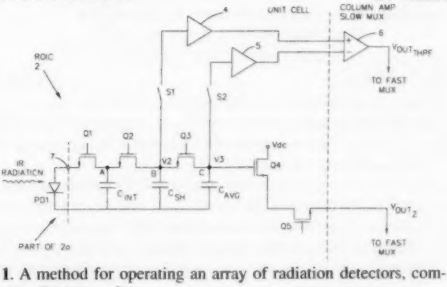
MULTIPURPOSE READOUT INTEGRATED CIRCUIT WITH IN CELL ADAPTIVE NON-UNIFORMITY CORRECTION AND ENHANCED DYNAMIC RANGE

John T. Caulfield, Santa Barbara; Richard H. Wyles, Carpinteria; John D. Schlesselmann, and Kevin L. Pettijohn, both of Goleta, all of Calif., assignors to Raytheon Company, Lexington, Mass.

Filed May 6, 1998, Appl. No. 73,408

Int. Cl.[7] H01L *25/00*

U.S. Cl. 250—208.1 **20 Claims**



1. A method for operating an array of radiation detectors, comprising the steps of:

during a sampling period that defines a frame comprised of subframe periods, generating an electrical signal in individual ones of the radiation detectors, the electrical signals being generated in response to incident radiation;

in a first operating mode, forming a high pass filtered output signal from electrical signals generated during at least one frame period;

in a second operating mode, forming a subframe averaged output signal from electrical signals generated during a frame period; and

reading out, in the first operating mode, the high pass filtered output signal or, in the second operating mode, the subframe averaged output signal.

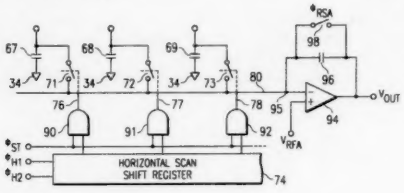
FIXED-PATTERN-NOISE REDUCTION IN ACTIVE PIXEL IMAGE SENSORS

Jaroslav Hynecek, Richardson, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Provisional application No. 60/046,492, May 14, 1997. This application May 14, 1998, Appl. No. 79,210.

Int. Cl.[7] H01J *40/14*

U.S. Cl. 250—208.1 **6 Claims**



1. A device for sensing light comprising:

an active pixel sensor;

a holding capacitor for storing a pixel signal from the active pixel sensor;

a scanning switch coupled between the holding capacitor and a sense line;

a switch control line for turning the switch on and off;

a logic gate having a horizontal scan shift register input and a strobe input, the switch control line is an output of the logic gate.

6,040,570

EXTENDED DYNAMIC RANGE IMAGE SENSOR SYSTEM

Peter Alan Levine, Trenton; Donald Jon Sauer, Princeton Jct, and Nathaniel Joseph McCaffrey, Lambertville, all of N.J., assignors to Sarnoff Corporation, Princeton, N.J.

Filed May 29, 1998, Appl. No. 87,087

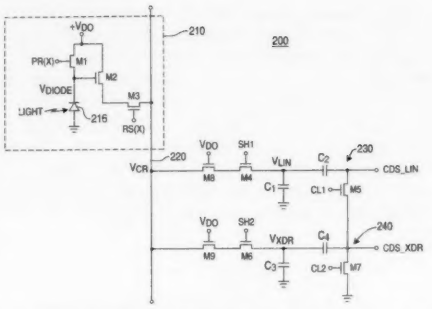
Int. Cl.[7] H01L *27/00;* **H04N** *3/14*

U.S. Cl. 250—208.1 **9 Claims**

1. An extended dynamic range imager, comprising:

(a) an array of pixels for providing an output signal for each pixel related to an amount of light captured for each pixel during an integration period;

(b) a row of extended dynamic range (XDR) sample and hold circuits having an XDR sample and hold circuit for each column of the array for capturing an XDR signal related to a difference between the output signal and an XDR clamp level to which the pixel is reset at a predetermined time before the end of the integration period; and



(c) a row of linear sample and hold circuits having a linear sample and hold circuit for each column of the array for capturing a linear signal related to a difference between the output signal and an initial output signal to which the pixel is reset at the beginning of the integration period.

6,040,571

TIME DOMAIN MULTIPLEXED AMPLIFIED SENSOR ARRAYS WITH IMPROVED SIGNAL TO NOISE RATIOS

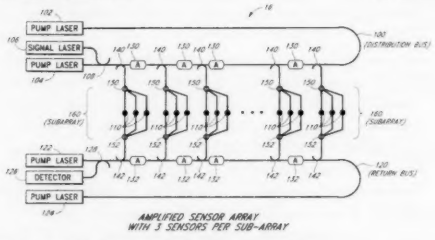
Craig W. Hodgson, Mountain View, Calif.; Jefferson L. Wagener, Charlottesville, Va.; Michel J. F. Digonnet, Palo Alto, and H. John Shaw, Stanford, both of Calif., assignors to Board of Trustees Leland Stanford Junior University, Stanford, Calif.

Continuation of application No. 08/814,548, Mar. 11, 1997, Pat. No. 5,866,898, Provisional application No. 60/021,699, Jul. 12, 1996, Provisional application No. 60/034,804, Jan. 2, 1997, Provisional application No. 60/036,114, Jan. 17, 1997. This application Jan. 26, 1999, Appl. No. 237,716.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] H01J *5/16*

U.S. Cl. 250—227.14 **23 Claims**



1. An optical sensor architecture comprising:

a plurality of sensors which receive an optical signal and which output perturbed optical signals;

a distribution bus coupled to each sensor to distribute the optical signal to each sensor;

a return bus coupled to each sensor to receive the perturbed optical signal from each sensor to be included as a portion of the return signal;

a plurality of first optical amplifiers distributed at selected positions along the length of the distribution bus to maintain the power of the distributed optical signal at a selected level; and

a plurality of second optical amplifiers distributed at selected positions along the length of the return bus to maintain the power of the perturbed optical signals in the return signal.

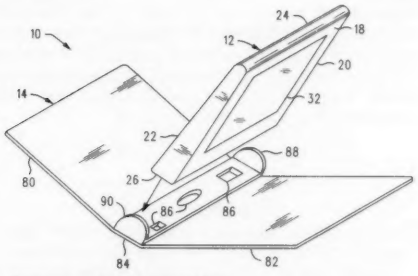
NOTEBOOK STYLED SCANNER

Modest Khovaylo, Fort Collins; Michael A. Puyot, Greeley; James C. Dow, Fort Collins, all of Colo.; Scott Henderson, Brooklyn, and Davin Stowell, New York, both of N.Y., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed May 21, 1998, Appl. No. 82,847
Int. Cl.[7] H01J *3/14*
U.S. Cl. 250—235 **31 Claims**



1. Scanner apparatus, comprising:

a housing having a front side and a back side;

a scanning device sized to be received by said housing;

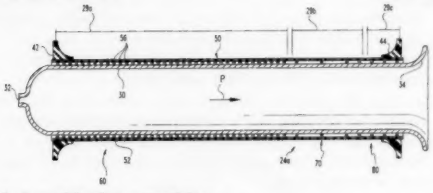
a transparent platen located on the front side of said housing, said transparent platen allowing an object positioned adjacent said transparent platen to be scanned by the scanning device; and

a window located on the back side of said housing, said window allowing a user to view at least a portion the object positioned adjacent said transparent platen.

6,040,573
ELECTRIC FIELD GENERATION FOR CHARGED PARTICLE ANALYZERS

C. Ray Sporleder, and David E. Clemmer, both of Bloomington, Ind., assignors to Indiana University Advanced Research & Technology Institute Inc., Bloomington, Ind.

Filed Sep. 25, 1997, Appl. No. 937,729
Int. Cl.[7] H01J *49/42*
U.S. Cl. 250—281 **41 Claims**



1. A combination, comprising:

determining desired characteristics of a first electric field configured to control charged particles in a charged particle analyzer;

providing a first electric field generation device corresponding to said determining by:

defining a predetermined pattern of electrical conductors on a flexible dielectric substrate, the conductors being spaced apart from each other along the substrate and being carried on the substrate to flex therewith;

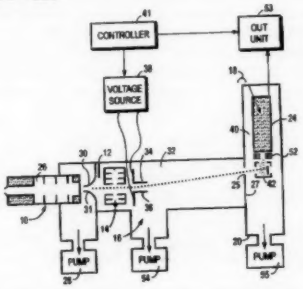
bending the substrate to provide a predetermined spatial orientation of the conductors; and

applying an electric potential to the conductors to generate the first electric field.

6,040,574
ATMOSPHERIC-PARTICLE ANALYZER

John T. Jayne, Littleton; Douglas R. Worsnop, Lexington, and Charles E. Kolb, Sudbury, all of Mass., assignors to Aerodyne Research, Inc., Billerica, Mass.

Filed Mar. 5, 1998, Appl. No. 35,048
Int. Cl.[7] H01J *49/04*
U.S. Cl. 250—288 **7 Claims**



1. An analyzer for analyzing the particulate content of an atmosphere, said apparatus comprising

A. means for extracting a sample of said atmosphere and forming a beam of the particles contained therein;

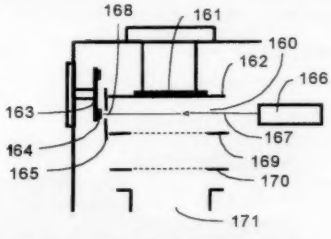
B. means for sorting the particles in the beam according to particle size; and

C. means for detecting and analyzing the volatile and semi-volatile components of the sorted particles on a per particle basis, thereby to provide a measure of the numbers and constituents of the particles of the various sizes.

6,040,575
MASS SPECTROMETRY FROM SURFACES

Craig M. Whitehouse, and Bruce A. Andrien, Jr., both of Branford, Conn., assignors to Analytica of Branford, Inc., Branford, Conn.

Provisional application No. 60/072,246, Jan. 23, 1998. This application Jan. 22, 1999, Appl. No. 235,945.
Int. Cl.[7] H01J *49/16*
U.S. Cl. 250—288 **1 Claim**



1. A method of fragmenting ions whereby:

a. ions produced in an ion source are directed to a collecting surface configured in the pulsing region of a mass analyzer, forming an ion population or neutralized molecule population at said collecting surface, said collecting surface comprising a MALDI matrix material, said mass analyzer comprising a laser configured to direct laser pulses to said collecting surface, an analyzer region and a detector;

b. pulsing said laser to create MALDI generated ions from said ion or molecule populations; and

c. accelerating said MALDI generated ions into said analyzer region of said mass analyzer for mass to charge analysis and detection.

ENERGY FILTER, PARTICULARLY FOR AN ELECTRON MICROSCOPE

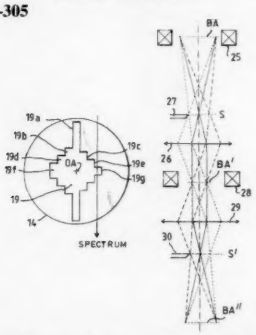
Gerd Benner, Aalen, Germany, assignor to Leo Elektronenmikroskopie GmbH, Germany

Filed Sep. 1, 1998, Appl. No. 145,397

Claims priority, application Germany, Sep. 1, 1997, 197 38 070

Int. Cl.[7] **H01J** *37/26*

U.S. Cl. 250—305 **13 Claims**



1. An energy filter having an exit image plane (BA) and a dispersion plane (S), comprising:

a diaphragm arrangement (**14**, **27**, **30**) for energy selection in said dispersion plane (S) or in a plane (S') conjugate to said dispersion plane (S), and

at least one deflecting system (**12**, **13**; **12'**, **13'**; **12'**, **25**) preceding said diaphragm arrangement (**14**, **27**, **30**), that effects a deflection of an electron beam, wherein setting of different energy bandwidths takes place by different excitation of said deflecting system (**12**, **13**; **12'**, **13'**; **12"**, **25**, **28**), which results in different deflections of said electron beam relative to said diaphragm arrangement (**14**, **27**, **30**).

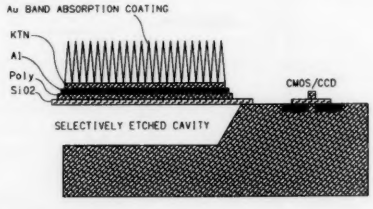
CHOPPERLESS OPERATION OF A THERMAL INFRARED RADIATION SENSOR SYSTEM BY APPLICATION OF HEAT PULSES TO THERMALLY ISOLATED PIXEL SENSOR ELEMENTS

Nicolas Mauduit, 9 rue Berthollet, 79005 Paris, France

Provisional application No. 60/023,707, Aug. 8, 1996. This application Aug. 8, 1997, Appl. No. 907,809.

Int. Cl.[7] **H01L** *27/146*

U.S. Cl. 250—338.1 **16 Claims**



1. A thermal sensor array for providing signals representative of the amount of thermal radiation in each of separate area portions of a scene producing thermal radiation which is incident upon the thermal sensor array, the array comprising:

a multiplicity of thermal-radiation-sensing pixel elements, the elements being sufficiently thermally isolated among and between each other so that each element comes to an equilibrium temperature that is proportional to thermal radiation incident upon the element from an associated portion of the scene, each element serving to produce an electrical signal in proportion to its temperature;

means for applying a heat pulse to each of the multiplicity of elements so that each element is momentarily driven to a new and higher temperature during the course of which change in temperature an electrical signal is produced;

wherein when heat pulses are applied to elements each at a different equilibrium temperature then the magnitudes of the electrical signal produced by each will vary in accordance with this difference;

wherein variations in temperature within the scene and in the separate area portions thereof are deducible from these differences, and are not required to be deduced from variations in the signal output of each of the elements at each of plural temperatures as is characteristic of conventional thermal sensor array where the electrical signals produced by the multiplicity of elements within the array are from time to time unrelated to temperature within the scene.

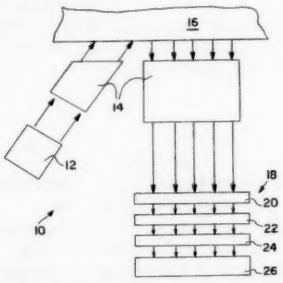
METHOD AND APPARATUS FOR MULTI-SPECTRAL ANALYSIS OF ORGANIC BLOOD ANALYTES IN NONINVASIVE INFRARED SPECTROSCOPY

Stephen F. Malin, Chanhassen, Minn., and Gamal Khalil, Chandler, Ariz., assignors to Instrumentation Metrics, Inc., Tempe, Ariz.

Filed Feb. 2, 1996, Appl. No. 597,480

Int. Cl.[7] **G01N** *21/35*

U.S. Cl. 250—339.12 **13 Claims**



1. An apparatus for determining the concentration of an organic blood analyte in a body tissue sample, comprising:

(a) means for irradiating the sample with incident radiation containing a plurality of distinct, nonoverlapping spectral regions within the infrared spectrum, wherein each of the spectral regions encompass a range of wavelengths between approximately 1100 and 5000 nanometers;

(b) means for collecting reflected radiation emerging from tie sample and directing said reflected radiation into a beam path;

(c) adjustable filter means disposed in the beam path, wherein said adjustable filter means attenuates the intensity of radiation in the beam path;

(d) principal analyte filter means capable of receiving radiation emerging from the adjustable filter means, and selectively passing discrete wavelengths therefrom, wherein said discrete wavelengths are specifically correlated with the concentration of the analyte;

(e) second filter means capable of receiving the discrete wavelengths emerging from the principal analyte filter means and attenuating the intensity of said wavelengths;

(f) detection means for receiving the attenuated wavelengths emerging from the second filter means;

(g) means for converting the detected wavelengths into a signal representative of the intensity of said wavelengths; and

(h) means for correlating the signal obtained in step (g) to determine the concentration of the analyte.

6,040,579

THERMOELECTRIC SENSOR

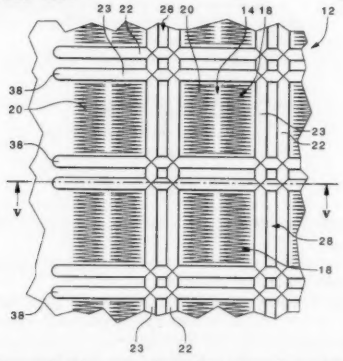
Ulrich Münch, Neuchâtel, Switzerland; Dominik Jaeggi, San Francisco, Calif., and Niklaus Schneeberger, Dübendorf, Switzerland, assignors to EM Microelectronic-Marin SA, Marin, Switzerland

Filed Feb. 25, 1998, Appl. No. 30,025

Claims priority, application European Pat. Off., Feb. 28, 1997, 97103317

Int. Cl.[7] G01J *5/12*

U.S. Cl. 250—344 **8 Claims**



1. A thermoelectric sensor formed by a membrane including a plurality of elementary cells formed respectively by a plurality of thermoelectric elements, said plurality of elementary cells defining respectively a plurality of distinct elementary surfaces of said membrane, wherein each elementary cell is thermally insulated from adjacent elementary cells by metal wires arranged on one face of said membrane and thermally connected to a substrate supporting said membrane.

6,040,580

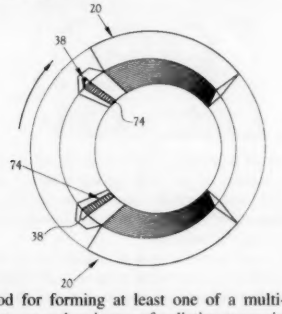
METHOD AND APPARATUS FOR FORMING MULTI-DIMENSIONAL ATTENUATION CORRECTION DATA IN TOMOGRAPHY APPLICATIONS

Charles C. Watson, and William F. Jones, both of Knoxville, Tenn., assignors to CTI Pet Systems, Inc., Knoxville, Tenn.

Continuation-in-part of application No. 08/563,268, Nov. 27, 1995, Pat. No. 5,750,991, which is a continuation-in-part of application No. 08/210,960, Mar. 21, 1994, Pat. No. 5,471,061, which is a continuation-in-part of application No. 08/037,303, Mar. 26, 1993, Pat. No. 5,296,708. This application Jan. 19, 1998, Appl. No. 8,848.

Int. Cl.[7] G01T *1/166*

U.S. Cl. 250—363.03 **12 Claims**



1. A method for forming at least one of a multi-dimensional attenuation data set and an image of radiation transmission through an object positioned in a tomograph device, said tomograph device being at least one of a positron emission tomography (PET) device, a single photon emission computed tomography (SPECT) device and an ECAT ART device, said tomograph device having radiation detectors defining a plurality of faces, said tomograph device including a plurality of collimators, said method comprising the steps of:

positioning at least one selected point source of radioactive radiation proximate at least one of said plurality of collimators in a selected sequence, said radioactive radiation being directed through the object and received by a selected subset of said radiation detectors of said tomograph device; and

processing signals received from outputs of said detectors of said tomograph device to determine transmission data from radiation from said source of radiation during passage of said radiation through the object for forming said at least one of an attenuation data set and an image.

6,040,581

GAMMA-RAY COMPENSATED NEUTRON IONIZATION CHAMBER

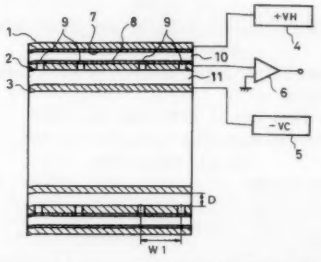
Toyokazu Gotou, and Shinji Fukakusa, both of Tokyo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed May 28, 1998, Appl. No. 84,879

Claims priority, application Japan, Dec. 17, 1997, 9-348189

Int. Cl.[7] G01T *3/00*

U.S. Cl. 250—390.01 **3 Claims**



1. A gamma-ray compensated neutron ionization chamber comprising a cylindrical or plate-like high-voltage electrode to which a high voltage is applied, a cylindrical or plate-like signal electrode for taking out a neutron current, and a cylindrical or plate-like compensating electrode to which a compensating voltage is applied, these electrodes being arranged concentrically in the order named with predetermined spacing therebetween, and a plurality of holes being formed in part of the signal electrode, wherein the total area of the holes is set to a value equal to or smaller than 5% of the surface area of the signal electrode.

6,040,582

ION BEAM FOCUSER FOR AN ION IMPLANTER ANALYZER
